tion. Again, it would be much more highly valued if it were really expert thru and thru. For example, a carefully worked out article on "Slums" would be more useful than the few lines of indefinite "definition," with a 1903 extract from "A Handbook on the Prevention of Tuberculosis," a 1907 extract from "The Challenge of the City," and two extracts from other works. With these criticisms we must conclude with a recommendation calling attention to the large number of subjects relating to all sorts of social reform, from which the reader and student of social problems will be sure to obtain information. A short list of a dozen titles from the letters A, B and C will indicate the nature of the subjects treated: "Abandoned Farms," "Jane Addams," "Anarchism," "Arbitration," "Australian Ballot," "Baths (Public)," "Birth Rates," "Boot and Shoe Workers' Union," "Charity Organization Societies," "Chartism," "Chicago." Let us, therefore, make the best of this volume, but hope that when another is issued in some year to come it will be somewhat better worked out and better digested. This volume might have been a greater improvement than it was on that of 1898.

The New American Type and Other Essays. By Henry D. Sedgwick. Boston: Houghton, Mifflin & Co. $1.50.

With a strong tendency to be one of a class, and a sturdy reluctance against moving out into a larger world, Mr. Sedgwick, in this last of four or five volumes published in rapid succession, gives clear evidence of having at least looked out of the windows of a snug, comfortable seclusion among books, and caught glimpses of real life as it is lived among the strenuously resisting or conservative classes, and, in some degree, among the strenuously striving folk who are the vast mass of our American people. This latter aggregation is worthy of more and deeper study. It is there that the real wheat of the land is cultivated in patches. It isn't all chaff that grows in the common field. All the best grain is there, tho not all that lifts the head high is to be adjudged desirable wheat. "Observe that all the well-filled ears hang the head!" said the wise old farmer. In the essay that forms the title chapter of his book, *The New American Type,* a very just and picturesque description is given of certain portraits done, in the last century but one, by such eminent painters as Gilbert Stuart, Gainsborough, Sir Joshua Reynolds and others. These painters portrayed gentlemen in an age when

> "Physical stability begat mental calm; peace of body ensured peace of mind. . . . The abundant praise of animal life, of healthy body, of beauty of face, shouted out by these portraits, does not, however, exceed their testimony in favor of health of mind. . . . The calm and quiet of Sir Joshua's age are scarcely more physical than moral. It is a period of the Ten Commandments, of belief, of dogma, of fixed principles, of ethical laws. . . . These quiet sitters had none of the perplexity and inconsequence which mark a generation that plays its game with no rules; their courses of conduct were all meted out by principle and maintained by authority."

The "principle," it may be said in passing, and the "authority," are very fairly and rather discouragingly depicted by Thackeray, a master hand, in his "Four Georges"; by Trevelyan, in his recent "History of the American Revolution"; by John Bright in a hundred speeches. Mr. Sedgwick, however, is not to be quoted as wholly accepting either the principles or the authority. But from the study windows it is clear that he sees the beauty of such a picture of still life and turns away from its charms with reluctance. Against the type presented by these old-fashioned artists he finds the new American type best illustrated, in most details, at least, by Sargent in the field of art, by Mrs. Wharton in clever fiction, and by Mark Twain in the totality of the American citizen—the pure American product—*totus, teres, atque* (almost) *rotundus.* There is such marked advance in these later essays that one may with confidence believe that their author will one day open the front door, step out among the seething, living crowd of common people, here and in England, and find himself, as he undoubtedly will, elbowing at every turn a possible John Bright, an Abraham Lincoln, a General Grant without the title, a Charles E. Hughes—men without the traditions of any "family" except of that wholesome old family of Man, out of which heroes have sprung, out of which

the denuded acreage on the hights of humanity is everlastingly reforested.

Letters of Dr. John Brown. With Letters From Ruskin, Thackeray and Others. Edited by his son and D. W. Forrest, D.D. With Biographical Introduction by Elizabeth T. M'Claren. New York: The Macmillan Co. Pp. xi, 368. $4.00.

Dr. John Brown is one of the best beloved—if not the best beloved—of Scottish writers. His essays have a charm which every reader acknowledges; and the truth, simplicity and pathos of his immortal sketch of "Rab and His Friends" have raised that little booklet to a high place among the classics. There were in his nature two parallel streams—one of irresistible fun and playfulness, and a deeper, more overwhelming one of melancholy and self-depreciation. The letters to his friends show both of these characteristics. His delight in fun and nonsense naturally breaks out more exuberantly in his charming letters to the many children of whom he was so devotedly fond; for Dr. Brown surpassed even Lewis Carroll as a lover of children. His letters to the more mature among his friends show his deep affection, the purity and nobility of his character, his love of nature and animals, and his fine, almost fastidious taste in literature. Among his American friends were Mr. and Mrs. S. L. Clemens, whom he first met when they were in Edinburgh, in 1873, and who vainly urged him to visit them in Hartford, and become acquainted with a few of his many admirers in the United States. Lowell he also met in Edinburgh, in 1880; and for Lowell Dr. Brown several times expresses his great admiration. He preferred him to Longfellow, whom he describes as "a sort of male Mrs. Hemans." Lowell he considered "a great poet." "I would much rather," he wrote to Lady Minto, "be him (Lowell) than Tennyson or Browning; there is more of the light of common day, more naturalness in thought and word, and no want of depth or tenderness, with humor of the stronger and rarest flavor." And somewhat later, in a letter to Principal Shairp, he said of Lowell: "He is out of sight the greatest poet our cousins have yet sent forth, both in reach of thought and feeling and humor, and in general felicity of language and spontaneity." About thirty letters from Ruskin, and twenty from Thackeray, are given in a section by themselves, following the letters of Dr. Brown. In spite of the three collaborators in the work of editing, very little has been done either in the text or footnotes to connect the letters, or to make the allusions to people and events intelligible.

Germany in the Early Middle Ages, 476-1250. By William Stubbs, D. D. Edited by Arthur Hassall. New York: Longmans, Green & Co. $2.00.

Mr. Arthur Hassall, who has already brought out three volumes from the pen of Bishop Stubbs since the death of that distinguished historian of the English Constitution, has now edited, under the title of *Germany in the Early Middle Ages,* a collection of lectures delivered many years ago from the chair of the Regius Professor of History at Oxford. Contrary to one's natural expectations, the volume is narrative rather than constitutional, but there are to be found in its pages several of those remarkable characterizations of medieval personages in which Stubbs was an undoubted adept. The chapters are so arranged as to form a tolerably complete account of Germany from the great migrations to the death of Frederick II in 1250, and the style, less severe and impersonal than the stately diction of the constitutional history, will make the book more acceptable to the general reader. A few pages are occasionally devoted to comparisons of Continental and English conditions, which will help to join that which should have never been put asunder by English insularity and German patriotism. There is also an occasional contrasting of the German and the Frenchman in the arts of war, peace and chivalry—quite to the discredit of the latter, as was to be expected from one who wrote in the seventies, when Teutonism had brought English scholarship completely under its sway—before the mighty Fustel de Coulanges had fairly unmasked his batteries. Tho the lectures thruout impress one with the soundness and breadth of the learned historian's studies, there is a certain ancientry in their doctrines and

temper. Nevertheless, in view of the slight character of the materials on medieval Germany available in English, the volume will find welcome in college circles. At all events, those of us who learned our history under the Stubbsian generation will put it on our shelves beside the "Constitutional History" and the masterly "Introductions to the Rolls Series."

Studies in the Inner Life of Jesus. By Alfred E. Garvie. New York: A. C. Armstrong & Son. $2.25.

Students of theology will remember an excellent volume on "The Theology of Ritschl" by the author of the present book, who is now principal of New College, London. For some years he has been contributing to the Expositor studies on the personality of Christ, and these have been revised and expanded to a book of over 500 pages. Principal Garvie is a scholar, of broad sympathies and patient industry, one who follows closely the works of German theologians. A good notion of a large number of the recent studies of German New Testament criticism may be gained from his chapters, since he does not hesitate to include considerable quotations. Doctrinally he holds usually to conservative views, defending the virgin birth, the reality of the miracles, an essential and not an economic Trinity, and the trustworthiness of the Fourth Gospel, altho on the latter point he declares that "it must be conceded that the historical material has undergone a more thoro transformation by the doctrinal intention." He inclines to compromise opinions, holding to modern criticism and the older doctrine at the same time. Principal Garvie will have a wide hearing, but his work would have gained from greater conciseness.

The Church and Modern Life. By Washington Gladden. Boston: Houghton, Mifflin & Co. $1.25 net.

One begins to get at the heart of this interesting volume of Dr. Gladden in the fourth chapter, on "The Business of the Church," which is declared to be the redemption of society. "The social question," he says, "is the one question which Christianity—genuine Christianity—never ceases to ask. The first thing it wishes to know about your religious experience is how it affects your relations with your fellowmen." The coming reformation, which Dr. Gladden sees just ahead, is to be the renovation of society on Christian principles, which does not of necessity mean socialism, but which certainly does imply a struggle for justice, fair dealing and love, sufficient to inspire the enthusiasm of brave spirits. The Church is urged to enter upon this contest with all its heart, and thus regain the waning interest of many. To youth especially the appeal is made, and the object of the volume is to promote a revival of religion among more nobly disposed young people by directing the Church to a work which will command their enthusiasm. Dr. Gladden is no pessimist, altho he is a severe critic of conditions which prevail widely in organized Christianity. His book will promote better understanding between social workers and religious leaders, and if its counsels can be followed by those who shape the policy of churches, better days will speedily dawn. Dr. Gladden writes clearly and forcibly, and in a manner to win conviction among those who need a change of heart on these topics. The book is a good one to put into the hands of those who are inclined to be discouraged over the outlook for the Church.

The Elizabethan Religious Settlement. A Study of Contemporary Documents. By Henry Norbert Birt. Pp. xvi, 595. New York: The Macmillan Co. $4.50.

The author of this volume makes no effort to write for the general public. His work is a lengthy, careful and laborious inquiry into the great changes of the reign of Queen Elizabeth, which established the Church of England in the position which it now holds. The most important step in these changes was the passing of the Act of Uniformity in 1559 by Elizabeth's first Parliament, and the whole volume is largely a working out of the consequences of this act and the attitude of the bishops toward it. This act, in the opinion of Mr. Birt, has rendered the Established Church hidebound —an establishment created by law, maintained by law, and that "must perforce abide by the law, so long at least as it con-

tinues to be, as its legal title proclaims, the 'Church of England as by Law Established.'" Mr. Birt finds many proofs to sustain his contention that the reformation of the Church effected by Elizabeth was not popular; that the people of England were still in the main faithful to the old religion. It is perhaps natural that Mr. Birt, as a priest of the Roman Catholic Church, should lean to this opinion; but in fairness of presentation, and in the careful support of all statements by authorities, Mr. Birt's work conforms to the most exacting canons of modern historical criticism. In historical work his leader and guide is the Abbé Gasquet, and, like Gasquet, Mr. Birt is a living proof that the Roman Catholic Church can produce historians who care only to present the truth, whether it makes for or against previous traditions. Mr. Birt's volume should be read side by side with Froude's work on the same period. While Mr. Birt is far more accurate than his brilliant predecessor in the field, it takes the two widely differing historians to keep the balance even between the old and the new faith during this momentous period of England's national life.

From Libau to Tsushima. By Eugene S. Politovsky. New York: Dutton & Co. $1.50.

To his wife at home Politovsky sent his diary of Rodjestvensky's voyage, that ill-fated enterprise, and these are the facts in black and white. The unreadiness at the start; the nervous dread of the Japanese out of every nightfall and every fog bank; the shooting up of the Dogger Bank fishers, with a Russian cruiser to boot; the quarrels of the officers; the breakages of engines; the mending of rudders in rolling seas; the lollings about in the Indian Ocean; the senseless overloading with coal—all this while a deadly fear of Japanese attacks and an unwavering premonition of defeat clutched at their hearts! What could Rodjestvensky—what could any man—do with such a fleet? Somehow the boats were patched together and somehow the straggling line managed to get to Tsushima and its doom. That at least was something, and Politovsky, the young naval constructor, was as responsible as anybody for that achievement. It is but another most spectacular showing up of Russian incompetencies in that fateful war, yet a record, too, of tireless work by a faithful few, none the less dramatic because the author went to his anticipated death when the flagship "Suveroff," with most of the fleet, perished of incompetency at Tsushima. The story ends at Shanghai. From that port the climax has been told by Semenoff in his account of the battle itself. Politovsky gives us the preparation of what Semenoff recounts.

International Commercial Policies, with Special Reference to the United States. By George Mygatt Fisk. Pp. xvi, 288. New York: The Macmillan Co. $1.25.

After a brief explanatory and historical introduction, Professor Fisk traces the development of what he calls modern commercial politics, or State intervention for the regulation of commerce. One chapter is devoted to the mercantile system, one to free trade, and one to protection. Then follow six chapters dealing with the administration of the customs service, some of which are familiar, some unfamiliar, to the man of average information on public affairs. Two chapters deal with commercial treaties, three with trade-promoting institutions, and one each with commercial statistics, navigation politics, and public navigation - promoting institutions. Each chapter is followed by a good working bibliography and a list of questions, some of which are intended to stimulate independent thinking, others to encourage research work. These questions are not the least valuable part of the book, especially to students. On the whole, the book is a worthy addition to the "Citizen's Library," and will prove stimulating to college students taking courses in commerce or economics.

Literary Notes

....Dr. Stanley Davis's little volume on *Consumption,* now in its second edition, gives in plain language what the public ought to know about the disease and how to cure it without the use of medicine. (Treat & Co., $1.00.)

....*The Debate of the Body and Soul,* a fourteenth century poem modernized by the late Professor Child, of Harvard, will be published soon in limited edition by R. E. Lee &

Co., Boston. The same firm will also bring out in artistic form William Austin's *Peter Rugg: The Missing Man*, one of the earliest and best of American short stories.

....The latest volume of McClure's "Country Home Library" is *The Vegetable Garden*, by Ida D. Bennett ($1.50), which includes directions for the cooking of vegetables as well as for raising them.

....Every time we see a Baedeker Guide Book we wonder why we cannot print as good maps in this country. The new edition of the London volume increases our admiration, for it is the most difficult city in the world to find one's way about. (Scribner, $1.80.)

....The story of the Boxer movement is told again by informal letters in *The Beloved Physician of Tsang Chou*, an account of the life work of Dr. Arthur D. Peill, edited by his father, Rev. J. Peill. (London: Headley Brothers.) Very narrow indeed was the escape of Dr. Peill, his wife and baby from Tsang Chou to the coast. When it had become evident that it was no longer safe to remain at their station, they were got away by the help of a friendly general and magistrate, and passing thru troops of Boxers who were merely awaiting the arrival of an expected leader to attack them, succeeded in reaching the English warships stationed off the Taku forts.

....Dr. Hugo Radau in *Bel, the Christ of Ancient Times* (Open Court Publishing Co.), expounds the doctrine that Christian theology has its anticipation in the Babylonian religion, which was essentially monotheistic and trinitarian. He seeks and easily finds identifications of various gods as forms of a primeval principal God. The study is subjectively imaginative and the results must be guardedly accepted. To say that the Babylonian Bel Enlil and the principal Assyrian god Asshur were the same god is hardly scientific; to assert that Asshur comes from the Assyrian Anshar goes beyond any proof we have; while to correlate such an asserted trinity as Enlil, Ninib and Ninlil with the Father, Son and Holy Spirit is both baseless and offensive. The extreme to which Dr. Radau goes is seen in his relation of the thunderstorms at the Babylonian spring New Year festival of Ningirshu with the earthquake after the resurrection of our Lord (p. 53)—so "a change of *names* takes place—but *only* of *names!* Marduk becomes Christ!" In the language of the street, this is the limit.

Pebbles

WHAT becomes of the brunets when they die? Angels are always pictured as perfect blondes.—*Atchison Globe.*

BARBER—What is the greatest patent ever invented?
Customer—Greatest patent?
Barber—Yes, sir.
Customer—Give it up.
Barber—Purgatory.—*The Catholic World.*

A SUGGESTED REVISION.

"RICHLY Endowed, we are gathered together here in the sight of the élite, and on the face of this company, to join together this man and this woman in Holy Patrimony, which is commended of Saint Bradstreet to be enviable among all men, and, therefore, not to be entered into rashly or unsecuredly, but discreetly, carefully, and in the fear of bankruptcy. For the sake of this town and country estate these two persons present come now to be joined. If any man can show just cause why these interests may not be lawfully merged, let him now speak, or else hereafter forever accept their invitations."—*Puck.*

THE GIRL WHO WROTE BY SOUND.

I ADVERTISED for a shorthand girl
To write from my dictation,
And, from the answers, picked a pearl
(Judged by her application).
On either Smith or Remington
No other girl was "in it."
In shorthand she had often done
Two hundred words a minute.

She also wrote she was young and smart,
And acquainted with business ways;
Six dollars a week she'd accept for a start,
If I'd promise an early raise.
I hired this paragon "off the bat,"
She went to work today:
A pert young Miss in a picture hat,
And a very engaging way.

She had Pompadour hair and a Marcel wave,
Tan pumps with a Cuban heel;
Her fingers were freighted with gems that gave
Sparkles almost like real.
I started her off on a letter to Brown.
I found she was slow, so I waited
For her to catch up. At last 'twas all down,
And this is what I dictated:

In re your wire of this date
To buy Amalgamated,
We counseled you before to wait
Till we'd investigated.
When Copper shrinks a point or two,
We'll fill the order duly.
If this does not seem wise to you,
Advise, Yours very truly.

This done she faded from the room
Into her private lair,
Leaving an odor of perfume
Upon the desert air.
An hour past by ere she returned,
Brown's letter written out.
And here it is. I never learned
What it was all about:

Henry, you are out of date,
Too bad and amble-gaited,
We can't sell you at forty-eight
Till we've investigated.
When the copper drinks a pint or two
We'll fall toward her, Dooley.
If this design seems worse to you,
Devise, Yours very truly.

—*William Hickox, in the Saturday Evening Post.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Whether the People Rule

Is this a free government? Do the people rule. What are the facts in the case?

Mr. Bryan in his address accepting the Democratic nomination rung the changes on the demand that the people may rule, and not the corporations or an aristocracy of wealth. It ought to be enough to say that his cry was rhetorical and not expressive of the actual fact.

The people do not rule in Russia; they are not allowed to rule. They do not have the ballot. The people do not rule in Virginia. A Virginia Congressman says that in Virginia 60 per cent. of the white voters and 90 per cent. of the negro voters are disfranchised. But in any place where the people can vote they rule, or can rule if they want to. If they neglect to vote they still rule, for silence gives consent. This is theoretically true, and it is practically true.

Of course, intelligent men, and shrewd men intelligent for their own interests, are apt to guide the voters at first. The voters may prefer what the rich and shrewd men want. The workmen want high tariff just as much as the manufacturing corporations do. Or they are for a while misled, but even so they rule, for they give their consent and votes. When other leaders tell them they have been misled they make laws to suit themselves and their own interests. They have done it over and over again in this country, and will do it again.

When the people wish a man for President they choose him; they rule. So when Mr. McKinley and Mr. Roosevelt were elected it was an example of the people ruling. When free silver was rejected it was because the wisdom of the people so ruled, and even Mr. Bryan gives up the fight for it.

We have a case of the people ruling in this State. One would imagine from the talk of certain journals that the people have no choice as to the election of their rulers, and that just now in New York three or four "leaders" have the say who shall be nominated as Governor, but that these three or four don't dare to say their say until they have got the word from President Roosevelt. The people, so we have been told, are voteless and voiceless except as three or four leaders direct their voice and vote; and they, mute leaders of the mute, have had to wait the controlling word from Oyster Bay.

All this is bosh. The leaders are led, led by the people, or pushed by them. In this case these leaders don't like Governor Hughes. They don't understand his way. They can't deal with him; he makes no deals. His rule is simply that of straightforward honesty and obedience to the laws. He has beaten the tricky politicians again and again, and done it by appealing to the people. The people believe in him, and the people rule. He tells them that the Constitution and the laws—since the Legislature was driven to enact them—forbid gambling at racecourses, and he believes in the law and its enforcement. So do the people of this State, and they have decided to re-elect him that he may finish his work.

In the same journal we have seen Mr. Bryan laughed at for saying that the people do not rule, and then the declaration made that Mr. Woodruff, or, finally, Mr. Roosevelt, rules the Republican party, which must do exactly as they say, with no voice or rule. Of course all that is political talk. Set it down that in a land where there is a universal ballot the peo-

ple do rule. They rule wisely or badly, and they have leaders and advisers whom they trust and follow more or less. They rule by their intelligent vote, or their intelligent or non-intelligent silence. They declare what they will, and they get it, or at least they give their consent, and that, too, is rule.

Emotional Insanity

"ANGER is a short madness" is a saying too old to be traced to its originator, but it is only of late that its usefulness as a means of legal defense has been appreciated. The profession of expert alienist has now become a lucrative branch of applied psychiatry. Lawyers who have a reputation for skill in using this legal weapon are much sought by those who are able to afford their services. In the modern American murder trial each of the opposing parties, the State and the defense, hires as many and as eminent experts as it can and the jury presumably arrives at its verdict by the arithmetical process of cross cancellation. This is practically a reversion to the medieval form of trial when a case was decided by the number and quality of the persons the contestants could get to come to the court and swear in their behalf. Whether these compurgators knew anything personally about the crime or not did not matter.

At the present moment the attention of the public, even of those who would prefer not to think of such things, is being drawn to the preparations for the trial of Captain Hains, who, with the aid of his brother, T. Jenkins Hains, the author of popular sea-stories, shot William E. Annis at the Bayside Yacht Club, supposedly from motives of jealousy. The legal battle will not be as hard fought and long continued as the Thaw trial because the defendant is not a multimillionaire, but it will be along similar lines. The two lawyers selected for the defense have become prominent thru their connection with four or more trials where the plea of emotional insanity has secured an acquittal, and the District-Attorney has applied for $10,000 to procure the alienists necessary to the State.

The most interesting feature of the case is the report that the theory of reciprocal or contagious insanity will be introduced to clear the two brothers, that is, that one of them having been worked up by brooding over his troubles to such a pitch of excitement as to be irresponsible induced in his brother a similar unbalanced mental condition. This, tho somewhat novel, is a logical extension of the method that has become a prominent part of American jurisprudence, and it may have a wide application. It will be invaluable in all cases of conspiracy and mob violence. There is an extensive literature on contagious delusions and the madness of crowds to be drawn upon. The French, who for some reason or other have written most about it, call it *la folie des foules,* a phrase that sounds better than our own. The theory is that the mentality of any crowd, a mob or an audience, is below the average of the persons composing it while its emotionality is greater. It would be easy to prove that a member of a street mob was not in a condition to "understand the nature of his act and that it was wrong."

For that matter it would be difficult to convict any one if this specification were to be literally insisted upon. It could be plausibly argued of almost every murderer that he did not understand the nature of his act before the crime was committed. It is only afterwards that he fully understands it, when he sees its consequences, the irreparability of it, the grief it causes to the relatives of his victim and the horror and aversion that it excites in the minds of his friends. As for the second clause, what murderer does not regard himself at the moment as justified in his act? The criminal of passion thinks he does know the difference between right and wrong, and he believes he is right and his victim is wrong. A man who did not so regard his act would have in that fact the best evidence for his insanity. No doubt Captain Hains and Harry Thaw thought they were acting from the best of motives, defending the honor of their wives, maintaining the sanctity of the home, etc. It is characteristic of those who boast of their chivalry to take the most degrading view of women, regarding a wife as personal property to be protected from burglars.

There are three reasons for the punish-

ment of a criminal, if we do not count the old idea of revenge, that is, the satisfaction of personal spite or abstract justice by inflicting an equivalent injury on the injurer. This idea still influences our juries, and traces of it can be detected in our codes, but it has been repudiated by the moral sense of the age. The remaining reasons are, first, the future protection of society from similar acts of the same individual; second, the future protection of society from similar acts by other individuals, and, third, the reform of the criminal. In regard to the first it must be considered that a murderer is not usually a congenital or chronic criminal. He is in many cases quite an ordinary man who has been placed under a peculiar stress of circumstances, and he is not, like the forger and the thief, apt to repeat the offense. It is only the men of unstable mentality, liable to be carried away by passion at any time, who are to be feared in the future. That is to say, the plea of emotional insanity, if it saves a murderer from the gallows, should logically lead to his permanent incarceration. For the second, the deterrent effect, it is essential that the punishment should be prompt, sure and exemplary. In these respects our criminal law fails, and that is why murder is increasingly common in this country. The third reason for punishment by society, the reform of the criminal, is too wide for discussion here. We will only say that we have never known a criminal to be reformed by hanging him.

We would not wish anyone to conclude that law in America as it is practised does not act as a deterrent to crime and therefore might as well be abolished. A trial for murder really causes a man, no matter how rich he may be, a great deal of annoyance, inconvenience and expense. Altho Thaw is not confined in the asylum for the criminal insane to which he was sentenced, he is still in jail, except for an occasional fishing trip, and what is worse he is bankrupt. Many a rich man if the law puts to him the alternative "your money or your life," would answer "Take my life; what is life without money?" Besides these things get into the papers. Trial by journalism is more feared than trial by jury. A man who might give way to a passion of love or hate if he knew he would be quietly hanged on the morrow, would shrink appalled at the thought of the yellow pillory. Thaw had to pay a fee of $80,000 to a single lawyer and it is not everybody who can afford to murder at that rate. Even if rich men have an advantage, we must remember that more crimes are committed by poor men than by rich men, for the same reason, that which any farmer boy will be happy to explain, that white sheep bear more wool than black ones. Besides we are adding to our legal system a feature characteristic of China and other Oriental countries, that is imposing a fine on the community in which a crime is committed. Criminal procedure at this rate will become so expensive that only very rich places like New York City can afford to allow murders to happen, and even they will have to be economical of them.

Pronouncements of the Lambeth Encyclical

THERE are over three hundred Anglican bishops, and a majority of them met in the Lambeth Palace within closed doors for several weeks. They came from all over the world, and they had long and frank discussions. They have concluded with an encyclical letter to their clergy and members and have put its points into seventy-eight resolutions, the whole covering eight long and close columns of the London *Times*. We do not need to summarize them, but only to call attention to the matters particularly discussed. That they hold the faith, that they believe in service, that they seek a trained clergy, that they approve religious education of the young and foreign mission takes space but might be taken for granted. So say we all of us.

The political institutions and laws in America and Australia differ from those in England, and we doubt not that is the reason why the Conference did not condemn the "godless public school." It particularly explains language on marriage and divorce weaker than the British Church would have uttered, and it explains the failure to give any utterance at all on marriage with a deceased wife's sister. There is a sort of regret exprest in the Encyclical Letter that this subject

is excluded from the resolutions adopted, but it is explained that laws and ecclesiastical regulations differ in different centers, and this has to be left to the separate national communions. This is right and wise, for the more that can be left free in discipline the better.

On the divorce question the Conference has spoken, but by way of compromise, and for the same reason. Of course, it condemns divorce as a very great evil, and it would limit it to the case of adultery. But there came up two further questions, one whether the innocent party can marry again, and the other whether if he or she marries again such person can be admitted to Holy Communion. The Church also has to deal with the cases in which for the reason of desertion —which Paul allows—or for any other the law grants divorces. Are such divorces valid in the Church? The Conference says that only divorces for one cause are right; and yet it is not quite clear how it would deal with those who have contracted legal divorces and marry again. Indeed, whatever it has said has no value, for the resolution was adopted by a vote of 87 to 84. In part it reads:

"Recognizing the fact that there has always been a difference of opinion in the Church on the question whether our Lord meant to forbid marriage to the innocent party in a divorce for adultery, the Conference recommends that the clergy should not be instructed to refuse the sacraments or other privileges of the Church to those who, under civil sanction, are thus married."

But while they can be given the sacraments, the most sacred of all ordinances, they are in a very minor matter discriminated against, for it is said that if the innocent party desires to marry again "it is undesirable that such a contract should receive the blessing of the Church." That seems fatuous enough. They can have the communion; they are to be recognized as good, sound communicants, but they must go to a dissenting clergyman or to the civil authority to be married. The trouble is that a large number of the bishops hold to the doctrine that once married under no circumstances and for no offense can either party be so unmarried as to contract a new marriage. We hold that doctrine to be unscriptural, and, what is more, unreasonable and unjust, a doctrine that encourages immorality.

We are pleased to see that the Conference adopted a resolution against "the organization of different races living side by side into separate or independent Churches, on the basis of race or color." It provided for the revision of the Prayer Book, and allowed the omission of the Athanasian Creed. It could do no less, for the American Church omits it. Bread and wine are the only elements allowed in Holy Communion, and yet in case of absolute necessity something else may be permitted. The bishops had in view such cases as those in which missionaries quite unable to get the juice of the grape have made use of cocoanut milk or even Bass's pale ale. The conference said nothing about alcoholic drinks, but condemned opium in China and the gaining of revenue thereby. Particularly we are pleased that the bishops approved the plan from New Zealand for a coming together of the Anglicans and the Presbyterians. But it is on the basis of "consecrations to the episcopate on lines suggested by such precedents as those of 1610"; and yet, during the period of transition they "would respect the convictions of those who had not received episcopal orders." Apart from this there is no recognition of non-Episcopal Churches, and no good word for the Roman Church, but kindly expressions for the Eastern Churches and the Moravian Church, and the Jansenists of Holland.

It has been a useful, educative meeting, and has somewhat moved toward freedom. It has done all that could have been expected of such a conference.

The Turkish Revolution

Among the many interesting and significant facts in regard to the Young Turkey revolution, few are more worthy of note than this, that it has taken place in a section where there are few, if any, Turks. The five provinces extending from Adrianople to the Adriatic, of which three — Salonica, Monastir and Kossovo—make up what is known as Macedonia, while two—Scutari and Ja-

nina—constitute Albania, have a total population of about 3,000,000. Of these about 1,000,000 are Moslems, and the remainder Christians. The Moslems, however, are not Ottomans, but Albanians (370,000), Bulgarians and Servians (350,000), while the remaining 100,000 include officials, soldiers and a small percentage of Ottomans. The 2,000,000 Christians are divided approximately as follows: Bulgarians and Servians, 1,200,000; Wallachians, 180,000; Albanians, 300,000 (100,000 Greek and 200,000 Roman Catholic); Greeks, 200,000. The remaining 120,000 include 50,000 Jews, 50,000 gypsies, 20,000 Armenians, Europeans, etc. These figures are estimates only, as there is no reliable census. Of these different classes, no two are in harmony, but each hates the other with an intense hatred, which goes far to account for the anarchy that has characterized the entire section, and which has increased so steadily that a little time since it seemed inevitable that the European powers would be compelled to take matters into their own hands and compel not only the warring factions, but the Sultan, and even Germany and Austria, to permit peace. It has been increasingly evident for some time that the Austrian desire for railroad connection with Salonica, and German dreams of commercial, if not political, prestige, were not less potent than Turkish misrule and local feuds in keeping up the condition thruout the peninsula.

Into the very center of this maelstrom the Young Turkey leaders leaped with an audacity that fairly took away the breath of the diplomats, and so far have scored a victory which would have been considered impossible. What influenced them? They have kept their counsels well, but certain facts are so evident that they may well be assumed to have had a prominent place. First stands the peculiar condition of anarchy and disintegration, offering a superb opportunity for a daring coup. Second comes the peculiar type of the Moslem population, which is not Turkish but Albanian and Slav, and which has always been restive under Ottoman rule. Ever since the days of the famous Ali Pasha of Janina, the Albanian Moslems have been semi-independent and easily open to influence against the hidebound Tartar element that has been dominant in Constantinople. A significant illustration is found in the story of the Moslem women who threw off their veils and appeared with open face in the streets of Monastir. There is not a Turkish community in Asia where that would have been possible, and more than almost anything else it marks the belief that Islam is not inconsistent with modernism. A third fact is the reappearance of England on the stage of Eastern politics. Since the days of the Treaty of Berlin England has kept aloof from Turkish affairs. There have been occasional ambassadors at Constantinople who have exerted considerable influence, but the hegemony has rested now with Russia, now with France, and more recently with Germany. Of late Turks have come to look upon the Kaiser's movements with dread, as they have realized how his grip upon the Empire was tightening. Bulgaria and Servia, too, have shared the anxiety of the Turks. Just now England steps to the front with a note for the settling of the Macedonian problem, and forthwith the new British ambassador at Constantinople is greeted with an acclaim such as has met no other foreign representative. That she will be in general sympathy with Young Turkey ambitions, at least so far as set forth, is generally understood; and what better way to ensure her support than to appear, in the very center of disturbance, as the one force that can bring order out of chaos, and without necessitating the presence of foreign troops! Is this also at the basis of Abdul Hamid's so sudden acceptance of the new régime? He has little reason to love England, but less to love Germany. Almost any change that will loosen the hold of the German octopus would be welcomed. What will be the outcome no one can tell. No student of the Eastern question ever prophesies. One thing is certain. The old power of the Tartar Turk in Europe is broken, and can never be what it has been. Will Asian Islam accept the leadership of European Islam, and the opprest villages of Asia Minor find relief thru a new conception of their faith?

Whether the time for this has come, or whether Islam is but bending to the storm, is not yet evident. It is true, how-

ever, that there is a new spirit abroad in the Empire. The Young Turkey leaders have shown great shrewdness and skill in launching their enterprise. They could have chosen no better place, no better time. Whether they will be able to continue remains to be seen.

The Case of Colonel Stewart

THE controversy over Col. William F. Stewart is one of those in which either side, well exploited, easily conjures popular feeling; but, when set against each other, one so well offsets the other that venders of excitement keep the two sides as far apart as possible, and with whichever side one is conversant, to him it appears unimpeachable. Besides, Colonel Stewart's wife is a granddaughter of the great William Pinkney, first cousin of the late Senator Whyte, which draws out, on his behalf, the brilliant forensic ability of Senator Rayner, assuring the most graphic presentation possible. President Roosevelt stands pat, as the responsible authority on the other side, and the irresistible wave strikes the immovable rock.

If Senator Rayner follows his announced determination he will do all in his power to persuade the Congress to demand of the President a court of inquiry, as soon as the Brownsville matter is off the boards, at the opening of the next session. If the President holds to his present position—at least, as it is commonly understood — he will not swerve a hair's breadth from the course he has been following, no matter what Congress may ask.

Colonel Stewart is a colonel of the Coast Artillery. He is not a graduate of West Point—in which, perhaps, lies the secret of some of the antagonism to him. He was born in Rhode Island fifty-nine years ago last June, and, as he entered the army as a commissioned officer when he was seventeen, he has served as an officer for over forty-two years. He has been recommended for a medal of honor and promoted for gallantry on the field of battle. He has been exceptionally strict in enforcing military regulations to a point which has made him enemies; they say he is a crank on the subject. He is second in rank of all the colonels of Coast and Field Artillery on the active list. Colonel Greenough, the ranking artillery colonel, retires December, 1908, when Stewart becomes ranking colonel. He cannot be compulsorily retired by the President till June, 1911. At present, by order of the War Department, indorsed by the President, he is stationed, without command, at Fort Grant, Arizona, an abandoned military post. It consists of a group of deserted buildings in charge of a caretaker. His companions are the caretaker, teamster and coachman. The nearest railway station is twenty-five miles away. The nearest surgeon is at a cavalry post, seventy-five miles distant. At his request he was transferred, a short time ago, to St. Francis Barracks, St. Augustine, Fla., but it was found impossible, on acount of State complications, to keep him there, and he was at once ordered back to Fort Grant. He complained of the condition of his quarters and asked for transfer to Washington, D. C., but the quarters were nominally restored and Colonel Stewart was officially informed that it was the disposition of the authorities over him to keep him there till he could be compulsorily retired, unless in the meantime he asked for voluntary retirement. He asked for a part of the leave of absence which was due him, but it was refused.

Colonel Stewart, and his friends for him, have claimed that this treatment could not have been given unless charges had been made against him, and with all the vigor of Rayner—than which none could be more graphic—they have declared that he is being punished without a trial and have demanded that he have a court of inquiry, to face his accusers and refute the charges. Senator Rayner even goes so far as to compare Stewart's case with that of Dreyfus—with this in the favor of the Frenchman, that he did have a nominal trial, and did know what the charges were against him. Colonel Stewart has never been made acquainted with any charges. The fact is, there are practically none to make known. Senator Rayner forced from the Administration a list of statements which were the nominal basis for the present situation. Commenting upon them the Senator said: "Even if they were true—and I am informed that they are not true, and that the untruth could be sustained if this officer were afforded an opportunity—the charges are frivolous and petty, not

in the slightest degree affecting Colonel Stewart's character as a man, his honor as a citizen, or his courage as a soldier."

The position which the President takes is plausible—if it is based upon information which is really reliable, unprejudiced and free from animus. He asserts that he formed his opinion and set his course on the strength of the following report from General Murray and statements of others:

"There can be but one conclusion from the testimony of his division and department commanders, his corps commander, his second in command, his own staff officers and all others who have been called upon: Colonel Stewart is unfit for command. Instead of performing a useful function, he is a hindrance to the performance of public business, and little short of a scourge to those who are unfortunate enough to be under his control.

"The recommendation of General Grant as concurred in by the commanding general, Department of the Gulf, and myself as Chief of Artillery, appears to be the only practicable solution. It is therefore again recommended that to Colonel Stewart there be 'offered the alternative of relief from command or retirement upon his own application.'"

The President says that General Duval added the statement, to him, that the Chief of Artillery understated rather than exaggerated the case, but recommended that the option of honorable retirement be offered to Colonel Stewart for the reason that, while a court-martial would undoubtedly award some punishment, it would fall short of what was really needed, the separation of Colonel Stewart from active service.

It is not perhaps entirely unworthy of notice that General Duval and General Murray were both junior officers under Colonel Stewart and had been promoted over him; and that General Wade, the commanding general, altho he finally concurred in the report, stated, publicly, that he did not consider the imputations against Colonel Stewart sufficiently serious to demand such drastic measures. The fact that Colonel Stewart alone is not a West Point man will be suggestive to some; and even those who accuse him admit that any punishment awarded by a court-martial would be slight, while others—apparently supported by his long and honorable record—claim that even the petty charges could be absolutely disproved.

There is no doubt that the President's convictions are honestly held, any more than there is that they are in accordance with the wishes of some with whom he consulted. But there are many who feel that an officer of forty years' honorable record, in active command of a post, who without a word of warning receives notice from one who a few years before was a subordinate, that he can either retire at once or go into immediate exile for the rest of his official life, has the right to an explanation. On receiving this notice and realizing the powers against him, Colonel Stewart attempted to compromise. Conditions were such that he was absolutely sure of becoming a general, in the natural course, before his retirement for age. Accepting the effort to get him out of the service, but looking upon the promotion as his eventual right, he replied that he would retire if made a general at once. This puts the matter in a little different light from the general report, but it is believed to be correct, and suggests the wonder why, if the only desire was to have Colonel Stewart out of active service, and not to prevent his attaining the rank they have attained, he might not have been granted his natural right and quietly retired. A number of the men who advised his exile helped to consider his compromise and declared he was not fit to be a general. Possibly they were correct, but it is rather to be regretted that, if the steps taken were wholly justifiable, the justice cannot be made apparent by confronting the accused with his accusers, according to all civilized law.

Wireless

Last week occurred an event unprecedented in the history of the world. A man in Paris was talking and another man 310 miles away heard what he said. If there had been a wire stretched between them we should have—no, not understood it better, but should have been less surprised. But they were connected only by that which connects all things in the universe, the ether, and it was by means of this that they conversed. The man in Paris spoke into a receiver joined with some wires strung up the Eiffel Tower. The other man was just as far away from him as he could get to the westward, at the jumping place of France, the cape of Raz de Sein, near Brest. How the miracle was accom-

plished is explained, in so far as it can be explained, in this issue of THE INDEPENDENT, by one of the men who accomplished it.

Nowadays inventors do not rest on their laurels. Simultaneously with the announcement of this triumph, the French naval officers who have achieved it, express their intention of doubling the distance within a few months. The new Metropolitan Tower in New York, the tallest building in America, is being fitted up with apparatus for conversation with its only superior in the world, the Eiffel Tower in Paris. But our minds have been so rapidly expanded in recent years by a succession of marvels of increasing magnitude that nobody questions "whether," and all that is asked is "when?" Yet this is a much more wonderful thing than the catching of the dots and dashes of artificial lightning flashes by a coherer across the ocean. The fluctuations produced in the electric current by the human voice, in the transmitter of an ordinary telephone are so minute as to be unmeasurable. Still wireless telephony is not much behind wireless telegraphy, and may overtake it.

Both have introduced an unknown factor of incalculable value into the problems of warfare and diplomacy. The operations of the French fleet at the port of Casablanca, during the late unpleasantness in Morocco, were directed day by day from the Eiffel Tower in Paris. The British battleship "Indomitable," on clearing the Straits of Belle Isle, north of Newfoundland, reported directly to the Admiralty headquarters in Whitehall, London, a distance, as the ether wave flies, of 1,600 miles. Now a circle with a radius of 1,600 miles from London covers a large and important part of the earth's surface. Any part of England's fleet in seas within this limit is under the personal command of Sir John Fisher as he sits in what Mr. Stead has dubbed "the Conning Tower of the Empire." What difference will it make then if all the cables to the "tight little island" are cut by her enemies?

This utilization of the ether above us coincides and collaborates with the conquest of the air. Balloons capable of accommodating twenty-five passengers for a day or so pass at will over historic boundaries of hostile countries. The Wright brothers are learning to fly in a machine so light that it can be carried about anywhere in an automobile. Two dirigible airships maneuver together over the city of Berlin. A Long Island hotel, in its anxiety to be up to date or ahead of it, advertises a landing stage for aeroplanes on its roof. It is no longer sufficient to put a belt of armor around a battleship; the decks must be protected from enemies in the air. A Chinese wall or chain of custom houses will no longer keep out the invader or the smuggler. The country must be roofed over to be safe.

The interior of the earth still appears unconquerable, the greatest lacuna of our knowledge. Even the wireless waves seem to dodge it, preferring to go the long way round rather than the short way thru. We have only scratched the surface so far and can merely guess at the wealth that may lie beneath us. Something heavy we imagine from the weight of the world as a whole, perhaps a solid core of gold or platinum or radium, probably what would be much more valuable to us, unlimited stores of energy.

Mathematicians have amused us by telling what life would be in Flatland, where only two-dimensional beings exist; where a circle would be impenetrable and the entrance of it an inconceivable miracle. Mankind have hitherto been practically living in two dimensions, but now they are getting possession of upper and outer space for the transmission of themselves and of their messages. What the coming civilization of three dimensions will be no one can conceive.

Bishop Hood's Advice

The senior bishop of the African Methodist Episcopal Zion Church is Bishop Hood. He was bishop when for once, in 1872, he voted for Horace Greeley. In reply to a question by a Church paper he gives very ably the reason why he will vote for Mr. Taft this year. He says not a word on Brownsville; he sticks to one point. He says the Fifteenth Amendment is the bulwark of negro rights, their one protection from injustice, however it is nullified in some places. He says he finds that in one party there is an effort made to have it repealed, and he will and must stand by the

party that is pledged to maintain it. Referring to how he was driven out of a first-class railway car on entering Georgia, he says:

"In Georgia they seem to take pride in their idea of 'making a nigger know his place.' It is certainly the interest, and I think it is also the duty, of every black man to take his stand against this attack upon the Fifteenth Amendment. The Republican party is pledged to its maintenance; it has maintained it for forty years."

Certainly this is a telling presentation of a forceful argument.

The Transmutation of Metals

Sir William Ramsay must have left Clermont Ferrand, where the annual meeting of the French Association for the Advancement of Science was held, with somewhat conflicting emotions. On the credit side of his balance sheet of happiness were the facts that his address on the fundamental problem of the decomposition of the elements had been received with great enthusiasm and that the Association had awarded to him its gold medal. On the other side of the account, however, he had to set against this the item that doubt had been cast upon his most remarkable discovery by the one person in the world whose achievements in this field must be given priority over his. Professor Ramsay reported some time ago that he had found traces of lithium in a solution of a pure copper salt in a sealed glass tube after treating it with the emanation, or radio-active gas, given off by radium. Madame Curie, the Polish woman who discovered radium, has repeated the experiment, but failed to confirm his results. She found, indeed, that lithium could be detected when she used vessels of glass, quartz or copper, but if a platinum vessel was used no lithium appeared. This suggests that the lithium detected by Professor Ramsay may have been already present as an impurity in the glass. So far the lady has the last word, altho a negative experiment has not quite the value of a positive one. It is easier not to get a delicate reaction than it is to get it. But lithium, tho classed as a rare metal, is very widely distributed in nature, and it is difficult to make sure that the salts, water and vessels used are absolutely free from it to begin with. And the amount of lithium discovered at the end of Ramsay's experiment was almost inconceivably minute, making its presence known by the characteristic red line in the spectrum. A few years ago an announcement that one metal could be transformed into another would have been received with general incredulity by chemists who have long been used to false alarms on this subject. But Professor Ramsay has made so many startling statements in the last ten years and proved them, that his last and most startling of all roused surprisingly little skepticism. Fortunately science is not based on authority, but on the unlimited repetition of experiments, and the opinion of its greatest leaders has no weight except as a guide to research.

That the law must be obeyed and discipline maintained and hazing stop at West Point is the opinion of the Superintendent of the Academy, and of the Secretary of War, and of the President. After long delay and much correspondence forth and back two seniors are expelled and six lower classmen suspended for a year. It is severe and just. Secretary Wright goes into a dictionary study of the meaning of hazing, and decides that the "bracing" given to the boys was not exactly hazing. Then the dictionaries should be amended, for hazing it was, and we do not see but it came precisely under the definition in the Standard Dictionary:

"To subject to sportive maltreatment; make the victim of several practical jokes; play pranks upon; put thru a harsh mock discipline; said of a student at a school or college."

We are condemned for our sins, our social sins, to another disgusting trial for murder, all the filthy details of which will be hawked by the press over the country, because the people have the curiosity to read it all. And in preparation to lead, or mislead, the public mind, the lawyers are reporting all sorts of stories by way of exculpation, for, on the face of it, the two brothers were guilty of a wilful murder of the man who, they say, had seduced the wife of one of them. And one, or both, of the brothers we are being trained to believe were insane. The excuse given for the killing is no excuse at all, and emotional insanity is a soft name for revenge.

Insurance

Insurance Terms Defined

Editor the Insurance Department of The Independent:

My Dear Sir—We have a little debating society in our town, which is not far from Fort Benton, Mon., and we have been interested in the theoretical side of insurance ever since the revelations which led to the Armstrong investigation in New York and to the so-called hostility to insurance companies as manifested in certain legislative enactments in several States. If it is not too much trouble for you, would you care to give, in The Independent, as matters of general information, definitions of the following insurance terms:

1. Policy.
2. Paid-up Policy.
3. Term Policy.
4. Tontine Policy.
5. Underwriting.
6. Actuary.
7. Experience Table.
8. Annuity.
9. Beneficiary.
10. Fraternal Insurance.
11. Old Line Inance.
12. Industrial Insurance.
13. Death Rate.
14. Dividend.
15. Surplus.
16. Estate
17. Mortality Table.
18. Loading.
19. Mortality.
20. Expected Mortality.
21. Premiums.
22. Single Premiums.
23. Cash Surrender-Value.
24. Twisting.
25. Reserve.

Answers.

1. A policy is the written form or contract of insurance betwen the insured and the insuring company, in which the specific terms are set forth.

2. A paid-up policy is one upon which the premiums have all been paid.

3. A term policy is one payable only in case the death of the insured takes place within a stipulated period or term. If the insured lives beyond the term the insurance expires by limitation.

4. A Tontine policy is one in which the profits of this particular scheme of insurance are enjoyed by the survivor or survivors of a number of persons. It was invented during the seventeenth century by one Tonti, an Italian. Tontine insurance, once popular, is no longer written in the United States.

5. Underwriting—the issuing of a policy of insurance, whether of life or fire.

6. An actuary is an expert in the mathematics of life insurance. He it is who computes premiums, values policies, ascertains the proper apportionment of surplus, etc.

7. An experience table is one based upon the experience of one or more insurance companies, whereby the duration or expected duration of life is fixt. The American Experience Table contemplates the death at the age of ninety-six of the last of 100,000 individuals alive at age ten. In insurance circles a man who survives the age of ninety-six is a dead one, so far as insurance goes.

8. An annuity is a stated sum of money annually paid to the policyholder during the continuance of the policyholder's life. The cost varies with the annuitant's expectancy of life. This form of insurance is perhaps more popular in England than here.

9. The beneficiary is the person to whom the policy is payable.

10. Fraternal insurance is, generally speaking, insurance furnished by secret benevolent societies upon the assessment plan. Many of these organizations have within a very recent term been compelled to advance their rates so as to bring them more nearly in accordance with those of old-line companies, whose premiums are based on the American Experience Tables.

11. An old-line company is one that writes an absolute contract, collects a fixt level premium, and accumulates the legal reserve.

12. Industrial insurance was devised to write insurance upon the lives of children and minors. The policies generally range from $15 to $500. This kind of insurance has been popular among the poorer classes and is often used to provide against funeral expenses. The premiums are collected weekly by collectors visiting from house to house. Industrial insurance has grown enormously in volume within the last quarter of a century.

13. The death rate is the ratio of the number of deaths of persons of the same age in 1,000 selected lives in a single year to 1,000.

14. Dividends are sums returned to policyholders from the surplus over and above the cost of insurance when all expenses are deducted. A life insurance dividend and a dividend declared on one or more shares of stock are totally different, a fact which is not always understood.

15. The surplus is made up of all the available property of the company which is in excess of reserve and other liabilities.

16. A man's estate consists of all his property, less all claims there may be against it.

17. A mortality table is made up of figures indicating the number of deaths that may be expected to occur from year to year in a given number of persons of a given age.

18. The sum added to the premium to provide for expenses and contingencies is technically called loading.

19. The number of deaths occurring in a single year in a given number of persons, or the losses resulting therefrom, is known as mortality.

20. Expected mortality is based on the expected number of deaths during a single year in a stated number of persons of specified ages or the losses resulting therefrom.

21. The sum charged by the insurance company for the insurance carried is called the premium.

22. When paid in one payment such payment constitutes a single premium.

23. When a stated number of premiums have been paid, the insurance policy is usually exchangeable for a proportion of its face called the cash surrender value.

24. Twisting is where an agent of another company persuades a policyholder to cancel his policy for the purpose of insuring in the other company.

25. The reserve at any time on a policy is the amount which the company must have in hand so that when added to the present value of all the future net (or mathematical) premiums a balance will be made with the present value of all the future benefits under the policy.

Want to Increase Their Capitals

APPLICATIONS by two stock mutual life insurance companies to their respective insurance departments for permission to increase their capital stock precipitates anew the discussion of an old question.

It must needs be admitted by all who understand the matter that a cash capital is not an indispensable requisite to the proper transaction of a participating life insurance business; that while it is just so much added security against uncertainties in the early and more expensive years, it is a superfluity and burden after the company is established.

It is entirely proper on the part of organizers to commence business with a subscribed and paid-in capital; altho, in the nature of life insurance, it is not essential except in so far as such provision becomes an obligation by law—a piece of legislative unwisdom that merits the fullest adverse criticism. Following the evidently inspired and pernicious example set by the Legislature of New York more than a half century ago, the greater number of the States now require that newly organized life companies shall have a cash capital, the amounts varying in the different States. Under this system new mutual companies become an impossibility. And yet these same States are zealous in their efforts to uphold the principles of mutuality in other directions—a piece of inconsistency difficult of explanation.

A careful examination into the merits of the applications for permission to increase their capitals by the two stock mutual companies referred to leads to the conclusion that they should be denied, if for no other reason than that such action is not required, either in the interest of stockholders or policyholders. Both companies are in sound financial condition; policyholders' equities are amply secured, and stockholders have for many years received handsome dividends on their present investments. A reason more to the point in support of a denial of the applications lies in the fact that policyholders should not be saddled with additional burdens in the shape of stockholders' dividends for money that is not needed and cannot be used profitably on their behalf.

Financial

The First National Bank of Detroit

THE new building of the First National Bank of Detroit has just been opened. By combining with the Commercial National Bank the First National Bank becomes the largest national bank in the State of Michigan. The First National was organized in 1864 and the Commercial National in 1881. Morris L. Williams, the president of the Commercial National, has been elected president of the First National. The other officers are Emory W. Clark, vice-president, and John T. Shaw, vice-president and cashier. The net paid-in capital of the First National is $2,000,000, the surplus fund is $1,000,000, and the undivided profits are over $64,000. The total deposits are more than $15,000,000 and the total resources more than $18,600,000.

IT was announced last week that Mr. Hans Winterfeldt, some time partner in Hallgarten & Co., who is thoroly versed in railroad finance, and is now of the directorates of the Colorado & Southern Railway, the Colorado Springs & Cripple Creek District Railway, the Electrical Securities Corporation and the Swiss Bankverein of Basle, Switzerland, and London, is to be a partner in the banking house of Speyer & Co. The impending change in connection on the part of Mr. Winterfeldt will become effective on or about October 1st.

. . . . James H. Parker, who was recently elected president of the Mutual Alliance Trust Company of New York, was born and educated in North Carolina, and was in the Confederate Army. In 1870 he became interested in the cotton business in Charleston, S. C., where he remained for twelve years. He then came to New York to enter the same business. He was three times elected president of the Cotton Exchange of New York, and in 1890 became vice-president of the National Park Bank. The Mutual Alliance Trust Company has a capital of $500,000 and surplus and undivided profits of $528,500. Its deposits amount to over $4,000,000, and its total resources to more than $5,125,000.

NEW BUILDING OF THE FIRST NATIONAL BANK OF DETROIT.

. . . . The People's National Bank is the name of the new bank which has just been opened in Brooklyn on Broadway and Quincy street. The officers are George W. Spence, president; George C. Miller, vice-president, and J. B. Korndorfer, cashier.

The Old York Investment Company, Kansas City, Mo., are offering $2,000,000 ten and twenty year 6 per cent. gold bonds of the Texas Portland Cement Company.

The Independent

VOL. LXV NEW YORK, THURSDAY, SEPTEMBER 3, 1908 No. 3118

Survey of the World

Notification of Mr. Kern

At Indianapolis, on August 25th, Mr. Kern was notified that he had been made the candidate of the Democratic party for Vice-President. The address of notification was made by Mr. T. E. Bell, of California. He attacked the Republican party:

"You will be able to show that the Republican party has been unfaithful to its trust, that it has violated the most solemn commandments of the political decalog, that its use to the people has not only been impaired, but utterly destroyed by permitting its energies to become absorbed in the artificial life of the corporate creatures of their laws, and that at this time we must either make a complete surrender to corporation misrule or redeem once and for all time the heirlooms of our nation from the corporation pawnshop in which they have been hypothecated by the party in power.

"You will be able to show that the tariff is a fair example of Republican policy, that the taxing of the many for the benefit of the few has resulted in an unequal distribution of wealth, and that history supplies no instance where the unequal dispersion of wealth has not resulted in an unequal subdivision of power, which has always been used for the general expression of the masses."

Mr. Kern followed and argued that the people do not rule. He took the paper trust as an example, with the general demand for a reduction of the duty on wood pulp:

"Behold the spectacle! On one side eighty millions of free people demanding legislation to right an admitted wrong. On the other side, a few men engaged in public plunder, aided by the dominating power within the Republican party, represented by the presiding officer of the once popular branch of Congress. And the plunderers and these unfaithful public servants prevail over the people of this great republic. In this instance did the people rule?"

Mr. Bryan at Indianapolis

Two weeks ago Mr. Bryan opened his campaign by a speech at Des Moines attacking the protective tariff. Last week he attended the notification to Mr. Kern at Indianapolis, and devoted his speech to the trusts and the failure of the Republican party to exterminate them:

"Nowhere does the Republican party show its indifference to real reform more than in its treatment of the trust question.

"The Sherman anti-trust law was past eighteen years ago; it has a criminal clause which provides a penitentiary punishment for those who conspire together in restraint of trade.

"Most of the trusts have never been disturbed, and those that have been prosecuted have not had their business seriously interrupted. . . .

"In his speech delivered about a year ago announcing his candidacy Mr. Taft suggested that the present law be so amended as to permit 'reasonable' restraint of trade. Such an amendment would be as absurd as an amendment to the law against burglary limiting the law to cases in which more than two burglars entered the house at one time or took more than half they found. In his notification speech he suggests national incorporation—a remedy which would make conditions worse, because, without adding to the power of Congress to prevent monopolies, it would deprive the States of the power to protect their own people."

After quoting the Democratic trust plank Mr. Bryan said:

"Here is a plain, candid statement of the party's position. There is no quibbling, no evasion, no ambiguity. A private monopoly is indefensible and intolerable. It is bad—bad in principle and bad in practice. No apology can be offered for it, and no people should endure it. Because the private monopoly is indefensible and intolerable the Democratic party favors its extermination."

He attacked the autocracy of the Speaker of the House, who represents the Republican leaders:

"That dominant power which now guides and directs the Republican party, has on many occasions defied the President in cases where he has, on the demand of the masses, made sporadic efforts in their behalf. In some instances he has persuaded this handful of leaders to compromise on their own terms, with

the eighty milions of people whom he assumed to represent, but in most cases he has been absolutely powerless.

"That dominant leadership elects the Speaker of the House, names the committees of the Senate, and is in full charge of the ingenious machinery provided for the protection of intrenched monopoly against the demands of the people. It dictated the platform adopted by that party in its national convention this year, and, after defying Mr. Roosevelt for three and a half years, and killing or crippling nearly all his proposed reform legislation, and having received his unstinted denunciation therefor, proceeded with the finest irony to endorse his Administration, after which it dictated a committee to take charge of the campaign, and is now in full command of the party organization. . . .

"This leadership of the Republican party, responsible for all the political ills from which the country now suffers, is satisfied with the party's nominees, giving them active and substantial support, all the while shouting the praises of Roosevelt in the West and South, and damning him and his policies to the privileged 'interests,' out of which they are 'frying the fat' with which they hope to carry the election."

Mr. Taft's Speeches

Mr. Taft will not confine himself to addresses from the front porch of his brother's house in Cincinnati, as was at first proposed, but will accept a limited number of calls to speak elsewhere. Mr. Bryan will fill the weeks before election with addresses all over the country, wherever it seems a State can be regarded as doubtful. On his way from Hot Springs, Va., for a week's stay at Middlebass Island, thirty miles from Toledo, Ohio, Mr. Taft was obliged to address crowds at the stations, and at Athens, Ohio, he made a non-political speech to the war veterans and then to the Republican Club, composed largely of union laborers, and his address was devoted in large part to the subject of labor and injunctions. He reminded them that four years ago we were told that if Theodore Roosevelt was put in power he would go around this country with a chip on his shoulder and involve us in war; that he was waiting for somebody to tread on the tail of his coat in order that he might have a fight. But, on the contrary, the fact is that never before in the history of the world has a President of the United States or any administration or any emperor or monarch done more to preserve the peace of the world than has Theodore Roosevelt at the head of this administration. When he came to the question of labor he said:

"But I am asked, 'What is the relation of the Republican party to labor?' I want to make one statement first; that never in the history of this country has there been an administration that has passed more measures directly in the interest of the laboring classes than the present Republican administration."

He then enumerated the measures which the Republican party has taken for labor—the passage of the employers' liability bill, the safety appliance bills, the Government employees' compensation bill, and the bill for the investigation of mine disasters. He then continued:

"Now I come to the question of injunctions. In the first place I understand that my own personal attitude toward labor has been represented as a man who thinks and says that a dollar a day is enough for any man. Well, there is one short way of meeting that statement, and that is that it is a lie. I never said so, and I don't think that it argues intelligence in any man who believes the statement, for what under heaven would induce me or any one else to say so?

"In the second case they say I am the father of injunctions in labor cases. I have issued injunctions in labor cases; there is no doubt about that, and I have done it because the rights of the plaintiff entitle him to an injunction, and when I am on the bench and enforcing the law, I enforce it, and I don't make any apologies for it. It has been my lot to sit in labor cases and to sit in anti-trust cases. When I am a judge on the bench in so far as I can I decide cases according to the law and the facts, no matter whom it hurts, because I believe that to be my sworn duty.

"Now it has been my lot to lay down the rules with respect to the rights of labor in two or three cases, and I refer to these cases as a full statement of what I believe the rights of labor to be with reference to its employment. Labor has the right to unite in organizations for the purpose of looking after the united interest of labor in its controversy with capital, because if it did not unite and was not permitted to unite then it would be helpless. Laborers have the right not only to unite but to contribute funds which in times when they wish to leave the employ of their employer, when they did not like his terms, may support their fellow members. They have the right to appoint officers who shall control their actions if they choose. They have the right to invite all other laborers to unite with them in their controversy, and to withdraw if they choose from association with their employers, but they have not the right to injure their employers' property; they have not the right by what is called a 'secondary boycott' to invite a third person into the controversy who wishes to keep out by threatening a boycott with him unless he assists them in the fight.

"In this fight between the employer and the

employee, or the united employees, they must fight it out between themselves, and they must not involve the rest of the community in it by a system of duress. This law I believe is a fair law, and being a fair law when I was on the bench I atempted to enforce it."

Mr. Taft concluded by telling why he fully believes in the organization of labor. He will hardly make a more positive statement of his position on the subject. It has been asserted that Mr. Taft's criticism of Mr. Bryan's plan for guaranteeing bank deposits might endanger the Republican chances in Kansas and other Western States, and an effort has been made to get more definitely Mr. Taft's views on the subject. He has spoken positively. He says:

"Fundamental objection to the proposed plan to guarantee deposits in national banks is found in the fact that it puts a premium on and is an inducement to reckless banking.

"The tendency would be to induce exploitation, manipulation and the use of assets of banks in a speculative way. It would promote speculation at the expense of fellow bankers, and that ultimately means at the expense of the depositors. Any proposition as to the amount of the tax that should be assessed, as based on the present rate of loss, is on an erroneous basis, as the danger of loss of deposits is increased vastly by the proposed system, so that the percentage of the tax would have to be vastly increased."

Exoneration of Mr. Jerome

Mr. Jerome, District Attorney for the city of New York, has been made so much of a national character by his phenomenal campaign in which he has, as an independent candidate, beaten both political parties, that his exoneration of charges brought against him is of public interest. These charges were filed with Governor Hughes by a minority of the shareholders of the Metropolitan Street Railway Company, and were backed by a journal which declared that he had been false to his duty in that he had not indicted or sought the conviction of wealthy misdemeanants. The Governor appointed Judge Richard R. Hand, a most competent lawyer, as commissioner to take testimony and report to him. Twenty-six charges were presented to him, of which ten were afterward withdrawn. Judge Hand made a very thoro investigation, and reports entirely in favor of Mr. Jerome. He says:

"My conviction upon the whole case is that the respondent has been shown to have discharged the onerous duties of his office with zeal and ability, having the public good as his motive, and that no incapacity, indifference or neglect of duty has been shown in any case. . . .

"What information this committee may claim to have as to the conduct of the District Attorney, upon which they have assumed to make these serious charges of improper motive, abject veneration of mere money and the possessors of money, neglect of duty, official misconduct, conspiring with criminals, throttling prosecutions and defeating justice, we can only infer from the fact that its chairman and secretary concede their utter ignorance and seem to have signed such charges as the counsel saw fit to prepare without real knowledge even of the contents of such charges, and in absolute ignorance as to their truth or falsehood, and the counsel himself is forced to admit that he had no greater knowledge or information than they. . . .

"It seems probable to me that the temperamental qualities of Mr. Jerome have tended to bring upon him this situation, in some degree. A certain self-confidence and contempt of the opinion of other men; a certain rashness of expression to the verge of recklessness; a certain delight in the exercise of his acuteness of mind and vigor of expression, and a certain impatience of criticism have combined, I think, to make men far more eager to attack him than they otherwise would have been. But these qualities of mind are not a just occasion for such charges as have been presented here, and have no real materiality in this investigation, while the fact remains that with the publicity of his life, the frankness, not to say imprudence, of his self-expression were perfectly familiar to the people of the County of New York, and were a large part of that in him which commanded their admiration and confidence. . . ."

The Commissioner accordingly recommends that the Governor dismiss the charges, which will doubtless be done.

A Presidential Sermon

The President tried, but failed, to go unannounced last week to the little town of Jordanville, N. Y., for the dedication of a library building costing $5,000 and with less than two thousand books, of which his sister, Mrs. Douglas Robinson, is one of the donors. The President made a speech, addrest to the farmers present. He said:

"I never preach the doctrine of shirking, and I never put play ahead of work. The happiest persons are those who do well the work before them. I do not envy the idler, neither the idle son of a multi-millionaire nor the 'hobo.' I have for both intense pity, of the kind that is not akin to love, but to contempt. The hardest worked individual on the farm is likely to be the mother or wife of the

farmer. If you don't applaud that, you ought to. I believe in the farmer economizing, but on himself, not his wife. I am dead right on that. If you have got to drop some one, drop one hired man rather than the hired girl. I want to see buildings like this one used for mothers' meetings. It gives the women a chance to meet each other socially, and it puts them in better trim for work. . . .

"Fathers need the most preaching, yet frequently the mothers, who have hard lives to live, take the unwise course in attempting to benefit their daughters and sons by bringing them up free from hard knocks. Next to hardness of heart the least desirable quality is softness of heart, and the mother or father should not try to bring up their children in that way. You don't get the right stuff out of those children for the next war or you don't get decent citizens when there isn't any war. Bring them up to work, so that they shall recognize that an obstacle is not something to be shirked, but to be overcome."

Governor Fort's Threat

Since the enactment of the so-called Bishop's law requiring saloons to be closed on Sunday and otherwise restricting their freedom, the saloons in Atlantic City, N. J., have paid no attention to the law, but have been wide open at all hours. Atlantic City is the most extensive watering place on the Atlantic Coast, accessible easily to both New York and Philadelphia, and the business is entirely devoted to visitors of all sorts, and there has been a harmony of interests between the city government and the haunts of vice. A promise some months ago that the saloons would make a show of obeying the law has not been kept, and Governor Fort determined to enforce the law, threatening even that if the Sheriff was not able or willing to do so he would call for the militia. At first the saloon men laughed at the threat, but the most influential political leaders told the saloon men that the Governor was in earnest, and that they had better submit. Accordingly at a meeting of the Royal Arch, an organization of 120 saloon-keepers, it was voted to close on Sunday, and to ask the city officials to see to it that the saloons not in the organization are also closed. Accordingly Sunday was "dry" for the first time in the knowledge of the oldest inhabitants.

Various Items

It has been settled between President Roosevelt and Governor Magoon that the Cuban Presidential election shall take place November 14th, and the inauguration will be January 28th. The date will allow the sugar to be completed. Governor Magoon says there was perfect order at the elections for provisional and municipal officers; and he believes there will be a quiet Presidential election, and that it will be possible before very long to withdraw all American troops.——The last of the soldiers were withdrawn last week from Springfield, Ill., perfect order having been restored since the riot, and the more reputable citizens having secured control of the situation. Nine persons were killed during the riots, two of them negroes that were lynched, one a reputable man eighty years old, and eighty were injured. The grand jury is still finding indictments for murder and lesser offenses. Kate Howard, the woman who was a principal leader of the mob, was arrested and bailed, but rearrested, when she committed suicide by poison.——There has been for some weeks a commission gathering evidence as to the condition of the convicts under leases in Georgia. The disclosures have been so terrible, including convicts beaten to death or otherwise punished so that they died, that the feeling has become very bitter against the whole system of leasing convicts. The legislature which created the commission met in extra session last week, and received a report which described the abuses and cruelties in scathing terms, showing that the State officers appointed to protect the convicts against abuse were in the pay of the lessees. The report recommends the abolition of the lease system and the employment of the convicts on roads and public improvements. Governor Hoke Smith approves the recommendation, which is likely to be adopted.——Eastern Georgia and the Carolinas have suffered from the severe floods following a storm of three days' duration. A bridge over the Savannah River and a dam six miles above Augusta were swept away, and the river overflowed a large part of the city. The water was four feet deep in Broad street, the principal business street of the city. The city was without fire, light or police protection; and when a bad fire broke out in some warehouses the fire department could do nothing. The Union Station was under ten feet of

water, and no trains could arrive. The flood in South Carolina is the most damaging ever recorded, and the rivers are higher than ever before known. Trains are stopt everywhere, and the loss will reach millions of dollars, the crops being in many places destroyed. In North Carolina the Republican State Convention was delayed by the inability of delegates to arrive. There are reports of numbers drowned.——The contestants at the Olympic games returned last week, and on Saturday had a great reception in this city. The chief honor went to John J. Hayes, who won the Marathon race, but gold medals and silver cups were presented to the various contestants by the Mayor at the City Hall. The enthusiasm was immense and the crowds along the line of parade tremendous. Athletic and other organizations were in the parade. The fact that so many of the contestants, including Hayes, were Irish by descent added much to the enthusiasm.——The chief financial event of the week has been the action taken in the case of the large brokerage firm of A. O. Brown & Co., which tried on Saturday morning, August 22d, to save itself by enormous matched orders which might control the market. The governors of the New York Stock Exchange made sharp investigation, and the result was that the firm was compelled to suspend, and Judge Holt appointed ex-Congressman C. E. Littlefield, formerly of Maine, as receiver.

The Fleet at Sydney and Melbourne

The reception given to the American fleet in Australian waters continues to be enthusiastic, and successive ports rival one another in their entertainment of our officers and men. At Sydney a gymkhana of native sports was given at the Agricultural Show Grounds, where six Queensland aborigines gave exhibitions of boomerang throwing, and there were contests in woodchopping, buck-jumping and bullock riding. In the tug of war the teams of British sailors defeated the Americans. The honors in baseball were even, the fleet team defeating the New South Wales by 4 to 3, and the University of Sydney defeating the battleship "Missouri" by 8 to 0. In the evening 2,000 American officers and sailors were entertained by the Commonwealth at theater parties. On the following day a procession of 8,000 school children took place, with Maypole dancing, chorus singing and flag drills. The children, dressed in different colors, formed a huge shield combining the flags of the United States and Australia. On the morning of August 27th the fleet sailed for Melbourne, leaving some 80 men who were having too good a time to return to the ships, and had to be forwarded later by rail. On entering Port Philip Bay, the sixteen battleships were surrounded and escorted to the city by fishing smacks, launches, yachts and excursion boats of all kinds, decorated with American flags, and greeting the visitors with shouts, music and gunpowder salutes. Sunday was a free day, on which no formal entertainments were given. On Monday morning the formal entry of the Americans took place, 2,000 bluejackets and marines marching from Port Melbourne thru St. Kilda road to the Carlton Gardens. Banquets and theater parties were held in the evening, and a torchlight procession of 1,500 members of the city fire brigades closed the festivities. A number of excursions have been arranged, and the state, federal and municipal governments have contributed generously for the expenses of entertainments, illuminations and decorations. Some 4,500 cadets from military schools have been brought free to the capital, and the 70,000 visitors overcrowd the accommodations of the city. The fleet will leave Melbourne on September 5th. The American sailors are receiving high praise for their good conduct while on shore.

Venezuela and the Netherlands

The Dutch battleship "Jacob von Heemskerk" arrived at Willemstad, Curacao, on August 28th, and was received with great rejoicing by the people. The "Friesland" is on its way to the same port, and it will later be joined by the "Utrecht."——The steamer "Merida" of the Red D line, bound for Curacao and carrying American mails, was held up for two days at Porto Cabello, because of the refusal of President Castro to give

MULAI HAFID.
Proclaimed Sultan of Morocco.

her clearing papers. M. de Reus, the Dutch Minister to Venezuela, who was expelled by President Castro, has arrived at The Hague. He declared the report that Holland, with the support of the United States, had conspired to overthrow President Castro was a pure invention. There is, he says, no revolutionary party in existence in Venezuela at the present time. He does not regard his expulsion as an infraction of international law, but as the result of the indiscreet publication of a confidential letter that he wrote to the How en Trouw Society of Amsterdam. A second note from Jose de Jesus Paul, Foreign Minister of Venezuela, to the Dutch Government, states also that the objection to M. de Reus was entirely personal, and that the Government of Venezuela is convinced that the Netherlands will make voluntary reparation for his action when it understands the circumstances. He further complains of the action of the dismissed representative of the Netherlands as follows:

"In consequence of M. de Reus's offense against the government of this republic, the neglect of the cruiser "Gelderland" to salute the Venezuelan flag, the attack upon the Venezuelan Consul and the members of his family at Curaçao, and the desecration of the escutcheon over the Consulate at Curaçao, the Venezuelan Government finds itself obliged to declare to the government of your Excellency that so long as the satisfaction due and the reparation for the offenses and grievances referred to in this note have not been given it cannot maintain friendly relations between the two countries."

It is reported that the Dutch Government has made inquiries at London, Rome and Berlin as to the support it may expect from these countries in the dispute with Venezuela.——The Venezuelan Civil Court of First Instance has rendered a decision declaring the French Cable Company guilty of complicity in the Matos revolution against President Roosevelt in 1903, and has sentenced it to pay a fine of nearly $5,000,000 and further damages to be assessed later by the experts. This is similar to the judgment recently handed down against the New York and Bermudez Asphalt Company. The French Cable Company will pay no attention to the decision of the court. Its service has been discontinued for four years, and its interests have been entrusted to the French Government.

The Persian Revolution

So far from being able to put down the insurgents at Tabriz, the Shah appears to be powerless to check the spread of the revolutionary movement. Ain ed Dowleh, who was sent to restore order to the province of Azerbaijan, does not feel himself strong enough to make an attack upon the nationalists entrenched in Tabriz, and they have refused even to consider the Sultan's demand for their surrender. One of the nationalists who ventured to propose a reconciliation was immediately shot dead. In return the revolutionists at Tabriz sent an ultimatum to the Sultan, demanding an answer within five days, promising the admission of their party to the Government, the banishment of the reactionaries at the court, a general amnesty and the immediate convocation of a national assembly. A notification has been sent to the foreign consulates by the revolu-

tionary committee calling attention to the clause in the constitution which restricts the powers of the Shah in the matter of foreign rights and treaties, and warning foreigners that the people of Persia will not recognize or be responsible for any foreign engagements unless these are approved by the national assembly. A proclamation has been issued calling on the people to revolt *en masse* against the Shah, ending with the words: "It does not matter to us whether Shah Mohammed Ali or Sultan Abdul Hamid is our sovereign." Itinerant priests thruout the country are preaching a holy war against the Shah. All the provinces of the southwestern border, from Tabriz to Laristan, are disaffected. The city of Kerman was seized by the revolutionists after a bloody street battle. The vice governor was killed, other officials fled, and a provincial government has been established. At Sultanieh, on the road between Teheran and Tabriz, the governor was driven out, and his residence pillaged and burned. The Council of Ministers has refused to submit to the dictation of the Shah, and all the members except two have resigned. Complaints are made against the palace officials who have been selling provincial governorships because they have, in some instances, sold the same post to two different persons.

Constitutional Turkey

The new Government is preparing its program of legislation to be placed before the National Assembly. Zia Pasha, the Minister of Finance, estimates that the floating debt of Turkey amounts to $35,000,000. Parliament will be asked to authorize a loan to cover this and leave a surplus for public works. Separate elementary schools for different races will be maintained, but secondary and higher education will be given in mixt schools. Technological institutions will be established and scientific investigations be made of the natural resources of the country. A member of the Cabinet on being asked what was the program of the new Government replied: "To do just the opposite of what was done under the old régime." That the new Government is not vindictive and intentionally unjust to the officials of the old régime is shown by the speedy trial and acquittal of Habib Effendi Melhame on the charge of fraud.——Target practice has been undertaken by the artillery near Pera for the first time in thirty years. ——The formal opening of the Hedjaz Railroad to Medina was made on Monday, when a special train from Damascus bearing the Sultan's commissioners reached the Holy City in which the Prophet took refuge.——The prevailing influence of peace and good will seems to have affected even the palace. Mehmed Reshad Effendi made a visit to his brother, Sultan Abdul Hamid, at his invitation for the first time during his reign and was cordially received. Reshad is heir to the throne, and as such, according to Turkish ideas, is to be regarded with suspicion by the reigning monarch. He has been practically kept a prisoner at Constantinople and isolated from the outside world, for fear that he would head a conspiracy for the overthrow of the Sultan.——A fire in the Stamboul district destroyed over 2,000 houses and caused a considerable destruction of life.——Zia Bey, formerly head of the spy system of Turkey, has escaped in safety to London by way of Smyrna and Marseilles.——Light is gradually being thrown upon the mysterious origin of the Turkish revolution thru the revelations of its leaders. Muhammed Dumoulin, one of the leaders, now in London, has given out the following statement:

"The first meeting of the Young Turks' Society was held at Bebek, on the Bosphorus, on October 20th, 1904, at the residence of Abdul Kerim, the Sultan's private secretary. The society grew with amazing rapidity, and within a year had spread itself over the whole empire. Our opportunity came when Austria proposed to build the Novibazar Railway, which meant the dismemberment of the empire. We immediately applied to the British Government for help to put affairs in Macedonia on a sound and workable footing. The British Government deserves the everlasting gratitude of the Turkish nation for its efforts to save it from ruin."

The closing reference seems to imply some other action on the part of the British Government than that known to the world, that is, the plan agreed upon

with Russia for the restoration of order in Macedonia.

Women Admitted to Prussian Universities

A most important step in the emancipation of women has been taken by the Prussian Government in the regulations that have been promulgated by the Prussian Ministry of Education with the approval of Emperor William. A preamble to the decree states that the rapid development of modern civilization, the increasing excess of the female over the male population, and the growing disinclination on the part of men in the upper classes to marry are compelling many of the girls of the middle and higher classes to renounce all hope of fulfilling their natural vocation of becoming wives and mothers. Opportunities are therefore to be opened to prepare them not only for teaching, but also for other professions. Women students will be allowed to matriculate at Prussian universities on equal terms with men at the beginning of the coming winter semester. The higher girls' schools in Prussia will be placed upon an equal footing with boys' schools under the direct control of the Government provincial boards or supervising committees, and their teachers will be required to have the same qualifications as those in the boys' schools. The education of the girls will begin at six years, and they may take up the study of French at the age of nine and English at the age of twelve. A year later those girls who wish to take a university course may begin Latin, and will be allowed to enter the universities at the age of nineteen. Two different preparatory courses are provided for them—a modern and a classical. Those who do not wish to enter the university may, at the age of fifteen, enter upon four years of special training to become school teachers or governesses, or upon a two years' finishing course in music, languages and domestic science.

Foreign Notes

Baron Speck von Sternburg, the German Ambassador to the United States, died in Heidelburg, August 24th, from the effects of lupus on the left side of his head. He was born August 21st, 1852, in Leeds, England, and since he had an English mother and an American wife he was exceptionally well qualified to represent Germany in an English-speaking country. He had been a close friend of Mr. Roosevelt from 1898, when he was Secretary of the Embassy and the latter Assistant Secretary of the Navy.——Antoine Henri Becquerel died in Paris August 25th at the age of fifty-six. His discovery in 1896 of the rays which bear his name opened up an unsuspected field to science, the radio-active elements, and led to new theories of the constitution of matter. In working on the phosphorescence of minerals under the influence of the X-rays he found that ores and salts of uranium acted upon a photographic plate thru a screen of paper or wood. He received the Nobel Prize for this discovery in 1903.——The Japanese Government has decided to postpone for five years the International Exposition which was to have been held in Tokyo in 1912. The appropriation of $5,000,000 made by the Diet is inadequate. At least $10,000,000 more is necessary and the new Government is determined to carry out its policy of retrenchment. The Cabinet has decided to cut down expenditures by $100,000,000. Thirty per cent. of this comes off the army and 10 per cent. of the navy estimates. The British Consul-General at Seoul has surrendered to the Korean authorities the editor of the vernacular edition of the *Daily News*, who was accused of embezzling the Korean national redemption fund and who took refuge in the home of E. T. Bethel, the proprietor of the paper, claiming the extra-territorial privilege.——Abd-el-Aziz, who was defeated in his attempt to regain his capital of Marakesh and forced to retreat to Settat in disorder, is reported to have retained his courage and to be already preparing another expedition. His brother and rival, Mulai Hafid, has, however, been proclaimed Sultan of Morocco in all the cities except those under the control of the French, and it is believed that he must soon be recognized by the European Powers either individually or thru another international conference.

To Eli and Sibyl Jones

An Unpublished Poem

BY JOHN GREENLEAF WHITTIER

[I have never seen this poem of Whittier's in print. It was written on the occasion of the sailing of the Quaker missionaries, Eli and Sibyl Jones, who had charge in Palestine of schools endowed by the Society of Friends.—SAMUEL T. PICKARD.]

As one who watches from the land
  The lifeboat go to seek and save,
And, all too weak to lend a hand,
  Sends his faint cheer across the wave—

So, powerless at my hearth today,
  Unmeet your holy work to share,
I can but speed you on your way,
  Dear friends, with my unworthy prayer.

Go, angel-guided, duty-sent;
  Our thoughts go with you o'er the foam;
Where'er you pitch your pilgrim tent
  Our hearts shall be, and make it home.

And we will watch (if as He wills
  Who ordereth all things well) your ways
Where Zion lifts her olive hills,
  And Jordan ripples with His praise.

Oh! blest to teach where Jesus taught,
  And walk with Him Gennesaret's strand;
But whereso'er His work is wrought,
  Dear hearts, shall be your Holy Land.

AMESBURY, MASS.

The Muckrake Man

BY UPTON SINCLAIR

AUTHOR OF "THE JUNGLE," "THE METROPOLIS," ETC.

ALL proper-minded people are agreed that the Muckrake Man is a noxious weed; yet he seems to flourish persistently. He is a hardy plant, difficult to keep down and impossible to destroy. Apparently he possesses within him some strange conviction which enables him to withstand obloquy.

It should occur to the thoughtful person that this powerful impulse to make oneself disagreeable must be worth inquiring about. What is it which gives to this unpleasant weed its extraordinary vitality?

In setting down my interpretation of the phenomenon, I am not speaking for myself personally; I know, more or less intimately, nearly every man who is at present raking muck in America, and I believe that I am able to speak from the standpoint of the group.

The Muckrake Man takes himself with tremendous seriousness. He believes that he serves a vital function in society; that

he is no less than the faculty of recollection in the growing social mind. He is the particular nerve cell in the burned child which cries out to the child, Do not put your finger into the fire again! He represents the effort of the race to profit by experience, and to do otherwise than repeat indefinitely the blunders which have proved fatal in the past.

If you will stop for a moment and consider, you will realize that the history of humanity up to the present time represents a series of failures. Races emerge from barbarism. They are joyous and proud and strong; they struggle and conquer, they toil and achieve. They build mighty cities and temples; they found courts of law; they write literatures and produce arts. But all the time there is a worm within the bud, which gnaws at it; and just when the flower seems most perfect, its petals fall, and it is scattered and trampled into the dust.

Now, to the earnest student who realizes this, it seems a very pitiful thing. Civilizations are such costly affairs. It seems too bad that no way can be found to save them. Here and there is a man to whom this thought becomes an obsession—it will not let him rest.

He sees a beautiful world about him, with stars and flowers and all sorts of things that interest him. He knows of many things he would like to do and to be, many ways in which he could amuse himself. And yet, instead of this, he begins to go about pointing out disagreeable truths to people. He says: "See, we are just like Rome. Our legislatures are corrupt; our politicians are unprincipled; our rich men are ambitious and unscrupulous. Our newspapers have been purchased and gagged; our colleges have been bribed; our churches have been cowed. Our masses are sinking into degradation and misery; our ruling classes are becoming wanton and cynical."

This has been said in our country for a generation. Abraham Lincoln said it, for one. All earnest students knew it. But the public merely laughed incredulously.

And then comes the Muckrake Man. He says to himself, "This is a serious matter. It cannot be neglected. The people will not believe it—but I will prove it to them!"

And so he proceeds to gather the evidence.

This is a very easy part of the Muckrake Man's task—realizing how easy it is, one might wonder why the trade is not more frequently followed. The Muckrake Man suffers only from the embarrassment of riches. His greatest labor is in rejecting. In whatever field he may elect to work, he finds one universal maxim prevailing: "Everybody knows." He finds that it is sometimes possible to get the actors themselves to confess to him. Frequently they will tell him the facts without even realizing their significance. "Why, my dear fellow," said a Chicago packer to me, when I confronted him with certain matters which convulsed two continents — "everybody knows these things. They are conventions of the trade. See, here, they are printed in catalogs"—and he proceeded to show me the prices of materials for adulterating and preserving spoiled meat.

Again, I talked with a young lawyer who had been prominent in one of the big life insurance companies. "My dear fellow," he said, "there was nothing wrong in the life insurance business. It was just that the public lost its head. We have been doing those things all our lives, and we are doing them still."

Again, I talked with a judge of the Supreme Court of New York about another judge who had paid $25,000 for his nomination. "My dear fellow," he said, "don't you suppose that a political machine has bills to pay?"

Again, I talked with a society woman, whose name is a household word in this country. "My dear fellow," she said, "those things are so obvious. Why do you want to put them into a book? People will simply call it a rehash." I answered: "I will put what you have told me into a book, and it will be received with a howl of incredulity from Maine to California."

This being the situation, it would seem that the Muckrake Man would have an easy time of it; it would seem that he should speedily win the friendship of the public, in whose behalf he works. But, unfortunately, the public takes its opinions from the newspapers; and the newspapers are owned by men who profit by corruption. Hence it is that the Muck-

rake Man and his work are regarded with aversion.

You will observe that the one thing that is never done to him is to refute his statements. You very seldom hear of any attempt to disprove the statements of the Muckrake Man. I know one who for six or eight years has been publishing facts about corruption in our cities and States; and in all that time he has never been corrected but twice. Once he published an acknowledgment of a misstatement; and in the other case he said to me, "I was foolish to publish that. It is true, but it is incredible. That is where you fall down, Sinclair. You refuse to eliminate the incredible."

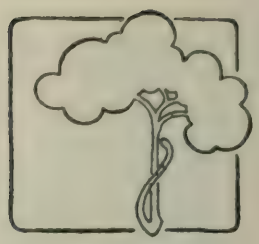
No, the editorial authority never refutes the facts; he sits aloft in his editorial sanctum and scorns to know anything about facts. Instead, he calls names.

He says, in the first place, that the Muckrake Man has an evil imagination; he has a nose for corruption, he thrives upon scandal, he hates humanity. Now the Muckrake Men I know are all men of personally clean lives and generous hearts; there is not one of them who would not have been something noble, if he had felt free to choose. Of those who come immediately to my mind, one would have been a metaphysician, another would have been a professor of ethics, three at least would have been poets, and one would have founded a new religion. Instead of that they are Muckrake Men. But they are Muckrake Men, not because they love corruption, but simply because they hate it with an intensity which forbids them to think about anything else while corruption sits enthroned.

Next, the editorial authority charges that the Muckrake Man is a money-seeker; that he gathers up other people's misdeeds and turns them into cash for his own benefit. Now, the Muckrake Man is one of the hardest-working men I know. He does not work eight hours a day, and then rest; he works all the time that he is awake—and his work has a tendency to keep him awake. He is always a man of exceptional brain power; and if, instead of writing indictments of rich corruptionists, he were writing briefs to defend them, he would be earning a hundred thousand a year, and would be a welcome guest upon steam yachts and private trains. As it is, he generally lives alone in a couple of rooms in a quiet hotel, labors for several months over an article, and then sells it for a few hundred dollars.

Next, we are told by the editorial authority that the Muckrake Man is a notoriety-hunter. Of course, if he had leagued himself with the corrupting class, and had played the game according to their rules, he might have hunted all the notoriety he chose. He might have become a magnate, and endowed libraries and charitable institutions, and been known as a great philanthropist. He might have purchased a leading newspaper, and had himself made an Ambassador, and been a guest of kings. He might have become a leading college president, or a bishop, or some other maker of public opinion, and been wined at Civic Federation banquets and hailed by all the newspapers of the country as a natural born leader. Instead of that, he goes by himself, and writes the truth relentlessly, and publishes it with grief and despair in his soul; and he is called a notoriety-hunter.

As a rule, the Muckrake Man began his career with no theories, as a simple observer of facts known to every person at all "on the inside" of business and politics. But he followed the facts, and the facts always led him to one conclusion; until finally he discovered to his consternation that he was enlisted in a revolt against capitalism.



He is the forerunner of a revolution; and, like every revolutionist, he takes his chances of victory and defeat. If it is defeat that comes; if the iron heel wins out in the end—why, then, the Muckrake Man will remain for all time a scandal-monger and an assassin of character. If, on the other hand, he succeeds in his efforts to make the people believe what "everybody knows"—then he will be recognized in future as a benefactor of his race.

New York City.

The Promise

BY HARRIET LUMMIS SMITH

WHEN Hiram Tedd, deep in the perusal of the Holy Scriptures, smote his knee and laughed aloud, his mother looked up scandalized from her knitting. But Hiram had his laugh out before he satisfied her curiosity.

"It's that there Jacob," Hiram explained, wiping his eyes. "He was foxy, all right. The old man was smart, but Jacob was smarter. He never let on that he thought he hadn't been treated right, but he got even." He leaned forward to continue the biography of his wily hero, and his zest did not savor of spiritual exaltation.

His mother's rocking-chair creaked rhythmically for a full minute before she offered any comment. "I s'pose you're likening yourself to Jacob," she observed dryly at last, "and the Widow Rice to Laban. But the widow's a good sight sharper than Laban ever was, and you've got considerable to learn before you're another Jacob. As far as the fourteen years of waiting go," added Mrs. Tedd, speaking with more than her usual deliberation, as if to give weight to her words, "I guess that's all right."

Her son's face reddened. "The widow is failing right along," he said resentfully. "She don't get to church now, even on the fine Sundays."

Mrs. Tedd sniffed. "Her Aunt Lucretia on her father's side was bedridden for twenty-seven years. She lived to be eighty-six, and the doctors began to give her up before she was fifty." The knitting needles clicked as with triumph.

Hiram ran his fingers thru his hair. His broad, kindly face, if exhibiting little of the craftiness of a Jacob, was not lacking in honest manhood. "My goodness!" he exclaimed desperately. "Sounds like I was hoping for Mary's mother to die, and the Lord knows I don't wish evil to a living creature. But as long as she says that we can't marry while she lives, it ain't in human nature not to be kind of looking forward." He sighed, resting his chin on his great hand.

"It's a pity Mary Rice is so under her mother's thumb," Mrs. Tedd exclaimed disparagingly. "If she had the spunk of a field mouse——" She checked herself at her son's gesture. Easy-going and gentle as Hiram was, there were bounds which even his mother could not cross. She had seen him roused once, and the terrible anger of a patient man was something never to be forgotten. At the memory her fingers trembled, and she dropped a stitch.

"It's the good daughters that make the good wives," Hiram declared oracularly. "But even if that warn't so, Mary Rice is the only girl in the world for me." His lips settled into the line which defied pleading and protest, and his mother, her resentment the fiercer, because it could not be spoken, knitted in silence. She was a vigorous woman, happier in making a home for her son that she was likely to be after she had relinquished her authority to another, yet she had a curious impatience to see him "settled," as she phrased it. Her motherly pride was hurt by the realization that the intimates of his boyhood were married, with children growing up about them, while Hiram must wait for death to give him the desire of his heart.

The clock had struck nine, and Hiram had gone upstairs to bed when a knock sounded at the back door. Mrs. Tedd let her knitting fall. "At this time of night!" she exclaimed, and hurried to answer the summons. A small boy stood on the steps, radiating a certain pompous dignity as of one who has been trusted with important tidings. "Is Hiram here?" he asked deliberately.

"Hiram's in bed this twenty minutes, and sound asleep as a dormouse by now. What's wanted?"

"I've got a message for him." The boy's self-respect exacted a pause at this point. Then his anxiety to tell the news

carried all before it. "My mother sent me to tell Hiram that the Widow Rice is dead."

"My land!" exclaimed Mrs. Tedd. She set down the lamp, with a sensation of being altogether to blame, of which her conscience afterward acquitted her. Self-accusingly she recalled her reference to the Aunt Lucretia who had died at eighty-six. "It's an awful thing to be wishing a body's life away," thought Mrs. Tedd, trembling with unaccustomed self-reproach. "And when I was scolding because I thought she was going to live forever, and keep Hiram out of his own, the poor thing was dying." From these unavailing reflections her mind came back to something peculiar in the message. "You said your mother sent you. I suppose Mary asked for Hiram."

"No, she didn't. When she came over for ma, ma says, 'O' course, you want Hiram.' And Mary squeezed her hands together an' she says, 'Oh, he'll know soon enough,' and then she began to cry."

"Your mother was quite right," Mrs. Tedd declared, but she understood Mary's scruples. From her own self-reproach she knew the pangs in the girl's tormented heart. "She feels as if she'd been watching for her mother to die," thought Mrs. Tedd, as she swiftly climbed the stairs to awaken Hiram. "She feels as if she'd done it herself, poor soul, and there never was a more self-sacrificing daughter in this world."

The awakening of Hiram was no easy task. The buxom little woman shook his shoulder, held the light where it would shine upon his face, and shrieked his name in his unheeding ears. Milder methods failing, she brought a dripping sponge from the washstand, and squeezed it resolutely. With a splutter Hiram sat up, the streams of water running down his face. "What's the matter? Is it morning?"

"Of course not. You haven't been asleep a half hour. The Widow Rice is dead."

"Dead!" The color left Hiram's ruddy face. Wide awake now, he stared at his mother without reply. Then a shiver shook his big body. "I feel as if I'd done it myself," he said brokenly.

"That's the way I feel," Mrs. Tedd acknowledged. "And you may be sure Mary does. Don't expect she'll act glad to see you. It's no more than natural that she should shrink away, as if you two had plotted to take her mother's life."

It was well for Hiram's peace of mind that his mother had given him the key for interpreting his sweetheart's mood, since otherwise Mary's attitude would have perplexed him sorely. She shrank from his embrace. Her eyes refused to meet his. She avoided being left alone with him for a moment. But after seven years of waiting, the most ardent lover can muster patience for a few days longer.

"You'd better give her a week after the funeral," Mrs. Tedd suggested, and Hiram did so. Then one night he drove over to her cottage with an exultant heart. The melody of an old love song rang in his ears. The waiting time was over, the mating time near. At last he had the right to claim what belonged to him.

Mary Rice greeted him with downcast eyes, and the color did not rise to her white cheeks. The hand she gave him lay cold and apathetic in his. When he would have kissed her she drew back. But even this shrinking could not change the quiet exaltation of his mood, for the waiting time was over.

"Mary," he said, without delay or preface, "for seven years I've loved you. When will you marry me?"

For the first time since her mother's death she looked full at him, and her eyes were like those of some hunted creature of the woods. "Hiram," she gasped, "I don't know how to tell you."

"Tell me what? When you'll marry me? Why, I'll save you that trouble, if you like." Hiram's laugh died in his throat. There was tragedy in the air. "If you're blaming yourself, Mary," he began.

She made a gesture of denial. "I know what you mean. It isn't that." She was nerving herself to go on. "I'm not free even now," she whispered at last. "Before mother died she made me promise something."

Her lover's eyes were on her face, and she writhed under their fixt gaze. "Don't

hate me," she implored. "She was dying and I couldn't help saying whatever she asked." She rocked back and forth as if in bodily pain, while Hiram waited, every muscle in his body tense.

"What was it?" he demanded at last. "Your promise, what was it?"

"She made me promise that I wouldn't marry while Uncle Jimmy needed me."

"Uncle Jimmy!" Hiram's cry of amazement brought the little old man briskly from the next room. "Did you call me, Hi?"

Hiram had found his tongue. "Why, this is nonsense. Uncle Jimmy will live with us. I took it for granted he'd come. You'd like it, wouldn't you, Uncle Jimmy?"

"Of course, I'm going to live with you and Hiram when you're married. What ails you, Mary?" exclaimed Uncle Jimmy, staring with amazement at his niece.

In the explanations and expostulations that followed, only one thing was made clear. The promise to her mother was paramount with Mary Rice. Whether the dying woman had acted with deliberate malice, as Hiram bitterly believed, or whether she had really been apprehensive as to her brother's welfare, in the household of Hiram Tedd, she had bound her daughter by pledges which could not be evaded. "She warn't so darned particular about my comfort while she was alive," snorted Uncle Jimmy, the tears of anger on his cheeks.

Hiram's patience gave way at last, and the storm of his anger broke. "Damn your promise," he screamed. "No woman would keep such a promise if it stood between her and a man she loved. It's all a trick," he raged, the veins of his forehead swelling in his frenzy, "You've played with me for seven years, and when you found you were caught, and there was no way out of marrying me, you made up this lie to throw dust in my eyes." He towered over her, his great hands working convulsively, as if the temptation to do her bodily harm was almost irresistible.

The girl lay back in her chair as if she had not life to shrink from a blow. "You're mistaken, Hiram," she said with gentle listlessness. "I'd rather be your wife than a queen, but I guess it's never to be. There's plenty of girls you could marry without waiting, and I'll pray with my last breath for your happiness." A tear ran from her half-closed eyes, and suddenly she found herself crushed to Hiram's heart, while he sobbed over her. "If we've got to wait, we'll wait," said the man. "But you're the only girl for me."

Uncle Jimmy was a pathetic figure as he followed Hiram to the door. "I'm so darned healthy, Hi," he cried apologetically. "and I'm not so old either, only sixty-one. But then," he added hopefully, "you can never tell. A touch of pneumonia, and that would be the last of me. And I was always careless about changing my wet shoes."

The naïve unselfishness of the little man went to Hiram's heart. "I don't know as you'll believe it," he exclaimed, wringing the other's hand, "but I hope you'll live to be a hundred."

If Mrs. Tedd's anger over the unexpected delay to her plans was less impressive than Hiram's, she did not surrender as readily as he had done. She went over to see Mary next day, resolved, as she told her son, to laugh her out of that piece of foolishness. When her efforts proved futile, she sent the minister to assure Mary that the breaking of such a promise was more commendable than keeping it. The minister readily undertook the commission. "It's an outrage for her to think herself held by such a pledge," he exclaimed. "It's no more binding than if it had been extorted under torture." But priestly absolution could not free Mary Rice. "She made me put my hand on the Bible," gasped the girl. Then, as if the words had called up the night when her new bondage began, her face turned ashen, and she sank back half fainting in her chair. The minister went away perplext.

It was to Uncle Jimmy that Mrs. Tedd's thoughts turned at last. But her plan now required diplomacy and caution. She began by asking Hiram if he meant to take Mary to the county fair the following week.

"I don't know. I hadn't thought of it," Hiram said, listlessly. He was a changed man since his disappointment. Setting himself to wait with grim resolution, he seemed to have grown years older in as many weeks. It was as if the

buoyancy and hopefulness of youth had been replaced by the weary patience of age.

"I'd go if I were you. I think Mary needs a change. She's looking very peaked," said Mrs. Tedd, stirring her coffee. "Her Aunt Betsy died of galloping consumption, you know."

The startled look on Hiram's face told her that the shot had taken effect. The next step was to buttonhole Uncle Jimmy at church and whisper in his ear, "Hiram and Mary are going to the fair, Wednesday. I want to see you about something particular. Don't speak about it to a soul, but come over as soon as they're gone."

Uncle Jimmy followed her instructions with an exactness which proved him fit to be a conspirator. Not long after Hiram's departure he made his appearance, a dejected figure. He sighed heavily when Mrs. Tedd inquired after his health.

"I'm well as ever, Sophy," he replied, in the melancholy tones of one who recounts a grievance. "I did catch a little cold at church two weeks ago, but I got over it in no time." He sighed again and took his seat in the least comfortable chair in the room, as if determined to lose no opportunity to crucify the flesh.

Mrs. Tedd sat down opposite him. "Jimmy Westhill," she exclaimed, "we've got to do something to help those children."

"I'm doing all I can, Sophy." Uncle Jimmy's voice broke in the earnestness of his protest. "I don't eat hardly nothing, tho Mary's cooking is so good that it's terrible tempting. And I lay awake nights a good deal thinking. Mary watches me so that I don't have much chance of getting into drafts, but I'm doing every living thing I know."

"Jimmy Westhill," Mrs. Tedd cried. "To my way of thinking that sort of suicide is as bad as any."

Uncle Jimmy looked at her in consternation. "But, Sophy, you said yourself——"

"What you want to do," said Mrs. Tedd briskly, "ain't to kill yourself, but to get married."

The little old bachelor jumped at the word. "Married!" he repeated and blushed ingenuously. "Land, Sophy! There's not anybody that would have me."

Mrs. Tedd made a sound of impatience in her throat. "Jimmy, it's all put on when a man makes such a speech. There never was a man who was such a poor specimen that he couldn't find a woman to have him." Then as Uncle Jimmy sat silent, apparently overwhelmed by this view of the case, she bestirred herself to help him out. "There's Almira Mears. She's got quite a good bit of property."

Uncle Jimmy cleared his throat. "Sophy, Almiry is a mighty nice woman. I ain't saying a thing against her. But I've always been kind of particular about a woman's looks. I can remember you, Sophy," continued Uncle Jimmy reminiscently, "when your cheeks were the color of Baldwin apples, and your eyes were as black as a piece of coal." He glanced at her obliquely. "And you're as good looking as ever to my way of thinking. But it don't seem as if I could bring myself to sitting across the table from Almiry three times a day."

Mrs. Tedd, while sniffing at the compliment, was not oblivious to Uncle Jimmy's closing appeal. "How'd Sarah Stockbridge do? She's good looking enough, I'm sure."

Uncle Jimmy sighed. "I always think of handsome is that handsome does when I look at Sarah. I'm a man of peace, Sophy, but Sarah's been in hot water all her life. She'd drag me into quarrels with my neighbors, and rile me till I wouldn't know myself."

Mrs. Tedd appeared nettled. "I declare, Jimmy Westhill," she exclaimed, "for a man who thought nobody would have him, you're mighty particular. Well, pick out somebody you want and ask her."

There was a pause. "Will you?" said Uncle Jimmy with sudden explosiveness.

"Will I what?" After vainly waiting for an answer, Mrs. Tedd looked hard at her visitor. He was smiling sheepishly and his withered cheeks were faintly flushed. Mrs. Tedd's amazement finally crystallized into comprehension.

"Jimmy Westhill, you don't really mean——"

"Yes, I do," exclaimed Uncle Jimmy. "Nobody else."

"The very idea! It's years since I've had the least notion of marrying!" cried Mrs. Tedd.

"Same with me till you put it into my head," acknowledged Uncle Jimmy. "But, Sophy, when I was a boy of fifteen, and thought about the wife I'd have some day, I always told myself that she'd got to be like you. And I guess the reason I never married was because I never found the woman who could hold a candle to you." A tremor of sincerity had crept into his voice. In his wiry old figure there was something suggestive of the ardor of youth.

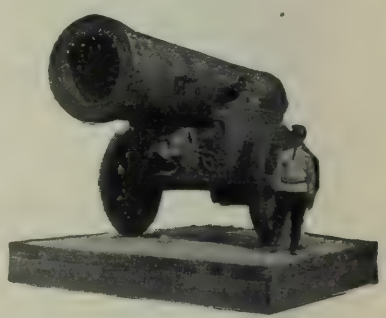
"The very idea," said Mrs. Tedd, but it was plain that she was weakening. Her eyes sought the floor. Uncle Jimmy rose from his chair and approached her; his hand touched her arm, stole around her shoulder.

"Of all things," ejaculated Mrs. Tedd in a tone that acknowledged surrender. The comely color came in her cheeks as Uncle Jimmy stooped for his kiss. "Well, anyway, it's for the children's sake."

The two sat on the porch, watching the sunset colors in the sky when Hiram's runabout came in sight. He drove into the yard and helped Mary to alight. The girl's eyes were downcast. She came forward hesitatingly, and was close to her uncle before she discovered his presence. Then she recoiled with a little cry, "Uncle Jimmy!"

Another voice spoke from the rocking chair placed suspiciously near the first. "You don't need to look so scared, Mary," said Hiram's mother with a hint of asperity in her tone. "And there's nothing to keep you and Hiram from making a match as soon as you like, for your Uncle Jimmy and I were married this afternoon."

With a cry the girl threw her arms around the neck of the older woman. Her burning cheek was prest close to that whose roses Uncle Jimmy so vividly remembered. Happy sobs delayed for a moment the whispered confession:



"So were we."

BALTIMORE, MD.

Must It Be So?

BY LEO TOLSTOY

IN the middle of the field surrounded by a wall stands an iron foundry with huge smoking chimneys, rattling chains, blast furnaces, a junction railway, and little scattered houses for the foremen and the workingmen. The workmen stir about in this factory and in the mine shafts nearby like ants. Some dig the ore from morning until night, or from night until morning, at a depth of three hundred feet underground in dark, damp, narrow, stifling passages, in constant danger of death; others put this ore or dirt on carts, with bent backs pull them in the dark to the hoisting shafts, and then take the empty carts back to fill them again. So they work twelve or fourteen hours a day all the week round.

This is the way they work in the mines. In the foundry itself they work, some at the smelting furnaces in sweltering heat, others where the molten iron and slag flow out; still others in the various shops as machinists. stokers, brick makers, carpenters, also from twelve to fourteen hours a day all the week round.

On Sunday all these people receive their wages, wash themselves, or get drunk without washing themselves in the saloons and dramshops which surround the iron factory on all sides to entice the workingmen. And early on Monday morning they put themselves in harness again for work.

Near by the peasants plow other people's fields with tired, starved horses. These peasants rise with the sun, if they have not past the night on the pasture

land, at the swamp, the only place where their horses can graze; at sunrise they return home, put their horses in harness at once, and, taking with them a piece of bread, set out to plow other people's land.

Other peasants sit on the country-road near the factory and beat stones in the shelter of a temporary bark shed. The feet of these people are battered, their hands horny, their entire body dirty, and not only their faces, hair and beards, but also their lungs, are penetrated thru and thru with lime dust.

They take a large stone from the heap, put it between their feet covered with vast shoes and wrapped in old rags, and strike upon it with a hammer until it is shivered into pieces. After the stone has been broken in this way they take the smaller pieces and hammer them until they are broken into still smaller pieces. Then they take a large stone again and repeat the process. So these people work from the gray of dawn until late at night for fifteen or sixteen hours a day, resting for two hours after their midday meal, but taking to strengthen themselves only bread and water at breakfast and other short intervals of repose.

This is the way in which all these people live, those in the mines as well as those in the iron foundry, the farm laborers as well as the stone breakers, from youth until old age. Their wives and mothers live in the same way, working beyond their strength, and in addition bearing the sufferings of childbirth and motherhood. So also live their fathers and children, poorly fed and poorly clad, overstraining themselves in excessive, fatiguing labor from morning until night, from youth until old age.

The tinkling of bells is heard and a carriage comes rolling past the iron factory, the plowing peasants, and the stone breakers. On the way it meets ragged men and women with sacks on their backs, who wander from place to place and live by alms. The carriage is drawn by four bay horses, the poorest of which is worth more than the entire homestead of each of these peasants, who regard the four-in-hand with great satisfaction. Two young girls sit in the carriage displaying their gay parasols, ribbons and feather hats, each one of which costs more than the horse with which the peasant plows his field. An officer, the galloons and buttons of his uniform dazzling in the sunshine, occupies the front seat of the carriage. A fat coachman in blue silk shirtsleeves and a velvet jacket is perched upon the box. He narrowly misses running down the pilgrim women and throwing into the ditch a peasant in a shirt covered with ore jogging along in an empty cart.

"Can't you see?" cries the coachman, raising his whip against the peasant who did not get out of the way soon enough. The peasant, frightened, pulls the reins with one hand and the cap off his head with the other. Three bicyclists, one woman and two men, spin noiselessly along a short distance behind the carriage, their nickel-plated machines sparkling in the sun. They laugh as they overtake the pilgrim women, who cross themselves in fright.

On one side off the road two horseback riders come galloping, a man on an English stallion and a woman on a palfrey. The lady's black hat and lilac veil alone, not to mention horse and saddle, cost more than a stone breaker earns by his labor in two months, and for the modern English riding-whip as much was paid as that young man, who is now walking up the path with such a contented look because he has succeeded in getting a position, receives for a week's work in an underground mine. As the young man turns out of their way he gazes with admiration at the sleek figures of the horses and the riders, and at the fat, exotic, powerful dog with a valuable collar on his neck running after them with his tongue lolling out.

This party is followed at a little distance by a cart occupied by a smiling girl gaudily dressed, with artificial locks of hair and a white apron, and by a stout, red-faced man with side whiskers and a cigarette between his teeth, sitting at the girl's side and whispering something into her ear. There is a samovar in the cart, several bundles wrapt up in napkins, and a small refrigerator.

These are the servants of the people in the carriage, on the horses and on the bicycles. It is no exceptional day for them. They live in this manner thruout the summer and go off on excursions almost every day. Sometimes, as today, they take

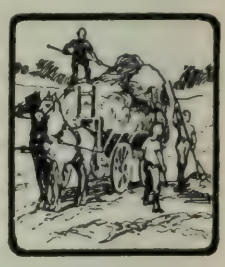
with them tea, various drinks and dainty food, so as to enjoy an occasional change and not always to have to eat and drink in the same place.

The picnickers belong to three families who live in a summer resort in the country. One is the family of a landholder who owns three thousand acres of land, the other is that of a Government official who gets three thousand rubles a year, and the third, the richest of all, is the family of a manufacturer.

All these people are not in the least astonished or moved by all the horrible conditions of labor, by all the misery that surrounds them. They think it must be so, and their minds are occupied with quite different things.

"Why, that's *awful,*" says the lady on the palfrey, as she turns to look at the dog. "I cannot bear to see it." And she stops the wagon. They all speak French with one another, laugh and put the dog in the carriage. Then they proceed on their way, raising clouds of lime dust which completely envelop the stone breakers and passersby.

The carriage, horseback and bicycle riders speed by like beings from a different world; but the workmen in the foundry, the stone breakers and farm hands continue their toilsome, monotonous labor, which they perform not for themselves but for others, and which will end only with their death.



"What a life these people have!" they think, and they follow the summer folks with their eyes, and their painful existence seems to them even more painful than before.

Must it be so?

YASNAYA POLYANA, RUSSIA.

The Farmer at Home

BY L. H. BAILEY

[Professor Bailey is director of the College of Agriculture of Cornell University, editor of the "Cyclopedia of Agriculture" and author of numerous books on agriculture and horticulture. He has lately been asked by President Roosevelt to be chairman of a commission to investigate the means for the improvement of agricultural conditions.—EDITOR.]

THE problems of agriculture are personal with the man on the land. With this individual and unattached man we must begin. The colleges of agriculture are now extending their efforts to the man at home. As an illustration of one of these efforts to understand the man and his problem, I will describe a "county agricultural survey" or census in New York. This may give the reader a view of a type of effort that is yet new, and little known to the general public.

The New York State College of Agriculture at Cornell University has long tried to extend itself to the man and to see the problems as he sees them. Many "surveys" of special industries have been made in former years, and the results have been published in expository bulletins. Recently this idea has been extended to the making of a complete census of all the farms in its own county (Tompkins), in order that the actual agricultural status may be known and judged. This county is chosen because it is near at hand, enabling the college to work out the method at the minimum of expense, and also because the region is representative of a great area of the hill country of the State. It is hoped that the inquiry may be extended to other counties. Already several counties have been surveyed in their fruit-growing relations. I speak of this work not so much to show what has been accomplished, as to illustrate the nature of the rural questions now under discussion.

The "Tompkins County Agricultural Survey" was begun in the summer of 1906, when the townships in the western part of the county were surveyed or

studied. This included Ulysses, Enfield and the eastern two-thirds of Newfield. During the summer, records of 486 farms were made in these three townships, practically every farm being visited and a record secured if possible. In the summer of 1907 Groton and Caroline townships were examined. In these two towns all the farms were visited and records of 474 farms secured. This makes a total of 960 farms studied in the two years. The work is continuing, and this year (1908) it is expected that the census of the county will be completed. When the returns are all in, complete tabulations and comparisons will be made, and the results published as a contribution to the knowledge of the actual farming conditions of a region.

An attempt has been made to secure accurate tabulated information in the following lines:

Name and age of owner of farm;
Number of tenant farms;
Amount of rent paid by tenants;
Average acre of farm;
Value per acre of land;
Amount of waste land;
Amount of timber;
Condition and extent of drainage;
The most profitable farm products;
Average yields of all farm crops;
Amount and character of all live stock, in detail;
The estimated value of farm cattle;
Total expenditures of each farmer;
Increase or decrease in soil fertility;
Increase or decrease in farm values;
Systems of rotation followed;
Condition of farm buildings and fences;
Condition of public and private roads;
And many other phases of the social and business side of farming.

It is hoped that by careful study of the records, valuable information of the following kinds, and others, may be secured:

Effect of system of farming on profits;
Effect of soil type and climate on system of farming;
The extent to which farms are improving, and why;
To what extent are farms declining or abandoned, and the reasons;
Effect of topography and transportation facilities on prosperity;
Relation to school, church and town facilities;
To apply this knowledge to the actual management of a farm in the surveyed region, and in co-operative experiments with the farmers there;
A consideration of the methods followed by the most careful farmers in various sections of the county, to aid in making suggestions of value to other farmers of the county and State, who have like problems.

Light on the Abandoned Farm Question

It is yet too soon to draw conclusions from this piece of work; but in view of the frequent statements that the region under consideration contains abandoned farms, it will be interesting to present figures of average value of land and buildings for the five townships first studied. According to the census report for 1900, the average value of land and buildings for New York State is $39.20 per acre. The figures below show the value per acre of five townships in Tompkins County. Two of these townships are in the southern half of the county, and are made up largely of hill farms of the volusia silt loam type of soil, which is considered to be of low productivity. Many of the farms are what are popularly known as "abandoned" farms. If the average for the whole county was known, the value per acre would not unlikely exceed that for the State. The average value of land in these townships, as returned by the owners, is:

Ulysses	$59.12	per	acre
Groton	45.62	"	"
Enfield	36.85	"	"
Newfield	28.57	"	"
Caroline	21.65	"	"
Average	38.26	"	"

The question is often raised as to whether farm values are decreasing in this part of New York. In order to secure accurate information, the question was included in the blanks for the townships that were studied in 1907. The figures give the percentage of farmers reporting in the different categories for the last five years; and they indicate that the rise in farm values is more general than decline:

	Increase.	Decrease.	Stationary.
Groton	64%	11%	25%
Caroline	46%	26%	28%

It will now be worth while to compare the yields of staple crops in these townships with yields for the State; these figures show that the lands are capable of good agriculture:

	Ulysses, 1905.	Enfield, 1905.	Newfield, 1905.	N. Y. State, 1905.	Groton, 1906.	Caroline, 1906.	N. Y. State, 1906.
Corn, bu...	34.0	34.5	30.0	31.0	35.5	33.7	34.9
Wheat, bu..	21.8	19.6	17.7	21.0	20.3	18.7	20.0
Oats, bu....	43.9	38.3	33.2	34.2	33.5	28.1	32.3
Barley, bu..	35.6	27.6	24.5	25.7	22.7	20.5	26.3
Rye, bu....	18.1	15.7	14.5	17.5	17.5	15.0	17.6
Buckw't, bu.	23.1	21.9	19.3	19.0	23.6	19.2	19.0
Hay, tons..	1.59	1.57	1.31	1.30	1.60	1.08	1.28
Potatoes, bu.	..	..	..	..	107.2	97.6	105.0

The question of increase or decrease in soil fertility was also raised with the farmers. Each farmer was asked how long he had lived on his farm, and whether the soil had increased or decreased in crop-producing power in the years that he had personally known the farm. Only those cases are recorded in which the farmer had known the conditions for five or more years. Many farmers had resided on the home farm for fifty years or more, but the results given in the following figures represent a knowledge of conditions for an average of about twenty-five years. The records of only two townships are given here, Ulysses and Enfield. Enfield township is often spoken of by those not familiar with actual conditions as being in a badly run down condition. If the statements of farmers who are actually running the farms are to be credited, the results seem to indicate that conditions are really improving:

	Percentage reporting increased fertility.	Percentage reporting decrease.	Percentage reporting stationary
Ulysses ...	53%	21%	26%
Enfield	60%	16%	24%

One finds good farms immediately in the so-called poor farming region. One man from two hundred acres sold in the year over $5,700 worth of produce, raised under general farming operations.

The number of acres per farm animal for these five townships was also taken. It is often stated that the number of farm animals in these hill counties is insufficient to keep up the fertility of the land. This may be partly true, yet in comparison with other sections of the State, Tompkins County is very likely up to the average. Practically the whole State needs more animals. From very accurate information at hand, it would seem that in this section general farming may be profitable if at least one farm animal is kept for each six acres of land. By one farm animal is meant a full-grown horse or cow, this being the unit. Five calves, swine or sheep are considered a unit, or two colts or heifers. The following figures show the number of acres per animal in the five townships surveyed:

Groton.....	6.08	acres	per	animal
Ulysses	7.8	"	"	"
Newfield	9.0	"	"	"
Enfield	9.05	"	"	"
Caroline	9.4	"	"	"

There is now much discussion on the condition of the farmer, founded in part on census statistics, in part on random observations, and in part on imagination. It is absolutely necessary to have the actual local facts; and these facts must be secured by a careful farm-to-farm canvass by persons who are sound and are able to judge. We must have more detailed agricultural facts than the United States Census can give us, and they must be closely correlated with the soil and farm conditions, and must often be judged by the particular farmer's personality.

This kind of definite information is needed by the teachers and investigators in the colleges of agriculture and the experiment stations, in order that their work may be applicable.

Such local data are also necessary to any real solution of the technical problems of farming. The investigator works out principles, but the application of these principles may be modified by many local conditions. He may not know what these conditions are. The farmer may not appreciate the importance of the principles. The result is that the investigator and the farmer are not able to work together to so great advantage as they might.

Surveys of many kinds are in progress by many of the colleges of agriculture. Such extension work takes the educational impulse to the farmer, and it discovers and marks the good men and separates them as local leaders. It is a quiet and fundamental way of understanding and quickening the agricultural status.

The collecting and recording of local facts is now the most necessary work in agriculture.

CORNELL UNIVERSITY, ITHACA, N. Y.

The Race War in the North

BY WILLIAM ENGLISH WALLING

"LINCOLN freed you, we'll show you where you belong," was one of the cries with which the Springfield mob set about to drive the negroes from town. The mob was composed of several thousand of Springfield's white citizens, while other thousands, including many women and children, and even prosperous business men in automobiles, calmly looked on, and the rioters proceeded hour after hour and on two days in succession to make deadly assaults on every negro they could lay their hands on, to sack and plunder their houses and stores, and to burn and murder on favorable occasion.

LINCOLN'S HOME.
He is very unpopular in Springfield just now and the house was attacked.

The American people have been fairly well informed by their newspapers of the action of that mob; they have also been told of certain alleged political and criminal conditions in Springfield and of the two crimes in particular which are offered by the mob itself as sufficient explanation why six thousand peaceful and innocent negroes should be driven by the fear of their lives from a town where some of them have lived honorably for half a hundred years. We have been assured by more cautious and indirect defenders of Springfield's populace that there *was* an exceptionally criminal element among the negroes encouraged by the bosses of both political parties. And now, after a few days of discussion, we are satisfied with these explanations, and demand only the punishment of those who took the most active part in the destruction of life and property. Assuming that there were exceptionally provocative causes for complaint against the negroes, we have closed our eyes to the whole awful and menacing truth—that a large part of the white population of Lincoln's home, supported largely by the farmers and miners of the neighboring towns, have initiated a permanent warfare with the negro race.

We do not need to be informed at

great length of the character of this warfare. It is in all respects like that of the South, on which it is modeled. Its significance is threefold. First, that it has occurred in an important and historical Northern town; then, that the negroes, constituting scarcely more than a tenth of the population, in this case could not possibly endanger the "supremacy" of the whites, and, finally, that the public opinion of the North, notwithstanding the fanatical, blind and almost insane hatred of the negro so clearly shown by the mob, is satisfied that there were "mitigating circumstances," not for the mob violence, which, it is agreed, should be punished to the full extent of the law, but for the race hatred, which is really the cause of it all. If these outrages had happened thirty years ago, when the memories of Lincoln, Garrison and Wendell Phillips were still fresh, what would not have happened in the North? Is there any doubt that the whole country would have been aflame, that all flimsy explanations and "mitigating circumstances" would have been thrown aside, and that the people of Springfield would have had to prove to the nation why they proposed to drive the negroes out, to hold a whole race responsible for a handful of criminals, and to force it to an inferior place on the social scale?

For the underlying motive of the mob and of that large portion of Springfield's population that has long said that "something was bound to happen," and now approves of the riot and proposes to complete its purpose by using other means to drive as many as possible of the remaining two-thirds of the negroes out of town, was confessedly to teach the negroes their place and to warn them that too many could not obtain shelter under the favorable traditions of Lincoln's home town. I talked to many of them the day after the massacre and found no difference of opinion on the question. "Why, the niggers came to think they were as good as we are!" was the final justification offered, not once, but a dozen times.

NEGRO HOMES.
The three to the right were looted, the three to the left were burned.

On the morning after the first riot I was in Chicago and took the night train for Springfield, where I have often visited and am almost at home. On arriving in the town I found that the rioting had been continued thruout the night, and was even feared for the coming evening, in spite of the presence of nearly the whole militia of the State. Altho we visited the Mayor, military head-

quarters, the leading newspaper, and some prominent citizens, my wife and I gave most of our attention to the hospital, the negro quarters and the jail.

We at once discovered, to our amazement, that Springfield had no shame. She stood for the action of the mob. She hoped the rest of the negroes might flee. She threatened that the movement to drive them out would continue. I do not speak of the leading citizens, but of the masses of the people, of workingmen in the shops, the storekeepers in the stores, the drivers, the men on the street, the wounded in the hospitals and even the notorious "Joan of Arc" of the mob, Kate Howard, who had just been released from arrest on $4,000 bail. [She has since committed suicide.—*Editor.*] The *Illinois State Journal* of Springfield expresst the prevailing feeling even on its editorial page:

"While all good citizens deplore the consequences of this outburst of the mob spirit, many even of these consider the outburst was *inevitable,* at some time, from existing conditions, needing only an overt act, such as that of Thursday night, to bring it from latent existence into active operation. The implication is clear that conditions, not the populace, were to blame and that many good citizens could find no other remedy than that applied by the mob. It was not the fact of the whites' hatred toward the negroes, but of the negroes' own misconduct, general inferiority or unfitness for free institutions that were at fault."

On Sunday, August 16th, the day after the second lynching, a leading white minister recommended the Southern disfranchisement scheme as a remedy for *negro* (!) lawlessness, while all four ministers who were quoted in the press proposed swift "justice" for *the negroes,* rather than recommending true Christianity, democracy and brotherhood to the whites. Even the Governor's statement of the situation, strong as it was on the whole, was tainted in one place with a concession to Springfield opinion. He said that Burton, the first negro lynched, was killed after he had incensed the crowd by firing into it to protect his home from incendiaries. But when Burton's home was attacked there had already been considerable shooting between the blacks and the whites. Moreover, according to his daughters, men had entered the house and threatened him with an axe and other weapons, while his firing of buckshot at random

MARKED HOUSES.

A white handkerchief nailed to the house indicated white people. The device of a white cross, it will be remembered, was used in the St. Bartholomew Massacre. The houses around this one were all sacked or burned and many inmates were injured.

into a mob is by no means necessarily a murderous procedure. The Governor made, then, an understatement of the character of the mob, suggesting that the negroes had lost their heads and were accepting the mob's challenge to war. It is probable that Burton was defending not his home, but his life.

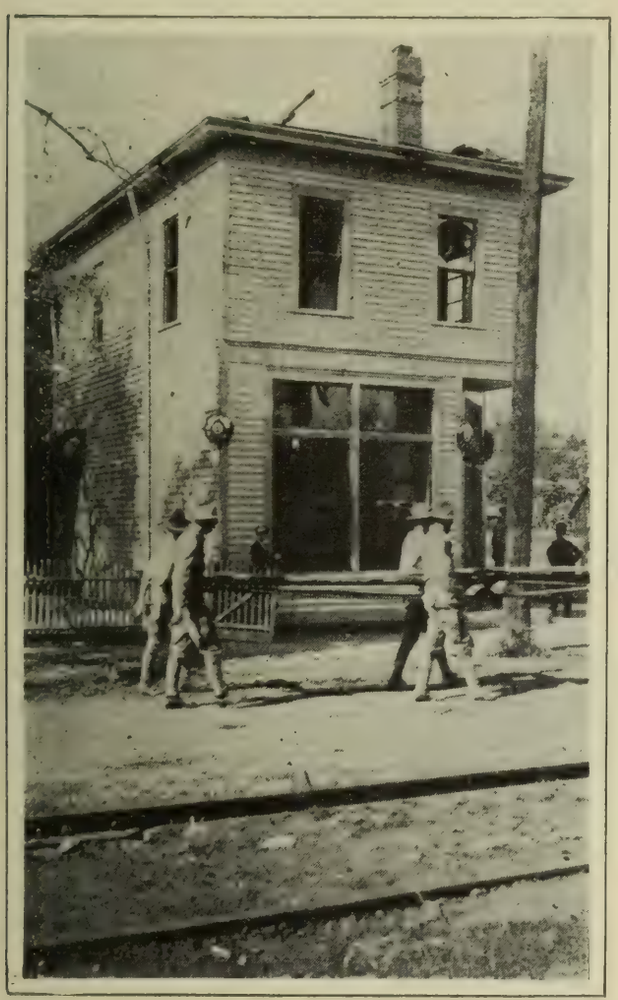
Besides suggestions in high places of the negro's brutality, criminality and unfitness for the ballot we heard in lower ranks all the opinions that pervade the South—that the negro does not need much education, that his present education even has been a mistake, that whites cannot live in the same community with negroes except where the latter have been taught their inferiority, that lynching is the only way to teach them, etc. In fact, this went so far that we were led to suspect the existence of a Southern element in the town, and this is indeed the case. Many of the older citizens are from Kentucky or the southern part of Illinois. Moreover, many of the street railway employees are from the South. It was a street railway man's wife that was assaulted the night before the riots, and they were street railway employees, among others, that led the mob to the jail. Even the famous Kate Howard had received her inspiration, she told us, from the South. While traveling with her brother in Texas and Arkansas she had observed enviously that enforced separation of the races in cars and public places helped to teach the negro where he belonged. Returning home she had noticed the growing boycott of negroes in Springfield stores and restaurants, participated in the alarm that "no white woman was safe," etc., and in the demand for negro blood. A woman of evident physical courage, she held that it was time for the population to act up to their professions, and by the cry of "cowards" is said to have goaded the mob into some of the worst of its deeds. She exhibited to us proudly the buckshot wounds in her fleshy arms (probably Burton's), and said she relied confidently on her fellow citizens to keep her from punishment.

This was the feeling also of the half hundred whites in the hospital. It was, in fact, only three days after the first disturbance when they fully realized that the lenient public opinion of Springfield was not the public opinion of Illinois or the North, that the rioters began to tremble. Still this did not prevent them later from insulting the militia, repeatedly firing at their outposts and almost openly organizing a political and business boycott to drive the remaining negroes out. Negro employers continue to receive threatening letters and are dismissing employees every day, while the stores, even the groceries, so fear to sell the negroes goods that the State has been compelled to intervene and purchase $10,000 worth in their behalf.

The menace is that if this thing continues it will offer *automatic rewards* to the riotous elements and negro haters in Springfield, make the reign of terror permanent there, and offer every temptation to similar white elements in other towns to imitate Springfield's example.

If the new Political League succeeds in permanently driving every negro from office; if the white laborers get the negro laborers' jobs; if masters of negro servants are able to keep them under the discipline of terror as I saw them doing at Springfield; if white shopkeepers and saloonkeepers get their colored rivals' trade; if the farmers of neighboring towns establish permanently their right to drive poor people out of their community, instead of offering them reasonable alms; if white miners can force their negro fellow-workers out and get their positions by closing the mines, then every community indulging in an outburst of race hatred will be assured of a great and certain financial reward, and all the lies, ignorance and brutality on which race hatred is based will spread over the land. For the action of these dozen farming and four coal mining communities near Springfield shows how rapidly the thing can spread. In the little town of Buffalo, fifteen miles away, for instance, they have just posted this sign in front of the interurban station:

"All niggers are warned out of town by Monday, 12 m. sharp.



"Buffalo Sharp Shooters."

Part of the Springfield press, far from discouraging this new effort to drive the negroes out, a far more serious attack on

our colored brothers than the mob violence, either fails to condemn it in the only possible way, a complete denial of the whole hypocritical case against the negro, or indirectly approves it. An evening paper printed this on the third day after the outbreak:

"NEGRO FAMILY
LEAVES CITY
WHEN ORDERED.

"The first negro family routed from Springfield by a mob was the Harvey family, residing at 1144 North Seventh street, who were told Sunday morning to 'hike,' and carried out the orders yesterday afternoon. The family

A LOOTED NEGRO SALOON.
Soldiers searching for dead bodies.

proved themselves obnoxious in many ways. They were the one negro family in the block and their presence was distasteful to all other citizens in that vicinity."

The tone of this notice is that of a jubilant threat. As the family left town only the day after, not on account of the mob, but the standing menace, the use of the word "first" is significant.

We have not mentioned the negro crimes which are alleged to have caused the disorders, as we are of the opinion that they could scarcely in any case have had much real connection either with the mob violence or the far more important race conflict that is still spreading geographically and growing in intensity from day to day.

The first crime is called a murder, resulting from an assault on a woman. An unknown negro was discovered at night in the room of two young white girls. The father and mother and two sons were also at home, however, and there is every probability that it was no assault but a common burglary. The father attacked the negro, was terribly cut up, and died. A few hours later a negro was found sleeping not very far away, and the press claimed that there was every evidence that he was the criminal. However, Judge Creighton, a man respected by the whole community, saw cause to postpone the case, and it was this short delay of six weeks that was used by the enemies of the negro in Springfield to suggest that the negroes' political influence was thwarting the "swift justice" of the law.

The *State Journal,* ignoring the common sense of the situation, stated editorially that Ballard, the victim, "had given his life in defense of his child," and added significantly: "This tragedy was not enacted in the black belt of Mississippi or of Georgia," and further, twelve lines below,

"Concerning him (the negro) and the questions which arise from his presence in the community, it is well to preserve silence at the present time. The state of the public mind is such that comment can only add fuel to the feeling that has burst forth with general knowledge of the crime."

The writer has been rather cautious, but has he not succeeded in suggesting clearly enough to readers of the character we have mentioned (1) that the deed was to be connected in some way with the race question; (2) that the public mind as it was, and events have since shown the world clearly what the writer must have known at that time, was justified; and (3) in directing their attention to the South as a basis of comparison?

Then what was the second crime, which occurred six weeks later, early in the morning of August 15th? This was

an assault by a negro on a white woman in her home. There is little doubt of the nature of the crime intended. But in this case there was far more doubt of the identity of the negro arrested for the crime, who was of a relatively good character. However, the victim's portrait was printed and circulated among the crowd, first as an incentive to lynch the suspected negro, then as a pretext for driving the negroes out.

As we do not lay much emphasis on these or the previous crimes of Springfield negroes, which were in no way in excess of those of the corresponding social elements of the white population, so we do not lay much stress on the frenzied, morbid violence of the mob. Mob psychology is the same everywhere. It can begin on a little thing. But Springfield had many mobs; they lasted two days and they initiated a state of affairs far worse than any of the immediate effects of their violence.

Either the spirit of the abolitionists, of Lincoln and of Lovejoy must be revived and we must come to treat the negro on a plane of absolute political and social equality, or Vardaman and Tillman will soon have transferred the race war to the North.

Already Vardaman boasts "that such sad experiences as Springfield is undergoing will doubtless cause the people of the North to look with more toleration upon the methods employed by the Southern people."

The day these methods become general in the North every hope of political democracy will be dead, other weaker races and classes will be persecuted in the North as in the South, public education will undergo an eclipse, and American civilization will await either a rapid degeneration or another profounder and more revolutionary civil war, which shall obliterate not only the remains of slavery but all the other obstacles to a free democratic evolution that have grown up in its wake.

Yet who realizes the seriousness of the situation, and what large and powerful body of citizens is ready to come to their aid?

New York City.

The Simple Life

BY T. P. O'CONNOR

[Mr. O'Connor has been a member of the British Parliament for over twenty years, and is a chief leader of the Irish party.—Editor.]

I AM strongly of opinion that the next great movement in the world of spiritual and moral reform will be the gospel of the simple life. We seem in some respects to have reached the stage in our habits and morals which was reached by Rome before the final decadence that led to the destruction of the mighty empire which she had created all over the then known world.

Luxury has increased to a gigantic extent; luxury has brought in its train looseness of morals and also some vulgarity of manners, and every day it is becoming more difficult for people of ordinary means to keep up with the expensive life now getting so common. I do not quite share in all the pessimistic views as to the extent to which these evils have gone. Indeed, there is good reason to believe that looseness and extravagance of living are less common and less widespread in certain sets now than they were a century ago.

I have never read a book on the eighteenth century which did not make me feel thankful to the destiny that had saved me from being born into that cruel, brutal, drunken and licentious epoch. As to the early days of the nineteenth century, I have been told by a member of one of our historic families that his father—who lived to a great age—exprest the opinion very strongly that

things were permitted in the days of his youth to members of the aristocracy which today would lead to ostracism by society.

But even making these deductions, and reducing the doings of the so-called smart set to their proper proportions, the fact remains that the enormous and rapid growth of wealth in the last few years has set the tide of luxury and extravagance and expensiveness flowing at a speed and with a volume unprecedented in our history.

This tide overflows far beyond the circles which it originally reached. It makes living more difficult and more expensive for the people of moderate means. One of the many ways in which this expensiveness of living shows itself is in the enormous proportions to which tipping has reached. There was a rather startling letter in the *Times* recently, which seemed to show that tipping has extended even from the restaurant and the hotel to the private house:

"Surely it is in the power of those who have a local habitation and a name in an English countryside to prevent their houses from degenerating into a kind of expensive hotel. Ugly stories are current regarding some of these privately owned hotels. It is said that the servants are not paid at all, tips constituting their entire wages. It has even been whispered that in the worst cases the servants pay for the privilege of serving, so that a part of the guests' tips go into the hosts' pockets. No doubt these are but idle rumors. But the fact that they circulate briskly is yet another proof that all right-thinking persons should endeavor to extirpate the existing system of extravagant 'tipping.'"

The correspondent recognizes that as servants are put to additional trouble by country house parties, they are entitled to presents; but the suggestion is made that this should not be done individually; rather that it should be handed to some general fund, which could be periodically distributed. So large a percentage of their earnings depend on tips that servants will decline situations in country houses where the entertaining is limited. It not infrequently happens, too, that when a host who has been in the habit of entertaining on a large scale dies, and his widow or his successor has not the same taste, the servants leave because their receipts in the shape of tips are thereby curtailed.

I have no means of knowing whether this startling indictment is true or not. I have not the privilege of paying visits to the country houses of the great, but if the statement is well founded, then, indeed, we have got a strange state of affairs, when hosts and hostesses are not ashamed to employ servants without wages, and in this way to form something like a conspiracy with them to exploit their guests. I certainly have heard that in Scotland, where men meet for sport, the fees given to the gillies reach an exorbitant amount. Nothing less than gold would be offered to or accepted by these gentlemen.

On the Continent tipping is worse than here. There the hotelkeeper, who is not a shame-faced or sensitive individual, makes no attempt to suppress or control in any way the tipping of his underpaid or entirely unpaid servants. Tho I often feel deprest about the condition of the masses of the people at home, I always feel a certain relief on seeing the very different conditions on the Continent.

Of course, the servants I mainly see are those in hotels, and heavens! how they are cruelly and wickedly overworked! I am always haunted by some of their faces. I remember an excellent creature in a Paris hotel, who, with her husband, had entire charge of a big floor. Her fine, soft, generous dark eyes shone forth from a background of a pallor that was waxen almost as death, and I heard that all the weariness which radiated—if that phrase be not an exaggeration in such a connection—from her overworked face and bent frame, was due to the terror that she could not provide for the little child she had out at nurse in the country.

One of the saddest figures I know is the portier, as he is called, at the German hotel in the big German cities. He has to remain at his post till one or two o'clock in the morning, when the last train comes in; he has to be up and about again at five in the morning, when many of the travelers are once more starting out to resume their journeyings.

Did you ever take even a passing look

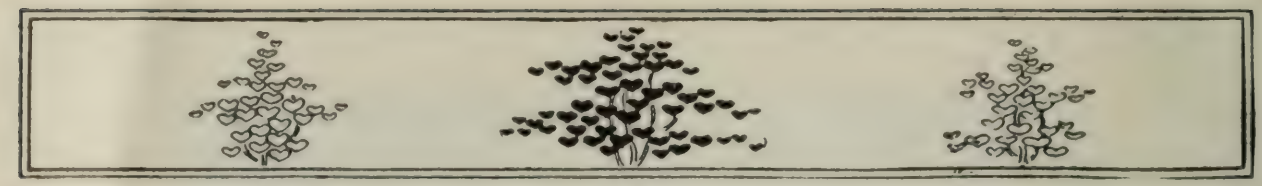
at the dog-hole in which he sleeps and eats and works? It is fetid with bad air, so that one night in it would be quite sufficient to give the ordinary man a fit of malignant fever. I could not help remarking that these poor wretches, often even at five o'clock in the morning, smell of drink. I was neither shocked nor surprised. I knew that in their case, as in the case of so many others, drink was taken to stimulate the system worn out by excessive toil and want of sleep.

Meantime, there are apostles preaching against the principal items in the self-indulgence of our modern life, and of course, like most apostles of novelties, they come from America. I saw an account the other day of a campaign started by a young medical man for the purpose of inducing people to confine themselves to one meal a day. The contention of this man was that his own people ate a great deal too much; that their three sure meals a day were responsible for most of their many physical ills; and that there was no chance of their getting sound bodies and sound minds until they took up the gospel of abstinence and strictly limited themselves to one meal a day.

This gospel has already made some way in this country also. I have a friend who is a member of the House of Commons, and who, therefore, has not the same opportunities as men leading a more tranquil life, and yet he is practising the simple life with astonishing regularity and astonishing results. One of his rules is to confine his breakfast to two apples. I was rather astonished to see him walking briskly at eleven o'clock in the morning the other day thru Regent street, knowing as I did that, except for those two apples, he had not tasted any food since eight or nine o'clock on the previous evening.

It is part of his régime to separate his eating and his drinking; in other words, he takes the dry meal; a gospel of dietary which I preached to an unlistening world a quarter of a century ago. I am bound to add that my poor friend has not up to the present helped his reputation very much by his régime. As he has to separate his drinking from his eating, he is seen at about three or four o'clock with a good-sized tumbler of whisky and soda in front of him, and at ten or half-past ten at night another jorum of the same kind stands before him in one of the smoking-rooms of the House, with the result that people who do not know imagine that he spends a great part of his days in the consumption of large quantities of whisky and soda. But he has his reward in an enormous improvement in his health. A cough which attacked him every winter for years, on which he consulted every specialist in London, and consulted them in vain, has entirely disappeared, and he looks young and strong and brisk.

Whenever I have been in the United States—and especially in the western parts of it—I have been astounded at the amount of meat which was eaten. How many times have I seen people shivering on a cold morning at four or five o'clock over the stove as they were eagerly awaiting the first meal of the day; and how I have marveled as I have seen them devouring a whole pound of beefsteak, as well as a good many other things besides, all washed down by strong tea or coffee. I am not surprised, therefore, that Americans should suffer from Bright's disease and from so many other maladies of the digestion.



It looks as if the simple life, which we could not be got to adopt by the preaching of the clergyman or the sage, is about to be forced upon us by the warning of the doctor and the fell force of disease.

Oakley Lodge, Chelsea, England.

Caspar Frederick Goodrich

who succeeded Rear Admiral Robley D. Evans, retired, as Senior Rear Admiral of the Navy, was born at Philadelphia on January 7, 1847. He was appointed to the United States Naval Academy from Connecticut in 1861, and was graduated from there in 1864. He became an ensign by promotion in 1866. By successive stages he passed through the grades until he was appointed rear admiral on February 17, 1904. He is now Commander of the Brooklyn Navy Yard. From the time he saw his first active service on the "Macedonian" at the age of seventeen in running down Confederate commerce destroyers, his has been a notable career. It has included sea service in two wars and the organization of the coast signal service. He was some time captain and president of the Naval War College, commander of both the League Island and of the Portsmouth navy yards, and in command of the Pacific squadron, during which command he extended much relief to the sufferers in the San Francisco earthquake. He also commanded the relief ship sent after the Greely Polar Expedition in 1884. He married Eleanor Milnor on September 4, 1873. She died but recently, and his son, Lieutenant Caspar Goodrich, was killed July 15, 1907, in the flareback in the turret of the "Georgia." Rear Admiral Goodrich has long been a resident of Pomfret, Conn. His house there is called "Gladwyn."

The Spring Keeper

BY BEATRICE E. D'EMO

THERE never was the least use arguing with Cornelius, the underived satisfaction from such a debate being almost productive of an attack of nervous prostration to the other party. His habit was to listen attentively, eye one mildly through his glasses, and stick to his own point of view with a pertinacity that was horribly annoying.

Althea began the morning of a fine June day by discussing, with him, the inadvisability of setting up a "spring keeper," which term, correctly translated by Tobias Bartholomew, who lived on the adjoining farm, meant to the minds of country lovers a *lizard,* small, green and of evil countenance, warranted to preserve the purity of the well water by making away with all undrinkable substances such as gnats, spiders, etc, etc.

Althea said she would prefer to swallow a whole colony of mosquitoes flanked by spiders and stand the consequences rather than risk the chance of having the lizard come up in the well bucket at unexpected moments.

"But—er—it won't, you know," said Cornelius reassuringly. "It's an awfully sensible little chap and stays down at the bottom of the well."

"Nonsense! Do you expect me to believe *that?*" Althea's most telling arguments were those punctuated by "nonsense" and "fiddlesticks."

"Not at all, rather a high degree of sense, I should say." Cornelius left his chair and came and seated himself on the porch railing opposite Althea.

"Pooh!" Althea's pursed-up lips emitted a sound intended for wordless derision, and she rocked so vigorously that she shook the petals from a crimson rambler, at the side of the porch, down on her head. "Absolute nonsense!" she again vociferated, stooping down to capture a spool of silk from the setter pup, who leaped out of ambush for it. "How can it attend to business at the bottom of the well when the gnats are performing a dance of death at the top, eh?"

Cornelius adjusted his glasses carefully and eyed her with admiring approval, for her face was flushed a rose pink and the rose petals made a pretty crowning for her hair.

"You were speaking of the lizard?" he asked, with a provokingly absent-minded expression.

"Oh, no, certainly not, there are so many other things one might talk about that frequent wells and eat spiders." Althea's intention was to be scathingly sarcastic.

"Why, it's mode of operation, my dear, is to take a flying leap, grab a mouthful of mosquitoes, and quickly descend to the bottom of the well, where it may consume its prey in peace." Cornelius's art of fabrication had been largely developed by his success as a writer of fiction.

"I will never know a happy moment after that little beast has arrived." Althea stabbed her needle thru the dragon she was embroidering on a sofa cushion with an expression of vicious pleasure.

"Too bad! I really had forgotten for a moment that we had decided to keep the lizard." A smile of satisfaction beamed from the face of Cornelius. He realized by Althea's admission that she at least anticipated the arrival of the lizard.

"But we haven't," said Althea, seeing her mistake too late.

"I'm exceedingly sorry you are taking a woman's advantage of changing your mind so suddenly, for I've already gone to the expense of buying the little addition to our happy household, and it is really disappointing to think you do not appreciate my efforts to make the well-water more drinkable. I gave Tobias

one of my most cherished pipes in payment for the creature. It was a highly ornamental pipe and the bowl was a trifle damaged, also the stem refused to draw, but if he manipulates it with a degree of intelligence—a characteristic, by the way, which I think he totally lacks—he may be able to derive moments of pleasure heretofore unrealized." All the time he had been talking Cornelius fumbled in his coat pocket, and presently produced a glass jar and held it up before Althea's gaze. The lizard, small and frightened, blinked back at her through the glass.

"Cornelius Suffield, you are positively the most aggravating man. You know I hate horrid little things like that." She pushed the pup away from her slipper toe with an angry shove, but he returned promptly and attached himself to the bow with an expression of imbecile pleasure.

"I think I shall call you Rebecca," said Cornelius, addressing the lizard, "altho it is rather a case of sex problem. Wasn't it Rebecca who tended the well, Althea?"

"It was Rebecca *at* the well, not in the well," said Althea, rather huffily.

"A small point, my dear. I think I discover a distinctly aquiline expression of nose, don't you? Yes, assuredly its name shall be Rebecca. I almost wish it was large enough to wear hoop earrings and a Roman scarf." He gave the jar a shake and the lizard darted round inside it angrily.

"Cornelius!" Althea's voice rose to a dramatic pitch. "I beg of you to put that thing out of my sight. If Mary O'Hara should dip it up in the water pail she would give warning at once, and I would begin divorce proceedings, for I simply could not keep house without Mary."

"Althea vs. Rebecca—it sounds quite smart and up to date, hey, old man?" He held the jar out to the setter pup, who, whining and yammering, backed off and sat down, with hind legs sprawling and stump of a tail beating a nervous tattoo on the porch flooring. "I don't believe you'd win the case. Rebecca's such a timid little beauty any jury would vindicate her at once." He placed the jar where the morning sunlight flashed athwart the reptile's back, causing it to glitter like an emerald.

"Ouf! ouf! ouf!" barked the puppy, inflating and collapsing his flapping jaws like small leather bellows while he wedged his awkward body underneath Althea's chair and from that place of vantage defied the lizard.

"Please, Cornelius, dear, take it away." Althea had become polite, but distant as to manner.

"With pleasure. Come on, old boy!" He snapped his fingers at the pup, who, with cumbersome agility, capered after him as he strode off in the direction of the well, Rebecca's glass house held carefully in his hand.

As predicted by Cornelius, the lizard minded its own affairs in the most circumspect manner and remained at the bottom of the well, but Althea insisted that she would yet be surprised into a fit of hysterics by the creature coming to the surface, and she pretended to hail the time with joy when she should make her mother a visit.

Cornelius regarded her assumed satisfaction concerning the prospective journey with feelings bordering on uneasiness. Never before had she seemed so willing to leave him, yet he felt it would be catering to a woman's whim to give up Rebecca—that is to say, take her from the well.

"I guess I'm getting too old for her," he grumbled to himself as he watched Althea step lightly aboard the train preparatory to starting on her visit. "At first she didn't notice it, but now she's more used to me, I probably bore her, or else she's sick of the country." Nothing would have induced him to imagine the real cause of Althea's glee at her departure.

Any other time Cornelius would have welcomed with satisfaction the all-pervading air of silence that encompassed his estate, and turned to his literary labors with renewed zest. His feelings at the present time, however, were slightly perturbed, and a wave of dismal depression swept over him simultaneously with the sound of Mary O'Hara's doomful voicing of "Barbara Allen's" fate, in the far off kitchen. In the living room, where he was wont to write with Althea contentedly sewing at his elbow, the stillness was death to inspiration, so he wandered out again onto the porch. On the western side of this veranda a summer wind, fragrant with

the perfume of clover, blew softly, causing Althea's bamboo rocker to sway to and fro as if she sat enshrined therein. A workbag of pink silk hung by ribbons from one of the arms of the chair, and Cornelius could see a scrap of the last piece of embroidery protruding from the frilled top of the reticule. As he stood looking at it almost mournfully the setter pup rose from his nap beside the rocker with a doleful wail of despair, not because of Althea's absence, but for a more poignant reason that made itself manifest just back of his left ear where his hind foot tore the fur and made him yowl the louder.

"That's precisely the way I feel, old fellow, tho not from the same affliction. Come over here, I'll scratch it for you." He sat down on the top step, and seizing the puppy by the tail drew him gently toward him, where by careful rubs and sundry well-directed pinches he silenced the outcry.

A week past, and far from Cornelius recovering his usual buoyant disposition, he became less and less reconciled to Althea's absence, and began to feel a gloomy foreboding that he was going to be ill and that she ought to be home to care for him. Mary had suddenly declared open rebellion regarding the use of well water, and told him emphatically that she'd leave rather than drink water that "pisened reptile had lived in." So, aided by the hired man, Barney, he had to go across fields to procure a water supply from a neighboring artesian well, for he knew Althea would never forgive him if she returned to find her maid of all work gone. Finally he determined to put an end to his troubles by descending into his own well and evicting Rebecca, or pretending to do so, if only to restore peace in the household.

Now the day was warm and the house of Cornelius was far from the madding crowd, and when a man goes into his own well he has the privilege of dressing according to the temperature; therefore, Cornelius donned a suit of pajamas and a long rubber coat, and by the aid of a ladder, the bucket and chain and the hired man he let himself down, down into the deep, cool place.

"U-u-u-urrrrrrrrrrrrrrh!" he shuddered as he clutched the side of the ladder and bent over to examine, by the light of his pocket lantern, the stones that formed the walls of the well. He had an angry feeling that perhaps the wily Rebecca was hiding at the very bottom of the well, where it would be impossible for him to reach her.

"Hey, Barney," he yelled presently, "throw me down a stick of some sort!" but no answering call came to him, and afar off he could hear the wickering of the horse in the stable and the excited yelping of the puppy. Then of a sudden he espied Rebecca flattened against a moss-covered stone. Reaching down he cupped the palm of his hand and gathered the small body up in it. It was moist, but suspiciously stiff. He shook it vigorously and held it up by the tail. Never a quiver disturbed the rigid pose. "Dead, by Jove!" exclaimed Cornelius, as he slipped the lizard into his pocket and gave the chain holding the bucket a jerk, which was a signal to Barney that he intended ascending. Very slowly he made his way up the ladder while the windlass whined and creaked above his head. Finally, as he neared the ledge of the well he grasped it with both hands and lifted himself upward, his sudden appearance being greeted by an exclamation loud and horrified. He had an instantaneous view of three flying figures, also of a pretty frightened face that peered for a moment into his own, then the owner prostrated herself face downward in a bed of catnip, near the well brink, and yelled lustily for help, each yell being emphasized by angry kicks from a pair of high-heeled little boots.

"What on earth's the matter?" asked Cornelius, as he quickly flung his legs over the parapet of stone and bent over the figure in white muslin that lay at his feet.

"Matter enough," exclaimed the young person, sitting up with some difficulty and looking at him with scornful disapproval. "I'll have you arrested for this, just see if I don't." A trembling finger was shaken reprovingly at him. "We wanted a drink of water from that dear old well and when we pulled up the bucket you came too, and you've frightened us almost to death."

"I humbly apologize, but it's my own

well and I have a perfect right to go down into it, I should say."

"No, you have not, unless you put out a sign that you are inside. What were you doing? I believe you were trying to commit suicide." The voice and manner reminded Cornelius so of Althea that he laughed outright.

"Never was a thought further from my mind." He leaned quite easily against the ledge of the well, and the four other female figures, that had huddled in the far corner of the porch, regarded him with interest, then slowly descended the steps, and, cautiously stepping thru the ranks of turk-cap lilies bordering the walk, approached their companion, who still sat upon the ground, pulling the ruffles of her hat into shape.

"We rang the bell, but no one answered it," vouchsafed one maidenly voice.

"Yes, and we saw the girl and man over in that cornfield trying to catch a cow. I guess it must have broken thru the bars," suggested another.

"Undoubtedly your surmise is correct; everything about the place is of an investigating turn of mind and in the habit of doing things that should not be done. Even Rebecca has had the bad grace to die in the well; she could just as *well* have died elsewhere."

"How horrid to make a pun about anything dying!" exclaimed one of the four.

"Died in the well?" asked the three others. "How dreadful!"

"Yes, it was very sad," answered Cornelius. "She was just a member of our little household. My wife never liked her. I am almost forced to believe she left home on that account."

"How dreadful!" again exclaimed the muslin-robed virgins. "Who was she, may we ask?"

"Only a poor little creature that looked after the well," answered Cornelius, enjoying hugely the effect he was producing.

"Was she pretty?" The girl seated on the ground looked up at Cornelius, brightly expectant.

"Rather, but from an artistic point of view she was more interesting than pretty. Her color was beautiful and she was frail, timid and exceedingly graceful. I'm afraid I made a mistake in taking her from her own happy home and bringing her here." He looked sadly across to the waving cornfield, where the scarlet sunbonnet of Mary O'Hara bobbed up and down like a mammoth poppy.

"I told my wife," he continued, wickedly, "that if she entered divorce proceedings simply from a ridiculous, unfounded and instinctive dislike for Rebecca, the jury would be won over by the latter's gentle manners long before the case was finished."

"I think we'd better be going." The figure at his feet rose to her own, scorning the assistance of his outstretched hand, and proceeded toward the gate.

"You're *not* going?" Cornelius asked, looking after the retreating form regretfully. "I wanted to tell you more about my poor Rebecca. She was such a tender little creature, so I brought her here to *tend* the well." He looked about him mildly, but not a smile glimmered on the faces of his audience. A demon whispered to him to go ahead and horrify the white muslins as much as possible. He remembered having the same demon interview him when he was a boy and a cat crost his path, only then he was prompted to throw stones.

"Will you not stay a little longer? Mary shall make you some lemonade from water that Rebecca did not commit suicide in." Cornelius appealed to them in what Althea chose to call his "silver tone."

"We most certainly will not." The first white muslin stalked onward, looking neither to the right nor to the left, and her air was that of a Christian martyr leading the way to a wholesale sacrifice.

Now all would have been well with Cornelius had the young women possest between them one grain of humor, but, being totally lacking in this essential characteristic, they mentally digested his flippant words and talked seriously of *"their duty"* as they wended their homeward way, with the result that before twenty-four hours had elapsed the town coroner, accompanied by the town policeman, called upon Cornelius.

That gentleman, studiously reeling off yards of manuscript in his study, looked up as Mary O'Hara entered the room to announce the newcomers.

"Confound the luck!" said Cornelius. "This stuff has got to be finished by to-morrow. Go tell them I'm too busy to sit on any case for a week."

"Is that so, now?" came a voice from the doorway, where the coroner loomed impressively large and red-faced. "Well, Mr. Suffield, we're sorry to trouble you, but you're after being wanted on a serious charge."

"A what?" Cornelius wheeled round upon his guests with a face of interest.

"You've been charged with harboring a suicide," explained the policeman, who, having tied his horse to a tree by the gate, lounged into the room.

"Harboring a suicide?" Cornelius was now entirely alert and altogether nonplussed.

"A suicide!" he repeated wonderingly.

"A suicide!" said the coroner with a decided emphasis.

"A suicide," echoed the policeman, "en you ain't reported the case to the coroner."

The coroner wagged his head severely and coughed vigorously to show his disapproval of such measures.

"I really wish you gentlemen would explain yourselves, if only to save time." Cornelius motioned them to take chairs.

"It's something about a girl you en your wife hired to take care of the well; your wife didn't like her, en the girl was so homesick she committed suicide by drownding herself in the well, en——" The policeman flushed angrily as his announcement was received by roars of laughter from Cornelius, who gave every evidence of being attacked with violent insanity.

"Can't say I see anything so jokey about it." The coroner was a man who took himself and the world very seriously, and seldom laughed.

"Where did you get this information?" Cornelius asked between shouts of apparent delight.

"Three or four young women, daughters of well-known townsmen, thought they would come into your grounds to get a drink of water outen your well, and they found you hiding inside, and when you came out you told them all about the girl Rebecca."

"Ye gods!" Cornelius went off into another sputtering roar, pounding his knees, slapping the table, calling upon the absent Althea to come home for heaven's sake before he died, and making such an uproar generally that Mary O'Hara giggled with joy.

"Shure," she said, "en it was no suicide at all, at all, for I meself clapped her on the ugly head with a board, en I guess it did for her, for she's been making trouble this many weeks."

"So the young women said you told them," exclaimed the coroner, looking sternly at Cornelius.

"Indade she was the little mischief maker. The mistress wouldn't stay at home along of her, and the well water got so bad on account of her having the bad grace to die in it I wouldn't use it, en Mr. Suffield and Barney had to be going over to Bartholomew's place aborryin' water 'till I bet he wished he'd never giv the crayture to us."

"What's *she* talking about?" The coroner indicated Mary, with a backward flip of his thumb, and waited for Cornelius to reply.

"Rebecca," was all the answer forthcoming, and even the policeman was hypnotized by the snorts and gurgles that choked Cornelius's utterance, for he grinned sympathetically.

"Well, and who the devil *was* Rebecca?" The coroner's wrath routed his dignity of expression. "First, I hear this girl committed suicide in the well; then this woman," pointing an accusing finger at Mary, "says *she* killed her by striking her on the head with a board. A pretty state of affairs I call it, in a respectable township."

"Indade, then, en I did kill her meself as she come to the top of the well afther her feed, en I'd be thinking men like you en him," waving her head scornfully at the policeman, "would be afther doing bigger work nor running about afther such a mean little thing as Rebecca." Mary's attitude was aggressive in the extreme.

"And I ask you, woman, *where this Rebecca is, dead or alive?*" The coroner's face was flushed a dark crimson, and he appeared to be suffering from internal tantrums.

"Go, go get her, Mary." Cornelius weakly waved his hand in the direction of the garden. "I buried her under the

crimson rambler by the side of the porch."

Mary disappeared for a moment, and then could be seen from the study window digging vigorously, with a small trowel, under the rosebush, and being ably assisted by the puppy, who wore a look of unnatural intelligence on his wrinkled face. All at once he gave a sharp yap of pleasure, seized something in his mouth, and went racing round and round the flower beds, with Mary O'Hara in full pursuit.

"There's Rebecca. Quick, you'd better look, for there's no telling what that puppy's going to do with her."

Cornelius caught the coroner by a fat shoulder and turned him about so that he faced the window.

"If that girl would get out of the way I might see." The coroner was adjusting a pair of brass-bowed spectacles, thru which he presently scowled furiously at the form of Mary O'Hara, who capered screaming and waving her long arms after the puppy.

"Why, I be everlastingly jiggered if 'tain't a tree toad or a 'spring keeper,'" he finally announced with an air of keen disgust.

"That's just what I told the young women who were here yesterday; that I brought Rebecca here to tend the well." Cornelius assumed a manner of intense affront and indignation as he explained briefly his conversation with the white muslins.

"You mighter knowed you couldn't make no fool talk with a parcel er women," said the coroner.

"I always hearn as how you writers was a queer lot," said the policeman, examining Cornelius with twinkling eyes.

"'Tis a wonder to me you ain't all of you in the electric chair with your imaginations. Here them girls has it all over town that there's been a suicide up here, en a nice laugh there'll be on me when I try to explain things."

The coroner stumped down the garden path, never looking to the right nor to the left, and in a few minutes Cornelius had the pleasure of seeing his late visitors retreating down the country lane on their ambling steeds.

NEW YORK CITY.

The Quaker Boy at School

BY ISAAC SHARPLESS, LL.D.

PRESIDENT OF HAVERFORD COLLEGE.

WHEN the Pennsylvania Quaker boy from the farm reached the age of twelve or fourteen years, he was sent to boarding school. There was only one possibility in the choice of a school, the school which had educated all his ancestors and the ancestors of all his playmates since 1799.

It was in the days following the Revolutionary War that this school was conceived. The Friends had withdrawn from politics. A time of war and revolution was no time for them. It was assumed that they had been sympathizers with the British, an assumption in the case of the wealthy merchants of Philadelphia probably true; but, for most of the others, true only in the negative sense that they did not approve the means taken to establish independence. They would have preferred further protest, commercial opposition and passive resistance. Their whole history revolted at the idea of war, and hence there was no place for them in the Government which they had organized under William Penn, and in which, till 1756, they had been the pervading force. Many of their young men could not be controlled, however, and preferred the active service of their country to their church connection.

The defection of the aggressive element was a serious loss to Quakerism and left the mystical, introversive tendencies, always strong, in control of the development of the society.

There was consequently one danger for the future. The farmers were prospering as never before. Great families of children were growing up, and as they reached majority were building new homes on the adjacent lands. But many

of these children had no education except such as the primary school at the meeting house afforded, and some, hardly that. The well-educated Friends of the city were the first to see the danger.

Whether John Dickinson was a member of the Society of Friends at any time of his life, is an enigma of history. His ancestors were, as were also his wife and children. There is much in the conservative and legal arguments of the "Farmers' Letters" and his appeals to the crown, and in his unwillingness to take the critical plunge into independence, to suggest Quaker influence. But he was a Brigadier General during the war, and an ardent tho cautious advocate of American ideas.

His sympathies were all with Friends, and his own well-trained youth and broad intelligence saw the danger of a community without educated lay leaders, and whose principles did not demand even of their ministers any extensive mental training. He wrote many urgent letters to waken the Friends to a sense of the danger, and when a plan for a boarding school was finally evolved, gave a large contribution to its establishment.

Associated with him was Owen Biddle. He had been a fiery patriot in war times, a member of the Board of War of Pennsylvania, a man of means and education, and withal something of an astronomer. But, as one of his friends wrote: "The age of miracles was not yet past," and when the excitement was over he went thru a period of serious repentance and made his peace with the Friends.

He drafted the plans which made the school possible. Associated with these were the Pembertons, the Drinkers, the Churchmans and others who had always kept in the strait and narrow way. The school was launched. Six hundred acres of beautiful land in Chester County, twenty miles from Philadelphia, were purchased, sufficiently inaccessible to suit the monastic idea of the time as to a proper location.

When, in the early days of railroads, one was proposed thru the tract, the influence of the school was great enough to divert it to an adjacent valley a mile away. A great brick building of harmonious proportions was erected. No musical sounds should profane its halls, nor any art lead away from simplicity; but the birds sang in the great trees and enticing vistas were opened to the cultivated fields around. The denial of the beauty of art seemed to make them more responsive to the beauty of nature.

But what could be taught in a school managed by a great committee which would inevitably be governed by its most conservative members, for the Quaker habit of waiting for practical unanimity gave, in effect, the control to the least progressive. Above the primary branches there was not much place for the staple of the day, the ancient classics. They had too many heathen allusions and influences to be safe reading for young Friends. While not entirely excluded, the boys did not think in the ideas and language of Greece and Rome. No one thought of teaching modern languages and the days of laboratory science and text-books of history had hardly dawned. It was not the Quaker idea to teach theology. The spirit of it was supposed to be drawn in with the religious services and customs of the place. No thought of making ministers introduced itself into the school, tho some of the Friends occasionally admitted that if a Divine power did create a minister, a good education might add to his usefulness outside of meeting, if not within.

There was no danger, theological or intellectual, in reading, or spelling, or penmanship, and these were taught with a success the present might envy, if not emulate. Besides this two other branches were safe and edifying. The backbone of the school was mathematics. Enoch Lewis, Benjamin Hallowell and Samuel Alsop, all authors of mathematical treatises of merit, kept up the spirit to a high-water mark. The grading of the school was based on proficiency in this one subject.

The first mathematical teacher was a premier in the school, not a principal, for that the school did not have for about a century, but a sort of a glorified first among equals. In this subject every boy went at his own pace, no rigid classification restrained the genius, or unduly hurried the plodder.

Another subject which might properly

exist in unrestrained proportion in such a school was English grammar. Lindley Murray and Gould Brown and other Quaker grammarians had blazed the way, and John Comly, John Forsythe and other lesser lights could follow. It was much learning of formal rules and notes and exceptions, and parsing of involved sentences, and correcting of imperfect ones. Some fine specimens of literature were memorized, and the classic etymologies of many common words were drilled into boys with a thoroness which made them very unpopular.

The rules given him were largely hortatory: "On awakening in the morning, endeavor to turn your thoughts toward your great Creator, the author of all our blessings," or relate to common decorum or politeness, "When strangers speak to you, give a modest, audible answer with your faces turned toward them."

He had had no chance at home against the overpowering will of his father, and the imposing governor seemed a still more formidable controller of events. Numbers, however, gave courage, and paying little attention to the excellent generalities of the committee, he soon found himself engaged in a game of courage and skill against that dreaded official. He had, perchance, been somewhat schooled in the game by an older brother, whose defeats and victories had been many times exultingly recounted in his hearing. Rules were the instruments of authority, and penalties paid the price of defeat. These were the governor's weapons, but the boy had the audacity of youth and the sympathy and aid of a hundred friends. To go to a town three miles away out of bounds and spend three cents (all he had) in cakes, was a heroic achievement, if successfully accomplished. But if, alas! he was late to dinner, and hence had to give an account of himself, it meant a week cooped in a little yard, where he could only play marbles with his fellow victims while the other boys were at ball. This was fair enough, for he knew the risk, and would have borne it patiently except for the thought of home, whither the story was sure to go.

Stolen apples, too, were wonderfully sweet, when he heroically made the great venture into the old orchard and returned with a pocketful of unripe and gnarled fruit, to be distributed as proof of his prowess among admiring friends. If he could purloin a piece of pie from the table and carry it under his jacket, again he was a hero, for he not only risked detection by his master, but also the chance of a "jam" on the stairway if his fellows knew that the contraband could be squeezed into an undistinguishable mass against his shirt.

His best chance, however, was at night. The whole great upper story of the house was full of beds, and to these, at 8.30 o'clock, after a Bible reading and a time of silence, wended the still unsubdued boys. The lights were turned out, and the governor, in felt slippers, was an unseen and unheard agent of the society for law and order. But when all was quiet and every one was asleep, this official would betake himself noiselessly to more congenial society downstairs. Here was the opportunity for which the boy near the door had been waiting. He had noted the retreating form brush past him as he hid in ambush, and after due time had elapsed to make sure of his ground, had given the signal. A rain of pillows descended on the heads of the sleepers, beds were overturned, and a delightful and exciting anarchy ruled supreme. The best must be made of it, for, in the nature of things, it could not last. The wise boy found his bed before a crisis was reached, but the luckless youth of imprudent tendencies wandered far from home, and when, in the midst of the unsuspecting rioters, the light was suddenly struck, and the governor's all-seeing eye penetrated every corner, empty beds told the tale. There was a great clearing up the next day.

The keynote of the school was "a guarded religious education." The first adjective was supposed to refer to the exclusion of un-Friendly as well as immoral influences. Only members were admitted, and the Quaker peculiarities of dress and language were enforced with undeviating rigidity. The moral standards, save at times when some unrighteous boys got in by accident, were also uncompromising, and started the

boy in life with a predisposition to truthfulness and honesty and sobriety of thought and conduct.

But every one of the committee of sixty chosen by the Yearly Meeting from among its most "weighty" members would assert that if the school failed religiously it was a complete failure, even tho the mental influences were bracing and the conduct of the boys was exemplary. Truly, when those sixty men and women visited the school, it was an impressive occasion. The broad-brimmed hats of the men surmounting the smooth-shaven face and long, straight-collared coat; the ponderous bonnets of the women, including a quiet face encased in an immaculate cap, with a "handkerchief" around the shoulders of the same ephemeral material, made an impression of saintliness not soon forgotten. And when the hour for "meeting" came, as it did twice on First-day and once on Fifth-day, and the two hundred boys and girls seated themselves on the uncompromising benches (for then only could the sexes be in the same room), with these celestial figures in the ministers' gallery in front, and a silence that could be felt gathered about the assemblage, then, if ever on earth, heaven seemed present.

The spirit of youth was awed and he heard, as from an oracle, the prayer or the preaching which presently was sounded, as if it were the voice of God, as indeed it sometimes was. The sentences might or might not be grammatical, the delivery might be natural or a chant, the subject-matter might be logical and practical or a succession of Bible phrases suggested by each other and tending no whither, but the effect of the whole was solemn. It was seldom emotional. Its burden was to induce the hearers to yield the heart to the operations of the Heavenly Guide and thereby grow in grace. These divine visitations would become more frequent and definite and potential as the result of obedience. The impulses to good were to be found within rather than without, and would become rules of life, as well as spiritual influences.

This from the committee. The teachers were more appreciative of the terrestrial factors which moved the lives of boys and dealt in more practical problems. But however far from the standards of his school life the man would stray, he would never be able, if at all spiritual, to separate himself from the profound influences of those simple and sincere religious meetings.

The men from the old school have not been prominent in any large measure in literature or statesmanship, but when a moral question is involved they are, almost to a man, right. Under untoward circumstances they stand for righteousness in politics, and the ranks of the working reformers in and around Philadelphia are largely recruited from them. Their lives are testimonials to the efficacy of "a guarded religious education."

HAVERFORD, PA.

The Feast of Liberty

BY FRANKLIN E. HOSKINS

[The Rev. Dr. Hoskins has for many years been a missionary of the Presbyterian Board in Syria.—EDITOR.]

WE are just completing one of the most exciting weeks in Turkish history. On July 22d a telegram announced the return of Said Pasha the fourth time to the office of Grand Vizier. Then followed a series of political bombshells which have shaken the Empire to its foundations and produced a state of feeling that almost beggars description. July 23d brought news of the second promulgation of the Constitution, which was strangled in its cradle thirty-one years ago, and an order for the election of deputies. This involved the freedom of the press, and there was another explosion of joy. Then followed telegrams announcing the pardon of all political exiles and the abolishing of the iniquitous spy system of the palace clique.

The city was stunned and startled, but

about the third day after the opening telegram people waked up, and by Thursday were ready for a three days' Feast of Liberty that presents the most remarkable demonstrations in Turkish history. The long pent-up feelings of the people, the smothered memories of hopes aroused at the beginning of the present reign centering about the names of Midhat Pasha, the martyr; about Said Pasha and the Constitution, burst forth like a volcano. It was a veritable resurrection of buried hopes, a genuine return from captivity.

So Beirut, like many other Turkish cities, gave itself up to a great Feast of Liberty. The city was decorated as never before with flags, garlands, branches of trees, festoons, and, as a new feature, inscriptions of a startling character. Some of the narrow streets were almost roofed over with decorations, the pavements covered with rugs, while bands of music and crowds of people surged back and forth all day long and far beyond midnight. It was as orderly a crowd as any land could boast of, and the eye searched in vain for a single individual showing signs of alcoholic drinks.

The word "freedom" was on every lip, woven into ten thousand salutations and inscribed everywhere within the decorations. Here and there appeared a grotesque perversion of its meaning. I noticed two large shops where a week ago all sorts of weapons were sold surreptitiously, decorated profusely, but more prominent than all the flags and greens was a large picture of the Sultan encircled with Martini and Winchester rifles and a dozen kinds of the latest models of villainous-looking automatic revolvers! This was freedom with a vengeance. One could not escape the grim suggestion of the way in which the reforms were obtained by the army having encircled the ruling Sultan.

The freedom of the press, guaranteed by the Constitution, was unmistakably manifest, when men wearing long aprons with "Havas" and other telegrams began to hawk the latest news from Constantinople thru the streets: "Return of the Young Turks—Constantinople populace oppose the reforms—spy system abolished—amnesty to all political exiles—hostile demonstration before the house of Izzet and others like him"—matters that no one would have dared mention above his breath a week ago! Then came the daily papers, uncensored for the first time in thirty-one years. Most of them began with a diatribe at the hated censor himself, and when he complained to the Wali he was laughed at for his pains and his lost occupation.

From time immemorial public gatherings of all kinds have been prohibited, and now, for the first time in the life of the present generation, crowds gathered at the open places and embryonic orators mounted chairs and tables and stairways, and speaker after speaker delivered impassioned addresses on the iniquities of the passing régime and the long sought liberty. But the climax came down in the public gardens in front of the palace. Every post and pillar and kiosk was brilliantly illuminated, the military band in its grand stand and tens of thousands of people listening to the oratory, which was flowing like liquid fire. Moslem and Christian followed each other in rapid succession; editors, lawyers, doctors, Government officials, officers from the army and navy, white and green turbaned scholars, all rushed forward to enjoy this long-denied privilege of free speech. They were the best known and prominent men of the community. They seemed to realize clearly that it was the army that had freed them from the thraldom of the "palace clique" at Constantinople. So plaudits for the army were long and loud, and when any of the men in uniform mounted the rostrum to speak the excitement was intense.

Only five years ago the city of Beirut was given over to mob violence, in which the desperadoes of the Moslem community gained the upper hand, and between 30,000 and 40,000 Christians fled for their lives to places outside the city. Nothing but the timely presence of three American war vessels prevented a terrible massacre. Hence the most impressive feature of the present demonstration was the vehemency, the continued reiteration of the sentiment of brotherhood of Moslem and Christian, who were to live together in peace in this new era. No such utterances were ever heard before in Turkish history. Any one predicting such a possibility a month ago would have been treated as a visionary. But here

were a hundred turbaned Moslem speakers ringing the changes on this theme until we seemed like those standing in a dream. One venerable sheikh with green turban, flowing robes and a stentorian voice, told how forty years ago the Moslem and Christian mothers used to nurse each other's children and the young men call each other brethren. Then came the awful bitterness of the present régime, which had fomented fanaticism, hatred and bloodshed. But that was now past, and in the future they were again to live together as brethren. Again and again the Moslem speakers gave the salutation "*Es-Salaam Alaikum ya akhwy*" ("Peace be unto you, O brethren"), which had been withheld from the Christians for so many years except by all but the most liberal and enlightened Moslems.

At one place in the streets was a large inscription, which versed the new spirit in a verse from the Koran beside a verse from the Bible: "The beginning is from God, victory is near"; "The beginning of wisdom is the fear of God." Then came a sentiment perhaps never written before in public: "Long live the Moslem-Christian Brotherhood," and below it, "Long live Liberty." It was almost impossible to believe our ears and our eyes. Then at many places and many times during the day, when the people caught sight of a Christian priest and turbaned Moslem in proximity to each other, they were pushed into each other's arms and made to kiss each other.

Wherever speeches were made the beginning and ending was "Let freedom live." Speaker after speaker alluded to the fact that Americans celebrated their independence on the 4th of July, the French on the 12th, and now the Ottoman's came in at the end of the same month! Only ten days ago men could neither write nor pronounce the word "liberty," and now it was rolling from a thousand tongues, the sweetest word they had ever spoken. And when a speaker gave utterance to a specially acceptable sentiment, he was interrupted by cries of "Repeat," and then the whole audience would repeat it in concert as if desirous to engrave it upon their memories. One well-known sheikh, owner of what has been the most fanatic Moslem journal, in the immediate past, made an impressive appeal to all the orators of the evening to send their speeches to his press, where they would be printed in a volume, "lest we forget what has happened tonight"!

On Thursday evening the military men kept open house and gave sherbets and cigarets to all the city in front of their quarters. The next evening the civil officials did the same. But perhaps as striking as any other demonstration was that of the rougher characters of the Moslem community, who for ten years and more have kept alive a bloody vendetta with the Christian roughs of one of the suburbs. On the first day of the feast the Moslems marched with banners up to the Christian quarter, met and embraced their Christian opponents (among both parties were many whose hands were stained with blood), and invited them to a feast of fraternity, and actually served them at long tables in the square in front of the palace. This sight drew tears from many eyes, for among the spectators were those whose sons and brothers and fathers had been slain in this bitter feud, and others whose children were exiles from fear and from false charges registered in the Government records not a hundred yards away.

On Sunday the largest and most remarkable demonstration took place in the Armenian church among the bazars. The commander of the troops and many of the officers, together with the military band, were present. The bishop, many of the priests, many more of the Moslems, made fraternal speeches, in which all bewailed the awful events of the present reign in Armenia, and welcomed the new era, in which there was to be liberty, equality and fraternity, ending the so-called Armenian question forever!

Whatever the immediate or more remote future may bring forth in the Empire—and we are sure that many startling events are yet to transpire—this week of marvelous sights and unheard-of utterances, with its triple festival in which all classes and religions have mingled so unexpectedly, will leave impressions and memories that can never fade from the minds and hearts of this present generation.

BEIRUT, SYRIA.

Literature

More or Less Historic Romance

THE historical novel proper appears to have given place entirely to the romance, whose only connection with history is the laying of its scene in the more or less remote past. The stock in trade of this brand of reading matter is common property now, very common indeed, with recurrent preferences, however, for certain models that, having often been tried, are easily imitated once more. No need here of spending time and labor in original research: atmosphere and background can be readily conveyed from the last two or three stories of the same kind just preceding; indeed, it is possible that, by much repetition, they may have been absorbed by the memory, to be produced at will.

LADY RANDOLPH CHURCHILL.
The Century Co.

One of the most easily repeated models in this genre is that of the Stuart romance. It never varies in its essentials, whether it be of Charles "the Martyr," of his son, of the Old Pretender, or of "Bonnie Prince Charlie," with, if a comparative novelty be aimed at, James II always ready in reserve. Here are well-beaten paths of romance, indeed, plots, characters, and all! If it be Charles I, why, there's Cromwell to hover near him in the background, as their respective followers fill in the foreground, generally in a most romantically unhistoric distribution of light and shadow. If it be James II, "Dutch Billie" must inevitably suggest the lines along which plot and counterplot are to run. What would a tale of the Chevalier of St. George be without Scotland and Glencoe? And when it comes to Prince Charlie, of course, there is his weakness for pretty faces; Thackeray did not write in vain.

And now to work. Of a septet of recent stories of this kind, no less than three deal with the Stuart motifs, one, *My Lady of Cleeve*,[1] with James and William III, the other two, *The Sword of Dundee*[2] and *The Fair Moon of Bath*,[3] with the Young Pretender. All three are love stories with the usual obligato of adventure and sword play; none is historical in any serious sense of the word. The covers of all three books are adorned with pictures of women, which is most appropriate, since it is indicative of the nature of their contents. The heroine of the first is haughty, a spirited shrew of a Jacobite, to be tamed by the King's officer, whom she defies. She of number two is a winsome Scotch lassie, displaying high heroism in the service of her idol on his flight to the coast after Culloden. The newest maid of Bath, her contemporary, is demure, maidenly, but steadfast in her faith in the lover who is suspected of having stolen despatches dealing with Charlie's descent upon London at the very time when he was fascinating the maid of the clans in the north. As *variations sur des thèmes connus*, these books are not bad. Quite the contrary, they have their merits. Others just as good have preceded them; still others of exactly the same quality will succeed them next year, when they shall be forgotten.

Whenever Mr. Justin Huntly McCarthy writes a new novel, we know that a new play from his pen is on the way. This time he has chosen to remodel that once famous melodrama, *The Duke's Motto*,[4] which used to set the hearts of our maiden aunts aflutter in the days

[1] MY LADY OF CLEEVE. *By Percy J. Hartley.* New York: Dodd, Mead & Co. $1.50.
[2] THE SWORD OF DUNDEE. *By Theodora Peck.* New York: Duffield & Co. 12mo. $1.50.
[3] THE FAIR MOON OF BATH. *By Elizabeth Ellis.* New York: Dodd, Mead & Co. 12mo. $1.50.
[4] THE DUKE'S MOTTO. *By Justin Huntly McCarthy.* New York: Harper & Bros. $1.50.

when we were young—quite young. Mr. McCarthy has done wisely and well; they knew their business, these French melodramatists of the middle of the last century. It is likely that the play, adroitly revamped, may have a new lease of popularity. The book leads us to expect this.

Ruritania, Graustark and the demesnes that thereunto adjacent lie are as familiar to us as the France of Louis XIII, or the England of the Stuarts. The author of "The Colonel of the Red Hussars," following Mr. Hope's example, has written a sequel to that successful story in *The Princess Dehra*,[5] dealing with the death of the old King of Valeria and the struggle for the throne between his American kinsman and the wicked pretender, with the Princess as the real prize between them. Villainy, murder, conspiracy, it is all here as it has been served up to you many a time before, as you have every right to expect it. Mr. Theodore Roberts's *Captain Love*[6] is the story of a man who has lost his memory, and is seeking to recover his identity. That all this happens in eighteenth-century England, the England of highwaymen, roisterous blades and high play, but makes the story more picturesque. If not a novelty, it is at least done with considerabl zest.

The book of these seven that alone deserves serious attention has been kept for the last. *Weeping Cross*[7] is not the ambitious success its author has aimed at, but it is a serious piece of work, creditably carried thru. These memoirs of the Irish bond servant in Puritan New England, relating his great love, and his adventures with the Jesuit Fathers, contain a promise of better things to come.

Recent American Fiction

A VENERABLE English anecdote relates that Turner, having finished the most flaming of his sunsets, called in his housekeeper to admire it. "I never saw a sunset like that," was her comment. "No," answered the painter, furiously, "but don't you wish you could?" The anecdote applies to Alfred Henry Lewis's Westerners and their picturesque speech. It may be an invention, or, at least, a literary tradition evolved from a modest modicum of fact, but it is certainly vastly entertaining. Why should fiction not adorn truth for once? We like these gentlemen of imaginative, figurative speech, and welcome *Wolfville Folks*.[1]

What fills the heart of the mere male with gratitude toward Mrs. Mary Stewart Cutting, in these days of the airing of the married wrongs of the women, is her clear perception of the part of the burden of conjugal life that falls upon the man's shoulders. One may like her short stories better than her novels, in one way, but it must be said that in *The Wayfarers*,[2] as elsewhere, her vision is clear. She presents understandingly both sides of a very intricate problem of human existence.

In Edwin George Pinkham's *Fate's a Fiddler*[3] one is struck most of all by the remote, perhaps unconscious, but none the less unmistakable, influence of Dickens. Plot and character, and attitude toward life, all are reminiscent. The book is rather well done, but one doubts if it was particularly well worth doing. *The Master Influence*,[4] by Thomas McKean, deals with New York Society with a capital S, with a love that reason cannot conquer with wickedness and many other things. It is a mere coincidence that Caruso sings in one chapter and the Black Hand begins to send blackmailing letters to a Fifth avenue club immediately afterward. Plot, and plenty of it, is Mr. McKean's preoccupation.

The woman holds the middle of the stage in what should be pre-eminently a man's book—Ada Woodruff Anderson's *The Heart of the Red Firs*,[5] a tale of the Puget Sound country in the period of its settlement. The woman proves worthy of the rôle assigned to her. Anna Chapin Ray's *Quickened*[6] is the story of the conversion of a Protestant, the descendant of Puritans, to Roman Catholicism. The

[5] THE PRINCESS DEHRA. *By John Reed Scott.* Philadelphia: J. B. Lippincott Co. $1.50.
[6] CAPTAIN LOVE. *By Theodore Roberts.* Boston: L. C. Page & Co. $1.50.
[7] WEEPING CROSS. *By Henry L. Stuart.* New York: Doubleday, Page & Co. $1.50.

[6] QUICKENED. *By Anna Chapin Ray.* Boston: Little, Brown & Co. $1.50.

conversion is due in part to love of a woman, in part to religious influences. This is a mighty theme; the author fails to handle it convincingly. She only tells us that it happened.

The "Author of 'The Garden of a Commuter's Wife'"—why this cumbersome way of describing her?—furnishes us in *The Open Window*[1] with twelve tales "of the months," good work all of them, each with a bit of observation of life in it, and with here and there a line of interpretation.

Some English Novels

A COMPARISON of the current minor fiction of England and America results in a verdict favorable to the work done across the water, which continues to bear evidence of the influence of literary traditions, conscientious striving after the fulfilment of artistic requirements, while with us more immediate results are aimed at—timeliness, if not always mere salability.

One welcomes with unalloyed delight such a charming newcomer as Edward C. Booth, whose *The Post-Girl*[1] joins to freshness of atmosphere an artistic touch, a technical felicity, which, gracefully light in its comedy, lacks neither poetry nor strength in its sentiment. It is a love story—the oldest kind of story—but it is fresh and hopeful and smiling as the springtime of life; the charm of its heroine is her own, not the traditional quality of the heroines of fiction, while in Father Mostyn, the village vicar, the author has created a figure that one can like heartily and enjoy artistically. It is, indeed, this light literary quality of the book (no easy achievement, one wagers) that will recommend it to those whose days of susceptibility to the romance of youth and love have grown dim.

Last year M. P. Willcocks attracted some well-merited attention with "The Wingless Victory," a novel that was described in these columns as the grafting of an Ibsen plot upon a Thomas Hardy environment. This author's new novel, *A Man of Genius*,[2] cannot be said to be as felicitous in story or character drawing as was its immediate predecessor, which, one is tempted to believe, it may have preceded in the writing, if not in the publication. It is good, conscientious work, but it fails to convince, chiefly, but not only, because the Man of Genius does not convince one of his possession of the

COPYRIGHT, 1908, BY F. A. STOKES CO.

MISS MARIE CORELLI,
Author of "Holy Orders."

divine quality, the most difficult attribute of a fictional character to handle.

Frank Danby's *The Heart of a Child*[3] has had its brief season of popularity across the water. It is a clever book and an entertaining one, and a welcome one for its wholesome tone, rather unexpected from the writer of "Pigs in

[1] THE OPEN WINDOW. *By the Author of "The Garden of a Commuter's Wife."* New York: The Macmillan Co. $1.50.
[1] THE POST-GIRL. *By Edward C. Booth.* New York: The Century Co. $1.50.
[2] A MAN OF GENIUS. *By M. P. Willcocks.* New York: John Lane Co. $1.50.
[3] THE HEART OF A CHILD. *By Frank Danby.* New York: Macmillan Co. $1.50.

Clover," not to mention her amazing performance of a couple of years ago. A music-hall artist who marries a peer is a legitimate object of British interest. If she be morally worthy of her rise, she will attract the great American public as well.

The grafting of the Continental European application of reason to the making of marriages upon the Anglo-Saxon faith in "love" alone is the subject of Ernest Oldmeadow's new story, *Aunt Maud*,[4] which is ingeniously planned and plausibly worked out. It is a sensible book for young girls, but it does not probe very far into the subject. It leaves us at the threshold of the married state. Constance Smedley deals lightly and airily, without seriousness of purpose, with the emancipated young woman and her puzzling lack of well-established relation toward her parents and society in *The Daughter*,[5] throwing in the suffragette agitation as a timely fillip.

A little irritating at first in its insistence upon the outward and inward hallmarks of aristocracy—just on the verge of snobbery, in fact—L. Allen Harker's *His First Leave*[6] improves as the story progresses, and turns out to be a happy mixture of the familiar English "county people" novel and wholesome sentiment. There is an innocuous touch of Kipling's Anglo-Indian society, and a not unwelcome reminiscence of the Duchess. A readable little story for women.

A book to be read most of all for its clever studies of Sicilian and Italian types is John Ayscough's *Marotz*.[7] One may be but languidly interested in the book as a whole, but he cannot help liking the parts of which it is constructed.

The Avenger. By E. Phillips Oppenheim. Boston: Little, Brown & Co. $1.50.

Mr. Oppenheim hits the bull's eye of popular taste with the certainty of a marksman who has fixt his rifle in a vise. He has always the same success at chaining sensations together and hiding one mystery inside another. Unlike most detective stories his plots are not mechanical and his people not marionettes. The reader who has the Oppenheim habit will follow *The Avenger* from the murder in the first chapter to the suicide in the last with as much interest as he has any of the preceding seventeen of the author's novels.

The Voice of the City. By O. Henry. New York: The McClure Co. $1.50.

Mr. O. Henry might well have chosen the title of his latest book, *The Voice of the City*, for his own pseudonym, as it has been his special self-appointed task to interpret New York to itself, and to speak for the silent majority of its "four million" citizens. Some of the twenty-five short stories collected in the present volume are in his best vein. "A Lickpenny Lover," "The Memento" and "The Plutonian Fire" strike a deeper note than that of the mere rollicking gaiety which characterizes most of the slight tales. We would warn Mr. Henry against overproduction were it not for the fear of missing by unhappy chance some rare bit of *genre* cameo, cut from life. Almost any one would gladly sort over a bushel of oyster shells for a handful of pearls, and the present critic is no exception.

SIDNEY PORTER ("O. HENRY").
Author of "The Voice of the City" and "The Gentle Grafter."

[4] AUNT MAUD. *By Ernest Oldmeadow.* New York: McClure Co. $1.50.
[5] THE DAUGHTER. *By Constance Smedley.* New York: Moffat, Yard & Co. $1.50.
[6] HIS FIRST LEAVE. *By L. Allen Harker.* New York: Charles Scribner's Sons. $1.50.
[7] MAROTZ. *By John Ayscough.* New York: G. P. Putnam's Sons. $1.50.

The Firing Line. By Robert W. Chambers. New York: D. Appleton & Co. $1.50.

Mr. Chambers has made a slight change in the stage setting of his dramas of fashionable life. Instead of the scene shifting to Europe from New York, the characters in his latest novel move from Palm Beach to the Adirondacks, giving the author an opportunity for painting the contrasted pictures of the palm and the pine, or, at least, of the palmetto and the maple; and at the same time affording his hero an equal opportunity of earning his caviare and truffles by landscape gardening on the estates where the idle rich, whom Mr. Chambers loves, spend winters and summers of content or discontent. His hero is far from idle; his half hero is one of those cynical and insouciant young men who have fascinated generations of schoolgirls, from Eugene Wrayburn to Louis Malcourt. The heroine, Shiela, is one of the beautiful and impulsive young girls whom we have learned to expect as Mr. Chambers's own. They are always superlatively innocent and frank, and, in the case of this particular heroine, inclined to make much unnecessary trouble for everybody, herself included, thru a supersensitive social conscience. She violates conventionalities, or abases herself before them, with a young-girlish inconsistency very exasperating to the sensible reader. But if heroines behaved sensibly where would be the novels? In *The Firing Line* Mr. Chambers shows again his antipathy to divorce, preferring to kill off his most interesting character rather than to allow Shiela to divorce her husband, even for

ILLUSTRATION FROM "THE FIRING LINE" (CHAMBERS).

the best of reasons. This view is in sharp contrast to that of Mr. Herrick and Mr. Phillips in their recent novels. *The Firing Line* is not so good a novel as "The Fighting Chance," because it lacks the uplift of a great moral victory, altho the author may have intended to portray one. But Mr. Chambers does not know how to be dull, and this latest novel is no exception to the facility of his style and unfailing invention.

The Shoulders of Atlas. By Mary E. Wilkins Freeman. New York: Harper & Brothers. $1.50.

Mrs. Freeman is the Muse of the New England conscience, which has been described vulgarly, if not inaptly, as "big as a barn." In many rural communities the barns are so much larger than the houses that the passing stranger has wondered why the farmers did not move into their barns to live. A New England woman, having a conscience several sizes larger than the rest of her mind, she has usually moved into it and lives there. Any disregard of a conscience of that size, and tragedy is inevitable. Sylvia Whitman, in Mrs. Freeman's latest novel, *The Shoulders of Atlas,* has a conscience which weighs her down as horror of debt does the slender, bowed shoulders of her husband, Henry Whitman, and various burdens oppress the other characters of the book. One of the heaviest burdens is heaped upon the slight shoulders of a very young girl,

> "a burden that has been gathering weight since the first creation. . . . It may bend innocence into guilt and modesty into shamelessness, but there is no more reason for condemnation than in a case of typhoid fever. Any man of good sense and common Christianity should take that view of it."

However, a morbid heredity, whether of an abnormal conscience or of no conscience at all, is not so easy to cure as typhoid fever, and the story of these interlaced lives in a little New England village darkens into tragedy. That the tragedy is relieved by scenes of gentle comedy and many flashes of keen insight into New England folk ways is only to say that this novel outranks "Jerome" and "Jane Field" and Mrs. Freeman's other dramas of conscience and of New England.

The Greater Love. By Anna McClure Sholl. New York: The Outing Pub. Co. $1.50.

The Greater Love is a story of a woman's revolt against the social morality of an American family with its pride in an unsullied lineage, its swift condemnation of any other than the Puritan standard; her punishment thru her daughter's unhappiness and her final expiation of her sin, which is excused by every extenuating circumstance the by no means inadequate art of the author can invent. The wages of sin remain much the same from one generation to another; no matter how cleverly it may be condoned and excused. It may strike the moralist that the author of *The Greater Love* goes too far for safety in her rehabilitation of Eleanor's character. The heroine is an exotic creature, needing a richer soil than the stony Puritanism in which she has been reared. She finds Paris suited to her temperament, but, like so many other parents who demand freedom for themselves, she seeks shelter for her daughter, "who only knew a child's Paris, in which every one is young and gay and kind." The return to America and the discovery that her daughter's happiness is jeopardized by her mother's history form part of its expiation. The price exacted is hard enough to set to rest the moralist's fears that the author will be too easy with Eleanor. The style, if somewhat serious, is dignified, and the psychology of a mother's love is made clear and credible without exaggeration or mawkish sentimentality. The inexorableness of the moral law is the Nemesis alike of the weak and of the daring.

The Mystery of the Yellow Room. By Gaston Leroux. New York: Brentano's. $1.50.

The prime requisite of a detective story is that it be interesting. *The Mystery of the Yellow Room* is that, and more. For the interest lasts to the end of the book, and the mystery is not solved before the reader has manufactured many solutions of the problem, in which a murderer, apparently, makes his escape thru brick walls, or a thick door locked and barred on the inside. The beauty of the victim, the unusual nature of the work in which she had been engaged, the sinister fact of the murderer's disappearance in two

cases as tho he had been blown out suddenly like the flame of a candle, the preternatural acuteness of the boy-faced reporter, Rouletabille, all combine to make an unusually perplext plot. Professor Stangerson and his daughter working late at night to put the finishing touches to their report summing up their labors on the "Dissociation of Matter" on the night of the attack upon Mlle. Stangerson suggest one theory of the murderer's escape from the locked Yellow Room, and, later, from a corridor where three men are stationed to intercept his flight;

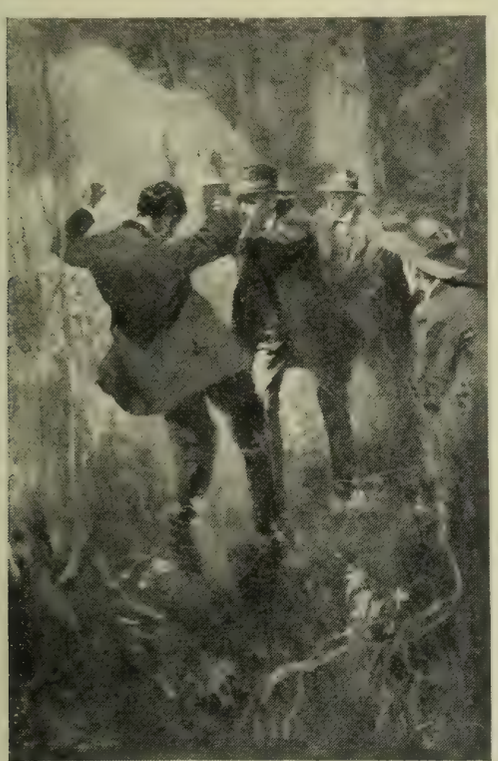

Illustration from "Judith of the Cumberlands," by Alice MacGowan. Putnam.

but there are other tenable theories and fascinating clues irresistible to the lover of detective tales. *The Mystery of the Yellow Room* will keep the reader awake on the most slumbrous of summer afternoons in the idlest of vacation days.

The Spanish Jade. By Maurice Hewlett. New York: Doubleday, Page & Co. $1.50.

Halfway House. By Maurice Hewlett. New York: Charles Scribner's Sons. $1.50.

Mr. Hewlett seems anxious to prove that he is master of more than one style, by publishing two novels near together, one a romance not altogether unlike "The Forest Lovers" and the other a modern Meredithian novel. The romance is a story of Spain in 1860, as he tells us in his introduction, when the country was "splendidly frank, acquainted with grief and sin, shameless and free." In such a setting *The Spanish Jade* has an easier air to breathe than "The Queen's Quair." In the latter Mr. Hewlett was dealing with Englishmen perhaps as passion-laden as the Spanish, but whom generations of convention had taught a fine ingenuity in hiding all that was primitive in their natures. Now, he has given us the love story of a tawny-haired Spanish girl in a country of quick emotions, who falls in love with an English gentleman of intelligence and sympathy, but much national prudence. To the Englishman a virtuous woman is as commonplace as coffee and rolls for breakfast, but to the Spaniard such a woman is a miracle. And so, after all, it is the half-barbaric Spanish valet who catches the bright gleam of Manuela's spirit and falls down and worships it with a poet's and a lover's intensity. *Halfway House* is the story of a more than halfway flirt, who, in the person of an English nursery governess, manages to ensnare among half a dozen others a wealthy gentleman twice her age, a young farmer, a cub snob and a hermit-gardener who has taken all England for a wild flower garden and lives a gypsy life while he attends to his peripatetic horticulture! Why Miss Mary Middleham is able to ensnare all these diverse men, Mr. Hewlett does not make clear to the reader, but a woman's charm is often inexplicable except to the man who is being charmed—and he cannot give a reason for his enthrallment. Perhaps it is Mary's readiness to be loved, if not to love very deeply, which makes her so dangerous, altho a "little peering-eyed nobody of a nursery governess," as her sister-in-law describes her. That Mary seems so real a girl and causes us to speculate on her motives, or nature rather, for she scarcely has motives, only sentimental impulses, is a triumph for Mr. Hewlett's heroine. As in his new master, Meredith, the men are negligible, except as they are needed to explain the involved love psychology of the lady.

The Politician. By Antonio Fogazzaro. Translated by Antonio Mantellini. Boston: Luce & Co. $1.50.

This is, to a certain extent, a problem novel, and dealt with by a mind less pure and lofty than that of Italy's greatest novelist we can easily imagine how morally repulsive it might become. The Baroness Elena di Santa Julia is the wife of a Senator, who is a debased ruffian. Daniele Cortis, also a Senator, is her cousin. She has no children; he is unmarried. They love each other; but in their conception of love, life and duty

Frontispiece from "The Testing of Diana Mallory," by Mrs. Humphry Ward.

they are actuated by the same noble pride, and they love each other with that impassioned love which resists the fiercest trials, which defies separation, absence and death, defies everything save honor. All the young woman's affection is absorbed by Daniele, and Daniele's only hope of earthly happiness is concentrated in Elena. But both struggle against themselves. The conflict is influenced by the necessity of submitting to religious sentiment; but it is marked by something more; a sort of aristocratic haughtiness which inspires Elena and Daniele with horror at the thought that they should do anything calculated to deprave them in their own eyes. The translator, who has done his work only fairly, might have selected a better title than *The Politician*. The public life of the hero is treated in a masterly fashion, but it is entirely subordinate to the passionate analysis of his sentiments and the events that take place entirely in the domain of the spirit.

The Circular Staircase. By Mary Roberts Rinehart. Indianapolis: The Bobbs-Merrill Co. $1.50.

Following the example set by the dean of detective story writers, Mrs. Anna Katherine Green, the women authors of America keep pace with the men in the unraveling of mysteries. This story is a warning against renting furnished country houses unless the agent guarantees that it does not contain a circular staircase and a secret ch—but that's telling. The three women who take the house for the summer have a hard time of it, for it is beset by a burglarious swarm of men, women and ghosts at all hours of the day and night. Who they all are and what they all want the reader may guess, if he can.

A Dissatisfied Soul. By Annie Trumbull Slosson. New York: Bonnell, Silver & Co. 75 cents.

We have heard New Englanders tell of persons who were so hard to suit that they would not stay in Heaven if they got there, but it takes Mrs. Slosson to actually discover such a case. In this and in the other short story bound with it she shows her usual skill in the handling of a grotesque theme.

Potted Fiction: Being a series of extracts from the world's best sellers, put up in thin slices for hurried consumers, by the United States Literary Canning Company. Edited by John Kendrick Bangs. New York: Doubleday, Page & Co.

The title is self-explanatory. Any one too busy to read the six novels in the original or unable to pay $9 for them will find here abbreviated approximations of the following: "Rollo in the Metrolopus," by Dopeton Hotair; "Six Months," by Hellinor Gryn; "The Lost Secret," by E. Fillips Dopenheim; "A Pragmatic

Enigma," by A. Conan Watson, M. D.; "The Stepdaughter of Peterson Jay," by George Jarr McClutchem; "Somehow Long," by the author of "Alice in Wanderland." Mr. Bangs is not the equal of Bret Harte in the art of condensing novels, but he is more modern in his subjects.

Persia: The Awakening East. By W. P. Cresson. Philadelphia: J. B. Lippincott Co. $3.50.

It is impossible for books to keep pace with the march of events nowadays. "The Awakening East" has shut her eyes again and the Shah is holding the lids down. There has been a sudden reversal of the fair prospect in the last two months. Parliament is dispersed by a whiff of cannon smoke. Zill-es-Sultan, uncle of the Shah, and mainstay of the reformers, is again in exile. Some of the palaces the author admired are now in ruins and a Russian colonel rules in Teheran. But the value of the volume is not impaired because its politics is a little out of date. It is mostly devoted to travel and description, and so furnishes a background, a stage setting, for the dramatic events we read of from day to day. The author past thru the whole country from north to south, entering from the Caucasus and leaving by the Gulf. This gave him an excellent opportunity to trace the progress of the Russian invasion, an invasion at first commercial, next political and now military. Most readers would be willing to confess that they could follow the author's wanderings better if he had given them a sketch map.

The Religion of a Democrat. By Charles Zueblin. New York: B. W. Huebach. $1.00.

Professor Zueblin was one of the most popular of the extension lecturers of the University of Chicago, and he has now resigned this position to devote himself to independent lecture work. This volume contains his latest series and retains the characteristics of the successful lyceum address, the direct forceful style, the telling phrase, the graphic illustration, the emphatic contrast and swift generalization. His point of view is that of the Fabian socialist, and his aim is constructive rather than destructive. His

THE HOUR OF PRAYER
From Cresson's "Persia."

sharpest attacks are made on race prejudice, sex prejudice, class prejudice and theological prejudice, and he looks forward to the day when Church and State shall be in a new sense one, and the people in a body shall have accomplished their own redemption.

Literary Notes

On Forthcoming Books

So far as can be judged from the publishers' announcements the fall books will be of unusual interest and value. Tho perhaps less numerous than formerly, the average quality appears to be higher. Some of the good things that were put away into cold storage last year are coming out now. If the public libraries and individual book buyers who find themselves short in their book money are thereby induced to exercise more care in selection it will be a benefit to both readers and publishers.

FICTION.

Many of the new novels are familiar to the public as serials. Others are from such well-known writers as to need no introduction. *The Testing of Diana Mallory,* by Mrs. Humphry Ward (Harper); *The Red City,* by Dr. S. Weir Mitchell (Century); *The Diva's Ruby,* by F. Marion Crawford, concluding the trilogy of "Fair Margaret" (Macmillan); *Kincaid's Battery,* by George W. Cable, a story of the Civil War (Scribner); *A Spirit in Prison,* by Robert Hichens, Italy this time instead of the Sahara (Harper); *Peter,* a novel of which he is not the hero, by F. Hopkinson Smith (Scribner); *The Fair Mississippian,* by Charles Egbert Craddock (Houghton); *The Guest of Quesnay,* by Booth Tarkington, said to be another Beaucaire (McClure); *Kingsmead,* by Bettina von Hutten, with more of Pam, who seems likely to rival Elsie Dinsmore (Dodd); *A Commentary,* by John Galsworthy, author of "The Country House" (Putnam); *Gilbert Neal,* by Will N. Harben, a Georgia story, of course (Harper); *The Point of Honor,* by Joseph Conrad, a Napoleonic novel (McClure), *Holy Orders,* by Marie Corelli, dealing with the decline of religion, the liquor problem and yellow journalism! (Stokes); *The War in the Air,* by H. G. Wells (Macmillan); *Helianthus,* by Ouida, a novel which she had nearly completed at the time of her death (Macmillan); *The Blotting Book,* by E. F. Benson, a story of a crime and its detection (Doubleday); *Lewis Rand,* by Mary Johnston, in which Jefferson and Burr figure prominently (Houghton); *Our Daily Bread,* by Clara Viebig, one of the most popular of German novelists (Lane); *The Gorgeous Isle,* by Gertrude Atherton, high life in the West Indies (Doubleday); *The Great Miss Driver,* by Anthony Hope, English county society (McClure); Peter *Moor's Journey to Southwest Africa,* by Gustav Frenssen, a story of the war against the Hereros, by the author of "Jorn Uhl" (Houghton); *Rose-White Youth,* by Dolf Wyllarde, and we had hoped that she would write something different (Lane); *The Hermit and the Wild Woman,* by Edith Wharton, short stories (Scribner); *The Statue,* by Eden Phillpotts and Arnold Bennett, how will they pull together? (Moffat); *Redemption,* by René Bazin, author of "The Nun" (Scribner); *The Whole Family,* by twelve leading authors, anybody can name them (Harper); *Every Man for Himself,* by Norman Duncan, Labrador stories (Harper); *Septimus,* by W. J. Locke, of "Marcus Ordeyne" fame (Lane); *Salthaven,* by W. W. Jacobs, more of those funny sailormen (Scribner); *An Immortal Soul,* by W. H. Malloch (Harper); *Though Life Do Us Part,* by Elizabeth Stuart Phelps (Houghton); *The Altar Stairs,* by G. B. Lancaster (Doubleday); *Judith of the Cumberlands,* by Alice MacGowan (Putnam); *The Spitfire,* by Edward Peple (Moffat); *The Expensive Miss Duncan,* by S. Macnaughton (Dutton); *The Adventures of a Nice Young Man,* anonymous (Duffield); *A Palace of Danger,* by Mabel Wagnalls (Funk); *The Long Arm of Mannister,* by E. Phillips Oppenheim (Little); *The Gentle Grafter,* by O. Henry (McClure); *Two Gentlemen of Virginia,* by George Cary Eggleston (Lothrop); *The Tether,* by Ezra S. Brudno (Lippincott); *Interplay,* by Beatrice Harraden (Stokes); *The Trail of the Lonesome Pine,* by John Fox (Scribner); *Wroth,* by Agnes and Egerton Castle (Macmillan); *The Marquis of Loveland,* by C. N. and A. M. Williamson (McClure); *The Fly on the Wheel,* by Katherine Cecil Thurston (Dodd); *The Little Brown Brothers,* by S. P. Hyatt (Holt).

HISTORY AND BIOGRAPHY.

In American history and political biography we have the complete edition of the *Writings of James Madison,* edited by Gaillard Hunt, in 9 vols. (Putnam); the second volume of Edward Channing's *History of the United States* (Macmillan); the third and concluding volume of the *Reminiscences of Carl Schurz* (McClure); *Robert E. Lee,* by Thomas Nelson Page (Scribner); two more "American Commonwealths," *Wisconsin,* by Reuben G. Thwaites, and *Minnesota,* by W. W. Folwell (Houghton); three volumes of "Stories from American History," *The Wilderness Road,* by H. Addington Bruce, *The New England Whalers,* by John R. Spears, *and The Great Lakes,* by Edward Channing and Marion F. Lansing (Macmillan); *Roger Williams,* by E. C. Carpenter (Grafton); *Ideals of the Republic,* by James Schouler (Little).

The coming Lincoln centenary has brought an abundance of literature for old and young in biography and fiction: *The Boyhood of Lincoln,* by Eleanor Atkinson (McClure); *The Death of Lincoln,* by Clara E. Laughlin (McClure); *Abraham Lincoln: Boy and Man,* by James Morgan (Macmillan); *Lincoln Master of Men,* by Alonzo Rothschild, anniversary edition (Houghton); and *The Toy Shop,* by Margaret S. Gerry (Harper).

Of English histories on a large scale we have had more than enough in the last few years. The tendency is now toward biography, chiefly literary and feminine: *Reminiscences of Lady*

Randolph Churchill (Century); *Victoria Regina: Her Court and Subjects,* by Fitzgerald Molloy (Dodd); *Scottish Women of the Past,* by Harry Graham (Duffield); *Journal of Elizabeth Lady Holland,* edited by Earl of Ilchester (Longmans); *The Holland House Circle,* by Lloyd Sanders (Putnam); *Leaves from a Life,* gossip about artists and authors by a lady who prefers to remain anonymous (Brentano); *Oxford in the Eighteenth Century,* by G. D. Godley (Putnam); *Gladstone at Oxford in 1890* (Dutton); *Henry Stuart, Cardinal of York,* by Alice Shield (Longmans); *Chaucer's England,* by G. G. Coulton (Putnam); *William the Conqueror,* by F. M. *Stenton* (Putnam); *The Constitutional History of England,* by F. W. Maitland (Putnam).

But the French ladies are not to be driven from the field by their British rivals: *Madame Elizabeth de France,* by Mrs. Maxwell Scott (Longmans); *Louise de la Vallière,* by Jules Lair (Putnam); *The Daughter of Louis XVI,* by M. G. Lenotre (Lane); *Madame, Mother of the Regent,* by Arvède Barine (Putnam); *The Later Years of Catherine de Medici,* by Edith Sichel (Dutton), and two more Napoleon books, *Dumouriez* and *The Defense of England,* by J. Holland Rose (Lane) and *Life of Bonaparte,* by S. Baring-Gould (Stokes).

To judge from the books of history and travel that are published there are only three countries in Europe worth mentioning; Italy is the third and apparently the dearest to Americans: *The Medici Popes,* by H. M. Vaughan (Putnam); *Lorenzo the Magnificent,* by E. L. S. Horsburgh (Putnam); two books on Count Castiglione, *Courts and Camps of the Italian Renaissance,* by Christopher Hare (Scribner), and *Baldassare Castiglione the Perfect Courtier,* by Julia Cartwright (Dutton); *Women of Florence,* by Isidora Del Lungo (Doubleday); *Social Life in Rome,* by W. W. Fowler (Macmillan); *Builders of United Italy,* by R. S. Holland (Holt); *Tragedies of the Medici,* by G. E. Staley (Scribner); and later in the season a *History of Rome in the Middle Ages,* by F. Marion Crawford and Giuseppe Tourassetti (Macmillan).

TRAVEL AND DESCRIPTION.

The North-West Passage, the voyage of the "Gjoa," 1903-7, by Roald Amundson (Dutton); *A Canyon Voyage,* the Powell expedition down the Colorado, by F. S. Dellenbaugh (Putnam); *Camp-Fires on Desert and Lava,* by W. T. Hornaday (Scribner); *The Niagara River,* by Archer B. Hulbert (Putnam); *Highways and Byways of the Pacific Coast,* by Clifton Johnson (Macmillan); *Through Ramona's Country,* by G. W. James (Little); *Alaska,* by Ella Higginson (Macmillan); *A Woman's Way Through Unknown Labrador,* by Mrs. Leonidas Hubbard (McClure); *New Zealand at Home,* by R. A. Loughnan (Scribner); *The Other Americans,* by Arthur Ruhl (Scribner); *The Cradle of the Deep West Indies,* by Sir Frederick Treves (Dutton); *American Supremacy,* by George W. Crichfield (Brentano); *Peru,* by C. Reginald Enock (Scribners); *Paris the Beautiful,* by Lilian Whiting (Little); *A Motor Flight Through France,* by Edith Wharton (Scribner); *Sun and Shadow in Spain,* by Maud Howe (Little); *The Alps,* by W. A. Coolidge (Dutton); *Hungary and the Hungarians,* by W. B. Forster Bovill (McClure); *Roman Holidays,* by W. D. Howells (Harper); *India; Its Life and Thought,* by John P. Jones (Macmillan); *In Old Ceylon,* by Reginald Farrer (Longmans); *Wanderings in Arabia,* by Charles M. Doughty (Scribner); *Out of Doors in the Holy Land,* by Henry Van Dyke (Scribner); *Egypt and Its Monuments,* by Robert Hichens (Century); *Eighteen Years in Uganda,* by Alfred R. Tucker (Longmans); *On Safari,* big game hunting in East Africa, by Abel Chapman (Longmans).

ESSAYS AND LITERARY CRITICISM.

It looks as tho all the talk about the revival of the essay as a popular form of literature had not been in vain. *At Large,* by A. C. Benson (Putnam); *Justice and Liberty,* by G. Lowes Dickinson (McClure); *Orthodoxy,* by Gilbert K. Chesterton (Lane); *A Happy Half Century,* by Agnes Repplier (Houghton); *Magazine Writing and the New Literature,* by Henry Mills Alden (Harper); *Literary Reviews and Criticisms,* by Prosser H. Frye (Putnam); *Counsels by the Way,* by Henry Van Dyke (Crowell); *In the Open,* by S. D. Kirkham (Elder); *The Lay of the Land,* by Dallas Lore Sharp (Houghton); *The Speaking Voice,* by Katherine Jewell Everts (Harper); *The Home Builder,* by Lyman Abbott (Houghton); *The Free Life,* by Woodrow Wilson (Crowell); *Park Street Papers,* by Bliss Perry (Houghton).

In literary history and biography besides those mentioned above we have *The Bronté's Life and Letters,* by Clement Shorter (Scribner); *On the Track of Stevenson in Old France,* by J. A. Hamerton (Dutton); *Thomas Bailey Aldrich,* by Ferris Greenslet (Houghton); *John Keats,* by Albert E. Hancock (Houghton); *George William Curtis,* by Henry Loomis Nelson (Harper); *The Cambridge History of English Literature,* Vol. III, Renascence and Reformation (Putnam).

DRAMA.

The reading of plays is certainly becoming popular in this country as it has always been in Europe, and poetical dramas continue to be published altho so far they do not succeed on the stage. *Faust,* by Stephen Phillips (Macmillan); *The House of Rimmon,* by Henry Van Dyke (Scribner); *Heracles,* by George Cabot Lodge (Houghton). We have *Molière* for the first time translated into English prose and verse by Curtis Hidden Page (Putnam). *Richard the Third* in Furness's Variorum Edition (Lippincott) will soon appear, and so will Swinburne's *Age of Shakespeare* (Harper). There are to be three volumes relating to Irving, a *Life of Henry Irving,* by Austin Brereton (Longmans); *Impressions of Henry Irving,* by W. H. Pollock (Longmans), and *Recollections and Reflections,* by Ellen Terry (McClure); one on *Richard Mansfield,* by Paul Wilstach (Scribner), and a study of *Ibsen, The Man and his Plays,* by Montrose J. Moses (Kennerly). Brentano will publish Shaw's staged debate *Getting Married,* and Harper's

a new play, *The Winterfeast*, by the author of "The Servant in the House," Charles R. Kennedy. Two popular American plays are to be published, *The Witching Hour*, by Augustus Thomas (Harper), and *Beau Brummel*, by Clyde Fitch; and three others novelized, *The Grand Army Man*, by David Belasco, Molnar's *The Devil*, by A. S. van Westrum (Dillingham), and *Polly of the Circus*, by Margaret Mayo.

RELIGION AND PSYCHOLOGY.

The collocation of these two words is made necessary by the appearance of a new literature dealing on the one hand with the psychological interpretation of religious phenomena and on the other with the extension of religious influences into psychological and even physiological fields. Of the many works in this line we must mention at least *The Psychological Phenomena of Christianity*, by George Barton Cutten (Scribner); *Mind, Religion and Health*, by Robert Macdonald (Funk); *Life of Mary Baker G. Eddy and History of Christian Science*, by Georgine Milmine (McClure); *A Physician to the Soul*, by Horatio W. Dresser (Putnam); *A Common-sense View of the Mind Cure*, by Mrs. Laura M. Westall (Funk); *Mind and Work*, by Luther H. Gulick (Doubleday). Two books on modern spiritualism, *The Spirit World*, by Hamlin Garland (Harper), and *Historic Ghosts and Ghost Hunters*, by H. Addington Bruce (Moffat). *A Theory of Mind*, by John L. March (Scribner); *The World I Live In*, by Helen Keller (Century).

A sumptuous history of *The Catholic Church in America* (Catholic Editing Co., N. Y.), in six large volumes will be published in honor of the Pope's Golden Jubilee. *An Encyclopedia of Religion and Ethics*, in ten or twelve volumes, edited by James Hastings, similar to his "Dictionary of the Bible," will soon begin to appear (Scribner). Of the numerous other forthcoming religious works we can only mention: *London Lectures on the Modernist Movement*, by Paul Sabatier (Scribner); *The Fundamental Truths of the Christian Religion*, by Reinhold Seeberg (Putnam); *The Acts of the Apostles*, by Adolf Harnack (Putnam); *Liberal Theology and the Ground of Faith*, by Hakluyt Egerton (Dutton); *The Character of Jesus*, by Charles E. Jefferson (Crowell); *A Junior Congregation*, by James M. Farrar (Funk); *The Seeming Unreality of the Spiritual Life*, by Henry Churchill King (Macmillan); *The Gospel and the Modern Man* (Macmillan); *Cardinal Newman*, by Charles Sarolea (Scribner).

SOCIAL SCIENCE.

Race questions are conspicuous in this department: *Racial Contrasts*, distinguishing traits of the Graeco-Latins and Teutons, by Albert Gehring (Putnam); *The Black Millions*, by Ray Stannard Baker (Doubleday); *The Story of the Negro*, by Booker T. Washington (Doubleday); *Studies in the American Race Problem*, by Alfred Holt Stone (Doubleday), and *Some Southern Questions*, by W. A. MacCorkle (Putnam). *The United States as a World Power*, by A. C. Coolidge (Macmillan). *As Others See Us*, by John Graham Brooks (Macmillan). *France and the Alliances*, by André Tardieu. *Popular Participation in Law Making*, by C. S. Lobingier (Macmillan). *The State and the Farmer*, by L. H. Bailey (Macmillan). *The Call of the City*, by C. M. Robinson (Elder). *The Century of the Child*, by Ellen Key (Putnam). *Principles of Taxation*, by Max West (Macmillan). *The Government of American Cities*, by Horace E. Deming (Putnam). *University Administration*, by Charles W. Eliot (Houghton).

In this hasty survey of the books which are announced for publication in the next few months we have picked out what, it seemed to us, our readers would like most to know about. No doubt when the fall books come in we shall find that we have left out some that are more important than many we have mentioned. Works on art, archeology, music, education and science, books for children, color books and holiday editions we have omitted almost altogether as they will receive special attention in later issues.

Pebbles

A REPORT comes from Oregon that people out there are considerably excited because Mount Hood is beginning to act like a volcano. That's nothing to get excited about. There are several men in this country who have for a long time been acting like volcanos without scaring anybody outside of Wall Street.—*Chicago Tribune.*

WE passed, in the course of an hour, two dead cows and more than fifty dead chickens. A strong smell of gasoline pervaded the atmosphere, and there were wheel tracks in the dust.

Sherlock Holmes became greatly interested.

"Watson," exclaimed he, after deep thought, "there has been an automobile along here!"—*Louisville Courier-Journal.*

JUDGE—Have you been arrested before?

Prisoner—No, sir.

Judge—Have you been in this court before?

Prisoner—No, sir.

Judge—Are you certain?

Prisoner—I am, sir.

Judge—Your face looks decidedly familiar. Where have I seen it before?

Prisoner—I'm the bartender in the saloon across the way, sir.—*Harper's Weekly.*

A Christian Scientist found his young son doubled up with pain as a result of too frequent trips to the apple orchard, where many choice green apples were to be had.

"What's the matter, Bobbie?" he asked.

"I ate too many apples," said Bobbie; "and, oh, how my stomach hurts!"

"Your stomach doesn't ache," said his father; "you just think it does."

"Well, you may think so," said Bobbie, "but I know. I've got inside information."—*Harper's Magazine.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

New States

THAT Arizona and New Mexico will be admitted at the next session of Congress as States there is, or should be, no doubt. They wisely rejected the proposal that they be admitted as one State, preferring to wait till their own population and the will of Congress allowed them to come in as separate commonwealths. Both Territories had a small population in 1900, but other existing States had a smaller, and irrigation and mines are drawing in settlers. They will both be worthy States.

But there is one other Territory which we would have made a full State, and that is Hawaii. We would have it, not because it can compete in size with other new States, altho its area is larger than that of Connecticut and Rhode Island combined, and somewhat smaller than that of Massachusetts, nor yet because its population easily commands admission, altho in 1900 two States had a smaller population than the 154,000 then accredited to Hawaii, and several others had a population not much larger. We have in view the international importance of Hawaii, with which scarce any other State can make comparison, and the importance of Hawaii to our future national interests.

Secretary of the Interior James R. Garfield has been visiting Hawaii and studying its conditions and advantages, and we doubt not that he would be pleased to have it made a full commonwealth. He carried to Hawaii these significant words:

"The President wishes not only that Hawaii shall have been annexed to the United States, but that it shall be incorporated in and become one of the United States."

Now what are the objections? We presume that, as has sometimes been proposed, California would like to have Hawaii annexed to itself, but that is impossible. Hawaii is not only too far separated in distance, but its interests are such that it could not consent to be dominated by Californian sentiment and legislation. Hawaii has its beautiful history of which it is proud; and it has also its institutions and habits which are not those of the continent. That suggestion can be dismissed.

Another objection is the conglomerate population of Hawaii—American, Portuguese, Chinese and Japanese, besides what is left of the national race. Hawaii has been hospitable to the Asiatics. It allows them full privileges, under American law, and supplies them with all educational and religious privileges. And they respond thereto. The children became Americanized and will be native-born American citizens, receiving all that social heredity which schools and political and commercial institutions can give. We have enough faith in Christianity and in our public schools to believe that our country will be safe in their hands, as well as in the hands of the children of other races. But we further believe that Hawaii is not to be made Portuguese or Asiatic, but that under Statehood, and a more liberal legislation as to coastwise shipping, there will be a great influx of American population to Hawaii.

There is scarce a ship that crosses the Pacific that does not have to stop at Hawaii. From Hawaii the steamship lines radiate out in every direction to North and South America, to Asia, Africa, Australia and New Zealand. All Pacific trade has to pay toll to Hawaii. That commerce is bound to grow rapidly,

and equally the population of Hawaii must grow until the Islands are crowded with people, and that incoming population will be mainly American, and all controlled by American principles. We trust that the people of Hawaii will soon open a campaign for annexation, and that Congress will grant the request. The "non-contiguous" prejudice has no weight with us. About very few States could so much sentiment attach as about Hawaii, our own daughter, child of our own love and culture, ruled by Americans of our noblest blood, and to be warmly welcomed to our Sisterhood of States.

The Real Rural Problem

THE editor of *Charities* makes the wisest comments that we have anywhere seen upon the President's appointment of a commission to investigate the social economy of rural communities. He rightly says that, in spite of the good natured banter and some stupid ridicule that this project has called forth, the proposed inquiry in real importance takes precedence of almost all subjects now receiving serious study.

The American rural community of this present time, particularly in the East, is a disappointing social group, if, indeed, it can be called a group. So remarkable was the rural neighborhood typical of New England, the Middle States, Northern Ohio and Southern Michigan before the Civil War, that most of our writers, preachers, legislators and students of social science are still under the spell of a certain mental picture which it left upon the mind. They are so blinded by it that they fail to realize how tremendously different is the rural community of today.

In those earlier times, not so very long ago, either, the rural community was prosperous, happy, intelligent and well behaved. It was full of "life." Its people were not only neighbors and friends; they were blood kindred, intricately interrelated thru the marriages and abundant offspring of their young folk. The district schools were full of children, the churches were filled on Sundays. The Thanksgiving reunions brought large gatherings of young and old together. The parties, sleigh-rides, dances and frolics of the young people were large assemblies and merry.

The rural communities of large portions of our Eastern States today are sadly lacking in cohesion. They complain that, as compared with manufacturing centers and the cities, they are not prosperous and that they are dull. It is next to impossible to obtain competent and trustworthy help on the farm or in the house. The boys and the girls are eager to get away to the "life" and opportunity of the town.

All sorts of "remedies" are cheerfully offered by statesmen and philosophers of all degrees and brands. Every few weeks the newspapers announce the invention, improvement or reform that is to bring back the good old times and make the young folk entirely willing to "stay on the farm." The trolley car, the free rural delivery of mail, the telephone, and so forth and so on, have all been hailed as the accredited saviors of the rural community; but in spite of them all the farmer sees the son who has been to the agricultural college and the son who hasn't equally impatient to get away, anywhere into the "life" of the big world, while he, worn and discouraged, advertises for any kind of a "hired man."

The editor of *Charities* drives his intellect straight thru all the wretched nonsense that has been written on this subject, and gets at the core of the problem when he says that the "real difficulty" is "the tendency toward a diminished population due to a marked decrease in the size of native families." That is the exact truth. The rural community of old had "life," energy, prosperity and happiness because it had big families. It was full of young folk who were happy, hopeful and busy together. There were plenty of them to do the work on the land and in the house, plenty of them to have good times together, and to seek and find mates within their own circle. Today the places of these native young folk are taken, so far as they are taken at all, by aliens and tramps, who render grudging and negligent service, and neither feel themselves to be nor are regarded by their employers as any real part of the community.

It will be said by a certain kind of

social philosopher that we are explaining cause by effect; that the size of the average family has diminished because the farms could not support the big families of other days. We have no patience with this nonsense, for nonsense it is. The soil of America has possibilities within it that have not been touched. The inventiveness of the American mind has transformed the possibilities of farm labor. What is needed is intelligent, interested, willing workers, not incompetent, uninterested hirelings. And what is needed to make "life" in the rural communities is a normal birth rate.

Francis A. Walker once put the kernel of applied Malthusianism in a nutshell. Instead of leaving more "room" and opportunity for the few offspring that have the luck to be born, Neo-Malthusianism simply leaves vacant spaces for immigrants to come into. We might just as well have had fifty millions more of sturdy descendants of American pioneers in our population today, without making the total population any larger than it is now. And with that large proportion of the native born we should have had plenty of "life" in the rural communities.

We are glad that the President has appointed his commission. We hope that it will tell us a lot of things worth knowing. But its report won't solve the rural problem, nor will anything solve it, until American farmers and their wives make up their minds to breed children as well as corn and cattle.

Freedom and Tradition

THE thing most forgotten by theologians in these days of theologic unrest is the history of American theology. There was a steady current of liberalizing theology in this country, and particularly in New England, till the days when Moses Stuart, Dr. Nathaniel W. Taylor and President Finney were suceeded by Professor Park; but this is now all unknown. Even the advances of Channing, Ware and Norton are bygones. About the time that Professor Park's star was sinking Prof. Henry B. Smith brought back from Halle and Berlin a new philosophy of religion, and straightway the Scotch philosophy was thrown overboard, and the New England theology as well, and everything looked back to Germany.

This is illustrated by a passage in the sermon preached by Dr. Gordon, of Boston, at the International Congregational Council in Edinburgh. He is defending freedom in faith, and lamenting the long lack of it. He says:

"The aboriginal interest of the religious soul —to know the truth, the whole truth, and nothing but the truth—has been subordinated to the conservation of traditional opinion, safety, peace. Conformity has been the bane of the Christian Church, conformity to the standard set by the thought, method, and opinions of former generations. All religious bodies are open to this censure. . . . There has been, in the Christian Church as a whole, little or no progress in the philosophy of Christianity from the days of Augustine to our own. The Christian intellect has gone outside organized Christianity for progress and freedom. In the Church there was little or no chance for minds of original genius. In English theology there has been no innovator like Berkeley, no genius for progress in the philosophy of religion equal to his in the interpretation of nature. In Scottish theology there have been no thinkers of the power of Reid, and Hamilton, and Ferrier, much less any single influence at all comparable to that of Hume in the history of European thought. There has been no room for such minds, no opportunity, no freedom. The loss of intellect to the philosophy of man's supreme interest is thus incalculable, and until within a generation or two we have regarded as finalities the crudities of early thinkers in this vast discipline."

Now we declare that there have never lived on the face of the earth men more eager "to know the truth, the whole truth and nothing but the truth" than the succession of theologians from Jonathan Edwards and his son to Samuel Hopkins, Nathaniel Emmons, William Ellery Channing, Nathaniel W. Taylor, Charles G. Finney and Horace Bushnell. They were not eager to be orthodox, but to know the truth. They every one suffered opposition and calumny as heretics, but they led the Church with them. They did not reach the end of all truth. They left something for their successors to discover. They lived before Evolution and Biblical Criticism; but they did the best they could; and to regard such a succession of original thinkers as steeped in medievalism is unjust to some of the freest thinkers who ever lived. They lived in the spirit exprest by Jonathan Edwards in one of his resolutions:

"I observe that old men seldom have any advantage of new discoveries; because they are

beside a way of thinking they have so long been used to. *Resolved*, If ever I live to years, that I will be impartial to hear the reasons of all pretended discoveries, and receive them, if rational, how long soever I have been used to another way of thinking."

It is true that Evolution and the Higher Criticism have undermined and overthrown much of the old structure of theology. But just as the savage who invented the sling or the bow may have been just as much of an original genius as Stephenson or Morse, so the men who, within their possibilities, advanced to a more liberal and scientific philosophy or theology are to be credited with just as much love for the truth, as much independence of thought, as those who now laud the liberty which their predecessors fought for. Luther was a stout believer in devils and witchcraft, but he was a free thinker. Jonathan Edwards hung sinners like loathsome spiders over the pit of hell; but he was a masterful free thinker. All these died in the faith of freedom as truly as John Robinson, whose last advice to the Pilgrim Fathers was that they should ever look for more light to come out of God's Holy Word; or John Milton, whose most eloquent utterance bade us ever search for the mangled and scattered members of the virgin body of Truth:

"We have not yet found them all, Lords and Commons, nor ever shall do till the Master's second coming. He shall bring together every joint and member, and shall mold them into an immortal feature of loveliness and perfection. Suffer not these licensing prohibitions to stand at every place of opportunity, forbidding and disturbing them that continue seeking, that continue to do our obsequies to the torn body of our martyred saint."

Preservatives in Food

THE experiments on the effect of benzoic acid and benzoates upon health and digestion carried out in 1904 by Dr. H. W. Wiley, under the auspices of the Department of Agriculture, have just been published. One reason for this delay was to give ample time for the industries involved to determine whether it would be possible for them to dispense with the use of these preservatives. Circular No. 39, containing the general results of the Government investigation, has been freely distributed and extensively commented upon by the press. The complete report was not sent out in this way, because it was too expensive and would not have been so generally read as the circular. It should, however, be obtained and studied by all who are specially interested in the subject, because it gives a much better idea of the difficulty and complexity of the preservative question than the summary in the popular circular. Bulletin 84, containing details of the work so far as published, is sold in four parts, dealing respectively with boric, salicylic, sulfurous and benzoic acids and their salts at 30 cents apiece by the Superintendent of Documents, Washington.

This work is by far the most thoro and scientific study of the effect of preservatives that has ever been done in any country, and Dr. Wiley deserves the highest praise for carrying out the long series of practical tests. Even one who did not altogether agree with his conclusions must admire the courage and honesty with which he has stated and upheld them, in spite of the opposition of powerful financial and political interests.

The public is somewhat familiar with the method of research thru the newspaper accounts of "the poison squad," the group of young men in departmental employ who offered themselves as the subjects for experimentation. They were first kept under scientific surveillance for two consecutive subperiods of five days each, then the preservative to be tested was given them in capsules in increasing doses for four more subperiods, then the study of their diet and health was continued for ten days longer. In this way the twenty-day preservative period can be compared with twenty days of the periods before and after taking. The daily variations in weight, etc., are so irregular that averages of the five-day subperiods are used for comparison.

In the latest work reported benzoic acid or sodium benzoate was given in doses of 1 gram, 1.5 grams, 2 grams and 2.5 grams successively during the four preservative subperiods. All of the subjects reported symptoms of discomfort and malaise, chiefly nausea, headache and weakness, before the experiment was over. It is impossible to determine what value is to be given to these subjective effects, for the imagination has a great influence over the stomach and the symp-

toms complained of are those most readily produced or allayed by suggestion. The other evidence is more convincing, but when examined in detail is not so satisfactory as we wish it were.

One of the strong points in the indictment against benzoic acid and benzoates is that most of the subjects lost weight during the period when these were given. That is true, but they also lost weight during both the periods when it was not given. If we try to make allowance for this as we do in correcting an aneroid for diurnal variation in climbing a mountain we get some curious results. Taking only the general average of the eleven men considered we find by comparing the first subperiod of five days with the second, during both of which no preservative was given, the loss of weight was .28 kilogram. During the next subperiod one gram of benzoic acid or sodium benzoate was given and yet the loss of weight was less than half that of the preceding interval, or .1 kilogram. The next increase of the dose to 1.5 gram produced no further decrease in weight but a slight increase, .02 kilogram. During the next subperiod with a dose of 2 grams the weight fell off .33 kilogram. The continued decrease in weight after the administration of the benzoic acid had ceased is ascribed to the belated effects of the preservative. This may be doubted, but it cannot be disproved, so we will have to leave it out of consideration, and compare the preservative period with fore period only. If the subjects had continued to lose weight during the three preservative subperiods at the same rate as they did during the two subperiods when no preservative was given them, then they would have lost .84 kilogram. But they really only lost .41 kilogram. If any conclusion can be drawn from this it would be that benzoic acid is truly a "preservative," and that it partly protects the human system from the deleterious effects of the Wiley table. Whether it was the character of the food, the restrictions put upon their habits or the consciousness of being the subject of experimentation, the young men certainly did not thrive under it before the dosing began. All of them lost weight during this preliminary period except one (No. 12), and he gained more rapidly when a gram of benzoate was added to his food.

It may be objected that the loss of weight would not have continued at the same rate, that the men would in time have got used to the Wiley board. That is true, but it would also apply to the preservative period. The men would have probably got used to the benzoic acid, possibly even in 2.5 gram doses.

Similar results are obtained, if we examine the tables showing increase of katabolism or the breaking down of tissue. The excretion of sulfur increased by .084 gram during the preliminary ten days, when no benzoic acid was given, but during the preservative period it did not decline at so great a rate or at any time reach as high a figure as it was in the five days before (p. 1222). The excretion of nitrogen between the first and second subperiods increased by .73 gram. If it had continued to increase at this rate it would have amounted to 2.19 at the third subperiod. The actual average increase for the eleven men was only .24 gram (p. 1181). That is, there was in most cases a greater difference between the two subperiods, when no preservative was given, than when the preservative was added or increased. This makes it doubtful how much reliance we can place upon these variations.

Since benzoic acid is condemned because it apparently decreased the weight of the body, we would naturally expect, when we turn to Part III of Bulletin 84 and find that sulfurous acid apparently increased the weight, both during the preservative period and after, that this would be accounted unto it for righteousness, but no.

A similar inconsistency occurs in regard to the blood tests. In the condemnation of sulfurous acid as a preservative great stress was laid on its injurious action in reducing the number of red corpuscles in the blood. This decrease amounted to 189,000 per cubic millimeter in the special series of experiments arranged to test this point; but benzoate of soda appears to increase the number of red corpuscles, and to a greater extent, by 377,000 per cubic millimeter. Nevertheless, this supposedly beneficial effect is not accredited to benzoate of soda in the general conclusions, which are altogether adverse. The corpuscle count is dismissed with the re-

mark that the experiment should be repeated before drawing a final conclusion, with which we quite agree.

The opposition to preservatives must be on the grounds that they are unnecessary, that they are likely to be used in too large quantities, and that they enable the manufacturer to use decaying and inferior materials. No one has yet been able to prove that they are generally injurious in small quantities. Dr. Wiley's experiments, in our opinion, clearly show that, for example, benzoic acid taken at the rate of two grams or more a day is injurious, but that is not convincing in regard to the amounts used in foods. The effect of a minute dose of a medicine is usually very different and often opposite from that of a large dose. Two of the most popular brands of catsup on the market contain benzoate of soda to the extent of 1-10 of 1 per cent. If Dr. Wiley's young men had taken it in the form of catsup, instead of capsules, they would have begun with four bottles a day of the ordinary family half-pint size and increased to ten bottles. We are quite sure that if they had taken the catsup alone, such catsup as mother used to make, at the rate of ten bottles a day it would have hurt them more than the benzoate of soda did.

A Solid North

TWENTY years before the Civil War there were two great parties, the Whig and the Democratic, divided on the tariff, the Whig supporting protection and the Democratic free trade. It was a clean division on one principal question of national policy, the one party asking Government protection of certain industries, the other opposed to all special privileges. There was no particular sectional division of parties, for there were Southern Whig States, as Henry Clay's pre-eminence shows.

Then came the anti-slavery issue, which united the North and equally the South. The Free-soil party was organized, and took in members of both the old parties. There was a heavy defection from the Democratic party, including a multitude of its young leaders in the North; and the Whig party was quite dissolved and destroyed, in part by the transfer of its young members to the Free-soil party, in part by older men going over to the Democratic party on the new slavery issue, and in large part by the brief sojourn of many Whigs in the Know-nothing party, the purpose of which was in large part, and its only benefit, to destroy the Whig party and prepare the way for the Republican party, which succeeded to the Free-soil party. In this way the Democratic party maintained its existence and name, but largely lost its creed, becoming for the time the pro-slavery party, and so a Southern sectional party, while the Whig party perished utterly, and in its place grew up the composite Republican party, with its only doctrines opposition to slavery and the maintenance of the Union, and thus itself made a Northern sectional party.

Because the Democratic party claimed the tradition of the party whose name it carried, and, further, because it controlled a purely agricultural section, it has continued, with less strenuosity than of old, to support a sort of free-trade doctrine, altho careful not to do too much injury to protection. "Tariff for revenue" has allowed something more than "incidental protection." On the other hand, the Republican party, controlling the manufacturing States, and replacing the old Whig party, has, since the slavery issue was settled, announced protection as its policy. This has offended not a few of its members, who do not believe in protection, but do believe for other reasons in the Republican party. We have, then, such curious paradoxes as college professors strongly supporting free trade in their teaching and writings, and yet voting for the Republican party, which defends protection.

Why do they do this? Not because they love free trade less, but because they love equal rights in other lines more. We still have the solid South, solid for the sake of keeping the negro under, in his proper subordinate place, and excluded from the ballot. A multitude of Northern men, who naturally belong to the Democratic party, cannot join it for this reason. This has given us ever since the Civil War an almost solid North prevailing over a solid South, and maintaining a protective tariff. They believe in equality of opportunity for all men; and, while they believe that a protective tariff

is essential inequality, they submit to it because equality in personal rights appears to them of more importance. The present movement within the Republican party for a revision of the tariff is opposed by the standpatters, but is really an essential acceptance of the principles of the old Democratic party. Not a few Republicans hold with President Jordan that "the ideal of equality before the law is violated absolutely and continuously in the theory and in the practice of the protective tariff," and yet they are forced to support the party which opposes their doctrine, and to oppose the party which supports their doctrine.

And this antinomy will continue so long as the Democratic party bitterly opposes political equality on the ground of race or color. Let the Democratic party in the South once cease to proscribe a portion of its citizens; let it cease to harp on the danger of negro domination, and not only would there be a large influx of negroes in the South to the Democratic party, but the solid North would be likely to be broken up by a transfer of the votes of those who believe protection to be in theory wrong, or whose interests as agriculturists favor the purchase of commodities in the cheapest market. Illinois was Democratic before the war, and Douglas defeated Lincoln for the Senate. The Republican rebellion in Wisconsin and Minnesota and elsewhere, and even in Massachusetts, indicates what might be the larger defection if the negro question might once be eliminated from politics. As things stand now the Democratic party is doomed to perpetual defeat, and the protective tariff to a long maintenance, but slightly modified, and that by the votes of those who are dissatisfied with it.

Campaign Funds

PUBLICITY and limitation of campaign funds is no new thing in this country, and a number of States have numerous elaborate statutes on the various phases of the subject. The attitude of the Presidential candidates serves to show how far we have already progrest and will further serve to accelerate the movement.

In a long list of States there are statutes requiring that either the candidates, committees or political agents shall file sworn itemized statements. It includes Massachusetts, Connecticut, New York, Pennsylvania, Virginia, Texas, Wisconsin, Minnesota, Missouri, Nebraska, Montana, Colorado, Arizona and California, and the Texas law of 1905 provides that *all* handling funds shall file statements. There is a variation of requirements as to disposition of the statement. In some places it is merely filed, altho open to public inspection. In some it must be advertised, and in others published in pamphlet form. There has also been considerable legislation restricting contributions and expenditures. The laws of Wisconsin, Missouri, Nebraska, Florida, Kentucky and Tennessee prohibit corporation contributions to campaign funds, and Wisconsin forbids non-residents from contributing. In Connecticut, New Jersey, Illinois and California it is unlawful to solicit funds of candidates, but they are entitled to contribute of their own free will, if they so decide. The time will no doubt come, tho, when candidates and officeholders will be absolutely forbidden to contribute to political funds.

As to the limitations on expenditures, Connecticut and Nebraska forbid the payment of naturalization fees and Texas prohibits the payment of an elector's poll tax. In New Hampshire, North and South Carolina, Florida, Mississippi and Arkansas treating and entertainment are forbidden. Betting on the results of an election is illegal in Maine, Pennsylvania, Wisconsin, Missouri, North Dakota, Nebraska, Oklahoma, Arizona and California. No State, however, has gone as far as Sir Henry James's British act of 1883, which deprives election workers of their votes, altho Minnesota's law of 1895 limits their employment. The only legal expenditures in that State are for public speakers and musicians, the personal traveling expenses of the candidates, rent of halls, cost of printing and postage, telegraph and other messenger service, the hire of clerks, challengers, canvassers and the use of carriages for the conveyance of infirm and disabled voters to the polls. The same Minnesota act and the Missouri law of 1893 limit the amount to be spent in a campaign according to the number of voters, and the California law

limits the expenses of candidates according to salary. The penalties to enforce these laws vary from fine and imprisonment to disfranchisement and annulment of election.

The whole question is well before the public by reason of the action of Judge Taft and Mr. Bryan, and we hope electoral reformers will seize the opportunity to extend and perfect the laws already on the books and to bring still other communities under their beneficent sway. In the meantime, it would not be amiss for the candidates to consider with care the suggestions of President Roosevelt that election expenses be borne by the Government just as those of election day now are.

A Newer Egypt

Now that, since the war between Japan and Russia, we hear so much of China for the Chinese, India for the Indians, and, indeed, Asia for the Asiatics, we must not be surprised that "Egypt for the Egyptians" is a cry that more and more resounds. It is curious that while all Turkey is rejoicing in the victory of the party of Young Turkey over the Sultan, the native sentiment in Egypt has been in favor of the Sultan, yet not out of love for him, but out of resentment at the rule of the Christian Power of Great Britain.

But the rule of Egypt by the Egyptians would require the full acceptance of Western education. This the more intelligent Egyptians understand. Islam is awakening to this fact, in Turkey, in Persia and in Egypt. The old Moslem university of the Mosque of El-Azhar at Cairo, with its nine thousand students and its 240 teachers of the Koran and Mohammedan law, can no longer satisfy the new need. Even the sixteen so-called higher or professional and normal schools, in which law and medicine and pharmacy and agriculture are taught and teachers are trained, are not enough. Still less are the progressive Moslems satisfied to see the best teaching in the hands of American and English missionaries. Accordingly, there will be opened in October the first university in Egypt to be conducted on Western models. The sum of $50,000 has been subscribed by natives of the country. Teachers will be called from France, England, Switzerland and Germany. But it is expected that ultimately the teachers will be Egyptians, and already students are preparing in Paris, Oxford, Cambridge and Leeds for such positions. It is planned to have free lectures on French, English and Arabic literature, as well as on Arabic and general history.

For all this the preparation has been made in good part by the education which American institutions in Syria and Egypt have given to students who have made their home in that country, just as similar preparation was made in Japan. The graduates of the Syrian Protestant College in Beirût are numerous in Egypt, and they occupy high positions. They are Moslems as well as Christians. They are editors of the most influential native journals, and are employed in government positions of prominence. That Beirût college is controlled entirely by Americans, and its board of trustees meets in New York, and its president and teachers have always been Americans, except as Arabic, French or other languages are taught. Robert College in Constantinople has, to a less degree, sent its graduates to Egypt. Then the admirable school conducted by the United Presbyterian Mission in Asiût, in Upper Egypt, has educated many Coptic Christians and some Moslems.

The only way to keep a population in subjection to a foreign nation is to keep it ignorant. If England is educating India and Egypt—and it is doing so to some extent—it is educating them for ultimate self-government. Whether that shall be under absolute independence or within the bonds of the British Empire, like Canada and Australia, we cannot foretell. It depends greatly on the willingness of the British Government to allow successive steps in self-government as the people demand it. But that problem touches the United States more immediately and exigently than it does Great Britain, because we have with much more purpose entered on the policy of giving education and self-government to Porto Rico and the Philippines; and it will not be long before we shall have to decide in what form, with us or without us, these islands shall rule themselves.

Tramp Elimination

A PROPOSITION for the elimination of the tramp deserves examination, and all experiments along that line demand study. We certainly are failing in this country to reach the problem with any degree of success. Temporary arrests, and feeding at public expense, have done nothing but aggravate the social disease. Professor Kelly, formerly of Columbia University, has taken pains to study the question from the standpoint of Holland, Belgium and Switzerland, and his report makes a very strong plea for the labor colonies system—more especially as they have been organized in Switzerland. He considers our method, reaching from the common house of detention to the penitentiary, to be only provocative of a growth of trampism, while the corrective principle involved is immensly expensive.

The number of tramps regularly on foot in the United States is set down at not far from five hundred thousand. A large percentage of these are boys under twenty-one years of age, for the time being mere vagrants, altho likely to graduate into criminal vagabondage. The real tramp is a man whose soul is broken down, whose nervous system has given up its initiative, and who has let go of all systematic employment. His wanderlust is simply the result of a loss of ordering in the brain. These men for the most part are the victims of disease and weakening habits, until they become intellectually and morally and physically a mere mass of breeding degeneracy.

The problem cannot be much longer put off, What to do with the tramp. We have given almost no attention to any real solution of the question. England has sent her committees to Holland and Belgium, but Parliament seems to be possessed of a conviction that nothing can be permanently done. Undoubtedly Herbert Spencer's doctrine of "let alone" is, in part, responsible for the condition of affairs both in Great Britain and America. The individual must be meddled with as little as possible. Even John Burns, now president of the Local Government Board of London, declines to adopt any system of permanent restraint. What we are doing both in England and America is to hale the vagabond before a magistrate, who must commit him to jail, on a short term of detention, or let him loose altogether. Old battered tramps and adventurous boys who have taken to the road for sport are herded together, and the result is that there is a great American university of vice constantly in operation. We are inclined to belive that those are correct, and among them Professor Kelly, in urging the labor colony as a remedy, and the only remedy. Labor colonies may properly displace our workhouses, almshouses and jails in their effect upon the vagabond himself, and as an economic measure in behalf of the people. This one fact meets us at the first stage of the argument that vagabondage has disappeared from Holland, Belgium and Switzerland. There are no tramps in either of these countries, altho the plans adopted are quite different.

The Dutch colonies are not self-supporting, and they do not undertake the reform of the tramp. In Belgium there is an institution that secures from the vagabond valuable work, and makes him of use to the community. The Merxplas Colony has become famous the world over. Its enormous buildings were built by tramps themselves. Out of these social victims have been created draftsmen, architects and builders. Tiles are manufactured, weaving is done, wagons are built, and other manufactures of a very complex order are carried on. It is, in fact, an industrial village, and must not be studied as a farm colony in any true sense of the word. There is a military system of government, and the population of six thousand may require it. Farm colonies, appealing more to the family life, can be managed without a penal atmosphere. But this is demonstrated by such colonies as Merxplas, how large an amount of valuable labor can be secured from the floating element that has withdrawn itself from social obligation.

The Swiss system differs from all others, because it is subdivided into compulsory-labor colonies and free-labor colonies. It undertakes to deal with the whole subject of helpless indigency. A wise magistracy will commit a large proportion of those who are now condemned to jails, to the free-labor establishment (the doors of which are always open to

the indigent); some of these, if necessary, can later be transferred to the forced-labor colony. The Swiss colonists are agricultural, and they manage to pay their expenses annually, with a neat little balance. Inmates of the forced-labor colony are offered a transferrence at the close of their sentences, and they often accept it. The idea of reformation is constantly kept in mind, but it is anticipated thru labor—that is, the vagabond is called out of his weakness and hopelessness, and is strengthened as far as possible in his will and executive power. The whole system, in fact, rests on this education of the will—the very point where the common school system is least efficient. Where scattered families can be reconstructed, they are furnished with cottages, at low rent, while to the wives and children there is lodging for a cow and grounds for a garden. It is found that a small agricultural colony can be run at a smaller expense proportionately than a large one. These also permit a closer intimacy between the director and the inmates.

Applying the case to the United States, there seems to be no reason why truck farming near the large cities, and fruit farming at a distance, cannot be successfully carried on by a plan very similar to that of the Swiss Government. If established where competition would ensue with private gardeners and orchardists it might be necessary to seek market at a distance. However, this bugbear of competition is not as serious as it appears. Where competition arises it is found that more energy is developed, and those only are crowded out who lack skill and persistency. Professor Kelly advises the specialization of industries. This can hardly be important in agricultural colonies. Intensive farming does not confine itself to one or two crops, but to ten or a dozen. If some of these fail, the farmer is still successful in his annual struggle for adequate returns from his fields.

The advocates of this system advise that every magistrate shall be permitted to commit any case of vagrancy to a labor colony, but that the colony director shall have a power of transfer from the enforced-labor colony to the free-labor colony. At the head of every colony should be a skilled farmer; and under his control the establishment should be somewhat plastic—that is, permitted to grow and shape itself according to conditions and circumstances. The whole affair should be largely in the hands of the inmates themselves, and they should be stimulated themselves to make the most of it. The experience of Switzerland shows that all properly managed colonies become self-supporting in the course of time. Our own "City Farm" on Staten Island shows what can be done as an initiative; also the one at Englewood in New Jersey. They give to the poor a cheerful life, and they contribute to the public welfare. Besides the amount of produce consumed on the City Farm, the shipments to market, in 1907, amounted to $8,000. The drift of our County Farms as they are now called, or old-time "Poor Houses," is in this direction. The subject should be taken up by our State governments with a determination to solve the problem. Vagabondage has become a menace to public morality, besides enormously increasing the proportion of degenerates. The time may come when degeneracy will weigh down social order and human progress. Is the Labor Colony the remedy at hand? Can we eliminate the tramp?

Lawyers' Ethics

The American Bar Association meeting in Seattle has adopted the canons of professional ethics and the oath of admission to the bar which was commented upon some months ago. The ideal set up is high, as it ought to be for a profession whose business is the law, and which includes all our judges, whose business is both law and justice. This code of ethics has been three years in the making and has been most carefully prepared. It covers the wrongs and dangers which beset a lawyer, the temptations to chicanery or injustice to clients, deals with unjustifiable litigations and the proper way of dealing with colleagues or with the court. If these rules of conduct could be generally followed the reputation of the bar would be not a little raised. We are glad to see the recommendation that this code of ethics be a subject of study in law schools and a subject for examination in admittance to the bar. It would be well if all law students should commit to memory the oath of admission,

from which we once more quote the following clauses:

"I will not counsel or maintain any suit or proceeding which shall appear to me to be unjust, nor any defense except such as I believe to be honestly debatable under the law of the land.

"I will employ for the purpose of maintaining the causes confided to me such means only as are consistent with truth and honor, and will never seek to mislead the judge or jury by any artifice or false statement of fact or law."

National Altruism

Nothing finer has been said or can be said on the subject than this which Mr. Taft has written for a missionary meeting. He admits that there was a time when, "enjoying a smug provincialism," he did not appreciate the importance of mission work, but experience in the Orient taught him better:

"No man can study the movement of modern civilization from an impartial standpoint and not realize that Christianity and the spread of Christianity are the only bases for hope of modern civilization in the growth of popular self-government. The spirit of Christianity is pure democracy. It is the equality of men before God, the equality of men before the law, which is, as I understand it, the most Godlike manifestation that man has been able to make. . . . It is my conviction that our nation is just as much charged with the obligation to help the unfortunate people of other countries that are thrust upon us by fate onto their feet, to become a self-governing people, as it is the business of the wealthy and fortunate in a community to help the infirm and the unfortunate of that community.

"It is said that there is nothing in the Constitution of the United States that authorizes national altruism of that sort. Well, of course there is not; but there is nothing in the Constitution of the United States that forbids it. What there is in the Constitution of the United States is a breathing spirit that we are a nation with all the responsibilities that any nation ever had, and therefore when it becomes the Christian duty of a nation to assist another nation the Constitution authorizes it because it is the part of national well being."

We fear some one may complain that Mr. Taft is stretching the Constitution, as with the clause which allows Congress to provide for the "general welfare" of the United States.

On the Bosphorus

One of the results of the Turkish revolution is the end of the persistent pestering of American citizens engaged in educational business in Turkey. Minister Leishman reports that at last the Girls' College in Constantinople has been granted the title deeds to its new land. The property is an ancestral one, one of the spots on the Bosphorus, accessible to the city, and having a magnificent view. There are between forty and fifty acres on the hights, and a private drive to the shore, with a building on the quay. It is by far the finest site for such a purpose on the Bosphorus, and President Patrick and the many friends of the college are greatly to be congratulated. Their school is the leading one for girls, and even the liberal Turks send their daughters there for education. The women of Turkey are second to none in their natural ability and aptitude for progress of the highest kind. The late President Charles Cuthbert Hall was president of the American board of trustees of the Girls' College, and in the desired enlargement of institution a worthy building in his memory would be most appropriate. Now is the time to strengthen the American colleges in Turkey. America has done for Turkey what she has done for Japan in introducing modern Western education; and all together it has cost less than one modern battleship, and has been a vastly greater benefit to the world than a fleet of them.

Indian Art

By *Indian* we mean Amerind, as some choose to use the word in distinction from East Indian. There is of late a special interest in Indian basketry, weaving, bead work, music, etc., and this is commendable whether considered anthropologically or as a means to interest people in benefiting the Indians. We would not go to the extreme of Major Pratt when in charge of Carlisle Institute, who would have no Indian art, no Indian music, no Indian language, no Indian anything. He wanted students to forget Indian tongues, just as far as possible, and a little farther. As we understand the better policy of the Indian Bureau under Commissioner Leupp, it is somewhat different. He is just as anxious to put the Indian on the white man's road, get him out of reservation and into civic life, get him acclimated to civilization, and especially get him to support himself in the

same way that the white man would, without government supervision. But he does not think it necessary to strangle or smother all Indian instincts or aptitudes, or wipe out his whole inheritance from the past. Whatever is good in Indian art or music he would perpetuate, just as with East Indian, Chinese or Japanese art, because it is good as well as interesting archeologically. He would like to have the Indian know that it is good, and let him have a legitimate pride in his race inheritance, instead of despising it. Moreover, if a fad for articles of Indian design and manufacture exists and the Indian can turn an honest penny by supplying the demand he would encourage that sort of money-getting as readily as lace-work or harness-making, except that it might not be so permanent a source of income; for what Commissioner Leupp wants is to get the Indian to earning his own living at some sort of work, and in the same way as a white man, and that seems to us to be the chief problem which now confronts the Indian.

It was a despatch from the London *Chronicle,* said to have been received from Rome, which declared that Cardinal Gibbons was greatly disappointed that Archbishop Farley of New York had not received the red hat. It is to be always expected that reports coming from that source and in that way are false and malicious. Cardinal Manning, in his autobiographical notices, rehearsed his difficulties in exposing these pretended telegrams from Rome appearing in *The Chronicle* and promulgated by interested parties. All such cable despatches dated other than from the Vatican, whether Rome, Paris, London, Berlin or Vienna, are mostly fabrications, like the Chinese news from Shanghai. It is incredible that Cardinal Gibbons should have exprest any disappointment at any action of the Pope.

There are, perhaps, 100,000 Japanese in the United States, and 90 per cent. of them unmarried men. Many of them want to remain here, and therefore want wives. It is expensive to go back for wives, and they fear they might not be allowed to return. There has been established in Tokio a Self-help Society, mostly of girls with some education, who take a training in housekeeping. This institution exchanges photographs with Japanese in this country of good reputation with a view to marriage. We are not sure, but under Japanese law the parties could be married *in absention,* as the marriage law requires little beyond registration. The advantage is that the children would be American citizens.

They dope horses with some exhilarating drug to make them win a race, but it is forbidden and treated as a fraud. Now it is proposed to dose human contestants with oxygen gas for a similar purpose, and we are told that the first experiment has been a brilliant success. We imagine that the human lungs have been fitted to the present atmosphere, and that any artificial change must be injurious, except as oxygen is given when one seems at the point of death, and athletic games should be as stringently honest as horse races are.

We commented last week on the case of Colonel Stewart marooned at the deserted Fort Grant. Since then by a "special order" he has been ordered to Fort Huachuca, Ariz., to have his physical condition tested under a medical inspector by a ride of 90 miles or a walk of 50 miles in three days. It looks queer, as if it were determined by certain officers in authority somehow to compel his retirement, seeing he will not resign, so that he may not reach the rank of general.

The new Japanese Cabinet has defined its policy to be one of retrenchment, and expenditures will be curtailed to the extent of $100,000,000, of which nearly half is in the army and navy. Now the jingo press and the jingo orators tell us that Japan is our chief foe, and would have us expand our navy to more than match Japan's. This would be a good time to follow Japan in the line of military economy.

Insurance

Agents and Company Relations

WHILE it cannot be said that fire insurance companies are in imminent danger of a serious clash with some of their agents, the signs of future complications with such of their representatives as are affiliated with the National Association of Local Fire Insurance Agents are not wanting. The membership of the organization named is an unknown quantity, its officers refusing to divulge any information on that head, a fact that induces the belief that it is limited and that it makes up in activity what it lacks in numbers. That this body is becoming militant, and that it rather inclines to the use of some methods for the accomplishment of its purposes too much resembling those resorted to by labor organizations and employers' associations, becomes increasingly evident and regrettable. True, the agent is an employee, but not on such terms as those which exist between laborers and their employers. To a limited extent the agent is to the company an executive officer, with power to accept liability, to handle its money, to discharge its obligations. Within his jurisdiction he is, in fact, the company, and the law holds the latter to a strict accounting for everything he does in its name. Because of these high and honorable relations, it will be unfortunate if any organization of agents, by objectionable methods, shall bring about a condition of affairs more nearly resembling an armed truce than the harmonious cooperation of men engaged in a common work.

BRIG.-GEN. DANIEL H. RUCKER, the father of Mrs. Phil Sheridan, having recently attained the age of ninety-six years, was, under the American mortality tables used by life insurance companies generally, as good as dead and was accordingly entitled to the payment of his binding policy of insurance. He was so notified, and, while the General is by no means a "dead one" as yet, he thankfully took the face of his policy with its accumulations as proffered by the insuring company. This shows that a policyholder does not always require to die in order to win. It is plain therefore that all insured men ought to try to live to be ninety-six years old.

THE *Insurance Press* is responsible for the statement that every piece of plate glass in the world today is, according to the law of averages, due to be broken within ten years. This, it would seem, is an argument in favor of plate glass insurance that it would be hard to get away from.

WHEN we realize that in every human body there are over two hundred breakable bones, it seems very singular that more persons do not carry accident insurance.

THE Travelers Insurance Company prints in its agents' record the table given below showing the widespread lack of large estates left by deceased persons according to statistics based on researches made in several cities by an unnamed insurance company, viz.:

	Toledo, Ohio, 1901-1905	Albany, N. Y. 1907	Minneapolis, Minn. 1907	Schenectady, N.Y. 1907	Providence, R.I. 1907	Troy, N.Y. Jan. 1 to Oct. 28, 1907	Allegheny County, Pa. Annual Average
Left no estate	5,784	1,101	1,485	728	3,503	935	4,599
Left $1,000 or less	769	244	184	100	212	*250	173
Left $1,000 to $5,000	581	115	248	39	62	‡107	230
Left over $5,000	264	95	145	41	44	44	162
Total deaths	7,398	1,555	2,062	908	3,821	1,342	5,164

*$2,000 or less. ‡$2,000 to $5,000.

In spite of the evidence to the contrary shown in the table, there are some agents who are lamenting that the life insurance field is pretty well covered. The covering evidently is pretty thin and with a great many holes.

Financial

The American Bankers' Association Convention at Denver

THE thirty-fourth annual convention of the American Bankers' Association will be held at Denver, Col., from September 28th to October 2d inclusive. Preparations covering the entertainment and business features are well advanced, and there is every prospect of a successful session. Meetings of the Savings Bank Section, the Trust Company Section and the Clearing House Section have already been arranged for. The convention will be opened with addresses of welcome by Hon. Henry A. Buchtel, Governor of Colorado, and Hon. Robert W. Speer, Mayor of the city and county of Denver. Among the other speakers will be J. D. Powers, of Louisville, Ky., president of the American Bankers' Association; Woodrow Wilson, president of Princeton University; B. E. Walker, president of the Canadian Bank of Commerce, Toronto, Ontario, and Alexander Gilbert, president of the New York Clearing House and of the Market and Fulton National Bank, New York. The membership of the association now numbers 9,700, and is constantly growing. It is expected that the Savings Bank Section will present a report covering postal savings bank legislation.

Harvard's Investments

PERSONS of comparatively small resources who seek safe investments in securities that can easily be marketed at any time will find some instruction in such a report as that of the treasurer of Harvard University. The funds of such an institution must be placed safely, and those who invest them have the benefit of the advice of conservative financiers. Harvard's investments amount to $19,977,911, and they yield an annual income of $945,176, or 4.73 per cent. In railroad bonds $5,147,000 has been placed, and the annual return from these is 4.11 per cent. Inspection of the list shows that the issues selected are those of railway companies which are old, notably strong, and carefully managed. A little more than 4 per cent. is all that can be realized by the investor from investments of this class. Under the head of sundry bonds ($2,340,487) are the issues of the great telephone and electric companies, yielding an average of 4.51 per cent. From $1,584,641 in traction companies' bonds the return is 4.31 per cent. The sum invested in railroad stocks, $1,121,817, is small in comparison with the institution's bond holdings, but the list shows that these securities were chosen with care. The dividend return averages 4.94 per cent. In a few industrial stocks of high grade, largely preferred issues, a little less than $500,000 has been placed, and here the yield rises to 5.44 per cent.

The average for the entire fund (4.73 per cent.) is determined to some extent by the higher income from considerable holdings of real estate. Those are investments of another kind. What we desire to point out is that Harvard's investments in the safe bonds mentioned above, $9,072,128, yield a shade over 4¼ per cent.; that the return from $1,594,879 in stocks is about 5.08 per cent., and that in the neighborhood of these figures may be found the rates that have recently been realized upon investments in securities of these two classes when safety has been sought and the bonds and stocks have been selected with the advice of competent and conservative bankers.

....During the past six years, 568 grade crossings have been removed on the Pennsylvania Railroad lines east of Pittsburg.

....The Empire State Surety Company of New York, of which W. M. Tomlins, Jr., is president, and whose paid-in capital is $500,000, has a surplus of $247,028, a gain during the past six months of $64,445. The total reserves amount to $563,683, a gain of $34,755. The total assets have increased $37,507 since January 1st, and now amount to $1,321,973.

The Independent

VOL. LXV NEW YORK, THURSDAY, SEPTEMBER 10, 1908 No. 3119

Survey of the World

The Vermont Election

Vermont is one of the very few States that still maintain an election for State officers separate from that for President, and the result in Vermont has been regarded as an index of the opinions of the people at large. Of course, Vermont is a sure Republican State, but when the Republican majority falls as low as 25,000 it is regarded as ominous for the party at large, but when it stands at 30,000 the Republicans expect success elsewhere. In 1884 the Republican plurality in September was 23,704, and Cleveland was elected Democratic President in November. In 1892 the State election gave the Republicans only 19,702, and again Cleveland was elected President; and from that time the State has been called the national barometer. The gubernatorial campaign this year was a pretty lively one, and the Independence party, led by Mr. Hisgen, has been a new and vigorous factor. But the voters were not much seduced from their old loyalty, and the Republican plurality was 29,378, which Mr. Taft declares to be very satisfactory. The vote stood: Prouty, Republican, 45,281; Burke, Democrat, 15,903; Backus, Independence League, 1,252; Campbell, Prohibition, 826; Dunbar, Socialist, 479. The Republican plurality in 1900 was 31,559 and in 1904 was 29,783. The Legislature will have one Democratic Senator, the first time for several years, and there will be thirty Democratic Representatives and six members of the Independence League in the lower house. The Republican majority will be large, and it is likely that Governor Proctor will be elected to the Senate in place of his father.

Foraker and Taft

At last Senator Foraker has publicly pronounced himself in favor of the election of Mr. Taft as President. It was at a meeting of a Republican club at Toledo, O. Before the meeting the two men met for the first time since Mr. Taft's nomination and greeted each other cordially in the reviewing stand in the presence of 5,000 persons, who cheered as the two came together. At the subsequent meeting in the theater Senator Foraker was roundly cheered when he entered the hall and shook hands with Mr. Taft. Mr. Taft said in the opening of an impromptu speech:

"It is a great pleasure for me to meet the gentlemen who are here. The chairman of the meeting said I have filled several offices almost without reward, but as Senator Foraker whispered to me, there are some who would accept them on the same terms.

"It is a great pleasure for me to be here with Senator Foraker, because when Governor he gave me what was really my first chance and took a good deal of risk in putting a man of twenty-nine years in the Superior Court of Cincinnati.

"We are in a great electoral campaign, and it is a pleasure to think in this presence that we are going to stand in the campaign shoulder to shoulder with the full strength of the Republican party."

The crowd then insisted on hearing Mr. Foraker, who said:

"There came very near to being a stifling sensation for the newspapers on this occasion. I was ten minutes late in getting here, and I ought to explain that the delay was due to the fact that we were sitting in a car in front of the hotel waiting for Governor Harris. Finally word came to us that the Governor was here and that the next President of the United States was here and that almost everybody except ourselves was here, and the newspapers were already arranging the telegrams announcing a confirmation of the feud and bad

feeling that exists between Judge Taft and myself.

"Under the circumstances, I will, I hope, be pardoned for speaking of this, but there has never been, so far as I know, the slightest ill feeling between Judge Taft and myself, and if there had been you could not lose me that way. If there is anything I feel I have a right to claim it is that I am a Republican in every campaign. I have my preferences sometimes as to who should receive the honors of the party, and everybody generally finds out what they are. I am an old-fashioned, flat-footed Republican who believes in settling all questions at the convention. When the Republican convention named Judge Taft that moment he became my leader. He has been my leader ever since and he will be my leader until the polls close on election day.

"There seems to be some doubt in Judge Taft's mind what the chief issue of the campaign may be. I can understand how he is troubled about this. I have had a little trouble about it myself. The all-important issue, however, is not necessarily what is in the platform, but whether the affairs of this Government shall be turned over to the Democratic party with Bryan at its head or remain in the hands of the Republican party.

"I don't want to say anything bad about the Democratic party, but it is a fact that it is not situated so as to permit of it successfully administering the affairs of the country.

"I want to repeat that his experience on the bench, in the Philippines, as Secretary of War, and in administering the affairs of the Panama Canal, in all positions he ever filled, has been such as qualify Judge Taft almost beyond any man ever nominated. We are going to elect him, and if he doesn't make a success of it it will be his own fault."

The meeting and the addresses are regarded as of political importance, showing that there will be no feud in the Republican party in Ohio, and that the Taft wing of the party will favor the re-election of Mr. Foraker to the Senate, altho Mr. Taft has consistently refused to take part in the divisions in the State. After Mr. Taft and Mr. Foraker had spoken Senator Dick made an address strongly supporting the re-election of Mr. Foraker.

Governor Hughes in Ohio

Governor Hughes opened the Ohio campaign last Friday in Youngstown, in the presence of over 20,000 people, whose eagerness proved that they well knew what had been his fight against the gamblers. Senator Beveridge, Governor Harris of Ohio, and other distinguished men were there, but Governor Hughes was the center of all attraction. His address was a very comprehensive one, taking up the contrasts between the parties and their candidates. The plants of the great steel company and the sheet and tube company shut down for the day, and 12,000 men paraded before the addresses. Senator Foraker was not present, having resented the failure to send him an invitation to be present. After contrasting the records of the two parties, Governor Hughes said:

"If all that Mr. Bryan has favored during the past twelve years had been enacted into law we should have been overwhelmed with disaster and would regard it as our chief business in the future to find a way of escape from the meshes of ill-considered legislation in which we would have been entangled. It is fortunate for him as well as for us that he was defeated, and whatever may be his present political potentiality may be ascribed to the fact that hitherto he has not been permitted to carry out his program. . . .

"There are a thousand exigencies in the affairs of this great nation which cannot be foreseen or attempted to be controlled by any platform. The sagacity, steadiness of character, firmness and sound judgment of the Chief Executive must be the security of the nation in many a trying emergency. And it is no injustice to Mr. Bryan's attractive personal qualities, to his effectiveness as an orator, his skill as a party leader, nor is it any disparagement of the purity of his motives, to say that the man who espoused free silver in 1896, renewed its advocacy in 1900 and later declared his belief in government ownership of railroads cannot be regarded as a safe leader to whom may be confided the great powers of the President merely because those doctrines are omitted from his present platform. The country needs a man rock-based in sound conviction and fundamental principle, in whose good judgment in any difficulty all may feel secure, and such a man pre-eminently is William H. Taft.

"Not only will the coming election directly affect the executive branch of the Government, but it is most important in its relation to the judicial branch. Rarely has the choice of President involved more far-reaching consequences. For it is not improbable that the next President will appoint at least four judges of the United States Supreme Court. Upon these appointments will largely depend the quality of the judicial work of this great court for years to come. Congress may pass laws, but the Supreme Court interprets and construes them and determines their validity. The Constitution, with its guarantees of liberty and its grants of Federal power, is finally what the Supreme Court determines it to mean. Upon the learning, wisdom and character of the judges of the Supreme Court rest not merely the just determination of the important matters of private right which come before that august tribunal, but to a very large degree the course of our political history and the development and security of our institutions. In view of the vacancies which in the natural course of events

will most probably occur during the next few years, we must remember that we are about to choose a representative of the people to whom is confided the nomination of Federal judges, a power second to none possessed by the President, the exercise of which calls for the highest judgment. If we should search the country for a delegate of the people who could be confidently intrusted with this important duty, it is probable that no one could command higher confidence than the Republican candidate for President. Himself a judge, learned in the wisdom of the law, he commanded the respect and esteem of the entire bar of the country without regard to partisan division.

"Revision there must be. It should be prompt, thoro and fair. But the policy of protection will be maintained and American industry, involving the interests of our wage-earners, must be properly safeguarded."

Governor Hughes took up the tariff question at length, and Mr. Bryan's numerous methods to control trusts, which he called "journeying in a land of dreams," such as the prohibition of duplicating directors, the requirment of a Federal license when a concern supplies more than a quarter of a product, the guarantee of bank deposits, etc., showing the futility of each. He said:

"It is the function of law to define and punish wrongdoing, and not to throttle business. In the fields of industrial activity the need is that trade should be fair; that unjust discriminations and illegal allowances giving preferential access to markets should be prevented; that coercive combinations and improper practices to stifle competition should be dealt with regardless of individuals, but that honest industry, obtaining success upon its merits, denying no just opportunity to its competitors, should not be put under prohibitions which mingle the innocent and the guilty in a common condemnation.

"The line of progress lies not in arbitrary action, but in securing suitable publicity and supervision and by accurate definition of wrongs and the infliction of proper punishment. The processes of justice may be slower and more laborious, but if we desert the lines of soberness and fair play to get quick results thru arbitrary interferences with trade we shall find that such short cuts lead only to disaster."

The Independence Party

The Independence party, also known as Mr. Hearst's party, because he has organized and carried it, has opened its campaign by the public notification last week of its candidates, Thomas L. Hisgen, of Springfield, Mass., who is known for his opposition to the Standard Oil Company, for President, and John Temple Graves, of Georgia, for Vice-President. At the meeting in this city Mr. Hisgen formally accepted the nomination and said:

"I believe that the first essential of all reform is to take the conduct of public affairs out of the hands of special interests and their tools, the corrupt bosses, and restore it to the hands of the people.

"To accomplish this I heartily advocate, as does our platform, direct nominations, the initiative, the referendum and the recall.

"The direct primary is spreading rapidly thru the States of the South and the West. Wherever the direct primary goes the party boss disappears. The party convention and its dummy delegates are the boss's tools. Destroy them, and the boss is powerless.

"Especially valuable is the referendum when franchises and other public property are sought to be disposed of.

"The right to initiate legislation, and when occasion arises to pass upon and reject legislation, is the purest popular government, and is condemned only by those who have lost faith in the right and the ability of the people to govern.

"Hand in hand with these measures of popular government goes the right to recall. When an official elected for a term of years demonstrates his unfitness or betrays the public trust early in his term there should be a speedy and simple way of recalling or getting rid of him instead of leaving him in office working public mischief, and at the same time strengthening his hands by the use of patronage.

"Upon this great issue of genuine popular government the Republican platform is silent, and the Democratic platform—gravely submitting the question 'Shall the people rule?'—ignores the very existence of either the direct primary, the referendum or the recall. Moreover, Mr. Bryan declares that he regards the omissions of a platform as binding as its declarations. . . .

"No business man has more reason than I to insist upon a strict enforcement of the law against oppressive trusts and criminal monopolies, but I would substitute conviction of criminals for reckless and disturbing threats and denunciation. Furthermore, I believe, as our platform declares, in jail for the responsible offenders instead of fines that are in reality imposed upon stockholders or collected from the consuming public."

The Young Turks in New York

The Young Turks had a great rally in New York last Sunday night, at Carnegie Hall, which was crowded with Turks and Armenians too full of enthusiasm to hear the speeches. The various revolutionary societies draped the walls with banners, and Turkish, Armenian, Greek and American flags were in abundant evidence. There were Russian contingents and Jewish Zionists, all shouting their joy for

Turkey, and no sign of ill will between Turks and Armenians. Mundji Bey, the acting Turkish Minister, who has now come out as a full Young Turk, presided, wearing the broad red ribbon of the Young Turks. Mr. James B. Reynolds presented the congratulations of President Roosevelt, which could hardly be heard for the enthusiasm. Mr. Roosevelt's letter said:

"Thru you I present my regards to Mundji Bey, the present Chargé of Turkey in this country, and express my great pleasure in the occasion which gives rise to the meeting next Sunday evening in Carnegie Hall. All men all over the world who believe in liberty and order, who believe in a liberal government under which justice shall be done to every man without regard to his creed or race, must feel the keenest interest and in sympathy with the movement so full of hope for genuine progress which is now taking place in the Turkish Empire."

The Armenian Archbishop, Abahuni, was frantically received, wearing his full ecclesiastical vestments. He called for harmony of the different races and religions, but when he added that the throne of Turkey should be preserved as the most efficient form of government for the time a storm of hisses broke out from the radicals, who want a republic; but they were soon drowned out by the cheers of the rest. There were many revolutionary speeches and songs in various languages.

Various Items

The political text-books are out. The two great parties publish each a big book for the use of spellbinders, containing all the arguments which speakers will need to use in informing the people. The Republican book contains 536 pages, and includes speeches of Messrs. Taft and Sherman and long articles on Prosperity, Publicity, Attitude to Negroes, President Roosevelt's Administration, etc. It also includes Mr. Bryan's letter of acceptance. The Democratic textbook contains similar documents, and gives the platforms of the two parties in parallel columns, so as to show great blanks in the Republican platform against the proposals of the Democratic platform.——The Republicans of Iowa have made no progress in agreeing on a candidate for the United States Senate. A caucus of the Republicans in the Legislature was called for last Friday, and fifty-nine attended and nominated Governor Cummins as a "Progressive" for the short term. But forty-seven refused to attend the caucus or to be bound by it. They called on Governor Cummins and threatened him that if he were elected by any aid of the Democrats, who are said to be likely to cast one vote for their own candidate, and then allow Governor Cummins to be elected by fault, his Republican opponents would prevent his being elected at the primaries for the full term. He answered them very sharply, saying that if they bolted the majority rule of the caucus the consequences were upon their own heads.——The grand jury has returned 117 indictments for the Springfield riot. In the last list are included indictments of four policemen charged with failure to suppress the riot when detailed for that duty. Three persons have been indicted for murder, one of whom, Mrs. Kate Howard, has committed suicide. The report says:

"After the most diligent inquiry we condemn in unmeasured terms the cowardly, contemptuous action of those members of the police force who, having taken the oath of office, failed to do their duty; men who were paid from money obtained from the pockets of the people of this city to protect life and property; men who were ordered by the heads of departments of the police to go out and disperse the mob, and who not only failed to use a club, handle a pistol or raise a voice against the mob on the side of law and order, but some of whom are shown to have assisted by act and word in doing the work that has brought destruction of thousands of dollars' worth of property and has brought the blush of shame to every law-abiding citizen of this city; men who under oath were bound and who, had they acted promptly, could have driven back to the obscurity from whence it came the mob that for a time assumed to hold Springfield in its bloody grasp."

——By the death of Col. W. F. Vilas, of Madison, Wis., his estate of $3,000,000 will go to the University of Wisconsin, after the death of his widow. But one half the income will be used for instruction, and the remainder is to be compounded until it reaches $30,000,000.

Dutch Ultimatum to Venezuela

The reply of the Government of the Netherlands, transmitted thru the German Minister at Caracas, discusses in courteous language each of the points raised in the last Venezuelan note. The Minister of For-

eign Affairs objects to the way in which M. de Reus, the Dutch Minister at Caracas, was expelled from the country. He admits that the publication of the offensive letter, altho it was unintentional, was a sufficient reason for his withdrawal, but he reminds President Castro that it would have been more in accord with diplomatic courtesy to have notified his Government that he was *persona non grata*, instead of taking summary action. In reply to the complaint that the Dutch cruiser "Gelderland" did not salute the Venezuelan flag on entering La Guayra, it is stated that, according to international naval practice, a vessel does not salute if it has previously entered the same port with due formality within the year, which was the case with the "Gelderland." As to the insulting of the Venezuelan consul by the mob at Willemstad, Curaçao, it is objected that he had not been officially recognized by the Government as consul, and so must be regarded as a private citizen of Venezuela, and that he was believed to have authorized the distribution of a circular denouncing the Netherlands Government. The Minister of Foreign Affairs also denies that Holland has asked other countries to join with her against Venezuela, tho he acknowledges that conferences have been had with other Powers regarding their grievances against President Castro. In return, the Government of the Netherlands makes a demand on Venezuela that practically amounts to an ultimatum, that is, that President Castro revoke his decree of May 14th, requiring the transshipment of all goods from and to Maracaibo and other ports in Western Venezuela at Porto Capello instead of at Willemstad, as formerly. This practically destroys this part of the trade of Curaçao. Holland insists upon compliance with this demand by November 1st.

British Labor Problems

The unemployed in Glasgow have taken to riotous demonstrations to make known their grievances. The Municipal Council had failed to take action to alleviate the distress, and, on the other hand, had made liberal appropriation for the entertainment of Prince Arthur of Connaught on his visit to the city to review the Boys' Brigade. This caused an unprecedented outburst of antiroyalist feeling, expressing itself in jeers, threats and insults directed against the Prince. As he rode thru the streets his carriage was surrounded by a mob of 5,000 men, who shouted "Down with all royalty!" and drowned the music of the band playing "God Save the King" with the "Marseillaise" and other revolutionary songs. The infantry escort with fixt bayonets and the police with clubs had difficulty in keeping back the crowd. On Sunday open air mass meetings were held, after which two thousand of the unemployed attempted to force their way into the cathedral during service, but were driven off by the police.——The Trade Union Congress is holding its forty-third session at Nottingham, under the presidency of James Shackleton, M. P. In spite of the fact that the Societies of the Engineers and Firemen withdrew last year, the congress is the largest ever held. There are 518 delegates, representing 1,776,000 members of the affiliated unions.——The regulations for the old-age pension system have just been published. A large part of the administration will be placed upon the post office department. The applicant will obtain from his local postmaster the application blanks, and these, after being filled out, are returned to the postmaster to be forwarded to the excise officer of the district. He will investigate the claim, and if the applicant is able to prove that he is seventy years old or over, has been industrious and has an income of $105 a year or less, he will receive a set of coupons entitling him to $1.25 a week, which he can cash at the postoffice. If his income amounts to $155 he gets 25 cents a week, and intermediate amounts in proportion.

Compulsory Arbitration in New Zealand

The policy of compulsory arbitration in labor disputes of the New Zealand Government is to be further extended and strengthened by a new bill which has been introduced by the Prime Minister and is now under discussion in committee. Strikes and lockouts are prohibited

under heavy penalties in the non-unionized as well as in the unionized industries. Every workingman who is party to a strike is liable to $50 fine and an additional fine of $5 for every week during which the strike continues and he remains a party thereto. For a lockout the employer is fined $1,000 and $250 a week for the time it continues. Penalties are also provided for aiding and abetting a strike or lockout, making a gift of money to or for a person or union engaged in them and publishing any expression of approval of a strike or lockout. In order to prevent any interruption of industries on the continuance of which the safety and health of a community depend still heavier penalties are imposed for striking without one month's previous notification in writing of their intention by employees engaged in

"(1) The manufacture or supply of coal gas; (2) the manufacture or supply of electricity for light or power; (3) the supply of water to the inhabitants of any borough or other place; (4) the manufacture or supply of bread; (5) the supply of milk for domestic consumption; (6) the slaughtering or supply of meat for domestic consumption; (7) the retail sale or delivery of coal, whether for domestic or industrial purposes; (8) the working of any tramway or railway used for the public carriage of goods or passengers; (9) any industry or occupation of such a nature that any danger to the public health or safety, or any injury or destruction of the property of the employer, has resulted from the strike.

The councils of conciliation, which have the authority to impose terms on both employers and employees in case of any industrial dispute, are composed of the local magistrates and two assessors appointed by the opposing parties. An appeal may be taken to the court, which is to be reinforced in the same way by two assessors. Any union which commits a breach of award is to be fined $500 for every offense and an individual is to be fined $25. This must be deducted from his wages, tho not to exceed one-quarter of the total amount, and if the defaulting worker goes to another place, his new employer is liable for the payment of the fine. In determining the proper rate of payment for services the court has power to establish a minimum wage and also extra remuneration for superior service, defined as follows:

"A needs-wage is such wage as the court deems a fair and reasonable remuneration for work which conforms in amount and quality to a standard fixt by the award. The standard to be so fixt by the court shall be work which is equal in amount and quality to that which in the opinion of the court is capable of being done by a worker of average skill and energy. An exertion-wage is such wage as the court deems a fair and reasonable remuneration (in addition to the needs-wage) for any work which in amount or quality exceeds the standard so fixt. The exertion-wage may be calculated either as a fixed proportion of the value to the employer of the work so done so far as it exceeds the said standard, or may be calculated in any other manner which the court thinks fit."

The Moroccan Crisis

Germany has precipitated a decision of the Morocco question by notifying the Powers participating in the Algeciras Conference that it is the opinion of the German Government that the speedy recognition of Mulai Hafid as Sultan of Morocco would be in the interests of peace. This sudden and independent action by Germany is regarded as a direct blow at France, which, in cooperation with Spain, was specifically given charge over the international relations of Morocco by the Conference. The representatives of Mulai Hafid were months ago given a cordial, tho unofficial, reception in Berlin, and as soon as he was proclaimed Sultan in Tangier, the German Consul at that place, Dr. Vassel, left for Fez, in order to be the first of the European Powers to greet the new sovereign. The attitude of Germany was naturally resented in France, but the fact that Great Britain at once announced her intention of taking no action in the matter until after learning the views of France, and the other Powers, with the possible exception of Austria, made similar replies, reassuring the French people that Germany is still in a position of diplomatic isolation. The standpoint of the French Government, as exprest in a semi-official statement, is that the Powers should act together in the recognition of Mulai Hafid and only take such action after satisfacory guarantees are given that European interests will be safeguarded in accordance with the Algeciras Convention. France repudiates the idea that she is opposed to the new Sultan or reluctant to recognize him if he will accept the obligations imposed by the Powers and assumed by his

predecessor. This acquiescence on the part of Abd-el-Aziz was, however, the chief cause of the revolt against him, and it is questionable how far Mulai Hafid can conform to foreign demands without losing his hold upon the people. The correspondent of the London *Times* at Tangier, Mr. Harris, states that the legations are already in possession of a written declaration from the new Sultan that he will abide by the Algeciras Convention and accept the responsibility for the national debts, but that he will demand an inquiry into the exorbitant bills for the European luxuries purchased by his predecessor. According to German opinion it is unwise to wait for France to recommend the recognition of Hafid, because it appears that she is delaying this action until he will agree to pay the expenses of the French campaign in Morocco and the loan made to Abd-el-Aziz for the equipment of his army against Hafid. Altho there has been some fighting, not altogether unsuccessful, in the vicinity of Marakesh in behalf of the fallen Sultan, he is reported to have give up all hope and disbanded his army, intending to make a pilgrimage to Mecca and then live in retirement in Syria.—— The Berbers, on the Algerian frontier, attacked the French stronghold of Budenib, and raided the surrounding country. The garrison of 1,500 men was in danger of being overwhelmed by the natives, who outnumbered them ten to one, and charged against the machine guns with fanatical recklessness, but reinforcements arrived in time from Colomb-Beshar, and the French assumed the offensive.

Foreign Notes

It is reported from Tabriz that all efforts to effect a compromise between the Shah of Persia and his rebellious subjects in that city have been in vain, and that the royalist forces under Ain-ed-Dowleh, recently appointed governor of the province, have been twice attacked with heavy losses by the revolutionists under Sata Khan.——The strain upon the relations between France and Germany over the Morocco difficulty is further intensified thru the wounding of French pride by the fact that the German army maneuvers are now being held in Alsace-Lorraine, on the battlefields of the war of 1870-71. More than 70,000 troops are engaged, being divided into two opposing forces, the Fifteenth Corps constituting the "Blue" army, stationed at Strasburg, and the Sixteenth Corps the "Red" army, at Metz. The final operations will take place at Saarbrücken.—— The reception of the officers and men of the American fleet at Melbourne exceeded in brilliancy and enthusiasm that given them in New Zealand and at Sydney. The city has not been so crowded for many years. At a dinner given to Rear-Admiral Sperry and the senior officers, Alfred Deakin, the Prime Minister, spoke as follows:

"The appearance of the American fleet indicates that it is on no holiday cruise. Its visit marks for us no casual adventures, for the invitation was given in a spirit of deepest earnestness and after sober consideration, and the concession made by the American Government in sending the fleet here is perhaps the most generous made in recent times by one nation to another. The American battleships show the last word in the art of naval construction, and the lesson to Australians is that as America was unable to take a first place in the world until the country had a first-class navy, because it was until then only able to protest verbally against outside injustice and injury, so Australia cannot be content to ultimately accept defense at any other hands than its own and should begin provision for its own navy in a modest way. We fortunately live under the shelter of the British navy, but those who say we should sit still are not worthy the name of Briton."

The American fleet, on leaving Melbourne at 8 a. m. September 5th, for Albany, West Australia, was escorted down the bay by all available steamboats, yachts and launches.——The world's record for flying with a machine heavier than air was broken at Issy, France, September 7th, by Leon Delagrange, president of the French Aviation Club. His aeroplane remained in the air thirty-one minutes altogether, altho the wheels of the machine touched the ground in its first round, so three minutes were deducted from the official time. On the previous day he made over 15 miles in a flight of almost 30 minutes. Wilbur Wright, at Le Mans, France, flew nearly 15 miles in 19 minutes and 48 seconds. Orville Wright, at Fort Myer, is making short daily flights to get control of his new machine.

Physical Valuation of Public Utilities

BY JOHN R. COMMONS

PROFESSOR OF POLITICAL ECONOMY, UNIVERSITY OF WISCONSIN.

WHEN Governor La Follette, in 1903, proposed to the Wisconsin Legislature an expert valuation of the cost of construction of railway property for the purpose of regulating rates, the outcry was bitter and panicky. Four years later, when the law was extended to all other public utilities in the State, the corporations accepted physical valuation as essential. They had just seen the difference between a rate based on physical valuation made by experts and a rate based on resentment and retaliation. The Railroad Commission, appointed by Governor La Follette, with the aid of the Tax Commission, had finished its careful valuation of the St. Paul Railway, and in view of that valuation had declared that passenger fares could not reasonably be reduced below two and one-half cents a mile.[1] But the legislature, a few months later, provoked by some petty regulations of the roads in changing their rates and in imitation of the action of other legislatures, overruled the commission and reduced fares to two cents a mile. The La Follette leaders protested, and the corporations then realized that physical valuation, instead of a scheme to rob them, was intended to be a means of dealing honestly with them. In the heat of the contest the railroads had paid attention only to Governor La Follette's charges of excessive rates, overcapitalization and discrimination. They had not noticed that he equally insisted that rates must be fair to the railroads, must yield them a reasonable profit on their true capital, and must stand the scrutiny of the courts. These he held could be secured only thru technical and expert knowledge of the cost in detail of railroad property and the cost of maintenance and operation.

Had the St. Paul Company been able to go into court it could have shown *prima facie* by the exhaustive investigations of the commission that a two-cent rate was unreasonable. But its lawyers recognized that the courts, as a matter of fact, make a distinction between an unreasonable rate and confiscation. As long as the reduction in total revenues of the company does not amount to confiscation, the courts do not interfere against unreasonable reductions in particular rates. It was because the commission had before it the true value of the property, supplemented by detailed operating costs, that it was able to apportion that value between freight and passenger traffic, and to declare that it required a two and one-half cent rate to pay a fair return on the portion assigned to passenger traffic. In other words, the commission was able to give a fairly accurate figure for the vague term "reasonable," whereas commissions and courts heretofore have been able to give only a guess.

This distinction between confiscation and reasonable regulation is clearly seen when we look into the items of valuation which the La Follette Commission allowed in the passenger fare case. The market value of the Wisconsin share of the stocks and bonds of the St. Paul Railway was found to be about $81,000,000, but the cost of reproduction of the property "in its existing condition"—that is, the "physical value"—was found to be only $51,000,000. Even this allowed what might properly be considered an excessive cost for the right of way and land for yards and terminals, namely, $10,000,000. This amount was arrived at on the basis not merely of the existing prices of adjacent real estate, but also of supposed compensation paid to owners for depreciation in the former value of the residue in consequence of the railroad crossing the part taken. In some cases this compensation is as high as fourfold, and the average is about two and one-half times the value of neighboring real estate. This allowance was made, notwithstanding the knowledge on the part of the commission that the right of way "was largely obtained by the

[1] Buell vs. C., M. & St. P. Ry. Co., No. 32, Railroad Commission of Wisconsin, February 16, 1907.

company free of charge." The commission also allowed interest during construction, as well as organization and legal expenses and contingencies, equal to another $5,000,000. These were the figures reported by the engineers and accepted by the commission.

But even this liberal valuation of the engineers was not adopted for rate-making purposes. The commission added $12,000,000, and fixt the reasonable value at $63,000,000. This happened to be the amount which the engineers reported as their estimated cost of reconstructing the property at present prices of material, labor, etc. According to the engineers, depreciation accounts for this difference of $12,000,000 between the "cost of reproduction new" and the "cost of reproduction in existing condition." From the economic standpoint this depreciation is just so much dividends paid out of capital. From the commission's standpoint it is the reasonable allowance to be made for all items of non-physical value. In other words, the commission added 23 per cent. to the physical value of the engineers, and, if we consider that the cost of the right of way was overvalued, the addition to physical value was possibly 30 per cent. or 35 per cent.

This liberal action of the Wisconsin commission may be compared with a recent decision of the Supreme Court of the United States.[2] A board of county supervisors in California had found the physical value of the property of an irrigation company to be $312,000, to which it added $25,000, or only 8 per cent., for non-physical elements. The Supreme Court declared that this was not confiscation. Public utility corporations might wisely look to the La Follette legislation to save them from the Supreme Court.

The profound significance of physical valuation is that it carries publicity to its logical conclusion. It has already been settled that the bookkeeping of public service corporations shall be uniform and open to the public. But this alone gives only income and operating account. Physical valuation gives the true capital account. This enables the people to know all the facts on which reasonable rates must be based. By knowing the physical value they know exactly how much is allowed for good will and other intangible values. Knowing these facts they can be trusted to be reasonable. The bulk of them are property owners and they do not believe in confiscation. They are not hostile to capital, but to the abuses that masquerade under the name of capital. They know that honest capital is timid and requires more than mere protection against confiscation. The courts may protect capital already invested from confiscation, but it is left to the people to encourage new capital to be invested. But the people cannot be fooled any longer by watered stocks and bonds. The danger is that they will exaggerate the amount of water. Only a physical valuation made by experts can show them where false capital ends and true capital begins. It enables them to deal as honestly with a corporation that has not watered its stock as they do with one that is overcapitalized. In the St. Paul case the Wisconsin Commission found the true value of the property to be some $7,000,000 greater than the total amount of stocks and bonds. Physical valuation disregards stocks and bonds, and guarantees a fair profit, not on capitalization, but on capital.

This kind of complete publicity is more necessary than ever before, because the people are taking government out of the hands of the politicians. Capitalists hitherto have been able to protect capital by alliance with the political machine. Thru this alliance they controlled the legislatures and dictated the laws. If they missed at this point they had an executive who would neglect to enforce the law. If the executive failed them they often could look to the courts to nullify or construe the law. But the new methods of nomination, election and referendum, the anti-pass, anti-lobby, anti-campaign-contribution laws are demolishing the power of politicians to help them. Even the Supreme Court is not a refuge if constitutional formalities are complied with. Henceforth corporations must take the people fully and honestly into their confidence. But corporations are slow to learn before the deluge. It indicates insight into the new

[2] 192 U. S., 201.

political conditions that La Follette, who led in destroying the political machine in Wisconsin, also led in carrying publicity to perfection. Physical valuation of corporate property is not only the people's protection against abuse, it is the corporation's protection of honest capital.

This can be seen, on the one hand, in the means it affords of protecting the people against their own agents. Heretofore the great danger in the way of regulating corporations by boards or commissions has been the control which the corporations gained over the commission. The people were helpless because they could not measure the amount of this control. But with a physical valuation of the properties made in the first place by competent engineers, and with this physical valuation kept up to date by a uniform system of accounts showing depreciation and new construction, the voters are able to see exactly how much profit each corporation is making on its honest capital. If the profit is excessive, public opinion will hold the commission to account. If the profit is deficient, the people will support the commission in an increase of rates. If the profit is reasonable compared with the profits in other lines of business, the people will not be moved by demagogic agitation. The people, then, are in almost as good a position to regulate rates as the commission itself. Physical valuation protects the commission, the people and the corporation. The corporations have neither motive nor opportunity to get control of the commission. They make their appeal directly to the people. Already the Wisconsin Commission has raised the rates where two electric companies had been cutting throats. It has lowered many railroad rates and raised other rates, always after a close calculation of cost of service and reasonable profit on true capital. Other matters, such as discrimination, competitive conditions, value of service, are necessarily taken into account, but these are minor points, and are accurately measured when physical value is known. As long as the commission stands on this bedrock, both corporations and people accept its changes in rates without protest.

There is, however, a disadvantage which both a State commission and the people labor under in the regulation of railroads. Railroads are interstate corporations and a State commission does not have the physical value of their entire property. Consequently the effect of State regulation on the profits cannot be known. This disadvantage disappears in the case of local utilities like those of gas, water, electricity and street railways. Here the commission has jurisdiction over the entire property. The physical valuation is complete. At the end of each year the people will know exactly the rate of profit on the total capital, and can judge whether the rates for service should be raised or lowered. The same complete information will be available in the case of railroads if the Interstate Commerce Commission is required to make a physical valuation. Then by distributing this value among the States on a uniform basis, along with a similar distribution of operating accounts, the several State commissions will have at hand the basis for reasonable regulation of local rates.

Physical valuation offers a solid foundation for overcoming a valid criticism of governmental regulation of private enterprise. This criticism points out that if rates are to be reduced every time an extra profit appears, then the owners are deprived of the motive to make large improvements, to take extra risks and to reduce costs of operation. The criticism is sound if the people do not understand the reasons for the extra profit. But with physical valuation the people can enter with their eyes open upon a kind of partnership with the corporation. The commission can adopt a sliding scale by which, with every reduction in prices brought about by a decrease in the costs of operation, the company may increase its profits by a definite rate. Or it may adopt a system of sharing the profits instead of reducing the prices. The present objection to these schemes is that the public is taken into a blind pool and does not know exactly the basis of partnership. Physical valuation, with uniform accounting, sets all the terms out in the open and above board. The people see the reasons for the extra profit, they know its exact re-

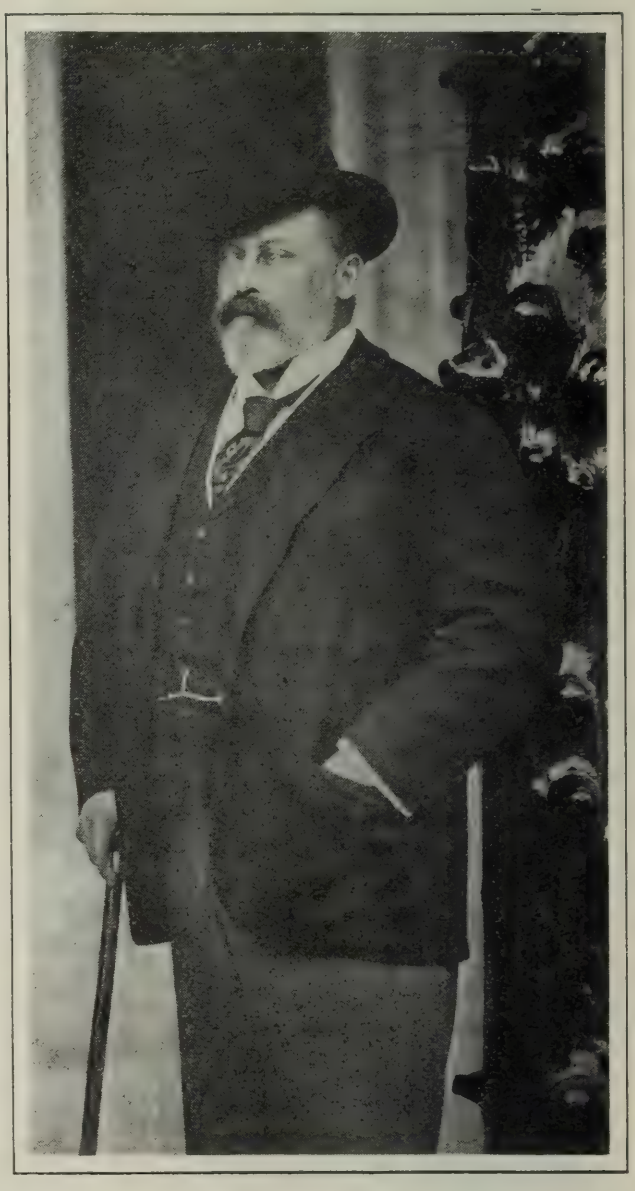
lation to the true capital invested, and they are in a position to acknowledge its wisdom.

An alternate method of regulating corporations is the control of capitalization. This is the method of Massachusetts, New York and Texas. The defect of this method is that it cannot correct the stocks and bonds already issued. Perhaps it should be adopted for future issues, but even then it requires physical valuation to be accurate. As regards outstanding issues the method is aimless. The New York Public Service Commission has spent several months investigating and exposing the stock-jobbers and corruptionists who inflated and then unloaded the stocks and bonds of the metropolitan companies. It is difficult to see much that can be accomplished in this way except to stir up anger and revenge. The physical valuation method, as introduced by Governor La Follette, is less journalistic, but more useful. It makes no invidious inquiries into the past, blackens no records, provokes no personalities. It goes directly at the present problem, finds out how much real capital the men of the past have devoted to the service of the public, pays little attention to the amount or history of fictitious capital, and quietly lays the honest foundation for future adjustments. With publicity of physical value, and power to regulate rates with that in view, investors know as much about real values as do the "insiders." Excessive issues of stocks and bonds cannot be floated. Overcapitalization, stock-jobbing, "fleecing the lambs," "high finance" are cut out at the roots. The amount of stocks and bonds can safely be left to private contract when the amount of real capital is known to purchasers.

MADISON, WIS.

Parliamentary Recess in Westminster

BY JUSTIN McCARTHY



THE newspaper press all thru Great Britain has lately been much occupied in speculation as to the probable result of the visit paid by King Edward to the German Emperor. The idea universally accepted is that the King's visit is made with the object of promoting peace between Great Britain and Germany, and it is understod that the invitation of the German Emperor was given with no less important and beneficent a purpose. There has been much alarm created lately in England, and not unnaturally, by the rapid and, one might almost say, the ostentatious, increase in the strength of the German navy. Germany might be said to have had until lately no navy adapted to the business of war, but recently she has been constructing assiduously great war vessels of immense size and strength, and a general feeling began to grow up thruout England that these ships could be designed for no other purpose than to make an invasion of England possible if war should break out between the two states, or, even, as many alarmists contended, with the object of compelling Engand to declare war against the German Empire. Germany is, in fact, the only European country now which could by any possibility become a dangerous enemy to King Edward's European dominions. For myself, I may say at once that I do not believe there is any desire on the part either of the German Emperor or of the German people to force England into a war. The Germans are a thoroly educated people, have distinguished themselves always in the promotion of the arts of peace, and I cannot see what possible advantage they could expect to gain from an invasion of England were their navy as strong as the most lavish expenditure of money and skill could make it. But, of course, the German Empire has come into existence because of German success in great, sudden, and, for the most part, unexpected wars against

EMPEROR WILLIAM.

European states. It is not, therefore, very surprising that Germany should be credited in England and thruout the world with an ambition to make herself greater and greater by the means of war and conquest. I am, however, yet very slow to believe that the Germany of our times is still the Germany of Bismarck's day, and is ready to run the risks of a war with England for the mere purpose of magnifying her position as a domineering European power. I have often been assured by many who profess to know that the present German Emperor is by no means the man to encounter indefinite risks and troubles in the mere hope of unmeaning victory. I think we may readily believe that the meeting of King Edward and the German Emperor was brought about by the sincere desire on the part of the latter, as well as of the former, to promote enduring good relations between England and Germany. I make the whole question my first subject in this article, because it has been a subject of the deepest interest thruout these countries for many weeks. Every one knows that King Edward is most earnest in his efforts to promote peace, and there seems as yet no reason to believe that the German Emperor is ambitious of involving his great and growing empire in the meaningless risks and troubles of another war.

The House of Commons has adjourned until the winter session, when its serious and pressing work will be resumed in good earnest. Meanwhile, Mr. Lloyd-George, now Chancellor of the Exchequer, is making a sort of semi-official visitation to Germany to study old-age pensions, and doubtless also with the intention of expressing to the German people, thru the men of influence with whom he is already acquainted in the Teutonic land, a just idea of the friendly and peaceful sentiments entertained

KING EDWARD.

toward Germany by the peoples of Great Britain and the desire of England to maintain and diffuse the gospel of peace. Now, it may well be thought that the history of England thus far has not given to the world any very convincing idea regarding England's devotion to the doctrine of peace. But it is quite certain that of recent years, and to a great extent with the growing political strength of the operative classes, a very strong and widespread feeling in favor of peace and in hatred of war has been

THE GERMAN EMPEROR AND THE KING OF ENGLAND.

making itself manifest thruout Great Britain. We have recently learned that the South African war cost to the exchequer of this country more than £200,000,000 sterling. Lloyd-George has won a special celebrity for himself by his many successes in bringing great trade disputes to a satisfactory and pacific settlement, and I have no doubt that his influence in Germany just now will be of sterling value in the promotion of a just understanding and of good feeling between the peoples of Great Britain and of Germany. He is one of the most distinguished and capable members of Mr. Asquith's Cabinet, and he has, to all appearance, a great and beneficent career yet before him. His influence in Germany will come at a very appropriate time, for many of the English newspapers are every day assuring the British public that Germany is determined on an invasion of England, while, on the other hand, many of the German newspapers are daily proclaiming that England's recent friendly understanding with France means first of all an alliance between England and France for a war against Germany.

The sad news of the death of Alfred Webb must have caused deep regret to my fellow countrymen in the United States and indeed to a large number of Americans. Alfred Webb was thruout the whole of his long and active life a devoted philanthropist, a patriot in the purest and highest sense, a friend of peace, a promoter of good will amongst men. He had visited the United States and Canada several times, and was indeed a great traveller, having gone

round the world twice and made himself well acquainted with the five great divisions of the globe. He was for many years a member of the Irish National Parliamentary party, and I had the honor of his friendship during the whole of my political career and thru the years that followed my enforced withdrawal because of broken health and overwork from my place in the House of Commons and in active service to the national cause. He was a man of great intellect and high culture, and he has contributed to literature a very valuable work entitled "A Compendium of Irish Biography." The volume was published in 1878 by M. H. Gill & Son, Sackville street, Dublin. This book is well entitled to have a place in every library, and indeed I do not hesitate to say that no really valuable library could be quite complete without it. Alfred Webb was as charming in conversation and in manners as he was beneficent and noble in his character and in his aims. Altho he spent so many years in Parliament and was unfailing in his attendance during the sittings of the House of Commons he avoided as much as possible any appearance as a speaker in debate, altho he maintained an untiring part in all the counsels and arrangements of the Irish National members. Just toward the close of his life he published a charming little treatise appropriately styled "Thoughts in Retirement," expressing in concise sentences his own political and personal reflections on the great international questions of the present time—a little treatise in which those who knew him could hear Alfred Webb himself addressing them thru every page and every sentence. He sent me a copy of this little pamphlet with some words of friendship that went to my heart. He sent it to me from Wales, where he was then making a short tour, and by a sad coincidence this his last gift only reached me just before the newspapers brought the announcement of his death by an accidental fall while ascending a Welsh mountainside. His name will live forever in the memory of his country.

London has lately been much given up to international exhibitions and international competitions of all kinds. The season may be said to have closed with a round of applause, such as that, only on an immensely magnified scale, which we hear in a theater when the curtain comes down on the final scene of some great dramatic success. I cannot but believe that these peaceful international competitions, which are coming into such favor and popularity of late in England and in other countries, must have a happy effect in bringing the peoples of the civilized world into a better knowledge of each other and a more cordial recognition of the bonds of friendship which ought to be common among civilized peoples. We here, and I presume it is the case in most other countries, have been accustomed to associate what is called the season with mere fashionable festivities and rivalries, with competitions of dress and the display of wealth and rank and splendor. But the season just closed has had for its distinguishing quality an honorable, healthful and promising competition, open to all nations in the faculties and the arts which lead to national prosperity and international peace.

The great and growing increase in the strength of the Socialistic party is one of the subjects of deepest interest thruout Great Britain. I include in the term Socialistic the whole of the Labor party, as that is represented in the House of Commons and outside it. The Socialistic party is devoting itself more and more every day to the increase of its parliamentary representation, and its efforts in this direction form an entirely new condition in our political and parliamentary arrangements. We are, in fact, at present at the opening of an absolutely novel chapter in the history of Great Britain and probably in the history of the world. There is nothing whatever of a revolutionary character in this new movement unless a movement may be called revolutionary which endeavors to bring about a complete change in the condition of the working classes by means of what I may call the organization of labor. The words I have just used bring back to my memory that book which once had so widespread a fame in France, and indeed thruout the civilized world, "Organisation du Travail," by my dear old friend, Louis Blanc. The work was held at the time by what are

called the higher classes everywhere to be a mere revolutionary treatise calculated and indeed designed for the destruction of all social order and political security. The principles which the book advocated were mainly the rescue of human labor from the cruel necessity of mere competition and the establishment of a great co-operative system with regard to work and workshops under the care and guidance of the state itself. Louis Blanc was an exile from France during many years, and I became one of his intimate friends while he found refuge in London and afterward when, on the fall of Louis Napoleon's empire, he returned to France and to a high place in political life. "Time has come round," and the theories with regard to labor and capital, which were held to be subversive of order when "The Organization of Labor" was published, are now beginning to be accepted in Great Britain and elsewhere as the surest guides toward order, peace and national prosperity.

London, England.

What I Know About Saloons

[We can write no more adequate introduction to the remarkable article which follows than to quote in full the letter from the author accompanying it: "I am not a writer, and am not aware whether the inclosed strictly personal experiences and observations have any value for the public or not. During the present discussion of the astounding 'dry movement,' however, it has occurred to me that if there is any subject on earth on which I am competent to write it should be that whose name heads the inclosed article. If original information gathered at first hand depends for its value upon the amount of money spent to secure it, said article should be a valuable one. A perusal of the article will convey the reason why it must be published anonymously, if at all."—Editor.]

IN reviewing a rich and variegated personal experience of saloons, which extends from New York to Denver, the feature that stands out most prominently in my recollection as true of all of them is the hard, listless, unfeeling type of man who keeps saloons. Saloonkeepere are all alike and they are all of this type. The keeper of a swagger place on Broadway is of just the same type as the keeper of a humble little joint in Orange, N. J., only that he is harder. The bonhomie, the goodfellowship, supposed by some to prevail among saloon habitués, is totally lacking in saloonkeepers. There is plenty of it of the artificial variety when a man has money, but a man may spend a hundred dollars in a saloon one night and have the saloonkeeper refuse to give him a drink the next morning when he is suffering for it, or give it to him in such a way as to spoil the drink. I never knew a saloonkeeper who was really a good fellow.

Saloonkeepers as a class are of a different type from the grocers and other tradesmen around them, a harder, tougher type, singularly impervious to human sympathy or interest in any matter whatever except the coin. Even when pleasant young fellows who are like anybody else go into the business they lapse into this type in a few years. I have in mind two young men who a few years ago were semi-professional athletes, very popular, very jolly, cheerful, and good company. They went into the saloon business, and both today are typical saloonkeepers, hard, sneering, blasé, saturnine.

There is a reason for all this. One sees a lot of human nature in trade, even behind a ribbon counter. The saloonkeeper sees worse and more of it than anybody else. Everybody is trying to stick the saloonkeeper. I have known men who would never think of beating a board or grocery bill who would unhesitatingly hang up the saloonkeeper.

Nobody feels any conscience about the matter. It is almost impossible for any saloonkeeper to collect a bill without taking legal measures. And they hesitate very much about doing this—first, because the judge doesn't greet them with open arms; more largely because it renders them unpopular and hurts their business. I knew a saloonkeeper in Denver

who would attach a man's wages for a bill, but it made him so unpopular that he finally went out of business. The saloonkeeper feels that every man's hand is against him, that he is despised and looked down upon, and that hardens him; something, I suppose, as it does the prostitute.

He is not equally hard everywhere, however. In New Jersey the saloonkeepers are the most human, the most like other men, of any place where it has been my pleasure and privilege to make their acquaintance. They are harder in New York, in Denver, and they are hardest in Kansas City of any place I have known. I have seen a saloonkeeper lean his elbows on his bar in Kansas City and watch two men beat up another and say not a word. Nothing of that kind could happen in Orange. A fight is stopped instantly. Many saloonkeepers give away a great deal of liquor. The most successful saloonkeeper who ever lived in a large Eastern City is said to have given away more drinks than many men sold. It was purely advertising on his part, and very cheap and good advertising. He became famous locally, and his place was always crowded. I must say, however, that I never saw the thing referred to in the following clipping. In the recent campaign in Alabama an effective argument widely used in pamphlets and newspaper advertisements by the anti-saloon party consisted of a brief speech by the opposition, from which we quote:

"Men who drink liquor, like others, will die, and if there is no appetite created, our counters will be empty, as will be our money drawers. . . . It will be needful, therefore, that missionary work be done among the boys, and I make the suggestion, gentlemen, that nickels expended in treats to the boys now will return in dollars to your tills after the appetites have been formed. Above all things, create appetites."

I never saw that done, altho I have known saloonkeepers who in my opinion would be quite capable of it, if they were capable of such a long look ahead. And I never saw any enticing of young girls into winerooms to ruin them, tho I have no doubt such things are done. Of course, girls have got to take their first drink some time, but I must confess that I never saw a girl in a wineroom who looked to me as if she were getting her first drink. Different places are very different about that, as well as other things. In Denver, when I was there, the saloons were full of disreputable women, drinking with the men right at the bar. One would come up and nudge you and say, "How's things for a drink?" The barkeep would say, "Yes, go on, throw a drink into her." It cost twenty-five cents at the cheapest to treat a woman there. If one took a five cent drink and gave her the same, the bill was twenty-five cents. Of this the house kept a dime and gave her a check for fifteen, which she cashed in at the end of the evening. At this period in Denver gambling was all under cover. One couldn't get a game unless he knew where to go. In Pueblo, 120 miles away in the same State, not a woman was to be seen in the saloons, but games were running full blast in every one, from the humblest dive to the most extravagant layout. I suppose some difference in city ordinances or in public sentiment made the difference.

In New York it is not at all customary for women to mix with the men in the saloon proper, altho one is occasionally seen there for a moment. But the winerooms back of the saloon are always full of women in the evening. The price for treating one of them is the same as in Denver, 25 cents for the cheapest drink. But the girl gets nothing; the house takes it all. The New York saloons consider that they pay the girls by giving them a safe place where they can come in off the street and be out of the way of the police.

In my experience, laws, and particularly law enforcement, make a very great difference in the conduct of saloons. In Orange, N. J., for instance, I have heard a saloonkeeper more than once refuse to sell to a minor who certainly looked to me to be twenty-one years old. Nothing but law produced this. There are also no games run by the saloons in Orange. If there were no State law against gambling in New Jersey, I do not know as there would be faro layouts and other games, as in Western saloons. There never have been in Orange. But there would be slot machines in every saloon, as there were a few years ago. In these slot machines, which are run by a syndicate, one puts in a nickel, with the possi-

bility of drawing out up to twenty nickels. The saloonkeepers "holler" sadly because these have been taken out. One told me that his slot machine used to be worth $100 a Sunday, half of which went to the syndicate and half to him. His patronage was nearly all colored. Negroes are very fond of these machines. They were, however, in the very highest grade saloons in great number and variety. I have seen high-grade saloons thruout the country fairly lined with them, and they collect probably more money in such places than in the colored saloons. The patrons do not plunge on them, like the colored brother. They put in a nickel to see what it will do and then run along. But as nickels are so much more plentiful among this class and the transient trade is so large, the collections are undoubtedly heavy. In Orange some saloonkeeeprs kept these in a side room, covered with a curtain, or in a cupboard or closet, after the gambling law began to be enforced.

It is true also that there is practically no Sunday selling today in Orange under the enforcement of the "bishops'" law by Sheriff Frank H. Sommer, of Essex County. Saloons close on the stroke of midnight Saturday, and the bar remains exposed to view all day Sunday. As a result, I know one place in Orange where I can get a drink Sunday, in a saloonkeepers' flat over his saloon. Others may know of another place, but the Sunday saloon business is practically closed.

The saloonkeepers resent this fiercely. They refer to Sheriff Sommer in the most unprintable language; many of his deputies have been assaulted, and I can truthfully say that I do not think there is a saloonkeeper in Orange who would not be glad to hear that he had been assassinated. This is not at all strange, for Sunday was their big day. Many of them would rather close all the rest of the week and open Saturday night and Sunday. One man told me that before the "bishops'" law went into effect he was taking in $250 a Sunday in his saloon, which sum had been lifted bodily out of his weekly receipts. He says he is not making expenses, that he paid $3,000 for the place and cannot sell it at any price, and that he sees nothing but to throw up his license and quit, $3,000 out of pocket and livelihood gone. There are many subtle phases of this Sunday closing question. As every one knows, the Oranges are dormitory towns, filled with rich New Yorkers and the professional and trades people who serve them. But in Orange proper there is also an industrial population—the hatters in what is known as the Valley. These hatters are great patrons of the saloon, altho they seldom drink anything but beer.

One of these hatters said to me the other day: "This Sunday closing law is turning me from a beer drinker into a whisky drinker." He went on to explain that because it was so easy to carry home one or two quart bottles of whisky Saturday night he was taking that instead of beer. "Before Sunday closing," said he, "my kids never saw me take a drink. They've seen me drunk twice on Sunday since." He also said that the law was turning houses into saloons. A number of men put together and order cases of beer sent to one house. Then they go there to drink and play cards on Sunday. The bottling business has certainly increased in Orange since the present *régime* began. I know personally of two saloonkeepers who have given up their business and gone into the bottling, delivering at the houses; and there are others. Nevertheless, there must be a great deal less drinking, for there is not a saloonkeeper in Orange who wears a smiling face.

The closing sharp at midnight has more to do with this than the Sunday closing. It is pretty hard for an Orange Valley hatter to get outside enough beer before midnight to make him drunk, and if a man gets home before he is thoroly soused, he gives up what is left in his pockets to his wife or his people. Parents are getting board money who didn't before, and wives are spending more for shoes and grub and such like vanities. And the fellows themselves have more loose change in their clothes thru the week. They have admitted that to me. The hatter's drinking is very light thru the week. Four or five beers a day will cover it till Saturday night.

Aside from the saloonkeeper's financial anxiety at this epoch, he has a moral grudge against the community. He says:

"The rich people, with cellars full of wine and liqueurs that they can souse in all the time, want to keep the poor man from buying a pint of beer on Sunday." This is perfectly true; that is, it is true that the rich man can and does drink when he pleases. There is a certain club with which I am quite as familiar as I am with the hatters' saloons. The men who support it do so in order to have a place where they can drink and play cards exclusively with their own class. It is merely a saloon, a restricted, co-operative saloon. It draws its revenues from precisely the same sources as the saloon—from drinks, cigars and cards. The restaurant is run by a separate management. The club rents rooms, but so also do many saloonkeepers. The food, drinks and tobacco consumed at this club are more expensive than at the saloon; the talk is also of more expensive things; that is all the difference. The club members also drink more than the hatters. They drink more steadily thruout the week, and they drink harder drinks. There is, however, far less drunkenness. The reasons for this, pursued to their end, lead one to a consideration of the whole difference between the two classes of men; and a comparative study of the drinking habits of club men and workingmen results in most interesting discoveries. In the first place, the club man is better norished than the hatter. That makes a great difference in the effect the liquor has. In the second place he distributes his liquor evenly over seven days instead of crowding it into one. But there is more than this. With the typical club man there is not only no drunkenness, but no thought of drunkenness. Such a thing doesn't enter into his scheme of life at all. The great body of the men I have in mind are in the active occupation of making money, either in good salaried positions or in their own business. Such a man will commonly take a whisky and soda at 10 in the morning, and another before luncheon. Before dinner he will take a cocktail. With dinner he will drink wines; and during the evening he will take perhaps a couple of whiskies with seltzer. Of course there is a difference in the drinks; some take more wines or brandies, but a great deal more whisky is drunk than anything else. By the time he goes to bed such a man has been stimulated all day; he has taken a great deal more alcohol into his system than the hatter, and yet he has not even approached intoxication. He has drunk scientifically, so to speak. He has imbibed for a specific purpose; for stimulant; not for intoxication.

Now the workingman when he starts in on his Saturday night time, drinks to get drunk. His intention is to drink until he gets that happy feeling which makes him think he would not exchange places with Rockefeller. There is nothing else on earth which can give him that feeling, and he wants the feeling. He wants the world and its cares and brutalities to fade away, and leave him feeling like a prince. I have seen that in the Eastern factory operative, and I have seen it in the Leadville miner. I remember particularly one Christmas at Leadville in the late '90's. The saloons frequented by miners were full of a crazy, howling mob; singing, yelling, waving bottles, jumping on faro tables and dancing among the chips. In one corner stood a giant in the last stages before jimjams. He brandished a chair about his head and laid out everybody who came near him. Guns had to be used and a rush made before he was secured. I particularly remember a big miner with a red shirt and a red beard, who had had just enough when he came in to make him dignified. He stepped up to the bar, raised his hand, and "Give 'em all a drink," he said with the dignity of a duke; "Give 'em all a drink." It was a time when all the miners were coming in with money in their clothes, and many were giving similar orders. So the whole house was treated. When it was all over Red Shirt said solemnly to the barkeep: "Well, it's on you; I haven't got a cent." The next minute he hit the floor. These men drank to get drunk. It was their deliberate intention. And they were a very dangerous crowd, for they were of a reckless, fearless, lawless type that one doesn't find among factory operatives, and nearly all of them carried guns. Now in any club I ever knew anything about there were a few older men —but only a very few—who had

crossed the line and become drunkards. They would take liquor to their rooms and drink alone; soak themselves. They were on their way to dipsomania, or already there, and irreclaimable. Such men have occasionally to be fired out of every club. They become uninhabitable, so to speak. There is also a set of young fellows, having their first fling, who drink for exactly the same purpose as the workingmen; to get that happy feeling. They also become intoxicated. But the solid mass of successful men who make up club membership and keep the clubs going, never get drunk; never drink to get drunk; and if the young fellows graduate into the same class, they stop getting drunk, too, and get their drinking down to a scientific routine. Such men work at high pressure, hard and fast, in business hours; and they drink in order to work harder and go faster and get the pressure higher. They drink for stimulus. This is the difference, as I have seen it, between club men's drinking and workingmen's drinking; and it leads me to the irresistible conclusion that the workingman never grows up mentally. He remains, mentally, immature, like the young fellows at the club of whom I have spoken. He doesn't get past that stage; does not acquire the will power, the force, to subordinate his desire for a present good time to the demands of health, reputation and business. Or, perhaps, he never, like the young club man, sees the prizes of life within his grasp if he keeps straight. He knows, instinctively if not thru logical reasoning, that there is nothing ahead of him but a dead succession of monotonous days, and that the only good times he will ever have are those he gets as he goes along. And we must add to this the fact that when the workingman gets drunk it is always in public, where everybody knows all about it; which is not true of the club man. At all events, the difference between the two is not in any sense a moral difference. It is a difference in brains, in temperament, in self control, a difference in what they see that they can get out of life. The club man drinks more and spends more for his drinks than the workingman. Of course in using these terms I speak only of drinking men. All business men do not frequent clubs, and all workingmen do not frequent saloons.

Now it is a question whether the public has anything to do with any club. Men who drink there can afford to drink; drink themselves into their graves, if they like. It is not likely that the club man's family will ever come to charity, or his children be deprived of proper care or education because of his drinking. I don't know that society has any business interfering with any vice or habit which does not entail a specific burden on society. There is this deeper fact, however, that just so long as men of wealth, power and influence in their respective communities, are drinking men, no sincere help can be expected from them in the control or extermination of saloon evils. I have seen drinking in their clubs prosecuting attorneys, judges, other men whose business it is to see that laws are enforced. The inference is obvious.

A long course of observation in many towns has convinced me that the hours between midnight and 6 a. m. are the most dangerous in the twenty-four for the saloon to keep open. It is during those hours that a man gets so drunk that he goes to sleep in low-grade saloons and wakes up in the alley, robbed of his money and perhaps of his clothes. It is in those hours that the majority of fights, thefts and killings occur in saloons. It is in those hours that a man gets so drunk that he doesn't go home that night, and as a consequence perhaps not for several nights; and then perhaps to find himself out of a job and his wife gone home to her people. And those six hours on Saturday night—or Sunday morning—are the most dangerous in the whole week. If the saloon closes at twelve, almost any man will go home if he has a home to go to. And if he goes home then, he may lie around the house Sunday, and go to the saloon late in the day or not at all. If I were obliged to choose between the two, I would close from 12 to 6 a. m. Sunday rather than later in the day. Any community would get a return out of all proportion to the effort involved by compelling closing during those hours Saturday night, and proportionately greater, of course, by closing those hours every night. In this connection I believe

a universal custom of a Monday instead of a Saturday paynight would have an economic value to society greater than any other one thing equally small and easy to accomplish.

Whether it is just or expedient to exterminate the saloon altogether or not, we certainly have a right to regulate it, since we regulate other occupations. The first and most important of all regulations is to close absolutely and inviolably, thruout the whole United States, every night at twelve. It is nonsense to say it cannot be done. If the police give the order, it will be done; and if the people of this republic cannot control their police forces they are unworthy of self-government. One necessary feature of any such law is that every bar must be exposed to full view during closed hours.

Saloon conditions in Kansas City, Mo., are the worst I ever saw among the third-rate saloons; the saloonkeepers the most brutalized, the saloons the most lawless and unregulated. It is an all-night town, the saloons never closed from one year's end to another. Men lie all over the saloon floors asleep all night, and of course their clothes are gone thru regularly. "Strong-arm" work is a regular thing. In this one man catches another by the back of the neck with one hand and claps the other over his mouth. Then a pal goes thru the victim. The saloonkeepers know this is going on all the time.

In connection with saloon life in the West I want to mention "short changing." In many places in the West they run dance halls or concert halls in connection with the saloon, and the customer at these sits down at a table and is served by a waiter. It is a regular part of the system for these waiters to bring a man less change than he is entitled to when he pays his bill. They never try this on a crowd that comes in together. They try it on one fellow alone, or perhaps two, particularly when they seem to be half soused, so that they will not notice their change. If the victim shows himself in the least hostile, he is pounced upon by bouncer and waiters, beaten, kicked and thrown out. If he applies to a policeman, the latter will laugh and say, "Run along, little boy," or, if he insists, will tap him over the head with his club.

I imagine it is conditions like these—the appurtenances of saloons rather than the actual drink itself—which has given the present prohibition movement in this country its strength. Many drinking men have grown to hate the whole business and the way it is conducted, and, despairing of ever regulating it, have concluded that the only way to get back at it is to put it out of existence. One other thing I believe is influencing such men—the awful nature of the beer sold over the bar. It has changed abominably in my time, and my experience doesn't go back very many years. A barkeeper who had grown gray in the business told me that the beer would not keep three days in the kegs; that they had to be extremely careful to order only the exact amount necessary, as if they had only one keg too much it would spoil. Another said to me, "I sell beer all day, but I never drink a glass of it; it isn't fit to drink." It is a burning shame that if the Government permits its manufacture it does not compel a pure product. There is no doubt that the hops in America go into beer. But there is so much beer and so few hops that the latter are used only in special brands such as one finds in clubs—brands that cost ten cents for a small bottle at wholesale. In the common saloons a "scuttle," which holds as much as three of these bottles, can be had for five cents, which shows the kind of stuff the workingmen are pouring into their unhappy stomachs.

Now as to the deepest part of the whole question; the reason for the saloon's attraction. It is not the drink simply. A man could just as well order the stuff to his house and drink there. As a matter of fact, not one man in a hundred drinks alone at home; and when he does he is a gone duck. He never recovers. It is the social side of it, and the gang, or clique element. A certain bunch of fellows gets to going to a saloon to play cards or other games, not necessarily gambling, of an evening; to talk, sing, tell stories, have a good time generally. They are not drunkards or crooks or toughs. They are honest working boys, or young fellows in salaried positions. Here is where the drink comes in. One treats, then another. Each must hold up his end and treat in his turn. After a

while they begin to feel happy. Cares clear away. The world begins to look cheerful. They forget their troubles. They are having a good time. A fellow could take a soft drink each time, and some of them do. But he isn't enjoying himself like the rest. The world is just the same to him. The songs and stories don't seem uproariously good. After a while they get stupid, he gets tired and goes home. I have seen many a man start in on the soft drink plan. One of two things invariably happened to him. Either he began to drink alcoholics, or he pulled out altogether and stopped going to saloons. Soft drinks don't make a man happy. It's the liquor makes a man think he's having a gloriously good time. After a while he wakes up and finds the taste for liquor fixt on him; he can't get along without it; he's got the appetite, which, in nine cases out of ten, he did not have to start with.

It is this good time that makes drunkards; makes it of men who have not the slightest taste for liquor when they begin; who even dislike it and are made sick by it. Neither a boy brought up in a total abstinence home, nor the boy accustomed to wine at every meal, is safe. The latter boy, like the former, may reach youth without the taste for liquor. He has never drunk enough at the family table to acquire the appetite. There has been no temptation there to over indulgence. But neither method protects the boy when he gets into a bunch that gets its good times in this way. There are mighty few things in this world that give a man, particularly a workingman, who lives a sordid, ugly life, the happy feeling that comes from liquor in a social crowd. It is not the taste of the drink at first, it is the happy feeling it gives him. By the time he has got sense enough to see the consequences, the appetite is too often fixt upon him. Then it becomes a physical as well as a moral and economic question.

The woman's side of this question has often been written up from the standpoint of the wife and mother. I do not know, however, as I have ever seen brought out the fact that the saloon prevents many women from marrying at all. A young man who has got into the way of going to the saloon every night, in such a clique as I have described, finds his amusement and entertainment that way. He doesn't go to call on girls, he doesn't spend evenings at their houses, take them to dances, shows, and so on. Other fellows may get their fun out of this sort of thing, but not he. And if he does see a girl to whom he would like to pay a little attention, he has no money and no good clothes. His system cuts girls out of lots of good times, which would not cost the men nearly as much as they spend in saloons.

The above description, of course, is of the workingman's saloon, the "poor man's club." In the high grade saloons there is a chillier and more formal atmosphere. These places have their habitués, like the other, but the very fact that they are expensive and attractive places implies that they cannot depend on local trade like the little neighborhood joints, but cater to a big transient custom, which keeps them filled with men who are strangers to each other. In these places there is no noise, no disturbance of any description. In some of them there are not even chairs. And yet they are tougher than the workingman's saloon; tougher because of the wine rooms in behind filled with women; still tougher because of the private rooms upstairs where men who are known to the place may take women to drink. I have in mind now high-class saloons in New York. Such a place has a quiet, unobtrusive, concentrated toughness quite lacking in the workingman's little neighborhood joint.

Harking back to the workingman's saloon once more, the kind I have described as the resort of cliques of friends, I want to depose my honest belief that if the custom of treating could be absolutely done away with, drunkenness would almost cease. Any man who begins the evening sober, and especially if he has not yet acquired the taste for liquor, will, if he drinks nothing but what he pays for himself, wait a while between drinks. If when the bunch sits down to play each man would order his own drink, he would not order another unless he really wanted it. He would play along and talk along happily enough, without drinking any great amount. Four or five in the evening would be enough; he would get sleepy and go home at a reasonable hour.

But with the custom of every man treating in turn, as they invariably do, the drinks come around so fast that they are fairly poured into a man. He gets happy very soon, and then he gets drunk, and then he gets the appetite fastened on him.

Now, in combating the saloon, I want to register my sincere conviction that there is nothing that will take a saloon bunch away from the saloon except baseball. The masses are crazy over baseball. They like it better than the theater, better than any show, better than the saloon. On Sundays all thru summer when baseball games are running, the saloons are emptied. And the men are not only not drinking, they are also saving money and sitting out in the open air. I believe Sunday baseball is the strongest enemy the saloon has got among saloon habitués. The churches fight Sunday amusements, and are particularly earnest against Sunday baseball; and I confess that baseball makes a lot of noise. Nevertheless, baseball is a perfectly clean, decent, innocent amusement, and I solemnly register my belief that among drinking workingmen it is the saloon's only competitor.

NEW YORK CITY

New Biblical Manuscripts for America

BY EDGAR J. GOODSPEED

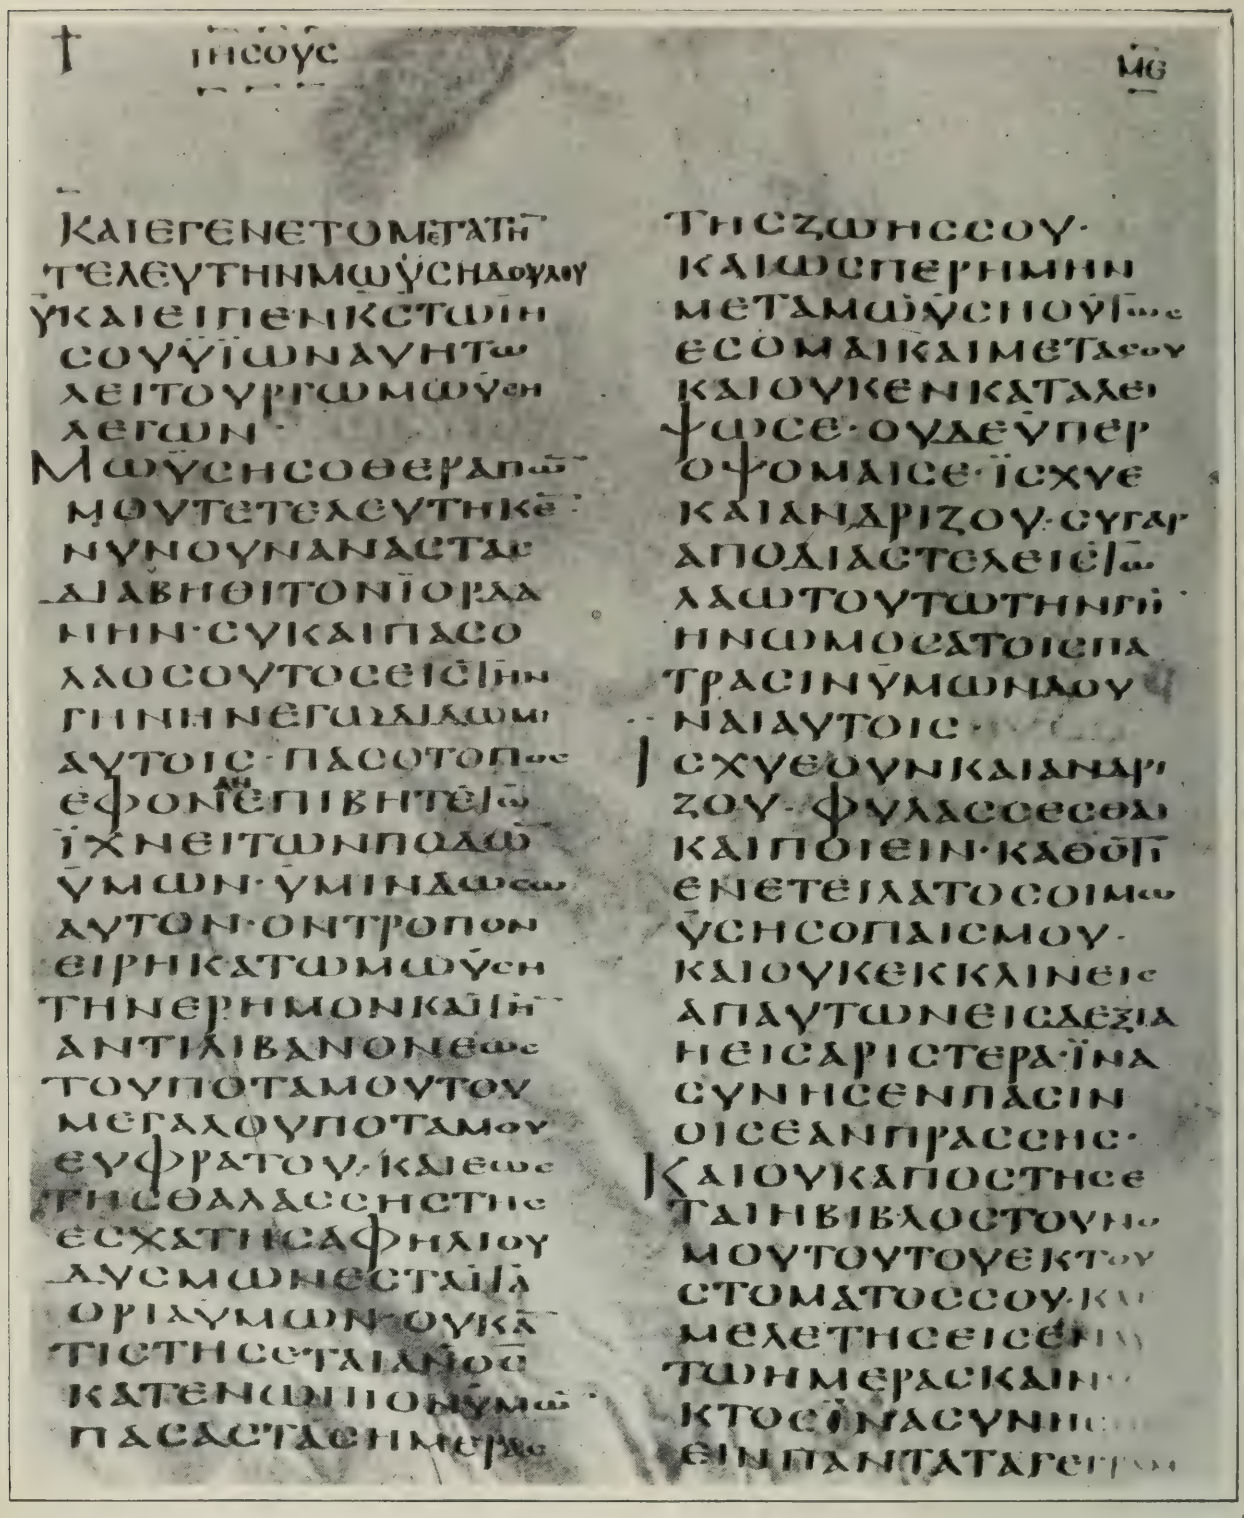
[Professor Goodspeed's chair in Chicago University is that of Biblical and Patriotic Greek, and he is one of our most accomplished younger students and writers on Biblical history and literature. We understand that these manuscripts, and other valuable collections, will be given by Mr. Freer to the United States thru the Smithsonian Institution.—EDITOR.]

AMERICA at last possesses a group of manuscripts of the Greek Bible that really rival in antiquity and worth the most famous codices of the continent. The eyes of Old-World scholars are now turned for the first time to this country as the home of manuscripts of the first importance for biblical science, and their discovery is hailed on both sides of the sea as the greatest event of the kind since Tischendorf found the Sinaitic manuscript of the Old and New Testaments, nearly fifty years ago.

Not that we have been unrepresented in the field of textual criticism. Ezra Abbott, of Cambridge, was so distinguished in such studies as to be called upon at the death of Tischendorf to serve as his literary executor, and when he declined the honor it was another American, Caspar Rene Gregory, then at the outset of his career, who undertook the task, and carried Tischendorf's great edition of the Greek text of the New Testament to a notable conclusion.

In textual scholarship America has been creditably represented. But in manuscript materials we have been lamentably weak. A few cursive manuscripts of the Gospels, none of them older than the eleventh century, are to be found in our libraries, but such witnesses carry little weight in the serious textual study of today. Since the time of Carl Lachmann, textual scholars have been turning more and more to the ancient uncial manuscripts, as the best and purest sources of the true Greek text, and of such witnesses this country has possest not one. But with the purchase last year by Charles L. Freer, Esq., of Detroit, of four Greek uncials, hitherto quite unknown, a new period in our American studies is marked, and the known materials for the textual restoration of the Septuagint and the New Testament receive a notable increment.

These manuscripts, now ascribed by the best experts to the fourth, fifth and sixth centuries, first appeared in the autumn of 1906 in the hands of a well-known Cairo dealer in antiques. They were seen by Professor Grenfell and Dr. Hunt, of Oxford, on their annual pilgrimage to the land of the papyri, and the British Museum was moving slowly



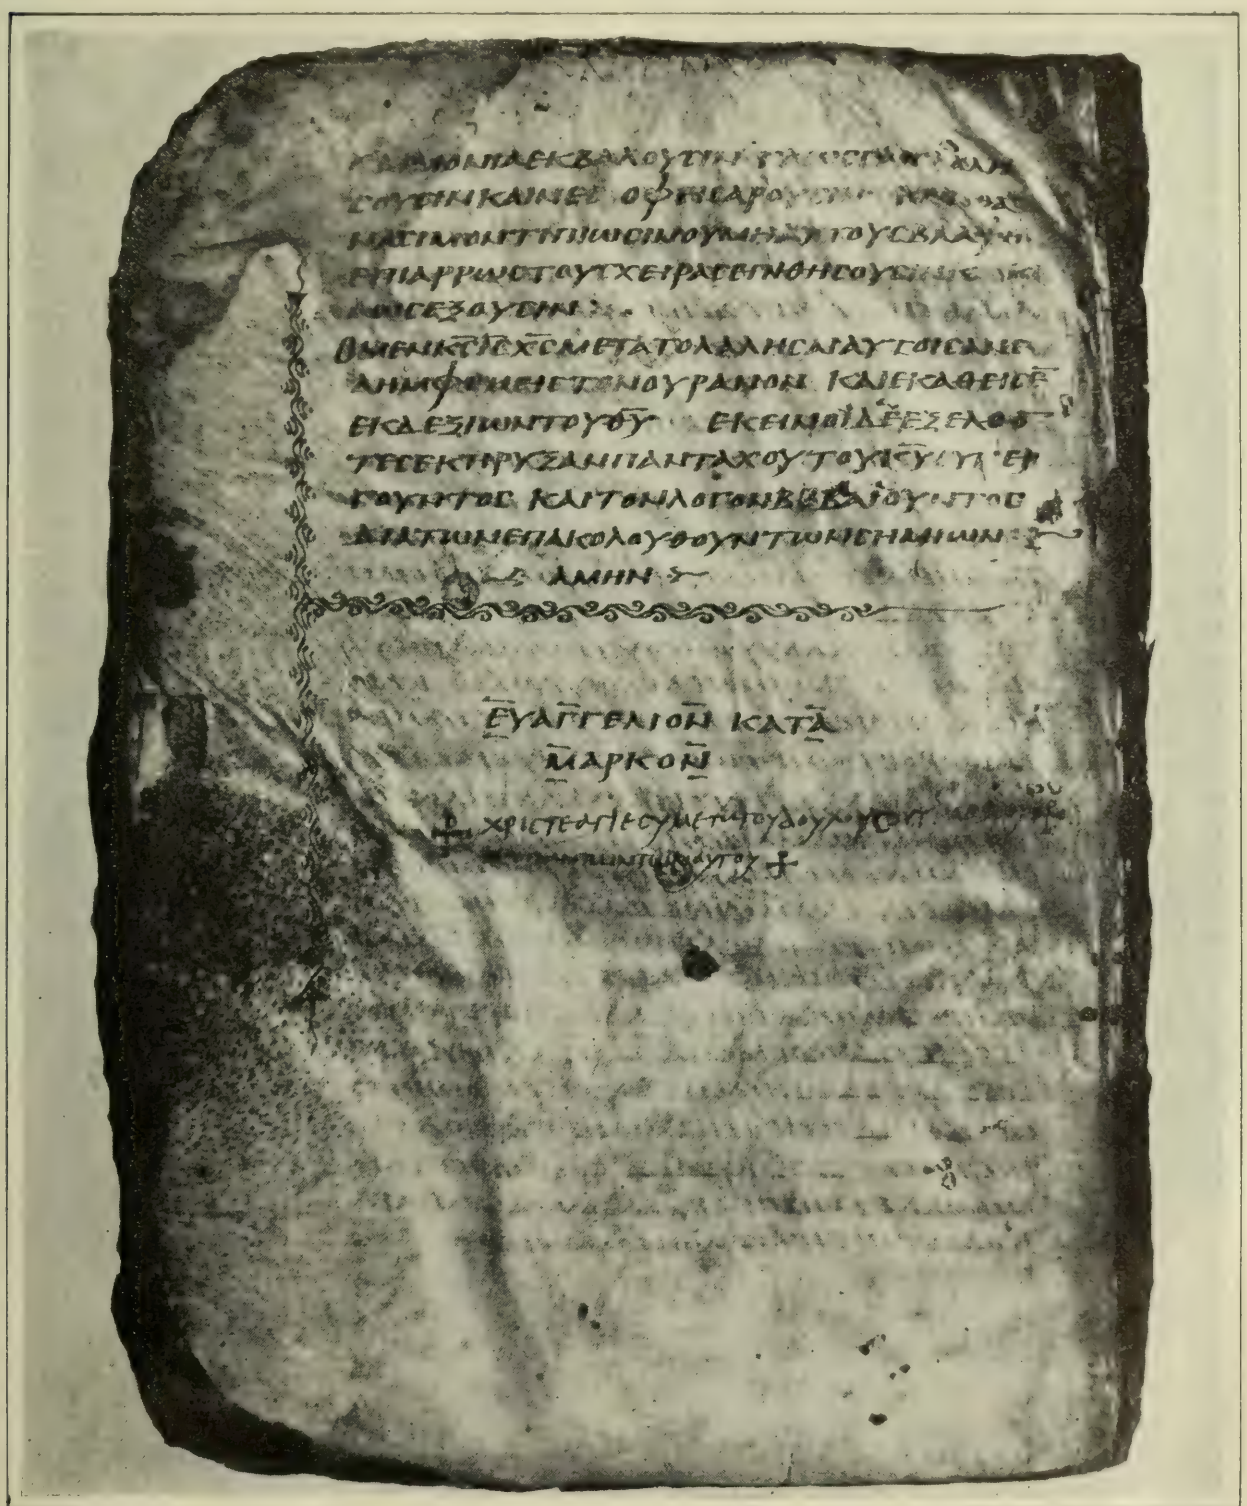
but irresistibly toward their acquisition, to divide with the Codex Alexandrinus the place of honor in their Hall of Manuscripts, when Mr. Freer, on his way around the world, to enlarge his collection of vases and curios, learned of them, examined them over many a cup of Egyptian coffee, in Ali Arabi's house in Gizeh, and finally, for a heavy bag of gold Napoleons, secured them and won for America a new distinction. Returning home after his long journey, Mr. Freer submitted his manuscripts to his learned friends, who can hardly have believed their eyes, we may suppose. Here were four ancient uncials, three of them in perfect condition, brought unheralded out of that East which we had supposed Tischendorf had most effectually ransacked for just such treasures; indeed, out of Egypt, to which we go in thousands every winter, and where German, French and English scholars, with expert knowledge and ample resources, are eternally vigilant for just such spoils as these. Assured by his chorus of scholars of their delight in his acquisition, Mr. Freer committed to one of them, Professor Henry M. Sanders, the grateful, if formidable, task of their proper announcement and publication. Professor Sanders is still in the midst of labors which Tischendorf might have envied, but he has already given some hints of the character of his treasures, which decidedly enhance the expectations of all students of the Old and New Testaments.

For the text of the New Testament five uncial manuscripts are recognized to be of conspicuous value, Sinaiticus at St. Petersburg, Vaticanus at Rome, Alexandrinus at London, the Ephrem palimpsest at Paris, and the Codex of Bezae at the University of Cambridge. These have emerged from obscurity one by one and at considerable intervals. The first of them to make itself known in Europe was the so-called Codex of Beza, taken, it is supposed, in the sack of some sixteenth century abbey at Lyons or Clermont, and given by its new possessor to Théodore de Bèze, the scholar of Lausanne, and afterward the successor of Calvin at Geneva. De Bèze, or Beza, as he is more commonly called, presented the manuscript in 1581 to the University of Cambridge, where it may still be seen. It is of the sixth century, and exhibits a very curious text, much given to paraphrase and interpolation, which renders it, while not the best, yet certainly the most interesting and problematical manuscript of the Gospels and Acts thus far known.

The Alexandrian Codex was the next great uncial to make its appearance in the West. In 1628 Cyril Lucar, Patriarch of Constantinople, presented it to Charles I. of England. Cyril had been Patriarch of Alexandria, from which city the manuscript seems to have come, for it is said to have been given in 1098 to the Patriarch of Alexandria. From the Royal Library the codex, which includes most of the Old Testament as well as of the New, passed into the newly founded British Museum, of which it is still the chief manuscript treasure. No biblical manuscript has been so long and easily accessible to scholars, or has been more thoroughly worked over. It was written in the latter part of the fifth century.

The Ephrem palimpsest had lain for many years in the Royal Library in Paris, presenting the Syriac text of works of Ephrem the Syrian, before Pierre Allix, somewhere about 1700, discovered beneath the Syriac, a Greek uncial writing of the fifth century, which proved to preserve many parts of the Old and New Testaments. This stately old manuscript had in the twelth century been pulled to pieces and written over with the Syriac text of Ephrem. It was not until 1840, however, that a young German, named Tischendorf, performed the difficult task of deciphering this underwriting, and thus first made himself a name among scholars.

The Codex Vaticanus is the best, greatest and oldest of biblical manuscripts. All visitors to the Vatican Library will remember it as the crowning lion there exhibited. There it has lain for upwards of five hundred years. At any rate the earliest list of the Vatican Library shows it to have been there about the middle of the fifteenth century. But this long repose in the cabinets of the Vatican was a time of relative obscurity for the codex, to which little serious attention was paid, until Napoleon carried



THE FREER DEUTERONOMY—JOSHUA.
The beginning of the Book of Joshua.

it away in 1809 to Paris, like many another work of art and literature. There for the first time its great value began to be recognized, and from that day dates the fame of Vaticanus. Thus while long known in the Vatican as an old and curious manuscript, the recognition of its serious worth is not yet a century old. The fall of Napoleon restored it to the Vatican, where it still lies. It dates from the fourth century, and presents the text of most of the Old and New Testaments with a purity which no other manuscript can equal.

Just fifty years after Hug had divined the true worth of Vaticanus, its great rival made its dramatic appearance. Tischendorf, of Leipzig, had gone twice to the East, searching convents far and wide for ancient manuscripts, and bring-

ing back no small stock of them. On his first journey, in 1844, he visited the Convent of St. Catherine on Mt. Sinai, and found there and secured forty-three great parchment sheets of the Old Testament in Greek, to which the monks attached little value. Recognizing in these a manuscript probably as ancient as the fourth century, Tischendorf returned to the convent in 1853 and sought in vain for the remainder of the manuscript. It is a thrice told tale how on his third visit, in 1859, he had given up all hope, and was about to leave the mountain, when, on the last night of his stay, the Steward took him into his cell and showed him, wrapped up in a cloth, the Codex Sinaiticus, written nearly fifteen hundred years before for some great church of the Christian empire. Sinaiticus, like Vati-

THE FOUR GOSPELS: CODEX PANOPOLITANUS.
The conclusion of the Gospel of Mark.

canus, contains most of the Greek Bible, and it is little behind its great Roman rival in antiquity and value. Tischendorf secured it for the Czar, and it now lies in St. Petersburg.

Almost fifty years have past since then, and we are called upon to witness another that fairly challenges comparison with it. In the first place, Mr. Freer's manuscripts are four in number, in different hands and of different times. There is, first, a manuscript of Deuteronomy and Joshua, belonging to the fifth or sixth century; a second, of the Psalms, of the same general date; a third, of the Gospels, of the fourth or fifth century; and a fourth, of the Pauline Epistles and Hebrews, on leaves much mutilated and welded by age and damp into a solid mass most difficult to separate. Any one of these would be reckoned a most fortunate discovery; together they constitute a priceless treasure, which the richest libraries of Europe might covet.

Whence come these manuscripts? Nothing was heard of them until two years ago. Certainly they have not long been resting in private hands in Egypt, unnoticed and untalked of in a land where the finding, buying and selling of ancient manuscripts in many tongues plays no small part. Nor did they, like the papyri, spring up out of the earth, for such manuscripts have always suffered from their interment, while three of these are in perfect condition. The dealer in whose possession they made their appearance declared that they came from Akhmin, a place from which valuable Christian antiquities of many kinds have often before come, for example, the fragments of the *Gospel* and *Apocalypse of Peter,* and of the Greek *Book of Enoch,* in 1886. More he might have said, but did not. Yet this is perhaps enough to supply a clue, and the modern detective instinct asks no more. ForAkhmin has recently given us other treasures, of a similar time and kind, and the source of them may be the source of the Freer manuscripts. In 1907 Carl Schmidt reported to the Royal Prussian Academy the discovery near Akhmin of a papyrus book containing the Epistle of Clement of Rome to the Corinthians, in a Coptic translation, which was said to have been found by the fellahin among the Christian tombs near the town. This book belonged to the fourth century, and was in almost perfect condition, being still in its ancient covers; and subsequent inquiry developed the fact that it had been found not in the tombs, but in a neighboring convent, and under circumstances of unusual interest.

On the banks of the Nile, nearly opposite Akhmin, rise the venerable walls of the Der el Abyad, or White Monastery, oftener called Amba Shenudah, after its great founder, Shenute, or Sinuthius, the father of Coptic Christianity and learning. This venerable foundation in former years gave up not a few manuscript treasures to the great continental libraries, until all its really valuable books were supposed to have departed. When Curzon visited it in 1838 he found in the library only half a dozen well-thumbed liturgies. But in some recent repairs, undertaken, it would appear, about 1906, its restorers stumbled upon a neglected chamber which proves to have formed part of its ancient library, and here was found the papyrus copy of the Epistle of Clement in Coptic, together with two other ancient Coptic books and some other manuscripts, of which no details have been recorded. It is significant that the manuscript of Clement, like the oldest of the Freer manuscripts, was written in the fourth century, and it is worth noting that it was in that century that Shenute founded the White Monastery, A. D. 385. Shenute lived from 333 to 451, and it is by no means impossible that his eyes once looked upon these very manuscripts. The other manuscripts that are reported to have been found on this occasion are said to have been dispersed among the dealers, and since the Freer uncials come from Akhmin, and made their appearance simultaneously with the others, it is difficult to avoid the conviction that they too lay not long ago in the dark and secure recesses of the White Monastery, undisturbed by the vicissitudes of over a thousand years. All this is the more remarkable when it is remembered that the monastery has been repeatedly pillaged and depopulated, and that as recently as 1812 the Mamelukes sacked it and drove away the monks. But it is

easy to see how in the course of this tempestuous history the contents and even the existence of this little chamber might be lost sight of, only to be revealed by accident after the lapse of ages.

Mr. Freer's uncial of the Gospels already stands out as the most ancient, striking and interesting of his four manuscripts. Like the Coptic Clement, it is still protected by its ancient covers, which are adorned with portraits of the four evangelists. It has been proclaimed by high authority to rival the Sinaitic and Vatican codices in age. In beauty, its clear and free uncial character leaves nothing to be desired. By great good fortune it is complete—a distinction shared with but seven uncial manuscripts of the Gospels, old or young, and with but two of equal antiquity, and those the two greatest. It contains the four Gospels in a most unusual order: Matthew, John, Luke, Mark, an order exhibited in but one other Greek uncial, the eccentric Codex of Beza. Its text, moreover, bristles with new and curious readings, one of which (in Mark 15:15) has already attracted wide attention.

We are only on the threshold of this precious library. But it is clear that these books are no mere curios. They have already called forth serious discussions in England, Germany and America, and have formed the subject of at least one slender book. It should be a source of patriotic pride that as England, France, Italy and Russia have their great Biblical manuscripts, now at last America is nobly represented in this privileged and honorable circle, and as the East gives up its treasures to the eager hands of Western seekers, we may hope that Mr. Freer, who is among the first, may not be the last to bring to this country great manuscript prizes and open the way for their publication. We of America have no great national representatives in these fields, as have England, Germany and France; we must look to private resources and enterprises; and we shall not look in vain.

A Child's Traveling

BY CONINGSBY WILLIAM DAWSON

Ah, little child, as you lie on my breast,
  Leaning your hair of gold close to my face,
Flushed in the gathering glow of the West,
  Where shall we travel—to what joyous place?
Shall we refashion our castles in Spain,
Or sail to the Indies with Sinbad again,
Or noiselessly drift to where tired stars wane—
Shall it be Africa, Sinbad, or Spain?
Speak, little child, and together we'll go
Back to the musical dreamlands we know.

Dear little child, you have wandered to rest;
  While you are sleeping I wonder and think
Where you will go, and what lands will be best
  Treading for such baby feet—and I shrink.
Should they be hillsides of laughter and song,
Or gardens of mercy and righting of wrong,
Of weeping or triumph, or love growing strong—
Journeys of shouting, of sorrow or song?
I can but love you and kiss your gold hair,
Happy in hoping that Christ may be there.

Taunton, Mass.

The Difficulties of the Ottoman Constitution

BY P. G. PAPAZIAN

[Mr. Papazian was for many years pastor of a very large church of Armenians in Marash, Western Turkey, and within the year came to this city to take charge of an Armenian church. He is fully competent to discuss the subject.—EDITOR.]

WE need not dwell upon those difficulties which have their origin abroad, particularly in two members of the notorious European Concert. If Russia seems disposed to regard the new régime with silent approbation, the twofold reason is that King Edward with his wonderful tact controls the Czar, and the political situation of Russia demands a policy of friendship with England. As for Germany, she is the sorest disappointment to every student of Eastern politics who carries a conscience within him. Ottoman subjects of all races, languages and religions are convinced that from the European side Germany has been the chief inspiration of the policy which has achieved the slaughter of the Armenians, the systematic persecution of the Liberal Turks, the humiliation of little Greece, the devastation of Macedonia, and much else which must be recorded in letters of blood. The amazing events of the past month must have disconcerted the German Emperor, who, however, feels himself impotent in the presence of a successful revolution.

The chief difficulty in the path of the Ottoman Constitution must be sought in the composite character of the people, rather peoples, upon whom a new order of things is bestowed so unexpectedly.

The population of the Ottoman Empire represents a mixture of peoples for which it is hard to find a parallel in the East. The Turks, who are the ruling class, betray their Tartar origin by their speech and physiognomy. The Circassians, a pure Caucasian stock, differ from the Turks in all racial qualities. The Kurds, who are chiefly centered in the eastern and mountainous regions, are as unlike the Turks in language, history, in temperament, as any two races can be. The Arabs, who occupy all the provinces to the south, and have even imposed their tongue upon a wide section of the empire, are wider apart from the Turks in color, in character, in costume, in sentiment, than the English are from the French. The only force holding these races together is the fact of a common religion—Islam—which, however, is fast waning in strength as a bond of organic unity. The Armenians, who are the most progressive of the Christian nationalities, are found in largest numbers in the provinces of Van, Bitlis, Harput and in Cilicia of ancient geography, with the largest colony settled in the metropolis of the empire. The Greeks inhabit the coast towns of the Mediterranean and are dispersed thruout Asia Minor. It is hard to analyze the genealogy of the modern Syrian, who is a large factor in the provinces of Damascus and Beirut. And, of course, there are Jews scattered all over the country.

Each of this multitude of races is distinguished by a distinct language or dialect of its own. The Turkish, while the tongue of the conqueror, is by no means the universal language of the Sultan's dominions. Yemen, Palestine, Syria, Mesopotamia, as far north as Aleppo, converse in the tongue of Arabia. The Kurd's language is as alien to the civilized world as it was to Xenophon's marching columns. The Greek and the Armenian each adheres to his ancestral tongue and resorts to the use of Turkish strictly for purposes of business. The sons of Jacob are the only race who readily adopt the dialect of the district

where they may happen to live. The Ottomans have never had the courage to impose their own language upon the subject races as Russia has done, nor do they possess the faculty of assimilation exhibited to such high degree by the United States. The logical result is the unique phenomenon that within the Ottoman Empire the language of the State is not the language of the entire land, and there is no one tongue common to the various peoples who have been thrown together within the bounds of the empire. The new Constitution rendered in the official language is simply incomprehensible nearly to one-half of the population of Asiatic Turkey. If the forthcoming Parliament is to discuss and legislate in Turkish, as it must, the reports of the Constantinople press will be quite as intelligible in some provinces of the interior as if they were written in Latin or Chinese.

The situation is complicated by a further grouping of the races upon the basis of religion, which tends to degenerate to sheer fanaticism. The Turk, the Kurd and the Circassian have embraced the faith of the Arab—Islam. Their motto is, "There is no God but God, and Mohammed is His Prophet." The Jew is the man whom all climates and centuries have known. As for the Christian population, they are divided into as many camps as there are races. Each claims its own national Church, its sacred language, its Fathers and saints, its fasts and feasts. Religious fanaticism has always been a cause of friction among the races inhabiting Turkey. Many of the ringleaders of the Armenian massacres were inflamed into rapine and murder by religious hatred against the "Giaours." And many Greeks and Armenians are satisfied that the Turk with his religion is a proper subject for sacred hatred. The Turkish is nicknamed "the enemy's language." The present writer has often been stigmatized as "unpatriotic" for daring to preach that a true Christian can and should love the Turk. We surmise that the Constitutionalists may suffer many shocks of surprise before the people of the land can be cured of the sin of fanaticism.

Both tradition and law have recognized and perpetuated these racial and religious discriminations which frequently have caused alienation and animosity between the governing and the governed. When Constantinople was captured in 1453 the victorious Sultan conferred certain semi-religious privileges upon the Christian communities, hoping thereby to win the newly acquired subjects into grateful loyalty toward the Ottoman throne. So we find today several national Churches, each representing a definite race of people—Armenian, or Greek, or Chaldaic, etc.—each provided with a constitution relating to matters of religion and education, each headed by an ecclesiastic functionary thru whom the Sublime Porte conveys the imperial will to the people of that race. Even the Protestant Church is organized as a separate "nation," furnished with a chancery at Constantinople. Indeed, in the vocabulary of the Ottoman Monarchy, *Millet* (nation) signifies a race or community of people identified with a certain ecclesiastical body and provided with a religious code. During the reign of Sultan Hamid these various codes have been of little value except for the antiquarian. Moslem and Christian, official and civilian, priest and pastor, all alike were taught by a strenuous process of catechism to accept the sovereign's pleasure as law enough for anybody. It is quite significant that the initiation of a new order of things at once has revived the slumbering spirits. No sooner does the Sultan promulgate anew the Civil Constitution of 1876 than the various Christian *Millets* speak out one after another, begging for the restoration of their neglected codes. It remains to be seen how an Imperial Parliament which is to legislate for a perfect conglomerate of races loosely held together can reconcile the civil and fiscal and military interests of the empire at large with the traditional rights and privileges, ecclesiastical and educational, of the several communities comprising it.

The military problem, in particular, is a serious one. All Christians and Jews have scrupulously been kept away from serving in the army and navy, which has been considered the religious prerogative of the peoples professing Islam. Moslems have furnished the soldier, while Christians the money. Is the new Parliament to make the Christian youth eligible for military service? Can the Moslem con-

science be brought to acquiesce to such a fundamental departure from the law and the prophets? Will it be possible to enlist the Armenian and the Kurd, the Turk and the Greek, in the same regiment?

Such being the situation within the empire, the Liberal Turkish party who have forced the Sultan to resuscitate the Constitution of Midhat Pasha must expect to encounter the greatest difficulty, not in the possible attitude of Europe, nor in the reluctance of the Ottoman Sovereign, but in the heterogenous character of the population of the land. The Ottoman Empire is not a consolidated body. It never was. Strictly speaking, it may not be called the Turkish Empire. The Turks have overcome, but have never conquered, the country. They constitute a bare majority in Asiatic Turkey (not to speak of the European slice), but certainly have neither the numerical nor the military strength to rule the subject races if these should unite. The Sultans have never enjoyed the loyalty and confidence of a unified kingdom.

This fact is a piece of misfortune for the Turk. It is also a necessary consequence of certain traits of the Ottoman character. The Turkish race clearly lacks the assimilating faculty which has made the Anglo-Saxon stock the conqueror of continents. The American stomach annually digests about a million aliens from a hundred different countries without sensibly suffering from dyspepsia. But the Turk, after centuries of occupation in three continents and with all the advantages of numbers, arms and religion on his side, has yet to absorb the first race under his yoke. And, judging from a long past, the Ottoman Empire might continue to exist in its present form almost indefinitely, without, however, incorporating its composite population into a unified and organic body. Evidently the task confronting the new régime is how to cultivate the confidence and secure the cooperation of the various and heterogeneous people of the land as to evolve a new and homogeneous empire. The past has utterly failed to accomplish this by the force of arms. Let us hope and pray that the Constitution may prove a more effective weapon.

Meanwhile all is not dark. There are unmistakably some encouraging signs accompanying the launching of the Constitution. It enjoys the unqualified support of the two Western powers of Europe, England and France, which are the truest friends of constitutional monarchy. The Liberal Turkish party, who providentially are put at the helm, are endeavoring to disarm the deeply rooted Christian prejudice by delightful demonstrations of fraternity. All classes and conditions of men, including the Turks, are agreed that absolutism has wrought irreparable ruin to each and all alike. The whole land is crying for respite.

Under the circumstances the plain duty of every person who has the welfare of Turkey at heart is to spare the new régime any unnecessary frictions. It would be a misdirected and futile patriotism on the part of the Young Turks to demand the evacuation of Egypt, which, in British hands, is saved for all the civilized world. Let us beware of alienating the best champion of reforms in Turkey. And the Armenians ought to abandon any Utopian dreams of independence or any lingering revengeful temper against their late oppressors, and extend a cordial hand of fellowship to their Turkish compatriots. The Christians ought to be willing to give their sons for service under the Turkish flag. Even the religious codes of all ecclesiastical bodies should be sacrificed willingly for the privilege of Ottoman citizenship under a constitutional monarchy. Let us give the dearly bought civil constitution a fair chance to save the tottering empire.

We, on our part, are quite resigned to seek the redemption of Armenia and Macedonia in the larger redemption of all Turkey.

It may be the will of Allah to employ the Turk to save the Christian together with the Moslem. He is the Lord of all the universe, says the Sacred Qoran.

Why the Difference?

BY W. A. WOODBRIDGE, D.D.

ON the afternoon of Tuesday, August 11th, returning to Portsmouth, Va., from a trip to Old Point, on a cross street I saw a small assemblage of women evidently deeply interested in something that was occurring; further on I saw a large crowd of men in the street and on the sidewalks. I asked a negro man standing in his own door what the gathering was about. He replied in a reserved, non-committal way that a policeman had been killed. Passing on I saw the body of the slain officer lying on the pavement and covered with a sheet; near by was a small pool of blood. There was little of excitement among the men gathered, several of whom were negroes.

Inquiry brought out the following facts:

A negro named Strong had beaten and otherwise maltreated his wfie. She had sworn out a warrant for his arrest. The officer who had gone to serve the warrant and make the arrest was resisted; a struggle ensued; in some way the negro got the pistol of the officer; three shots were fired, two of them taking effect—the policeman was slain; the negro fled, was pursued, but eluded his pursuers; bloodhounds were put on his trail, but soon lost it. Possibly he was within a large vacant house near by, or maybe he was hidden in some house on the next block, where only negroes lived.

I sat on a doorstep and watched "the mob" gather. According to press reports in the next morning's papers in other cities, a "race war" impended. It was a wonderful mob, gradually developing, growing larger rapidly. Its composition was without regard to age, sex, color or social conditions. Men, women and children; white and colored. Some came on wheels; several automobiles tended to give eminent respectability to the assemblage—to "the mob."

That morning, in a near-by suburb, an old white woman, past seventy-five, had been "criminally assaulted" by a young negro, who, his fiendish purpose accomplished, had escaped and was still at large. Conditions were certainly favorable for the inauguration of a "race war."

But as the shades of night began to fall my mob began to disintegrate. The women and children turned homeward; the colored contingent by ones and twos past into the gathering darkness. Quite a number of white men lingered in the yard of the vacant house, exchanging theories. Anon there would be a flash of light as one would strike a match with which to light a cigaret or relight his pipe. Suddenly there was the measured tread of soldiery; a battalion of militia past by, and then surrounded the suspect ed locality. Later two of them ordered all persons from the sidewalks. The few women and children that remained went home. The war of races was over for that day.

On the following Friday, August 14th, the negro who had committed the unnamable crime was arrested and lodged in the jail in Portsmouth. That night, about midnight, a mob assembled to storm the jail and lynch the prisoner. But the mayor was there, as were the police, and, I think, a military company. The mob, as is the way of mobs, was very determined. The prisoner was taken from the jail and quietly taken across the river to Norfolk and lodged in the jail there. A number of the rioters were arrested and let go under heavy bail. Then the second mob adjourned *sine die,* and the war was again over. The slayer of the policeman is still at large.

So far as my information goes, not one colored citizen was maltreated during this season of reasonable excitement.

The following, which I clip from the *Norfolk Landmark,* will indicate the feeling of the colored people of the vicinity in its bearing on the relation between the races in Eastern Virginia. The Norfolk Colored Baptist Association concludes a series of resolutions admirably drawn up thus:

"We especially congratulate Mayor Reed, of Portsmouth, Va., for the prompt manner in which he proceeded to put down and hold in check imminent mob violence, and his steady determination to enforce law and order; also the thanks of this meeting are extended to his Excellency, the Honorable Governor of the State, for his manly response to the petition of the Mayor, and to all the good citizens, who are trying to preserve peace and harmony between the races, and to them we beg to offer the assurance that we stand ready to assist in any legitimate way the enforcement of the law, and the punishment of criminals."

What is known of the "race war" in the city where lies the body of the "great Emancipator" THE INDEPENDENT's readers have gathered from the columns of the daily press. But that is not a "race war," but is a bitter, cruel, relentless, causeless hounding of innocent, helpless people, simply because they are colored. The mob killed, ravaged and burned the homes of innocent people.

Virginia and Illinois—in the one State the meditated vengeance was against the individual who had committed the crime for which he knew he must die, if not at the hands of the mob, then by law. In Illinois an individual crime that deserved the death penalty was the occasion of an outbreak against a race.

Why the difference?

BIRMINGHAM, ALA.

What Must Follow the Hague Conference

BY W. T. STEAD

[Mr. Stead has given as much thought and energy to peace and peace conferences as any other living man.—EDITOR.]

THE Hague Conference last year did much more than it received any credit for. Altho it did much, it began still more. What was begun at The Hague in the four arduous months in which the representatives of the governments met in council awaits development. The seed was sown by the Conference; it is for the governments and the peoples who were there represented to foster its growth. This is especially the task of the American people. For the Conference was an attempt but partially conscious of humanity to create a World State on what may be roughly but truthfully described as American principles. The European idea of the relations of states is that of anarchy tempered by force. The American idea is that of federation controlled by law. The underlying objective of the Conference of The Hague is to substitute for the European anarchical idea the American conception of federal union, in which free independent sovereign states, by mutual consent, agree to erect a great harmonious state-fabric, in which the last word will be that of the Judge, and not that of the Soldier.

Nor have the Americans been untrue to their trust. Since the Conference was dissolved nothing has been done by any other nation in the world save the Americans to give further form and substance to the federal idea. The creation of the Central American Federation is a great achievement of creative statesmanship which will ever redound to the credit of the present Administration. Nor is that the only step which has been taken in the same direction by the United States. The American Government is the only Power which has set itself diligently to work to frame arbitration treaties with other nations. These treaties, several of which have already received the sanction of the Senate, while others are still in process of negotiation, are signs that the intelligent interest which Mr. Root has taken in the subject has not slackened.

These are but the beginnings of things to come. The first great unfinished task of the Conference was the elaboration of a project of an International Court of Arbitral Justice. The idea was accepted by all the Powers. The scheme for the constitution and procedure of the court was agreed to with equal unanimity, with one important exception. At the Conference it was impossible to obtain unanimity for any scheme for selecting judges. An irreconcilable difference appeared between advocates of the sovereign right of every state, regardless of its might or its area, to an equal voice in the selection of judges, and the advocates of what may be described as the principle of force, who maintained that the Powers which dominated the world at present by virtue of their strength and wealth should be allowed corresponding dominance in the nomination of the judges of this world tribunal. The question as

to how the judges should be elected was declared insoluble by the Conference, but it was relegated to the attention of the forty-four governments therein represented. The first duty which lies immediately before all the governments, and especially before the Government of the United States, which took an honorable initiative at The Hague in proposing the constitution of the court, is to consider whether, with the inner light of the discussions of last year, it is possible for them to devise some scheme which would reconcile the opposing views. There is reason to believe that after the period of reflection which began when the Conference ended, Mr. Root and Dr. Barbosa, to mention two of the leading minds which have been engaged upon the consideration of this problem, may have discovered some method by which the idea of state sovereignty may be harmonized with the actual facts of the aggregation of force which makes eight or nine Powers practically the rulers of the world. It is quite possible for the American Republics to take the project of The Hague Conference and set up a Court of Arbitral Justice, according to the constitution and with the procedure approved at The Hague, for their own use, without waiting for the adhesion of the other Powers. The Court can be brought into being without waiting for the unanimous assent of all the Governments. It is always within the sovereign discretion of any state to deprive itself and its subjects of the advantages of such an International Court of Arbitral Justice. If it does not agree to come in, it can stand outside. There are many advantages which might arise from an initiative of this kind being taken in the western hemisphere. Public sentiment in the Americas is much more advanced in the direction of international arbitration than it is in the older world. If the Americas decided to bring the Court of Arbitral Justice into being, it is probable that several of the smaller European states, and possibly some of the Asiatic, might adhere, and in this way a Court might be created which would represent the whole of the western world and all the more advanced nations in Europe. There is nothing to bar progress in this direction except an agreement as to selection of judges. Should the initiative be taken west of the Atlantic, the seat of the International Arbitral Court of Justice would naturally be in the first instance in the western hemisphere, instead of being located, as proposed, at The Hague. This is an additional inducement to the American people to take an initiative in the matter.

The second subject upon which the Hague Conference ripened opinion without arriving at unanimous decision to act was that of obligatory arbitration. In principle all the governments accepted obligatory arbitration; but thirty-one Powers, including the United States and Great Britain, were in favor of establishing this principle by a general world-wide treaty, while the minority, headed by Germany, objected to a *world*-wide treaty, and declared their conviction that more rapid progress toward universal obligatory arbitration would be made by separate treaties between each other. Germany was the chief champion of the latter idea. Baron Marschall was never weary of inveighing against the idea that the petty Central American Republics could be treated on the same footing as the greater civilized states of the world. After innumerable discussions and many efforts to arrive at a unanimous agreement upon the basis of a general treaty, it was found at the end that thirty-one Powers were willing to accept obligatory arbitration upon only eight subjects, many of which were only of small importance. It was generally understood, altho not publicly declared, that the thirty-one Powers who found themselves in agreement would be invited by the French Government to enter into a general treaty among themselves, which might, in the first instance,,be limited to the eight points upon which agreement had been arrived at, but which could be capable of infinite extension by the addition of other articles as public opinion ripened. France has as yet made no sign of any intention to move in that direction, but should the French delay much longer, it would be well for the American Government to move toward practical action.

It may be well here to explain the difference between international arbitration as it at present exists and the new system which would be created if the Court of Arbitral Justice were constituted, and thirty-one or any greater or smaller number of Powers bound themselves to

submit questions in dispute without raising the reserves which they maintain for all other subjects affecting national honor and independence, or vital national interests. At present, even when nations have entered into a treaty of obligatory arbitration between themselves, if either of the parties refuses to go to arbitration there is no appeal to any outside authority, whereas, after the Court of Arbitral Justice had been created and was in session, if any Power that was a party to a treaty of obligatory arbitration, general or particular, were to refuse to arbitrate a dispute on any of the subjects included in that treaty, the other disputant would appeal to the International Court of Arbitration, which could summon the recalcitrant Power to submit to its jurisdiction. The changes foreshadowed by the Hague Conference would make all the difference between the voluntary agreement of private persons to arbitrate when it suits them, and the obligation under which all citizens are liable to being summoned, against their will, to prove the justice of their case when any dispute arises.

These two questions—the constitution of a Court of Arbitral Justice and the framing of a general Treaty of Obligatory Arbitration—are immeasurably the most important tasks which were bequeathed by the Conference to the governments of the world. The sooner they are taken in hand the better. By no government and by no people can they be taken in hand more appropriately than by the Government and people of the United States.

Compared with the importance of the Court of Arbitral Justice and obligatory arbitration, the other tasks which the Conference left over for the governments to take in hand are comparatively small. They relate chiefly to the regulation of the laws of war, and in the civilized world war is more and more becoming abnormal and exceptional. The great problem is not how to regulate war, but how to prevent its occurrence. Nevertheless, as even in the best regulated world state—much more in a world state that is still in embryo—wars may occur, it is necessary to provide in advance for contingencies which, however disagreeable, may nevertheless be inevitable. The British Government has intimated its intention to summon a conference of the leading maritime Powers in the autumn of this year, for the purpose of ascertaining whether or not it is possible to arrive at a general understanding as to the laws of maritime warfare, which are to be administered by the International Court constituted at The Hague for the purpose of settling questions arising out of naval warfare. At present there is no code for the International Court to administer. The Hague Conference made very satisfactory progress in the way of codifying some laws of naval warfare, but upon certain questions, it was discovered, it was impossible to arrive at unanimity at The Hague.

The irreconcilable differences which rendered action impossible at The Hague were those which existed between the great Powers themselves, and it is a very moot question whether, when the non-maritime Powers are excluded and the chief disputants meet in London, they will be any more disposed to mutual concession than when they debated in the presence of the representatives of all the governments of the world. However that may be, it is the duty of the governments to consider very seriously between now and the meeting of the conference in the autumn whether, by *pourparlers* among themselves, they can arrive at some kind of preliminary understanding, which the limited conference can discuss, and which, if approved, can then be submitted to a conference of all the Powers.

The questions which will come up at the limited naval conference are chiefly three: Firstly, the law of contraband; secondly, the law of blockade; and thirdly, the rights and duties of neutrals in the case of naval war.

The question of contraband was advanced materially to a settlement by the discussions at The Hague. Twenty-six of the forty-four Powers voted with England in favor of the total abolition of the law of contraband, and Great Britain was sufficiently in earnest on the subject to propose to those who voted with her that they should enter at The Hague into a general treaty among themselves for the abolition of the law of contraband. This, however, was vehemently resisted by Germany and Russia, and when the proposal was put to the vote the Republic of Haiti was the only power that signified

its willingness to enter into such a treaty at that moment. The proposal, therefore, was dropped, but it will come up again in the autumn. In the course of the discussions at The Hague, the American delegates show a distinct tendency to approximate to the views of Great Britain. They were willing to abolish altogether what is called conditional contraband, and to limit the law of contraband solely to arms and munitions of war. It would be of hopeful augury for the success of the Conference of great naval powers in the autumn if the American Government could approximate still further toward the British position, and the two Powers could agree upon submitting a joint proposal on the subject to the other naval powers.

On the question of blockade an agreement is also possible. The American and British governments have hitherto maintained that, when the blockade of any port has been declared, the blockading Power has the right to seize any ship the moment it leaves any port in any part of the world which it has reason to believe intends to run the blockade. Other Powers regard this as a monstrous interference with the free navigation of the seas. and it was proposed at the Conference that the right of capture of any suspected blockade-runner should be limited to a zone limited to a certain number of miles from the blockaded port. At first Great Britain absolutely refused to listen to any such limitation of the right of capture, but toward the close of the Conference a disposition was manifested on the part of the British delegates to assent to a definition of a zone of capture limited to twenty-four hours' steaming, by the swiftest steamer, from the blockaded port. This would limit the zone of capture to a distance of 700 to 800 miles from the blockaded port. As all the Powers are agreed that blockade-runners may be captured, and as the only difference arose as to the point at which such capture may be admitted, the later British suggestion affords reasonable hope that this question may be satisfactorily settled. But it is one which should be engaging the attention of the State Department, and one which should become the subject of negotiation between the Secretary of State and the naval Powers whom it most affects. As to the third question, that of the rights and duties of neutral Powers, there was at one time some prospect that the Conference would itself draw up a code upon that subject which would be accepted with unanimity. The Fifth Convention of the Conference embodies the agreement which was arrived at, but it was objected to by England and Japan as being much too vague. They reserved their assent to it, and it may be regarded as an open question.

It is too early to speak of the duty of preparing for the next Conference, which ought to meet in 1915. In 1913 a preparatory committee was to be appointed by the Powers to consider the program of the Third Conference, which would then be carefully studied by their respective governments with a view to legislative action in 1915. The Conference evaded the question of how that preparatory committee had to be constituted. The right of initiative to summon such a committee and to summon the subsequent Conference was recognized as belonging to Russia. The task of the Emperor in issuing invitations to the Conference will be governed by the precedents of the two previous Conferences, but he has no rule, guidance or precedent to indicate who should be invited to form the preliminary committee. Should it be a committee of all the Powers? In that case the committee would practically be a world-wide Conference, in which the representatives of forty-four states would practically decide what the subsequent larger Conference should do.

This, however, is not a matter of pressing importance. Sufficient unto the day is the evil thereof, and it is too soon to discuss in 1908 what should be done in 1913. I only mention it as one of the legacies left by the Conference to the governments which it represented.

There are other questions of minor importance upon which a good deal might be said, but at present it is unnecessary to obscure the broad outlines which I have roughly sketched in this article. I have confined myself to the work which has been specifically relegated to the action of the governments. I have said nothing as to the not less important duty which the Conference advised should be undertaken by the peoples.

LONDON, ENGLAND.

Literature

Russia's Message

THE profound impression made by William English Walling's articles on Russia, which have appeared in THE INDEPENDENT, is concentrated and intensified by his book,[1] which stands unique in the large and ever increasing international literature on Russia. It is not merely an exposition of Russian conditions—the tragic misery of 100,000,000 peasants, ever exposed to the certainty of periodically recurring famines; the destructive rule of 130,000 landlords acting thru one of the most ruthless despotisms known to history; the suppression of every form of free human activity, excepting that of official debauchery, devastation and slaughter; the struggles, hopes and aspirations of the revolutionists, and the varying phases of the protracted war of liberation. Walling has been too closely identified with the revolutionary movement to be able to write with impartial aloofness. He fights as he writes. He pleads passionately for the Russian revolution as a matter of the highest import to the world's civilization and progress.

A RUSSIAN PEASANT.
From Walling's "Russian Message."

Very few foreign observers have evinced so wide a knowledge of the various phases of Russian life and thought, and no foreigner has so completely assimilated unto himself the modes of thought and feeling, the entire psychology, of one of the Russian parties. The American Walling has transformed him-

[1] RUSSIA'S MESSAGE. The True World Import of the Revolution. *By William English Walling.* New York: Doubleday, Page & Co. $3.00.

self into a typical Russian Social Revolutionist—that militant representative of the enlightened peasants, small middle class and intellectuals, with his inextinguishable faith in the peasantry, his sublime eagerness for action without regard to personal consequences, and his impatience with all theories that might by any chance weaken his firm resolve to dare and again to dare. Walling is as confident a believer in the revolutionary possibilities of the peasants and in the socialistic possibilities of their village communities as ever *narodnik* (populist) was; hence his deep-seated aversion to Marxism as a system of thought and action. He repeatedly states that every important act in the revolutionary drama has hitherto proceeded from the industrial wageworkers. But when the revolutionary energy of the latter is on the wane he turns to the peasants as the mainstay of the revolution, owing to the sheer weight of their numbers and the preponderance of agriculture in the Russian economy. But the scattered, incoherent peasant revolts have been stamped out with blood and fire. Walling thereupon pins his hope to the efforts at drilling and organizing the villagers into a revolutionary militia capable of offering simultaneous widespread resistance. The guerrilla warfare has died out, and he begins to hope that the indomitable religious sectaries "may prove, after all, the most insuperable obstacle the Government has to meet." Driven to extremities, he draws comfort even from the Government's cunningly devised scheme of dividing the peasants by creating a small class of well-to-do farmers. This new class, he opines, may yet be turned into bitter foes of the Government, to which they are obliged to pay annual instalments on their increased allotments.

We have considered it necessary to point out the fundamental principle underlying Walling's entire conception of the course of the Russian revolution. With the Russian Social Revolutionists he holds that there is no objective limitation to the human will; that man is capable of choosing his environment, and that, consequently, every man and every social class may become an active promoter of the revolution. This necessarily leads to a denial of systematic thought and to a disregard of historical facts. Walling certainly knows that there have taken place in Russia innumerable peasant revolts, some of them most formidable *jacqueries,* involving the loss of hundreds of thousands of lives. He also knows that the sectarian resistance to the State Church is almost as old as the peasants' resistance to the landlord State. But Czarism was not seriously shaken until the advent of modern industry, with all that it implies. That no revolution can be victorious without the co-operaion of the peasants, of whom the sectaries form but a fraction, is a proposition so obvious as to need no enlarging upon. For the rest, the Russian revolution is a phenomenon so vast that no single mind or book can possibly compass it, but *Russia's Message* is the best exposition of it that has yet appeared in our language.

Alice Freeman Palmer

In the biography of his wife,* Professor Palmer, while never losing his fine reserve, has yet made vivid her strong and beautiful personality. One might ask for more of such incident and anecdote as he has used, but the effect of Professor Palmer's method, different from that usual to the biographer, is so impressive that one would hesitate to add anything to his carefully planned chapters. The book has itself the quality inherent, evidently in its subject, of looking at life in the large, of making little of details, save as they bear a spiritual significance.

The life of one noted in the history of the movement for the higher education of women recalls the life of Mary Lyon, and of other women of the earlier generation, and shows the stride taken in fifty years. The women of the earlier day worked in poverty always, amid unsympathetic onlookers, hampered by lack of competent helpers, as well as by lack of funds, and hampered yet more by old ideas, which only time and success in new ventures could remove. Mrs. Palmer trod a path not smooth, but at least broken, and where her executive ability could have wide scope, where understanding greeted

*Alice Freeman Palmer. *By G. H. Palmer.* Boston: Houghton, Mifflin & Co. $1.50.

her endeavors, and enthusiasm her success. Indeed, she stood much where any man engaged in kindred work would stand, dealt with difficulties of a like type, succeeded as a man of equal ability would, and came forth the broad-minded, poised, gracious, buoyant character that such a training and experience should evolve. After two years teaching in the West, Alice Freeman, a graduate of Michigan University, was called to Wellesley, as teacher of history. Her great personal power was quickly apparent, and when after three years a change was made in the faculty of the young college, its guidance in the shaping and decisive years was put into the hands of this girl of twenty-six. She married and left Wellesley after six years of service, six years that carried the college thru the dangerous period after the death of its founder and first administrator, and determined the form of its later development. The year as dean of the women's department of Chicago University being her only official position thereafter, her work was varied and of a general character, but perhaps none the less influential. Deeply religious, tho with nothing of the devotée, she gave her strength and her time gladly always to work for others. Eager first of all for the cause of women's education, she knew equally the value of other causes, and their affiliation to her own prime interest.

We are not quite past the custom of counting women into two classes, those whose interests are domestic, and those whose concern is outside the home. This biography should do something to lessen the hold of this notion, depicting as it does an intensely human, wholly sane personality, in which home life and outside tasks are each met with devotion and enthusiasm.

The book is wholly a happy one, the story of a glad life, having its share of hardship, nobly borne, and its joy and its success, taken as nobly. Alice Freeman Palmer was the exceptional woman, of notable power, but as we read her life we realize that her life was the normal life at its best, and herself the normal woman at the point of highest development, rather than the genius whose extraordinary abilities set her apart from her fellows.

Practical Farming. By W. F. Massey. New York: Outing Publishing Co. $1.50.

For a plain farmer, and by plain farmer we mean a well educated land tiller, this is just the every day book that he needs. The one thing least understood by the land tiller is the soil itself, and how to make it. Indeed it seems to be his only object to use up what soil he has, and waste whatever will go to make new soil. It would startle the majority of these good folk to tell them that they could make soil at all. They understand that they can whip up soil by adding manures, but to create new soil in large quantities is novel doctrine. The contents of this volume include a preliminary discussion of the agencies that are at work in soil formation, including the work of sunshine, of atmosphere, and of water. Then comes an analysis of good soil to show what it is composed of, and what poor soil requires. Here comes in an explanation of humus—ignorance of which is at the bottom of half our failures in farming. This incipient soil holds the moisture, equalizes the temperature, and is steadily adding to direct plant food. Overhead irrigation is a new proposition in farming and is carefully explained. A discussion of manures follows, and we get at the common sense and independence of the author, when he tells us that the need for commercial fertilizers has been largely brought about by the waste of home manures during past years—a waste unfortunately still going on all over the country. Giving us a very rational discussion of commercial fertilizers, and formulas for their making, Mr. Massey adds that American farmers are wasting a great deal of money in the purchase of these commercial products, which they could save by a more careful study of the needs of their farms, and by using legume crops. He believes that the day is rapidly approaching when American farmers will abandon for any usual farm crops the purchase of "complete fertilizers." Tobacco, and possibly the Irish potato, may require something of the sort, but composted material, that is, barnyard manure, with all sorts of decaying and waste material, such as can be found on any farm, are far more valuable than the best fertilizers procurable. In some of our States horticultural and

agricultural societies are largely in the hands of manufacturers of these commercial products, and the hue and cry is kept up to boom sales. In every way this book is of decided value.

National and Social Problems. By Frederic Harrison. New York: The Macmillan Co. $1.75.

The handful of Positivists has exerted an influence on public questions in England quite out of proportion to their numbers. A critic once said that he found at their meetings "three persons and no God." Nevertheless, gifted with brilliant and biting pens, and fired with hot enthusiasm, the Positivist leaders have found a way to reach the ears of the nation when it was oppressing the weak abroad or neglecting social duties at home. In the first part of *National and Social Problems,* Mr. Harrison, in a collection of essays on foreign policy that were written at various crises, discloses the principles which have kept his group invariably on the side of national morality:

"For more than a generation our party has insisted on peace; it has protested against the consolidation of all vast states, and, above all, against the formation of all military empires."

As England has waged fifty wars in fifty years, the denunciations of the Positivists have repeatedly rung out against the sins of their own government. Nor has the negative goodness of abstention from evil been enough:

"For more than a generation our party has called out that there can be no safety until the grand object of our rulers becomes the peaceful reorganization of industry."

The principles upon which that reorganization, according to Positivism, must be effected, the writer expounds in the second part of the book in articles upon such subjects as Trade Unionism, Industrial Co-operation, and Moral and Religious Socialism. In those dark early times, when a trade unionist in England was regarded as a Nihilist is regarded in Russia today, trade unions found in Mr. Harrison one of their doughtiest champions; but he was careful, in the interests of clear thinking and of Positivism, to deny the fervid claim that trade unionism would regenerate all society. Similarly, while he applauds the co-operative societies thru which over two million members do a retail business of 375 million dollars a year, he repudiates emphatically the notion that this collective shopkeeping supplies a new gospel for the full salvation of mankind.

The Popes and Science. By James J. Walsh. New York: Fordham University Press.

Dr. Walsh, of Fordham University School of Medicine, having established a satisfactory *modus vivendi* between his faith and his science, seems desirous of making it retroactive and proving that medieval churchmen were equally broad-minded. He shows that the popes were not so black as they have been painted, especially by ex-President White, but were often patrons of science as well as of art. He collects many instances to show physicians in good standing in the Church did use dissection and make considerable progress in anatomy and medicine, and argues that the treatment of the sick and insane was not so heartless and irrational as we have been accustomed to believe. Finally, he brings forward Crookes, Wallace, Richet Lodge, Lombroso and the other psychical researchers to prove that the tendency of science is away from materialism and toward the recognition of the spiritualistic interpretations that it used to sneer at. The volume is, of course, the brief of an advocate. Dr. Walsh seems to take a keen delight in setting up what most people would regard as a paradox, such as his "The Thirteenth, the Greatest of Centuries," and then defending it against all comers. But his books are not more partisan than White's "Warfare of Science With Theology," against which they are chiefly directed, and they should be read in connection with it by those who want to get both sides.

Omar Repentant. By Richard Le Gallienne. New York: Mitchell Kennerley, 75 cents.

Is Saul also among the prophets? Only a few years ago Mr. Le Gallienne added another to the numerous translations of the "Rubaiyat," and now he supplies us with the antidote. So much at least may be set down to the credit of East Aurora:

"Indeed, indeed, Repentance oft before,
I swore—but was I sober when I swore?"

No matter the duration of the author's mood, it is good sense and not bad poetry. The Anti-Saloon League would do well to circulate it as campaign literature and have it set to music, perhaps borrowing that of "The Persian Garden," for use in mass meetings this fall. Here are a few of the *rubais:*

Boy, do you know that since the world began
No man hath writ a deadlier book for man?
You smile—O yes, I know—how old are you?
Twenty—well, I just measure twice your span.

The Grape! The Vine! O what an evil wit
Have words to gild the blackness of the pit!
Said so, how fair it sounds—the Vine! the Grape!
O call it whiskey—and be done with it.

"Your health!" great God! your health! and straight drink,
Disease and Death—upon the cess-pool's brink
I cry "your health"—and with a laugh you drain
The poison that makes soul and body stink.

This shall the Vine do for you—it shall break
The woman's heart that loves you, it shall take
Away from you your friends—sad one by one,
And of your own kind heart an agate make.

This shall the Vine do for you—this good brain,
By usury of chance favors, it shall drain
Of all its proper powers to think and dream
And hold it captive by a vinous chain.

Straight limbs he makes to falter and fills with aches,
Proud backs he bends and the strong frame-work shakes,
Even of doughty captains of the wars:
No strength beneath the moon but what he breaks.

The Essential Life. By Stephen Berrien Stanton. New York: Charles Scribner's Sons. $1.00.

Twenty essays, or one might call them aggregations of Orphic utterances on such general themes as "Time," "Individuality," "Imagination," "Attitude," etc., are here gathered together. The suggestion everywhere is of Emerson, or an echo of an echo of Emerson, and yet the writer is an original thinker, with a spicy charm of his own. An agreeable expansion and illustration of his handsome thought, or even a little judicious discursiveness might have served to fix his reader's attention to what is really an exquisite bit illustrative of the "Comédie Humaine" or the "Commedia Divina"; but he prefers to leave the Orphic utterances as text. To himself, of course, each text has its expansion. Hasn't he labored for it an hour, a week, a month? Let his reader do the same. But of course the reader sets his own value on time, and hurries on from oracle to oracle, until he wearies, and, like a certain legal light of Boston, lays his head back and moans: "My beloved fireside genius, interpret to me this libretto lest I dilate with the wrong emotion."

The Soul of Spain. By Havelock Ellis. Pp. ix, 420. Boston: Houghton, Mifflin & Co. $2.00.

As a "sociological tourist" in Spain Mr. Havelock Ellis must be pronounced a great success. His latest book is a delightful blend of the comments of a thoroly informed and appreciative traveler and the observations of a keen student of races and social affairs. The sociologist-theorist appears now and then, especially in some of his surmises, based on ethnological notions about the Spanish people; also in discussing specially (most entertainingly, too, and one feels with discernment, on the main lines) the Spanish women. That the Spanish people have yet a great part to play in the world—at any rate, in the sense that they represent, in temperament and in ways of living, some of the eternal verities, toward which the pendulum must again swing—is plainly the conviction of Mr. Ellis. In the final chapter he considers the recent writings (mostly published since 1898) wherein various Spaniards explain in diverse ways their people's "decadence." He grants some validity to each of the causes put forth, such as the ecclesiastical domination of society, bad economic laws and practice, *empleomania,* etc. But he does not believe that the situation is so serious in any of these respects as the critics put it. Quite apart from the many ways in which this book "gives to think," it may be read with pleasure for its many glimpses into the very heart of Spanish life, regionally as well as nationally considered. A citation of some chapter headings will show the sweep which it covers: The Art of Spain, Velasquez, Spanish Dancing, Ramon Lull at Palma,

Don Quixote, the Gardens of Granada, Monserrat, Seville in Spring, and so on. Everywhere one feels that the writer has become veritably at home in Spain.

Literary Notes

....The Sunday magazine supplement of the *Seattle Times* for August 23rd, which was edited by the College Suffrage League, is filled with a very different sort of matter from that usually found in the "woman's section" of our newspapers. This is in itself the best argument for equal suffrage, that men, even the wisest of them, *i. e.*, editors, cannot tell what women want as well as they can themselves.

....A new edition of Burton's *The Book Hunter*, edited by J. Herbert Slater, the editor of *Book Prices Current*, is published by Dutton & Co. This differs from the Richard Grant White edition issued thru Sheldon & Co. in 1862-3, in that it has a portrait of John Ker, Duke of Roxburghe, 1740-1804, as a frontispiece, but it lacks the valuable index of the earlier volume prepared by F. F. Heard, of Boston.

....Leonidas Andreiyeff, the author of "Red Laughter" and regarded in Russia as the successor and superior of Gorky, is little known in this country, and it was perhaps for that reason that Brown Brothers, Philadelphia, chose to bring out as the first of their new series of modern European authors his short sketch, *Silence* (25 cents), altho so painful a story does not make a favorable introduction to the series.

....Vol. I., No. 1, of *The Grafton Magazine History and Genealogy*, New York, opens with an address by Dr. C. B. Alexander on "The Society of the Cincinnati and Its Future," and follows with articles on "New York in the Eighteenth Century," Roger Williams and the ancient Stirlings of Cadder, Andrew Ellicott and the ancestors of the Jewett Family, and reviews of genealogical books. Its editorial board is composed of Henry R. Stiles, George E. Ellis, Emma E. Bingham, and F. H. Hitchcock. It is well printed and issued quarterly at 50 cents a copy.

....The fourth volume of *Miscellanies* in the collected edition of John Morley's being issued by Macmillans in 14 volumes consists chiefly of book reviews, but reviews of the good old fashioned British sort, that is, original essays with some work that has appeared within the past few years as a text. A third of the volume is devoted to two great Florentimes, Machiavelli and Guicciardini. Besides these, there are reviews of Frederic Harrison's Byzantine romance, "Theophano," and his Positivist calendar, of Lecky on democracy, Hobhouse on "Democracy and Reaction," and John Stuart Mill. With all our wealth of magazines we have none that would give space to such scholarly and thoro critical studies as these even if we have men who could write as well on such subjects.

Pebbles

"WHICH do you think is the greatest slur:
"*Did* he kiss her? Did *he* kiss her?
"Did he *kiss* her? Or Did he kiss *her?*"—*Sun.*

SCENE: Grammar class. Dialog between teacher and Johnnie.
Teacher: "What is the future of 'he drinks'?
Johnnie: "He is drunk."—*Woman's Journal.*

"DOLAN," said Mr. Rafferty, as he looked up at the city post office, "what does them letters 'MDCCCXCVII' mean"?
"They mean eighteen hundred and ninety-seven."
"Dolan," came the query after a thoughtful pause, "don't yez think they're overdoin' this spellin' reform a bit?"—*Woman's Journal.*

THIS afternoon an Atchison mother was trying a cap on a fat little baby, and the baby was warm, sleepy and cross. Finally the mother and the milliner got the cap on the sticky little head, and the mother said to the baby :"Look up and let mamma see how pretty you look." The baby looked up at its mother, screwed up its face and bawled. The mother and milliner said: "Poor little thing, but he looks sweet in the cap."—*Atchison Globe.*

THE other night, when a Bryn Mawr man was putting his four year old daughter to bed, the following dialog took place:
"Can God hear what I say now?" from the daughter.
"Yes," replied the father.
This time in a whisper: "Did he hear then?" inquired the daughter.
"Yes. He hears you just the same," was the reply.
This time apparently lower: "Did he hear me then?" asked the child.
"Why, yes, of course he does," said the father.
"Well, I did not say anything that time at all," declared the child in triumph.—*Philadelphia Ledger.*

THE OPEN SHELF SYSTEM IN PUBLIC LIBRARIES.

WHERE are the tales of Sherlock Holmes?
And where's the "Scarlet Letter" now?
Where are those precious calf-bound tomes?
And even those bound in cheapest cow?
Where's Omar's song of verse and bough?
Or Raffles' yarns of midnight pelf?
Where's Smithkin's "Essay on the Plough"?
All vanished from the Open Shelf!

Pray tell me, too, where Pickwick roams?
And where's the Bacon-Shakespeare row?
And Mister Stoddard's foreign domes?
And L. J. Libbey's "Broken Vow"?
Where's "Down the Danube in a Scow"?
The Brothers Grimm on troll and elf?
And where's "The Way to Make a Bow"?
All vanished from the Open Shelf!

ENVOY.

Where's Bismarck's letters to his Frau?
The wars of Ghibelline and Guelf?
They've even pinched a hymn-book—wow!
It's vanished from the Open Shelf!

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Peace in Ohio

A GOOD fighter knows when he has fought to the finish, and that it is time to cry quits; and Foraker is a good fighter. Yet he knows how to yield so that he may fight another day; and that requires that he shall be re-elected Senator; for in politics, as in war,

> "Those that fly may fight again,
> Which he can never do that's slain."

There is peace from the Ohio to the Lake, peace made obvious, conspicuous, ostentatious. Taft and Foraker met on a reviewing stand in Toledo in the presence of five thousand people; they shook hands, verily shook hands, so that the crowd could see the fingers clutch, said they were glad to see each other, so that the reporters could hear it, declared that neither had a sword feeling for the fifth rib. Then they went together to a public meeting, shook hands again in public, and smiled beatifically, and the crowd cheered. Then Mr. Taft made a nice speech, and told how much he was indebted to Mr. Foraker for starting him in public life, said pretty things that might mean little or much, just as the hearer wished. Then Mr. Foraker spoke, and declared that he was a good Republican, that he was regular, that he would support loyally the Republican candidate for President, in fact that he was all right. Indeed he did all he could be asked or expected to do. He did not add that as he would support Mr. Taft for President he would expect Mr. Taft to support him for Senator, but his good friend who followed put in the expectation that all good Republicans would unite on Foraker for Senator, as they should and would on the regular candidates for President and Governor. On all this Mr. Taft said nothing; he could not say anything. He could only let his friends say for him that he would not meddle in any State fight, that he would help no candidate against Mr. Foraker, and that with this Mr. Foraker could be and should be content.

So it stands. Mr. Foraker must support Mr. Taft or he cannot be Senator. He does not pretend that he will stop his fight against Mr. Roosevelt, whose political heir Mr. Taft is. But in order to be regular and in order to be in the fighting line next time he must support the regular candidate, and that he will do, even to the extent of making public speeches.

Those speeches will be interesting, and we hope helpful. The peace will do much to insure a handsome and usual majority at the November election. But what we would most like to hear is his speeches urging the negroes to vote for Mr. Taft. He has been their idol. It has been at his word that a multitude of them have declared that never, never would they vote for Mr. Taft. Did not Mr. Taft carry out the President's order to dismiss the Brownsville soldiers "without honor," and did he not defend the President's action in his annual report as Secretary of War? Have they not declared that rather than vote for Mr. Taft they would vote for the party and candidate which never have a word for their rights, the party which contains all the Tillmans and Vardamans and which has past all the acts which discriminate against them and which disgrace the statute books of most of the Democratic States? And now here is Senator Foraker, their defender, the foe of President Roosevelt, the man whom they favored for Presi-

dent, come out definitely, flat-footed, for Mr. Taft. It is hard on them. Will they follow him?

They will if they have as much sense as their chosen leader. The Republican party is none too good to them; it has lost its old fervor; it has taken up other interests that do not interest them; but it is all they have got. If they can split on local issues, whether in the South or the North, voting for the best men in either party, it is well. But in national issues they are shut up to one intelligent course. The Republican party means well by them, somewhat languidly, perhaps, but fairly well. The Democratic party means ill to them all the time. Mr. Taft does not mean ill to them; he means well, so far as he has paid any attention to their needs. It was the President's act, not his, by which the Brownsville soldiers were dismissed. He held it up as long as he could, and when it was required by his position in the Cabinet he defended it as a lawyer might. But his principles on the general race question are sound and right, and he has done more for racial justice and equality than any other living man, and that for ten million colored people of the Philippines and Porto Rico. Cannot the negroes see that?

This is not exactly a Toledo pact, for while Mr. Foraker has made a pledge Mr. Taft has made none beyond his former declaration that he will keep his hands off everywhere. In a way we regret Mr. Foraker's milder attitude, for there is a certain delight in seeing him smite casques in a tournament. We are afraid he will not be so interesting, and that

> "The trenchant blade, Toledo trusty,
> For want of fighting will grow rusty,
> And eat into itself for lack
> Of somebody to hew and hack."

Natural Selection and the Poor

Prof. William Ridgeway, president of the Anthropological Section of the British Association, is a man whose knowledge and sincerity entitle him to respect, but he probably does not expect that his address at the Dublin meeting will receive much commendation or make many converts. This fact, of course, is no reason why he should not have made it. Unpopular opinions have their large uses even when, besides being unpopular, they happen to be untrue. They provoke us to re-examine our theories and our lightly accepted beliefs, and thereby to establish our scientific and moral foundations.

We do not happen to share Professor Ridgeway's conviction, that it is a mistake, fraught with all the tragedy of national suicide, to help the poor. His major premise, that human betterment as a phase of evolution has been produced in part by natural selection, and that without natural selection it must cease, we do not dispute. With all becoming deference to Professor Ridgeway's great authority, we think that his minor premise, that helping the poor necessarily prevents natural selection, is not only unproven but is probably untrue.

Even if the artificial institutions of government, law and property had never been invented, and men had lived until now as the beasts of the field and the fowl of the air, mutual aid would have played some part, as truly as individual rivalry and antagonism would have played their part, in natural selection. Countless times in the history of animal life it has happened that the survival not of the choicest individuals alone, but of entire groups, even whole species, has depended upon solidarity in the presence of enemies. Yet in the absence of government, law and property, competitive struggle and the elimination of weaklings is a far larger factor in natural selection than it can possibly be in our artificial human society. The reason is obvious.

In a state of nature individual survival depends upon individual quality—physical soundness, strength, intelligence, resourcefulness, in short, ability. In artificial human society it does not necessarily depend on any of these things. Government, law and property have over and over again given the advantage to the natural weakling and driven the individual of superior ability to the wall. They did precisely that, for instance, thruout large areas of Romanized Europe from the reign of Marcus

Aurelius down to the first barbarian invasions. They did it in many parts of France under the *ancien régime*. They did it in the fairest parts of England during those centuries in which enclosures of arable lands to enlarge the sheep pastures and the hunting grounds drove sturdy yeomen from the land into manufacturing towns.

This phase of the human process men like Professor Ridgeway always overlook or ignore; altho such of them as live in England should be familiar with the significant fact that the English aristocracy instead of running out, like the continental nobility, has been maintained in vigor by incessant recruiting from the lower orders, and by the not less significant fact that much of the best intellect of England and America is descended from the French Huguenot blood, which, when it found refuge in England, was compelled to live by engaging in the artisan vocations.

Professor Ridgeway, we feel sure, would agree with us that the only selection which can improve the human breed is that which proceeds thru the survival of natural vigor and natural ability. This selection is interfered with when these qualities are handicapped by any means whatsoever. To some extent they are handicapped when vigor and ability are taxed to keep weaklings from starving. But this tax is infinitesimal by comparison with the burden laid upon natural quality when the great prizes of life can be obtained only by those who enjoy some purely artificial advantage; like inherited social rank, or the tremendous power of property, or the equally tremendous power which discriminating legislation may create.

Now helping the poor may or may not increase the total handicap of natural ability. It all depends upon what poor are helped and how they are helped. If the assisted poor happen to be degenerates of any kind—congenital criminals or paupers, epileptics, insane persons or idiots—race deterioration is made certain by enabling them to reproduce their kind. But in every land there are and always have been uncounted thousands of the poor, gifted with natural ability and poor only because they have been overwhelmed by the sweep of political convulsions or industrial revolutions, which with the force of a tidal wave have swept them from their moorings and forced them to contend for life against privileged competitors enjoying artificial advantages unjustly created by law, and buttressed by law. To help such poor is to give natural selection a chance.

Democracy more completely than any other social system adjusts the social order to the natural order and the law of evolution. It aims to realize one supreme ideal—that of giving opportunity to natural vigor and natural ability, so long as it refrains from aggression and from predatory conduct. Democracy would help the poor by abolishing privilege. When that task has been accomplished, the help that it will be necessary to extend to the unsuccessful poor will not be so extensive as to imperil the future of the human race.

A Nation in Peaceful Triumph

Not one nation, but half a dozen nations—as they call them there—are shouting in triumph over the proclamation of constitutional liberty in Turkey. It is not the Christians alone of various sects, but the Moslems are as demonstrative as the Christians. It must be remembered that not the Christians only, but thousands of Mohammedans suspected of disloyalty have been murdered or exiled. In the days of our Civil War never was there greater rejoicing over a victory than was exprest at the meeting of Turks, Syrians and Christians in this city last Sunday night when Mundji Bey, the acting Turkish Minister at Washington, presided, and an Armenian archbishop was a principal speaker.

We have been looking up the reports in Arabic and Turkish papers. They bubble over with enthusiasm, and are filled with stories of the way the news was received in different parts of Turkey. From an Arabic paper, published in Cairo and called *The Pyramids*, we learn that the local government at Mûsh, near Sassûn, where the Armenian massacres were the worst, requested the Armenian bishop to exhume the bones of

the murdered Armenians, to pray over them the burial service, as they had been buried without service in the days of terror; and with their heads bowed the Turkish officers and soldiers stood thru the ceremony and declared that these men had died martyrs for the cause of liberty. They then appropriated a sum of money to erect a shaft in memory of the martyrs of liberty. At Diarbekir the news was received by the Vali, but he kept it two days, till further instructions came to give out the news, and they had a week of rejoicing. At Homs, in Syria, the news was given out, but the Moslems declared that it was freedom for them and not for the Christians, and a fight ensued between the young Mohammedans and the young Christians, and two Christians were killed and a number of Mohammedans wounded. When the government interfered and explained the case fully, the next day, the Mohammedan priest went to the Christian bishop and apologized for the error. At Cesarea the Moslems did not believe that the reform was meant for Christians also, and there was a fight, in which six Christians were killed. At Beirut, when the news was confirmed of constitutional freedom, a local Mohammedan took with him a seven-year-old child and went to the director of the custom house, and called him loudly to come out; and when he came and asked what was wanted, the man said: "Do you see this child here? He is the child of the man you, as a spy, killed seven years ago, when you joined the secret service of the Sultan. I took the child and brought him up, and have come to show him to you." When the Vali and director were removed the people crowded about them and hissed them and clapped their hands as the hated men departed. Private letters from Aleppo say that everything there is as happy and as free as in New York, and those who come from Constantinople say the same is true there.

But will it last? Has Mohammedanism gone back to the days of the Câliphs, or, rather, can it breathe the atmosphere of nineteenth-century freedom? Why not as well as the Buddhism of Japan? Much depends on the wisdom of a very few Young Turk leaders.

Protestantism Gone Mad

It is not mere madness—it is badness of heart, nothing less, that has stirred up the cranks of British Protestantism to protest against the visit of an Italian gentleman and priest to attend a religious meeting in London. There has been held an international conference of the Congregational Churches of the world; and then the Lambeth Conference of all the Anglican Churches of the world; and now there is to be an International Eucharistic Congress of the Roman Catholic Church. One would think that in a free country they had the same right to meet and invite whom they pleased as any other body of Christians or Pagans. But there is an Imperial Protestant Federation that thinks otherwise. Cardinal Vannutelli has been detailed by Pius X to preside at the Congress, and these imperial and imperious Protestants declare that there was a law past three hundred years ago which forbade any Papal Legate to enter the country—that was in the time of Queen Elizabeth. The law, they say, has never been repealed. Doubtless nobody thought of repealing it. Catholics are in both houses of Parliament; they have been allowed equal rights in the universities, and we imagined that all the disabling laws had been abrogated except that which requires the King on his coronation to swear to defend the Protestant faith. But this law, it would seem, had been overlooked. The Parliament which has lately provided for a Catholic university for Ireland will not allow any such statute to stand.

It offended these militant Protestants that King Edward was likely to receive Cardinal Vannutelli, who was to bring a courteous message from the Pope. Ah! think of the danger! Another Papist Plot! Vannutelli proposes—who knows?—to convert England to Popery, and then re-establish the Inquisition, and then Smithfield! There is nothing too silly for such silly people to believe.

That law—if such a law there still is—is obsolete. To insist on its observance, to forbid the Cardinal to land in England, to forbid the King to receive him and accept a kindly message from the Pope at Rome, to forbid the Eu-

charistic Congress to March in procession, would be indecent, unchristian. But these men are not Christians, for Christians love one another; and the purpose of their organization is to hate and devour their neighbor. We do not believe that any such law will be enforced. The Christian sentiment of the country would not allow it. Doubtless other laws granting their rights to Catholics have indirectly if not formally repealed this ancient and obsolete act.

Let the Eucharistic Congress hold its next meeting in the United States. It will be welcome in Washington. The President—Mr. Taft, we presume, who went as a Legate from the United States to Rome to settle with the Pope the troubles about the Friars' lands—will receive courteously any kind message from the Pope, and will reply in similar terms. We warrant it will be safe; it will not make a Catholic of President Taft, nor Catholics of our people. We do not any longer take special pride in the designation of *Protestant.* It was good enough once, but now we call ourselves Christians, and we allow the name of Christian to those equally who worship God the Father and His Son Jesus Christ as we do, but also adoré the Virgin somewhat more than we do. But they have their equal rights. We do not all of us agree with them, but we do not think of protesting against them, for we no longer need to. There is not a denomination in this country that has the word *Protestant* in its name which is not trying to get rid of it. We declare for; we do not protest against. We are hoping for unity, not looking for division.

King Edward will not receive the Legate; he is going to a horse-race that week. We wish he had given up the Doncaster gamble and had bestowed his sympathy upon his Catholic subjects, and shown his contempt for the mischief-makers.

Gifts of the Childless

A WEALTHY bachelor, Frederick Cooper Hewitt, whose names suggest a distinguished and rich family connections, died last week in Owego, N. Y., and left, as was most becoming, most of his property to the public. To various relatives and friends he made bequests of $100,000 or less, all that family and friendship required, and the rest he gave to the community in general, two million dollars to the Postgraduate Medical College and Hospital in this city, half a million to Yale, another half-million in smaller bequests, a million and a half to the Metropolitan Museum of Art, to which also he bequeathed his great collection of Barbizon paintings, and which he also made his residuary legatee, which may add something more.

Jeremy Taylor, in his "Holy Living and Dying," has a chapter on the incidental advantages which come from great misfortunes. He tells, by way of illustration, copying from Montaigne, of the man who threw a stone at a dog and hit his cruel stepmother, and who remarked that altho the stone missed its mark it was not entirely lost. There are incidental advantages that come from so great an evil as celibacy and childlessness, and one of them is illustrated in the case of Mr. Hewitt. Had he married in his young manhood, and raised a reasonably large family of children, he would have felt it his duty and privilege to distribute most of his wealth among them. He had no children as his natural heirs, and the interest and affection that naturally should have gone to them sought some object, and could properly go nowhere else than to the public. The only question then was one of selection; and he selected wisely.

Delay in marriage, ending in final celibacy, is one of our greatest social evils, and it affects most those who can fairly or well afford to marry. They are a better class, a more intelligent and thrifty class, from whom it is most to be desired that the future generation shall be recruited. In this country there is almost no increase of population except by immigration. Accepting it as a general statement that half who are born die before they are fully matured, in order simply to maintain present population, all who are physically mature should marry and have an average of four children to each married pair. Instead of this we see multitudes of married people, either selfish or unfortunate, who have no children or only one or two, and an increasing number who delay marriage indefinitely. That this is a most serious

evil and social loss is evident to anybody.

But it has this one minor incidental advantage, that what the State loses in growing citizens it makes up, in small part, in money. To be sure, the loss of possible children is a still greater loss of producing wealth, but there is some partial gain in the fact that those who have no children, or only one or two, are more inclined to compound for the fault they were inclined to by putting their wealth where it will be an advantage to other people's children. Such a man, who cannot take his wealth with him, must ask himself what he can do with it after his death. He has founded no family to bear his name; he can at best perpetuate his memory by founding a chair or an institution, some fund by which he will be remembered as a benefactor of his race.

The bachelor who gives his millions to the state does well; the married who have given children to the state have done better.

The German Sultan of Morocco

THE narrator of recent events in Morocco has been bothered by the question of official designations. When Mulai Hafid first appeared as claimant for the throne of his brother, the Sultan, Abd-el-Aziz, it was most convenient to allude to him as the Pretender, notwithstanding that there was another Pretender in the field, Bu Amara, holding his own in the Riff Mountains. When Hafid captured the southern capital, Marakesh, while his rival held Fez, they were commonly called "the Sultan of the South" and "the Sultan of the North." But when Abd-el-Aziz was driven from the northern capital and into territory held by the French at Casablanca, prepared his expedition for the recapture of Marakesh, the naked truth began to break thru the veil of diplomatic language and people spoke of the coming combat between "the French Sultan" and "the German Sultan."

That the correct designations had been hit upon at last is shown by the way Germany has seized the occasion of Abd-el-Aziz's defeat to interpose a second time in the plans of France in Morocco. Without waiting for France and Spain, the official custodians of Morocco by authority of the Algeciras conference, to take the initiative William the Sudden called upon the Powers to recognize Mulai Hafid as Sultan. According to reports, the proposal is somewhat coldly received, but that does not matter. He has accomplished his purposes, the embarrassment of France and the favor of the new ruler of Morocco.

It is but cold consolation to France in this predicament that she may pride herself on the diplomatic correctness of her attitude of neutrality. She has opposed Mulai Hafid without conquering him. She has given Abd-el-Aziz her moral support when he needed something more substantial. An editorial in *Le Temps*, presumably from the pen of M. André Tardieu, is frank in its admission of the mistake:

> "It is not to be dissimulated that France is in part responsible for this disaster. For some years instead of managing the Morocco question we have been managed by it. We have hedged, tacked and tergiversated. We have favored Abd-el-Aziz too much not to have compromised him; we have not sustained him enough to give him authority."

The story of the anabasis of Abd-el-Aziz is yet to be told, but enough has been divulged to show the completeness of the success of Arab treachery. His march upward from the sea toward the capital, as reported to the French papers from day to day, was a triumphal progress, a succession of fêtes, as chief after chief of the desert tribes came to offer him their homage, swear allegiance with all due ceremonies, and add their contingents to his army. This delayed the march, of course, but no enemy appeared until he was within two days of Marakesh. Then early on the morning of the 19th of August the signal was given—it could hardly be called an attack—and at the first shots the bulk of his army went over to the enemy. The recent recruits turned their attention to the baggage train, and fought among themselves for the loot of arms, ammunition, tents and provisions, newly purchased with French money. The artillerymen cut their traces and, mounted two on a mule, vanished in the desert. The French military mission, under Commandant Fariau, obeyed the unspoken order *"Sauve qui peut!"* with the utmost alacrity, and by

galloping day and night, chased all the way by the Beni Meskin, they arrived at Settat, the French outpost. They had lost three of their men, an Algerian subaltern and two artillerymen, and they could not tell what fate had befallen the two English officers of instruction who were on the staff of the Sultan, Dr. Verdon and Sergeant Balding. These turned up at Settat on the following night along with the fallen Sultan and his few faithful followers. Perhaps they could not ride as fast as the French officers; perhaps there were other reasons why they came in second in this wild race for the coast.

In Tangier the rumors of the defeat caused great excitement and confusion, for the Sultan's officials there had remained loyal to him. Should they longer hold out against the solicitations of Mulai Hafid? To make up their minds they needed to communicate with their defeated sovereign. But he was in a desert camp over 200 miles away and there are no railroads in Morocco, no road of any kind, in fact, and no postal service. Nevertheless it was very simple, thanks to the incongruous element of modernism introduced into this oriental imbroglio by the French occupation. They sent him a radiogram.

But he could not help them to a decision, so the notables assembled in the mosque at Tangier turned for advice to the man from whom they have practically had to take orders for the last few years, the French Minister. El Menebhi, ex-Minister of War, and El Guebbas, the present incumbent, long rivals and bitter enemies but now united by the emergency, went together to the French Legation to ask what they should do. But M. Regnault washed his hands of the whole affair. In a matter of the internal politics of the country such as a dynastic question, he said, he could not intervene. Such freedom of action as was now bestowed upon them they might have used to more advantage earlier, but the two men shouldered the responsibility and returned to the mosque, where Mulai Hafid was proclaimed sole Sultan of Morocco and all the people rejoiced.

The German Consul at Tangier, Dr. Vassel, has gone to Fez to gain the ear of the new Sultan, and his Emperor is pressing for his recognition by the Powers represented at Algeciras, of which we are one. France has the next move and the world is waiting to see if the Sultan will be put back upon the board or laid away in the box for keeps.

International Courtesy

The law requiring that articles patented and sold in Great Britain should be made there is bringing millions of capital to England, and is the occasion of a multitude of factories being built with foreign money. But it has another effect in the way of reprisals, not to speak of ill will aroused. The purpose is to benefit British labor, even if the exclusion of foreign-made articles puts a heavier cost on the consumer. This is in line with the principle of protection which Great Britain has so long resisted, but which the Conservative party is now accepting under the lead of Mr. Chamberlain. Doubtless the act will work well for the present, but if Germany and France and the United States and other manufacturing countries should adopt a similar policy the advantage would cease to exist, and a general loss would be the result. It is just like the experience of the European nations with the sugar bounty. By giving a government bounty to homemade beet sugar the production was increased until all the other European countries except Great Britain did the same, and the advantage to each was canceled, except as Great Britain, which raises no beets, got cheaper sugar for her jam. At last there had to be an international conference, and the beet-sugar bounty was abolished. So it is that if every country tries to get the same advantage over every other country none of them are any better off than they were to begin with; and the international comity and courtesy have been strained by a policy of selfishness which can be only temporarily profitable.

Politeness Pays

We occasionally find striking evidence that the virtue of courtesy is not only its own reward, but also brings in a very handsome profit on the original investment. Members of the staff of all public institutions are apt to

regard the task of "towing" visitors thru the buildings as one of the great bores of their position, and they do not always take pains to conceal their feeling. Two or three years ago an unknown man dressed like a farmer visited the Post-graduate Hospital with a friend who had to have a medical examination. While this was going on he was shown around the hospital by one of the physicians and became much interested in the work. Last week he died and the hospital receives an unexpected gift of $2,000,000 by will of Frederick Cooper Hewitt, of Owego. On account of a similar courteous reception at the Metropolitan Museum that institution becomes the residuary legatee of the estate, and is likely to get four or five million dollars. Most of the new pictures and pottery and tapestry now being bought by the Metropolitan Museum are marked "Rogers Fund." When the Museum a few years ago received word that $5,000,000 had been willed to it by Jacob Rogers, a locomotive builder of Paterson, N. J., the director and trustees could not remember such a man. No wonder; he had paid only a single visit to the Museum, one visitor among thousands, but the attaché who answered his questions was so polite and considerate that he determined to leave his fortune to the institution. If officials in such positions will take the trouble to treat all visitors as tho they were millionaires incognito, they will make no mistakes that they will afterward regret.

South American Navies

Brazil decided to build three battleships of the largest and most modern sort. What for no one could say, and so it was conjectured that they would be sold to Japan or some other country. But now it seems that Brazil proposes to keep them, says it needs them for protection. What protection it needed is not clear. The only considerable Power that could meet her in war is Argentina, and most naturally Argentina took it as a threat rather than a defense, and so she has voted to build two large battleships and four cruisers. This is only just after Argentina had entered on a policy of undefended peace, and by an agreement with Chile, her old foe, she had dismissed her fleet. This illustrates what a big navy is. It is not simply a defense; it is a provocation, a threat. Because one nation builds a strong navy, other nations must. If Germany strengthens its squadrons, Great Britain must double the expense. So the the burden mounts up until it is insufferable. The act of Brazil in thus creating a navy is criminal, and threatens or destroys the most beautiful illustration of the blessings of peace and arbitration the world has yet seen.

The Tolstoy Celebration

On Sunday last orders were given by the Russian Holy Synod that an encyclical be read in all the churches of the Holy Orthodox Church warning believers to take no part in the general celebration of Count Tolstoy's eightieth birthday. They declare that up to ten years ago his writings deserved honor, but that since then he has been the enemy of religion and has forfeited all claim for honor. They say:

"Tolstoy has denied the Savior. Since 1907 he has ranked among the pagans. Believers must abstain in honoring such a man in order to save their souls from the judgment of God."

This is the hight of absurdity. Of all men, Tolstoy does not deny the Savior, nor is he a pagan. The fact is that it is the Russian Church which he despises and hates for its unfaithfulness to Christ and to religion. He is over-literal in his following of the Bible, to the extent of non-resistance in case of injury done him, and thus takes an anarchistical position in affairs of government. He would remove all authority in State as well as Church, abolish not only armies, but police and constables as well, and trust wholly to the law of love. That is nonsense, but it is not pagan, and is quite consistent with Christian character and belief. We have not much respect for Tolstoy's literal exegesis and application of Scripture, but he is a better Christian than those who have condemned him. Prophets must expect that treatment from the old ecclesiasticism.

We have a communication from Gilbert H. Montague, Esq., calling in question the accuracy of the statement made by us in an editorial on the Standard

Oil fine, as well as by other journals, to the effect that the Circuit Court of Appeals, in reversing Judge Landis's decision imposing the fine of $29,240,000, was in error in giving as a reason for reversal that Judge Landis had excluded testimony from Bogardus showing that the company's traffic manager believed the rate to be six cents. We said that Mr. Bogardus's testimony was admitted almost in the words of the reversing decision. Mr. Montague says that is true, but that Mr. Bogardus was not allowed to present the evidence showing this belief. He refers for proof to the stenographer's official minutes, pp. 4977—5001, and quotes questions bearing on the matter whose answer was excluded, thus bearing out the reversal by the higher court.

There is more than one Rockefeller, even if one has made the name famous. He was not present at the Rockefeller reunion in Albany last week, but he is interested in it, and, as others have done, has prosecuted genealogical researches in Europe to learn where the name and family originated. The report made by his agent at Albany says that the family is—as the papers say—"of noble lineage, and can be traced back eight hundred years to barons in the south of France. Probably no man cares less than John D. Rockefeller for noble lineage, and that is what we can all claim. Our names show it, Kings, Princes, Lords, Dukes, Knights, Barrons, not to speak of Popes, Abbotts, Bishops and Priests; and intermarriages for generations have distributed the highest blood—and the lowest—to all of us if we only knew it.

The religious journals which comment on the death of Ira D. Sankey freely recognize the immense aid he gave to Mr. Moody in the evangelistic meetings by his Moody and Sankey songbooks. He was really the father of a new type of religious song which was effective because catchy, not a bit formal, yet full of religious passion. They offended the musical and poetical purists, but they admirably fitted the purpose, and greatly helped a multitude of people who needed their influence to seek a religious life. Mr. Moody was an immense influence for the unity of Christians of various names, and Mr. Sankey fully shared that good work with his songs, which leapt all denominational fences like wildfire. The two men were well mated evangelists, and the whole Church will long feel the faith and fellowship of their service.

Margaret Ashmun in *The New England Magazine* pays her tribute to old Salem in a sonnet which begins:

"Old Salem grows new Salem: ay, but we
Who love the faded glamors of the past,
We who hold our heritage unto the last,
Cherish what was, nor long for what may be."

That is very well, but there is another side to old Salem if an old rhyme about it gives a fair picture of its hospitality:

"They invited me to dinner when they knew I could not come.
They invited me to supper; I came but they were done.
They invited me to breakfast; I came before 'twas light;
They said they were very sorry, but they breakfasted over night."

The influence of the temperance campaign in Great Britain has been greater than anyone could have imagined. The average consumption of beer in ten years has fallen from thirty-two to twenty-seven gallons per head; while the consumption of distilled liquors has decreased to less than one-half. While the population increased four million, the consumption fell off nine million gallons. The big brewing magnates did well for themselves to sell out some years ago, make stock companies and go into the House of Lords while they could.

A mob is no place for women. If they join in a riot they must take the consequences. The two women who were fatally shot by the constabulary in Scranton went knowingly into danger and mischief. While we regret that the bullets chose them as victims instead of men, it is to be hoped that their death will teach other women to stay out of danger.

Insurance

"Twisting"

"TWISTING" in life insurance has long been condemned by all who hold conservative views. In the national convention of life insurance underwriters, recently held at Los Angeles, Cal., it was the subject of prolonged discussion. The convention voted without dissent in denouncing the practice. Why any insurance agent should seek to persuade any person already insured to leave the company in which he is insured because of the alleged superiority of a rival company it is hard for the layman to understand. It must appear to him as bad business policy. Almost every agent denounces the practice, but twisting not only survives, but it persists. In New York State twisting has received legislative disapproval in that a statute recently past by the legislature provides that an agent making misrepresentations to any person insured in any other company for the purpose of inducing such person to lapse, forfeit or surrender his insurance, is guilty of a misdemeanor, and his license as agent shall be revoked. Twisting creates suspicion, destroys confidence, and attacks the reputation, honesty and morality of the agent who first secured the application for insurance from the one made the victim of twisting. President Holcombe, of the Phœnix Mutual, has issued a pamphlet entitled "A Word About Twisting." As may be inferred, Mr. Holcombe is strongly against twisting. His arguments against it are sound and well worth the most careful attention of any agent who is tempted to "twist." It would be very interesting to know what arguments could by any possibility be advanced in favor of twisting.

JOHN A. HALL, well and favorably known as the president of the Massachusetts Life Insurance Company of Springfield, Mass., since 1895, is dead. The end came suddenly at the Hotel Victoria in London on September 3d. Heart disease was the immediate cause of his death, altho he had been ailing for some time and a physician had been in constant attendance. Mr. Hall went abroad early in August in search of health. He was born of sturdy New England stock at Saratoga Springs, N. Y., on December 17th, 1840. His earlier training was received in the public schools of his native city. At age sixteen he worked in the grocery store kept by his uncle, Ezra Hall. Subsequently he was employed by the Wheeler & Wilson Sewing Machine Co. at Bridgeport, Conn. Later he connected himself with the Springfield Arsenal, rising to the position of assistant inspector. Just before the close of the war in 1865 he engaged with a New York life insurance company, in whose service he went to Evansville, Ind. He returned to Springfield in 1867. In September, 1872, he became general agent for Western Massachusetts for the Massachusetts Mutual Life Insurance Company, passing rapidly thru various offices until he became president in 1895, which office he retained until his death. Mr. Hall married Miss Frances E. Fay in 1863. Two children survive. Mr. Hall was a trustee in the Springfield Institution for Savings, a life member of the Springfield Library Association, and a member of the school board. His clubs were the Union League of Chicago, the Union Club of Boston, and the Nayasset of Springfield.

A COMPREHENSIVE course on both fire and life insurance is to be offered at Harvard University this year. William Bliss Medlicott, general agent of the Atlas in Boston, will be the university lecturer on fire insurance and Herbert Beeman Dow, actuary of the New England Mutual Life, will have general charge of the life insurance course. The New York University will also introduce a special one-year course in fire insurance principles and practice into its curriculum. This course will be under the direction of E. R. Hardy, Ph. B., of the New York Fire Insurance Exchange, with the assistance of specialists in different departments of the subject.

Financial

The Federal Deficit

In many respects the United States Government differs essentially from the largest corporation. In periods of depression, however, the Government suffers from the curtailment of revenue quite as certainly as does any corporation. The Federal Treasury deficit of $29,000,000 for July and August, as compared with $7,500,000 for the corresponding period in 1907, is due to decreased receipts arising because of current business depression. There is no immediate cause for alarm because during the two summer months in question the customs receipts fell off $14,600,000 and the receipts because of internal revenue declined something like $3,000,000. There was, it is true, some increase in miscellaneous receipts, so that the net decrease in revenue was approximately $15,500,000. The suggestion that has been made that increased taxation could have more than offset the deficit would scarcely have met with universal approval. A large portion of the deficit arises because of the Panama Canal, which is a project that has been very generally indorsed by all parties. Public improvements and pensions are other sources of the deficit noted. The increased expenditure because of the army and navy is comparatively small, and the sum total of the deficit legitimately arises because of the period of depression thru which we are passing, and thru which, with present indications, we shall soon have passed. With the return of good times that now seems close at hand, the revenue will be ample enough not only to meet all expenses, but to make up present deficits.

....In the twelve months ending on March 31st Canada's imports were increased by $18,008,940, and her exports by $7,810,000.

....Germany exported to this country in 1907 cotton manufactures (mainly knit goods, laces and embroideries) to the value of $14,313,000.

....According to the *Journal of Commerce's* tables, the output of new securities in this country during the first half of 1908 established a new high record, having been $843,379,876, against $799,621,100 in the first half of 1907. Bonds and short term notes were four-fifths of the total.

....The American Car and Foundry Company reports $684,041 as its net earnings for three months ending July 31st. At a meeting of the board of directors, held September 1st, dividends were declared as follows: Preferred, No. 38, 1¾ per cent.; common, No. 24, ½ per cent., payable October 1st. Books close September 11th and reopen September 21st.

....At the close of the fiscal year the number of active national banks was 6,827, having an authorized capital of $930,542,775 and outstanding circulation amounting to $698,333,917. On May 14th there were in operation 2,137 of the banks organized under the act of 1900, with individual capital of less than $50,000, the average being about $26,000. A large majority of these banks are in agricultural communities. That on the whole they have been well managed and successful is shown by the fact that, while their paid in capital is $57,613,164, they have accumulated a surplus of $11,988,404.

....One of the lamentable features of modern life to which attention is only too frequently directed thru the agency of fidelity insurance statistics is the increase of embezzlements. These embezzlements have increased not only in banking circles during the last few years, but to such an extent likewise among commercial houses as to constitute a serious tax on commercialism generally. The cause of the increase mentioned is to be looked for in the fact that we have had, during the past ten years, an era of prosperity, the effect of which has been toward a relaxation of the business austerity that formerly prevailed.

VOL. LXV NEW YORK, THURSDAY, SEPTEMBER 17, 1908 No. 3120

Survey of the World

The Coal-land Decision

The United States Circuit Court for the Eastern District of Pennsylvania has issued a decision declaring unconstitutional and void that clause in the Hepburn Act which forbids railroad companies to transport in interstate commerce any article or commodity manufactured, mined, or produced by them or under their authority. The case was argued in June, Attorney-General Bonaparte making the principal argument for the Government. The effect of the law, if valid, would be to require all railroads to sell their coal lands and give up the mining of coal, or, at least, to limit the transportation and sale of coal to the State. The decision supporting the right of the railroads was agreed to by Judges George Gray and George M. Dallas, and a dissenting opinion was rendered by Judge Joseph Buffington. In his decision Judge Gray concluded as follows:

"From every point of view which we have been able to approach the question, the unreasonableness and consequent invalidity of this so-called 'commodities clause' is apparent. It invades the rights of the State by striking down the liberty, hitherto innocently enjoyed by its citizens under the laws and usages of the Commonwealth, to engage in interstate commerce to the fullest extent, as to all harmless articles, whether owned or not owned by the carrier, and deprives of their property these defendants, contrary to the letter and spirit of the Fifth Amendment to the Constitution. If the enactment in question be warranted by the commerce clause of the Constitution, it is hard to see what bounds may be set to the expenditure of that power. It will, indeed, be an open door thru which the forces of a centralization hitherto unknown may enter at will, to the overthrow of that just balance between Federal and State power for which the makers of the Constitution so wisely provided, as an essential to the preservation of our dual form of Government.

"We confine ourselves to the concrete facts presented by the pleadings in these cases, and intimate no opinion either way as to cases where property has been acquired by the carriers subsequent to the passage of the act. For the reasons stated, therefore, these bills in equity are dismissed, and the petition for writs of mandamus on the law side of this court are denied."

Judge Dallas added:

"The question is not whether the carriage from State to State of coal produced by the carrier is interstate commerce, for, of course, it is; but whether, being a kind of commerce which is not inimical to safety, health, or morals, and which, therefore, any one is entitled to pursue, 'as of right,' Congress may restrict a railroad company's interstate transportation to coal not mined or owned by it and in which it has no interest. Any such restriction, whatever it may be called, in its nature and effect is discriminative prohibition, and that the restrictive prohibition now in question was enacted not actually for the regulation of interstate commerce, but really to coerce the conformity of intrastate business with a 'policy' approved by Congress, seems practically to be admitted, and could not, with candor, be denied.

"No court has authority, under the guise of interpretation, to change the Constitution for the purpose of meeting a supposed requirement of present conditions, and the covert tendency of any usurpation of any such authority would inevitably be to transform the Government of enumerated powers which the Constitution established into a Government with all power vested in its legislative and executive branches."

Attorney-General Bonaparte has held a conference with the President and will appeal to the Supreme Court. As the result of the decision the stock of the Reading and Baltimore & Ohio railroads advanced two points, and several other railroads to a less amount.

Bryan and Cannon

Mr. Bryan was offended at the tone of Speaker Cannon's description of him in a late speech as a man who had accumulated more than a million dollars selling wind and ink to the public. In an address at Olney, Ill., he

detailed the amount of his wealth, and how he got it, and challenged Mr. Cannon to do the same. He said he was worth about $3,000 when he was elected to Congress. He served four years, and by careful economy saved between $3,000 and $4,000, or about $1,000 a year, so that when he went out of Congress in the spring of 1895 he was worth about $6,000 or $7,000. During the period that elapsed between the end of his Congressional terms and his nomination for the Presidency—about a year and four months—he was engaged in speaking and in lecturing, and added a small sum to his savings.

"After the election in 1896 my earning power as a lecturer was largely enhanced by the prominence which the campaign had given me. My book, 'The First Battle,' brought me $17,000, and I gave an equal amount of the profits to the various committees that had carried on the campaign of 1896. My lectures have been profitable and my writings have paid me well, but no one attends the lectures unless he wishes to do so, and no one buys what I write unless he is interested in reading it.

"More than half of my time since 1896 has been given to gratuitous work, and yet I have been able to support myself and accumulate property which I would estimate at $125,000; but, as one can never say accurately what property is worth until he sells it, I will fix $150,000 as the outside limit of my wealth, and I am willing to leave it to the public to determine whether that is more than I ought to have earned or whether I have earned it honestly."

Mr. Cannon, who has for years been elected by an overwhelming majority, but is now opposed by temperance people and Methodists as well as Democrats, so that his seat is in danger, replied to Mr. Bryan's challenge that his statement as to Mr. Bryan's wealth was intended as humor. He does not know what Mr. Bryan is worth nor does he care. As for himself he is worth considerably less than the million or two Mr. Bryan hinted at. His personal property, he says, consists of $55,000 worth of stock in the Second National Bank. His residence in Danville is assessed at $22,000 and his personal effects are listed at $15,115, as follows: Cow, $40; watch, $25; piano, $300; jewelry and plate, $350; cash on hand, $2,600; credits of other than banks and brokers, $10,300, and household furniture, $1,500. He admits also owning land and city lots. People there generally believe the Speaker is worth anywhere from $200,000 to $500,000, and that his property has come thru the management of his late brother's estate, with whom he was associated in business.

John Temple Graves's Acceptance

On Friday last, in the presence of Mr. Hisgen, candidate for President of the Independence party, and of Mr. Hearst, founder of the party, John Temple Graves accepted the nomination as Vice-President in Atlanta. In an address Mr. Hearst declared that if William J. Bryan was sincere he should not have approached him four months ago with the proposition to support him (Bryan) in the campaign and he (Bryan) would support him (Hearst) in the next campaign. In his speech of acceptance Mr. Graves said that the Independence party is the first of the great national parties to give the South a place upon its Presidentiol ticket —a consideration which the Democratic and Republican organizations have never dared to show.

"It is time for the breaking up of prejudice and tradition, and for realignment around conviction and reality.

"If the South of reconstruction owes any debt to the Democratic party, God knows we have paid it fully. For thirty years its solid legions have marched to the polls, bearing two-thirds of the ballots which have borne its spoilsmen across the line to office. And never yet in a national convention has a bone—even the second bone—been flung to the faithful and unexpecting of the solid South.

"The Democracy has failed. It has failed because it has been unfaithful. It has failed because it has trimmed and hesitated and straggled. It has gone after the fulness of syndicates and the fat of corporations. It is a party of pure opportunism, famished for success and hungry for the spoils of office. Its motto is 'Anything to win.' It nominates first a conservative, then a radical, then again a radical, and it can never escape the ignominy of the last election, in which it sacrificed every principle of its history and shamelessly nominated a candidate upon the monstrous plea that 'he was not objectionable to the trusts.'"

Political Events

The idea that Mr. Taft will make a quiet campaign from a Cincinnati porch has been given up, possibly because of the active campaign which Mr. Bryan has already begun all over the

country. Mr. Taft will make one or two speeches in Kentucky, and then speak in Nashville and Chattanooga, then at one or two cities in West Virginia, and from there go to Baltimore. He will then visit New York and speak there and in Buffalo, then at Erie, Penn., and Cleveland, O. From there he will make a series of rear-platform speeches in Northern Indiana, and an address in Chicago. He will then go out thru Iowa, Kansas, Nebraska, Missouri, and return thru Southern Illinois and Indiana. Mr. Taft thinks it possible that Tennessee may be captured by the Republicans.——The New York Republican Convention, which meets early this week, will doubtless renominate Governor Hughes. After a most vigorous attempt to defeat him, the leaders in this city have given up the attempt, acknowledging failure. They inaugurated a number of so-called "test votes," by which in a number of city districts a sort of referendum was allowed, and President Herbert Parsons, of the Republican County Committee, who had opposed Mr. Hughes, declares that the ballot shows that a considerable majority of the enrolled Republicans prefer Governor Hughes, altho there is also a bitter opposition.——Mr. Croker still interests this city, and in an interview he thus exprest himself on Governor Hughes's fight against the gamblers:

"They are ruining the country; ruining the race tracks, in which a great deal of money is invested; ruining the breeders of horses, many of whom are breaking up their studs, and that in a free country! It is a free country no longer. You have more freedom over here. I go to race meetings here and I see a fine crowd of people, ladies and gentlemen, enjoying themselves, and King Edward himself at their head.

"King Edward is the finest sportsman in the world. If there was anything wrong in it do you think he would be at the head of all kinds of sport in this country? In London you have a national sporting club. They encourage all kinds of sport and are allowed to make a certain amount of money; the rest goes to hospitals and charities.

"Governor Hughes's policy would get us back to the Puritanical days of the Know Nothings."

——The Republicans have nominated Congressman George L. Lilley for Governor of Connecticut, on a vote of 402 against 165 for other candidates. There are threats that this nomination will disrupt the party in the State, and his nomination was bitterly opposed by the Manufacturers and Business Men's Association, which issued a strong paper against him just before the convention. ——Mr. Gompers, president of the American Federation of Labor, and Mr. Mack, chairman of the Democratic National Committee, are seeking co-operation in the Presidential campaign. The Federation of Labor claims 2,000,000 members, and Mr. Gompers urges them to vote the Democratic ticket, as the Democratic convention accepted his demands in their platform. Mr. Powderly, formerly General Master Workman of the Knights of Labor, is quoted as saying that the labor tide against Mr. Taft has turned, and that probably the labor men will vote about as usual, 60 per cent. Democrat and 40 per cent. Republican. He says the last fifty years have shown a steadily improved condition for labor, the credit of which belongs to the party under which it has come. He gives this advice:

"Note the States that have labor bureaus, factory inspection departments and labor day laws and mark how those laws were past and those victories won in the main, note them and then consider the States where labor has not been so recognized, not so respected, and give due credit to the party that did this; then I would say to workingmen vote for that party and that man that gives hope—not promise, mark you, but hope of maintaining the high standing of labor and living in this country."

As to injunctions he says:

"If you will show me a single union that has been dissolved, that has lost a member, that has even lost prestige or the respect of the community thru the use of this injunction in labor disputes, then I'll admit that the injunction has done harm, but you cannot point to one instance wherein labor has lost ground thru it."

——There has been extraordinary excitement in South Carolina over the Democratic primary elections, particularly over the contest for United States Senator. No one had a majority at the first election, the vote standing about 20,000 for Mayor Rhett, of Charleston; 23,000 for the present incumbent, Senator Evans, and 25,000 for Mr. E. D. Smith, of Florence. For Governor, the present incumbent, Mr. Ansel, was easily renominated with 15,000 majority. A second primary election for Senator was required, the choice being between the two leading candidates, and Mr. Smith was chosen. Mr. Evans when Governor pushed thru the dispensary system, since discredited and abolished. Mr. Smith is

a graduate of Wofford College and an A. M. of Vanderbilt University, and has been specially devoted to agricultural progress.

Street Traffic

While Mr. Asquith has been visiting Germany to study old-age pensions for the benefit of the British Government, Commissioner Bassett, of the Public Service Board, has been visiting the principal cities of Europe to study what improvements can be made in our city transportation problems. He says no other city can carry so many passengers so swiftly by subways as can New York, for none has our system of express and local tracks. Berlin has made the elevated roads beautiful and almost noiseless. In the subway portions heat is not generated as is the case here. The London subways are so cluttered up with branches and switches that rapid transit is impossible. The same track cannot be used for both transient and long-distance trains. Londoners prefer to ride in the open air, and the automobile 'buses are taking business. The roadbeds and the rolling stock of the street railways are better in the European cities than with us, which conduces to reduce noise. The motormen are trained to make quiet stops, and the safety devices are better. But a principal advantage he finds in the reduction of street congestion, as there is no such transportation of freight across the cities as with us. Most of the large European cities are approached on all sides by railroads, and each has its freight station, to which all goods for that section are transported. Greater New York needs some method of relieving the public streets of the immense amount of freight traffic now impeding them.——The bulletin of the American Railroad Association reports that in the last three weeks there has been a reduction of 30,371 in the number of idle cars, but there are 222,632 still idle.

Progress in Aeronautics

Orville Wright, at Fort Myer, near Washington, has day by day made longer and more difficult flights with his aeroplane, until on September 12th he established four new records for distance and duration of flight, carrying capacity, and altitude. He remained in the air for 74 minutes and 20 seconds circling about the parade ground and the adjacent fields and cutting figures of eight at a rate of about forty miles an hour, keeping at an average hight of about 125 feet, and frequently rising to about 250 feet. He has made two trips with a passenger on board; in the first case, Lieutenant Lahm for six minutes and a half, and the second time with Major George O. Squiers, also of the Signal Corps, for over nine minutes. Leo Delagrange, the president of the French Aviation Club, whose record of 31 minutes has been more than doubled several times by Orville Wright during the week, is hearty in his congratulations of his successful rival. He says:

"I am neither jealous nor discouraged; on the contrary, weather permitting, I will try to fly an hour myself. Wright's apparatus is neither inferior nor superior to mine; it flies, so does mine. The Wrights have had ten years' experience and training. I have had eighteen months'; that makes a difference."

——Wilbur Wright, experimenting at Le Mans, France, has had some difficulties with his motor, and has confined himself to short flights.——Henry Farman has constructed a new areoplane called "The Flying Fish," of a novel form. The body of the apparatus is shaped something like a fish, and is supported by two sets of triple planes on each side. Each of these wings is 106 inches long and 40 inches wide, and is movable on its supporting axis, so its angle can be changed. The three planes are not placed directly behind each other, but the second is a little lower than the first and the third still lower than the second.——Colonel Oschevsky-Kruglik, a Russian army engineer, is working on a new type of flying machine which is to be supported not by aeroplanes but by a screw consisting of a pair of thin steel plates, 12 feet long and 4 inches wide, curved so as to resemble the letter S. Another screw set at right angles to the first will provide the forward motion. ——A semi-rigid dirigible balloon under the command of Major Gross, of the German army, beat the record of Count Zeppelin by an hour, by remaining in the air 13 hours. He past from Berlin to Magdeburg and back in the night, stopping on the way for two hours in the air to watch the burning of a farm house.

The Eucharistic Congress

The Eucharistic Congress held in London during the past week has stimulated the devotion of the Roman Catholics of Great Britain and excited the animosity of extreme Protestants. The anticipations of a serious outbreak of fanatical violence did not prove justified, owing to the action of the Government in preventing the carrying of the Host in the street procession and severe police protection. The representatives of fifty-one Protestant societies addressed a memorial to King Edward protesting against an official reception or even the presence on English soil of a papal legate, and calling attention to the decision of the royal councils of 1428, under King Henry VI, and 1561 under Queen Elizabeth, when it was decided that no legate or nuncio of the Pope had a right to visit England without permission. The King conveniently absented himself from London, and no further attention was paid to the protest. Cardinal Vannutelli, the papal legate, was met at Charing Cross station by a large crowd of Catholic prelates and laymen, and a formal reception took place in the Roman Catholic Cathedral of Westminster, where 8,000 persons were gathered. Archbishop Bourne, of Westminster, in welcoming the Cardinal, explained the objects of the congress as follows:

"It is an act of worship, an act of faith, and at the same time an act of reparation intended to atone for all those words utterede in the English language, that, sent forth in knowing and bitter malice and many more spoken in ignorance, which surely will be pleaded in mitigation of their guilt. have done outrage to the Blessed Sacrament."

There were in attendance at the congress ten cardinals, fourteen archbishops, seventy bishops and twenty-two abbots, and both the general and the sectional meetings were thronged. The religious procession which was to take place in the streets near the Cathedral in order to give the Catholic population an opportunity to adore the Host and see the foreign ecclesiastics was strongly opposed by the Protestant Alliance, which addressed an appeal to the Government in the following language:

"Protestant feeling in London and the Provinces, as you doubtless are aware, has increased enormously since Tuesday, and the country is now looking to you to prevent the law of the land being broken. Any other course will involve grave danger to the public safety. If riot and disorder should result the responsibility will result with the Home Office, which has had ample warning of the state of feeling in London."

It was argued by them that such a procession was clearly prohibited by the Catholic Emancipation Act of George IV. The Catholics claimed, however, that this had become obsolete, like many other anti-Catholic laws, for example, that which is still on the statute book providing that a Catholic may be compelled to sell any horse he owns for $25. The Government at first seemed disposed to pay no attention to the protest, but as the liability of disorder became more manifest, the Premier, Mr. Asquith, privately requested the archbishop to abandon it. Archbishop Bourne explained that he wanted a public announcement for the reason of the change, to which Mr. Asquith replied by the following notification:

"His Majesty's Government are of the opinion that it would be better in the interests of order and good feeling that the proposed ceremonial, the legality of which is open to question, should not take place. I much regret the disappointment which the abandonment may cause."

The procession on Sunday did not meet with any violence, altho it was hooted and jeered by the mob at a number of points, and the police had difficulty in keeping clear a passage for the procession thru the densely packed crowd, partly of devout Catholics and partly of curious spectators. Cardinal Vannutelli marched at the head in scarlet robes and hat, accompanied by a bodyguard of English peers. After reaching the Cathedral the Cardinal appeared on the balcony above the door holding in his hands the monstrance containing the Host.

The Dreyfus Case

Louis A. Gregori, the Parisian editor, who shot Major Dreyfus in the Pantheon on June 4th, when the body of Emile Zola was deposited in the Pantheon, was acquitted in the Assize Court on September 11th. The act was committed as a political demonstration in the presence of the immense crowd assem-

bled in the Pantheon, and he twice fired upon Dreyfus, who received the two bullets in his arm, so there was no question of the facts of the case. The efforts of the counsel for the defense were spent in trying to reopen the Dreyfus case by summoning Premier Clemenceau, Minister of War Picquart and other defenders of Dreyfus. But they refused to appear, and the anti-Dreyfus witnesses were not allowed to give any evidence on the original case. Among them were Henri Rochefort, Colonel Paty du Clam, who was largely responsible for the conspiracy against Dreyfus, and the Commandant Lebrun Renault, who claims that Dreyfus confessed his guilt to him when he was degraded. It was argued, in behalf of Gregori, that he had no intention of killing or seriously injuring Dreyfus, and that he had suffered more at the hands of the crowd and by his three months' detention in jail than had Dreyfus from his shots. The action of the jury, however, in refusing even to find Gregori guilty of "assault without intention to kill" is quite inexplicable.——

We have noted the fact that three music-hall singers brought suit against the Electrical Workers' Union of Paris for damages on account of losing their turns when the theaters of Paris were closed by the strike of the electricians. The defendant, M. Pataud, the secretary of the union, conducted his own case, defending himself on the ground that he was

under no contract to supply light to the public, but that was the duty of the directors of the electrical company, and that the workmen had a right to strike whenever they chose. The court decided that M. Pataud was guilty of abuse of the right to strike, and was responsible for damages resulting from such malicious interference with the life of the city and the sacred rights of those who wish to work. Damages of $1.60 and costs were imposed in each case. If this action is approved by the higher court, to which the case has been appealed, it may have an important bearing upon labor questions.

The Railroad to Medina

The opening of the Hedjaz Railroad from Damascus to Medina was celebrated with great enthusiasm and impressive religious ceremonies in the Holy City September 1st. The members of the Imperial Mission went to the Tomb of the Prophet for early morning prayer, next to the residence of the Prefect, and then, still before sunrise, to the railroad station outside of the city, where an immense crowd of Mohammedans from all countries were assembled. Here speeches were made by Field Marshal Kiazim Pasha, Director of Construction, who has now been appointed Governor-General of the Hedjaz Province, and by Mukhtar Bey, engineer in charge of the last section, and others. The declaration of their determination to carry the enterprise thru to Mecca was received with great applause by the people, who carried them on their shoulders, and generously contributed to a fund for the continuance of the line. An Arabic oration was given by Ali Kiamil, an Egyptian Nationalist, who said:

"We are today celebrating three great events —the pilgrimage to Medina, the opening of the Sacred Railway, and the first constitutional anniversary of the Caliph of Islam. The Prophet did not permit the railway to reach the Holy City before the Caliph had granted a Constitution to his people."

After the ceremonies the Mission inspected the electric light plant, which has been erected for the purpose of illuminating the Mosque of the Tomb. It is also an unprecedented and significant fact that a detailed report of the proceedings was telegraphed in English to the London *Times* by its special correspondent, and from that paper we copy the accompanying map showing the progress of railroad construction in Turkey. The successful completion of the Hedjaz line is particularly interesting, because it is a native undertaking, constructed by Turkish soldiers, and paid for by contributions from Mohammedans all over the world, altho the plans were prepared by German engineers. The line, which is over 600 miles long, was first projected in 1900, and has been carried forward with great persistency, in spite of the difficulty of constructing a railroad thru a barren country against the wishes of its warlike inhabitants, who felt that they were being deprived of their chief revenue, the caravans of the pilgrims. Medina is to the Mohammedans almost as sacred a city as Mecca, and has been even more rigid in its exclusion of Christians, none of whom is known to have openly entered its gates. Captain George F. Sadlier approached the city in 1819, and J. F. Keane, also an Englishman, accomplished the same feat in 1878. Sir Richard Burton in 1854 entered the mosque disguised as a Mohammedan pilgrim, but even he was not able to penetrate behind the curtain covering the tomb of the Prophet. Apart from these names only six Europeans are known to have visited Medina in the last 400 years, and these were either slaves or disguised as Mohammedans.——The Hedjaz Railroad has a political as well as a religious importance, for it will enable the Sultan to hold in check his Arabian subjects, who have never willingly or for any length of time submitted to his authority. The road from Constantinople to Baghdad, which is being constructed by the Germans, will before long be carried across the Taurus Mountains, and be connected with the new road by an extension from Aleppo. Constantinople will then have railroad connection with both the Red Sea and the Persian Gulf. It is to be expected that eventually the Russian railroad system in the Caucasus will be connected with this, either thru Persia or Eastern Turkey. This may be why Russia is now so much interested in the revolution at Tabriz.

Sending a Son to College

BY CHARLES F. THWING, LL.D.

President of Western Reserve University and Adelbert College.

It may be confest at once that certain parents are in grave doubt about sending a son to college. The parents who are in grave doubt are not usually those who are directly touched by the academic tradition. But they are those who are moved immediately and powerfully by the more conspicuous illustrations and examples of the college spirit. The athletic interests of the college make to them an appeal, but the appeal is not one favoring a higher education. The conjugations of the games of football and of baseball represent the more conspicuous elements of the grammar of college life, as this grammar is printed in the newspapers. Such statements rather repel than win not a few homes to the college. The badness, too, and whatever there is of good in what is known as hazing offers an appeal forbidding and irritating. The general air of carelessness or of indolence which rests with delightful jauntiness on the shoulders of college students not infrequently arouses a feeling of disgust with many fathers and mothers. The contrast between the steadiness of labor, the regularity of service and the general experiences of the life of the young boy engaged in business, and the freedom of life —a freedom which is often sadly abused —of the college years are mightily significant to the heart of many a parent. All these conditions, either direct or atmospheric, existing with greater or less impressiveness in all colleges, serve to cause the parent who may lack a larger experience with life's phenomena to say that his boy at least shall have no part in any such nonsense. Life is too short, work too serious, money too costly, to permit him to send his son to an institution which allows such practices and which tolerates such conditions. One must not be reluctant to confess that parents do have not a little ground for making such inferences. The student does not make a worthy appeal to the community when he is in undress uniform. It should, however, be acknowledged that the community usually prefers to see the student in undress uniform, as it also may be said that at certain times the student prefers to be seen in undress uniform. This uniform as manifest in the baggy football trousers and the medieval headgear of both baseball and football is far more picturesque than the scholar's cap and gown.

Yet there is an interpretation of academic conditions which some parents are inclined to make of quite another sort. The parents who make an utterly different interpretation are usually those who are willing to recognize that the university is still in its storm and stress period. They know that the golden age lies not only ahead, but far ahead. They appreciate the fact that youth has its time of play, and that into the time of play it is well for much—of course, not too much—play to come. They know that the American college cannot hope for a development altogether different from the development of English and German and Swedish. They, furthermore, are obliged to acknowledge that many, not all, newpapers whence most people draw their ideas of the life of the college are more eager for the sensational than for the picturesque, for the picturesque than the impressive, and for the impressive than for the simple truthful interpretation of college affairs.

The wiser parent therefore is indeed to consider the whole college life in large and generous ways, as he thinks of asking his boy to live this life for three or four years. When in ways large and generous the parent therefore does consider the question, what does he find? Does he find that which makes it worth while to oblige himself and his son to go to college?

To this question I wish at once to give

in answer a very simple but positive affirmative. The reasons for the answer I wish to interpret.

The college represents a personal process and result of what I shall call self-discovery. A student comes to himself; his strengths, his weaknesses, his limitations, his purposes, his ambitions, become more or less well known to him. I find that the freshmen think they know themselves. Not a few enter with a definite idea of their life's calling. It doubtless in certain cases may be well to have a definite idea of one's future vocation. For definiteness of ideas promotes celerity of endeavor. But such definite conceptions usually prove to be false. I have known many cases in which boys come to college with definite ideas of becoming ministers, doctors, lawyers, engineers. The intending ministers usually become engineers, and the engineers ministers. It is impossible to exaggerate the importance of the knowledge of himself to the college man. His supreme and ultimate choices depend upon such knowledge. His happiness and social efficiency depend in no small degree upon such knowledge. Such knowledge the college gives thru its general processes; its studies, its associations, its associates are contributing forces to such self-knowledge. Ah, self-discoveries are of the utmost significance for humanity and for society, as well as for the individual immediately concerned. For no greater misfortune can befall the race than for its members to seek to serve it in ways and under conditions in which this service is hesitant and reluctant. No greater advantage can befall the race than the putting into it every year scores and thousands of men who are able to direct its energies by wisest methods unto results which are nothing less than magnificent.

This self-discovery may not be simply a process touching one's industrial or social efficiency; it may involve a process of nature more fundamental. It may be the finding of oneself as a personal being. It may be a coming to a consciousness of oneself which is nothing less than revolutionary in one's whole being and character. It represents self-reverence and self-control, as well as self-knowledge. It means a putting of oneself into relationships with other men, with history, with future endeavors, with worlds. It means the transmutation of playfulness into work, of triviality, or even frivolity, into seriousness, of rule into principle, of superficiality into thoroness and of transitoriness into permanence. In a word, the college boy finds himself. Such a finding the parent may indeed rejoice over: in such a discovery the college has helped the father's boy and the boy's father in ways most direct and most efficient.

The parent, moreover, soon learns that his son is not only finding himself; he is also finding life. He comes to appreciate relationships. If it is a mark of the untrained to see only one thing in much, it is a mark of the trained mind to see many things and much in one. "Why did you send your boy to college?" I asked the president of a great railroad. "Because he will have hard problems to solve. The college training will fit him to solve these problems." The problems which American life is to solve in the future are of tremendous complexity, perplexity and comprehensiveness. They are social, financial, governmental, industrial. The massing of the great forces of life is occurring in the United States. The continuance of the process of combination and consolidation is to be limited only by the finding of men who can guide and control these great movements. The men who give most promise for such guiding and controlling are the college men, for they are trained men. They are trained to think. They are able to weigh evidence. They can see value, assets. They can reduce a multitude of discordant phenomena to the one truth which unites all into a harmonious whole. They are able to detect the irrelevant and to point out the essential and necessary. They can discriminate motives and show how motives become movements.

It is, of course, superficial and I think it is almost superfluous to say that college graduates have no monopoly of such conditions and forces. Greater men who are not college graduates are found in the active work of the modern world than are most men who are college graduates. The college is not the only force that helps to form humanity and the individual. Let us be thankful that there

are other forces, many and most influential. But it is to be said that the college is a force which, added to the natural force of many men, has helped to constitute their great worth. But I am only urging that the more complex conditions of modern life are making more imperative the need of men of the widest, deepest, highest, most enriching education, and of a most disciplinary training. The great business men of the future are to be better trained than were their fathers.

Yet the father is sure to find that the college will give to his son something besides a capacity for commercial and industrial leadership. This something is a gift which not a few would regard as of importance superior to commercial or industrial mastery. The college will help a boy to a more satisfying life. It will open to him fields of meditation and reflection fresh and inviting which once would have seemed to him barren and brown. It will aid him in finding himself least alone when most alone. It will help him to clearer thinking, to purer feeling, to stronger willing; but the thinking will also be richer as well as clearer, the feeling will be deeper as well as purer, and the will will be more gracious as well as stronger. The treasury of life will become to him more precious, and all that humanity has saved out of its struggle for the pure, the true, the good, and the beautiful will be dearer to the heart, more holy in his will and more effective in and thru his whole being. Literature, architecture, friendship, music, nature will speak to him in more varied and finer tones. The inspiration they give will be more impressive and the solace that they offer will be more consoling.

In the enriching of one's life a father sending his son to college may give a special value to the word friendship. For it is a word most significant in the college language. I have known a wise father to say, "I will send my boy to college even for the sake of the friendships he will make." College friendships! What a world of love, of associations and of associates they open. They are wrought into literature, as well as into life. The greatest poem of the last century commemorates a college friendship. There are no friends so natural, so genuine, so warm, so true, so satisfying as those formed in college. In life's failures these men are the ones who still love us, in case the man himself has not failed. In our triumphs their congratulations give the most contentment. The father may indeed think well of the friends whom he will give to his son by opening to him the college doors.

But the father will also learn that thru the college he is able to fit his son not only for self-adjustment of a large and fine type, but also for the richest service to the community. His son will become a better citizen by reason of his academic residence. I do not fail to recognize that the impression prevails that the so called higher education may so lift the man above the uneducated that he is unwilling to try to be of common public service. I do not fail to recognize either the fact that education does refine the taste as well as inform the judgment. I am painfully aware that examples can be found of graduates who seem to glory in their remoteness and aloofness from common interests. But notwithstanding all such conditions and examples the fact remains that a college education usually not only prepares a man to be of better service to the people, but also inspires him with a wish to be of better service. The education opens his eyes to opportunities to which he would otherwise have been blind. It gives to him breadth and depth of sympathy, as well as increases his power to meet demands. It not only gives him a richer manhood, it offers to him a finer citizenship.

The father therefore who is obliged to consider whether he will or will not send his son to college should look all the facts in the eye. He should not be content with a superficial interpretation of the superficial interests of the college. He should make first a true and just interpretation of the fundamental relations which education bears to the higher interests of the community and the highest purposes of his son's career. When a parent has made such a survey and interpretation he will find that in most, not by all means in all, cases he cannot make so good a use of three or four years of his son's life, or so good a use of a few hundred, or it may be, of a few thousand dollars, as by sending his son to a good college.

CLEVELAND, OHIO.

The Practical Use of Airships

BY COUNT ZEPPELIN

[Count Zeppelin is the foremost constructor of airships in the world, the inventor of the large dirigible type composed of a number of balloons inclosed in a rigid aluminum envelope. In our issue of August 13th we told of his unprecedented flight from Lake Constance to Stuttgart and its disastrous sequel. A picture of his airship was published July 16th.—EDITOR.]

A MOTOR airship follows the movements of the atmosphere; in crossing an air current it is just like a boat crossing a stream. The stream carries it downward while it is making the crossing. If the boat is to reach a point exactly opposite, it must go up stream just as far as it will be carried down stream by the current. An airship must do exactly the same when it is trying to reach a certain point on earth along a straight line when a broadside wind is blowing. If the goal lies in the direction of the wind, the ship's course will be helped; if the ship has to face the wind, it will be hindered. If the velocity of the counter current of air equals the velocity of the airship, then the vessel will remain in the same relation to the earth beneath. If the velocity of the counter air current exceeds that of the ship, the ship will be blown backward.

In order to find out how distant the places are that my airship can surely reach under the most unfavorable circumstances it is necessary to know the most untoward winds that could affect its course. My airship travels 4,000 kilometers, or about 2,500 miles, in four days, going at the rate of twelve meters a second, or 43.4 kilometers an hour. Thru a careful study of the hourly reports of the speed of the winds given out by the meteorological stations, the stormiest day was planned that could be conceived of in the course of a year from the longest period of the most violent winds. By comparing such a day with days of moderate winds, the conclusion was reached—for middle Europe at least—that the most difficult conditions for an airship to weather are presented by winds blowing in the same direction at the rate of six meters a second for four days in succession at a medium elevation. Under such highly unfavorable circumstances my airship would cover 1,700 kilometers in four days, and would have on hand at the end a sufficient reserve of fuel.

Thus, on the most unfavorable days of the year, the ship could travel from Berlin to St. Petersburg, Moscow and Constantinople, tho to reach the last two places would require nearly four days. On an average, under favorable circumstances, about thirty hours would be required; under less favorable circumstances about forty. It would, therefore, make better time than the speediest train of today.

If an airship can indubitably travel a certain stretch in a bee-line, then half that distance is the limit of the trip that should be made from one locality to another. It is important to know this limit, especially in taking flights over the ocean or over the country of an enemy. The limit of my present airship is 850 kilometers; for the next one I build it will be 1,150 kilometers. That is, with the most unfavorable weather, the ship might fly from Mainz to Danzig and back, or from Metz to Königsberg and back. I say "might" intentionally; for at the present time such long flights will not actually be undertaken, because in calculating the weight to be carried, I reckoned only upon the smallest crew necessary. To make a trip of this length would result in nothing else than establishing a "record," for which there is no occasion now.

Taking the coasts or inner boundaries of civilized countries as starting places—to which points the airship can be conveyed in parts, if it cannot fly there itself—airships can be used for the exploration of new lands, or for the strengthening of a country's hold upon colonies into which no railroads as yet conduct. The ship could travel by stages of 300 kilometers each. For such short stretches back and forth it requires very little fuel. It can, therefore, carry a considerable number of passengers and equipment for constructing a station, as

well as fuel to carry it to the next stage, at the end of which another station can similarly be constructed.

Knowledge of the winds is far more necessary for flights over the ocean than for those over land. The winds are the sole deciding factor of what an airship can undertake in traveling over the waters. At present airships, on the whole, cannot venture more than 1,000 kilometers over the ocean. But they can go a good deal farther where the prevailing winds blow inland. For instance, from the western coast of Europe they can sail out to the west, because here western winds prevail. From the eastern coast of the United States they can travel to the east, because eastern trade winds blow there.

I have frequently heard the opinion exprest that my airships are too expensive for general use. Assuredly, only the few moneyed men will have the pleasure of owning such an air vehicle. But the number of owners of airships will greatly exceed the number of those that possess private yachts.

But why should military airships be considered too costly, which, in all sorts of weather, by day or night, can always be at a required spot, if kept ready in relays, to enlighten the general or admiral of the proceedings of the enemy; which can penetrate to the utmost limits of the hostile territory, to its furthermost harbors; which by their superiority can vanquish the enemy's shipping, and thus lead to a triumphant end of the war—should such airships, I ask, be considered too costly? And, after all, the costliness, comparatively speaking, is not so great, even if both cost of construction and motor supplies are considered. Every warship—even the very smallest—every squadron, every battery costs considerably more. And of what significance is an outlay like this if it means the securing of a colony or the opening up of some unexplored region?

Enterprises of the most varied kind undertaken with airships can be sure of profitable returns. For instance, a company might start a route between Berlin and Copenhagen. The capital required for building the ship, a main station at Berlin, and a landing place at Copenhagen would be one million marks. The receipts for one hundred trips back and forth in one year (the duration of each trip would be about one-half what it is with present means of communication), with about twenty-five passengers to each trip, the fare fifty marks ($12.50), would be two hundred and fifty thousand marks a year. From this deduct one hundred and fifty thousand marks for insurance, underwriting and running expenses, and there remains a net profit of one hundred thousand marks, or 10 per cent.

Or, better still: A line between Stuttgart and Lucerne, which would travel over the monuments of Germany's former greatness, past the ruins of the ancestral homes of the Hohenstaufen and the Hapsburgs; past the modern castle of the Hohenzollern, with its towers rising to the heavens, the sign of Germany's rebirth and promising future; past the Lichtenstein, about which poetry and romance have spun their webs; and then into the wonder-room of nature, glorious Switzerland, with its lakes and mountains. This line—to come down to sober detail again—might bring in a profit of 100 per cent., since it would require only one main station, Stuttgart. At Lucerne the ship could moor on the lake. Similarly, the lakes of Constance and Zurich could be used as anchoring places for intermediate stations. And no fare would be too high for the richer class of international tourists.

This international route of travel leads to the question frequently mooted, whether the crossing of political boundaries would be permitted on account of customs duties and the state's control of travelers. Since no means of exclusion is possible high up in the air and the landing of persons and chattels in a foreign land cannot be prevented, the prohibition of aerial intercourse between countries cannot be conceived of. On the other hand, for this very reason, aerial navigation will be a sure bond between the peoples of the earth.

Nevertheless, despite what I have said, government regulation is not so very difficult as may seem at first glance. We have as an example treaties between nations in regard to their respective rights on the high seas. Similarly, we will in the future have treaties between treaty-making nations determining the localities in each country at which an airship may land, or from which it may take flight.

The consuls of the various lands co-operating, the airship permitted to set forth on a trip will receive its papers, with a list of passengers, mail matter, cargo, etc. In this way aerial intercourse can be regulated in a fairly simple manner, without, as many seem to suppose, instantly upsetting all rules now in existence in regard to customs duties, passports and guarding of frontiers. Of course, I have merely sketched the general rules to be laid down for aerial navigation. These will have to be supplemented by a vast number of regulations, some of which will be difficult to determine. Far-seeing jurists in various countries have already taken up these questions. I know of an excellent treatise, written here in Germany by Grünwald, entitled "The Airship in International and Penal Law."

But why do I proclaim aloud my aeronautic confession of faith? Why do I endeavor once more to prove the superior worth, the extraordinary capacity for development of the rigid system by calling attention to past performances and pointing to scientific truths? Why do I do this now, when the time is so near when deeds will prove the futility of every doubt?

Exactly because, after all, that time is not so near as we think. The forward march of my undertaking has been accompanied by various misfortunes. Who will guarantee that such accidents as have occurred will not occur again, thereby postponing the decisive flight by another winter and another winter? For even if after practice one is sure of a safe flight by night and of making a safe landing on terra firma, it would be foolish to make the first attempts in the season of the longest nights, when fogs prevail and the earth is frozen.

As long as God grants me the means and the strength to continue to work, no delay will occur. But should too early an end be put to my activity, my co-operators, who are acquainted with my thoughts, even those regarding the future, will not be able to continue with my work unless they have the support of the wishes and the will of the German nation.

STUTTGART, GERMANY.

The Foolish Knight

BY LLOYD ROBERTS

RECKLESSLY and carelessly I wooed the golden maid,
With brave display of creamy plumes and gleam of burnished steel;
She laughed my love disdainfully, she mocked me unafraid—
"Your sword should be a poplar rod, your silver shield a creel."
She said she did not love the blade
That only sleepy peace portrayed.

I rode me to the border where the ford is ever red,
And there I left my broken plumes and all my bright array;
The trail between the cedars was guarded by their dead,
When I laughed across the shallows and turned and rode away.
She shuddered when I showed the blade,
"There is no mercy there," she said.

While striding thru the courtyard a beggar whined at me;
I paused to tear my jewels away and drop them in his hand.
His blessings were so loud and long she could not help but see,
And my mercy and my bravery I offered for her hand.
"You cannot buy my love," she said,
"With Peace, or Silver, or the Dead."

FREDERICTON, N. B., CANADA.

Jewish Criminality

BY FRANCIS J. OPPENHEIMER

[During the present year Mr. Oppenheimer has made a special study of the condition of the Jews in this city, and has published long articles embracing their religious condition, their philanthropies, wealth, and success in education, arts and sciences.—EDITOR.]

NO single attack, in many years, has so stirred up the Jews as the one made by Police Commissioner Bingham in his *North American Review* article, entitled "Foreign Criminals in New York," for in this article the Commissioner declares that 50 per cent. of all the criminals in New York City are Jews. The keen resentment of the Jews will be understood when it is considered that the county of New York, which comprises Manhattan and Bronx boroughs, contains 750,000 Jews, and is the largest communal settlement of Jews in the world, Warsaw, Poland, being the second, and Brooklyn, with its 250,000 Jews, being the third.

Since the publication of this article the Jews have held conference after conference, and have been very active in their efforts to discover how much of this article is statistically false, as well as socially unjust. One of these secret conferences, at which the writer was present, did not break up until after three o'clock in the morning, and neither Congressman Goldfogle nor Justice Rosalsky nor any of the prominent Jews present seemed to notice the time, so engrossed were they with the necessity of disproving the accusations of the Commissioner.

Not surprised are the Jews at this article, for a year ago a similar article stated that out of the 2,000 pictures in Rogues' Gallery in Mulberry street, 1,200 were of Jews, and when Commissioner Bingham was asked if this was true he replied it was. Many Jewish boys are "old offenders at the age of ten," the Commissioner states; and "ignorance of the language, more particularly among men not physically fit for hard labor, is conducive to crime," he says. "It is not astonishing," he adds, "that with a million Hebrews, mostly Russian, in the city (one-quarter of the population), perhaps half of the criminals should be of that race." and again:

"The crimes committed by Russian Jews are generally those against property. They are burglars, firebugs, pickpockets and highway robbers—when they have the courage."

Knowing Commissioner Bingham, the Jews rather expected this attack, but, unfortunately for the Commissioner, it comes at a time when they are best prepared to answer it. For the last three months the State Federation of Jewish Societies has had an expert investigator, scientifically, if quietly, examining all the criminal records of the county of New York for 1907, and the Jews of New York City are now themselves in various committees calmly and scientifically going over and verifying the results of this investigation. They have not, as some of the newspapers have asserted, demanded that Commissioner Bingham resign, nor do they so intend. They do want him to face the correct figures, which they will show him, and they will request him to either disprove these or prove his own. If he cannot do either, then will they as a race demand a public retraction and an apology.

Here are some of the figures they have in their possession. Of the 4,573 indictments in the county of New York in 1907, 666, or 14.5 per cent., were found against Jews. Of the 2,848 convictions in the same year, but 16.14 per cent., or 460, were of Jews. As given by the Board of Health, December 31st, 1907, in New York County there are 2,687,800 persons, of which it is estimated that 750,000 are Jews. To these figures Commissioner Bingham will assent. Of these 750,000 Jews, 460, or 6.1 out of every 10,000, are criminals, the report of the Jews reads. Of these 460 Jews, 310 were born in foreign countries and 120 were born in the United States.

Table after table has been prepared by Mark J. Katz, Esq., private secretary to Mr. Edward Lauterbach, the well-known corporation lawyer, who is also connected with the State Federation of Jewish Societies. Mr. Katz was com-

missioned by the Jews to make this investigation, and when it was completed it was sent to Mr. Jacob H. Schiff, who forwarded it to Judge Greenbaum, president of the Council of Jewish Communal Institutions.

Mr. Katz finds that 35.4 per cent. of the criminals of New York, and not 85 per cent., as the Commissioner states, are foreigners. How Commissioner Bingham has determined on this percentage no one has been able to discover. The Immigration Commission appointed by President Roosevelt, according to Congressman Bennet who is a member, has been seeking continuously for just this very information, and it has not yet secured it.

In Commissioner Bingham's official report to Mayor McClellan, dated December 31st, 1907, not a single reference is made to the Jew in crime. Out of the 204,119 arrests during 1907, 50,000 were for violations of city ordinances, such as breaking windows, playing ball, generally trivial offenses. Of the 21,532 felony arrests, but 4,817, or 22.4 per cent., were convicted, whereas 77.6 per cent. either were discharged or acquitted. No statistics are there anywhere in this report to confirm the Commissioner's statement that 85 out of 100 criminals are foreigners or of foreign parentage.

All those informed of the detailed workings of the court machinery know that it is impossible to find out the nativity of the parents of criminals, for on the indictment no such query is asked, tho places are provided by the stamp which is placed on each indictment for name, address, charge in indictment, of what charge convicted, judge, sentence, place of birth, religious instruction (yes or no), married or single, read or write (yes or no), name of father, mother or guardian.

During his investigations Mr. Katz went over all the books and the official criminal records of the Court of General Sessions, County of New York, 1907. To do this it took three months. Mr. Katz does not deny that in his report some slight errors may have crept in, but these are errors not of commission, but rather of omission. Mr. Katz had 6,000 blanks printed, corresponding to the rubber stamp above referred to, which is placed on every indictment. In addition, he went over the books of the dispositions in the District Attorney's office, having the co-operation of the clerk.

Every indictment was looked at, and frequently Mr. Katz consulted with Judge Rosalsky, who gave him all possible aid. Where there was any doubt as to the nativity of a criminal, as where it was suspected the criminal might have given a fictitious name, the judges always were consulted. Mr. Katz never gave the Jew the benefit of any doubt. Where the name ended in a "stein," a "berg" or a "sky," the criminal went down a Jew.

Mr. Katz explained to the writer that he did not consider it necessary to go into all the "lower crimes," such as keeping a pushcart without license, or for violations of city ordinances, confining himself exclusively to the "high crimes." The perpetual admonition to the Jew has been "Move on," and these offenses Mr. Katz has not reckoned as criminal. Of the 21,532 arrests for felony for 1907 there were 4,817 convictions, or 22.4 per cent.

Of the 460 Jews convicted during 1907 54.6 per cent. were convicted for grand and petit larceny. There were 26.7 per cent. convicted of burglary, and 3.3 for robbery; and 15.4 per cent. were convicted for miscellaneous offenses.

Of the 353 Jews indicted for grand and petit larceny 251 were convicted. Eighty were pickpockets. This is what Commissioner Bingham has to say about Jewish pickpockets:

"Tho all crime is their province, pocket picking is the one to which they seem to take to most naturally. Indeed, pickpockets of other nationalities are beginning to recognize the superiority of the Russian Hebrew in that gentle art."

The Commissioner tells of an Italian and a Hebrew who were partners in a pickpocketing scheme. The Hebrew was the "tool," or the one who "did de job"; the business of the Italian was only to distract the victim's attention.

Of the 251 Jews convicted 78 were convicted for stealing from their employers. Of these 251 convicted Jews 216 were single and 35 married, 193 being "first offenders."

Of the 11 Jews convicted of forgery 8 were first offenders, 5 were single and 6 married men. Out of the 16 Jews indicted for receiving stolen property 7

were convicted, 5 of these being first offenders, 3 were single and 4 were married men. Out of the 162 Jews indicted for burglary 123 were convicted, 84 being first offenders; 107 of them were single and 16 married. Of the 31 Jews indicted for robbery 15 were convicted; 12 of this number being first offenders; 13 were single and 2 were married men. Out of the 24 Jews indicted for assault 10 were convicted, 9 being first offenders; 4 were single and 6 were married men.

Out of the 65 indictments brought against Jews for miscellaneous offenses 43 were convicted, and of this number 42 were first offenders. Of the 460 Jews convicted in 1907 79 were sent to State's prison, 491 of the 570 sent to State's prison last year not being Jews; and 74 of the 574 sent to the penitentiary were Jews. Of the 750 persons sent to the Reformatory and House of Refuge but 171 were Jews. Also 124 of the 773 suspended sentences were in connection with Jewish cases, and 12 of the 181 other dispositions were in reference to Jews. It is quite evident from the figures above that the percentage of Jewish criminals sentenced to the State prisons and the penitentiaries is below and the percentage of those sentenced to reformatories is above the average.

Only 153 out of 750,000 Jews during 1907 in the County of New York were sent to prison, and this includes the 74 sent to the penitentiary. Out of the 460 Jews convicted during 1907, 107 had been before convicted. There were 2,388 who were not Jews convicted in the county during the year 1907, and of this number 589 had been in prison before. Of these 460 convicted Jews 259 were under the age of twenty-one years and 201 were twenty-one and over. Following is a more complete table:

Of the 460 convicted Jews 402, or 87.4 per cent., were between the ages of fifteen and thirty, and of these 402, 259 were under twenty years; and 289, or 62.8 per cent., lived on the East Side of New York City, and below Fourteenth street, at the time of arrest. Prof. Isaac Hourwich, statistician of the Public Service Commission, commenting on these figures, says:

"A fact of great significance is brought to light by the age statistics of convicted criminals. The highest criminality among the Jews, as compared with Gentiles, is found between the ages of fifteen and twenty; more than one-half of the convicted Jewish criminals were minors."

Out of the 1,034 convictions between the ages of fifteen and twenty, 259 were of Jewish boys, and out of the 1,148 convictions between ages of twenty-one and thirty 143 were Jews, and but 41 of the 427 convictions between the ages of thirty-one and forty were Jews. Eleven out of the 163 who were convicted, between the ages of forty-one and fifty, were Jews. Four out of the 53 convictions, between the ages of fifty-one and sixty, being Jews. Of the 23 convictions above sixty 3 were Jews.

"The juvenile Jew emulates the adult in the matter of crime percentages," Commissioner Bingham says, "40 per cent. of the boys at the House of Refuge and 27 per cent. of those arraigned at the Children's Court being of that race." It should be borne in mind that the House of Refuge is only one of many similar institutions open for the care of criminal children of New York City. There are in addition many other missionary juvenile asylums, Catholic reformatories and other Christian institutions of the same order, whereas there is but one Jewish protectory, and this being of recent birth has but limited accommodations. Consequently the greater number of criminal Jewish boys have to be sent to the House of Refuge.

Commissioner Bingham's article makes of the Jews not only an impossible race, but a criminal race. It is significant that under all kinds of torture and persecution, under the lash of the whip as well at under the sting of the pen, the Jews have survived. Today there are 5,000,000 more Jews than in the time of King David. Natural history contains the answer to Commissioner Bingham's police, or rather lack of police statistics. The Jews love life and they are long livers. Coroner Harburger says that never during his experience has a Jew been brought before him convicted of homicide. The Jew holds his life dearly, the life of his neighbor as well, but better than both these, does he hold and revere not crime, but truth.

New York City

Great Britain and the Liquor Business

BY CHARLES M. SHELDON, D.D.

Author of "In His Steps," Etc.

IT was my great privilege for four months this last summer to travel over Great Britain, including Ireland, the Channel Islands, the Isle of Man and the Isle of Wight, in the interests of temperance legislation. The readers of The Independent may be interested to know something of the present conditions concerning the liquor interest and its effect on the people of Great Britain as gathered from observation during this experience.

In the first place, the liquor business in Great Britain is still a respectable business. One day while watching a tennis game in a large and fashionable town in Derbyshire I was attracted by the playing of a young man who was associated in a game of doubles with another young man and two young women. I asked a friend who the young man was, and he said he was a wine and spirit merchant. I asked who the young women were and he said one of them was the daughter of the vicar and the other the daughter of an honored merchant in the place. I said: "Do you mean to say this young wine and spirit merchant is on a social footing with these other young people?" The reply came in an astonished tone of voice. "Why, certainly; there is no difference between him and the other young men in the place so far as social rank is concerned." Such a thing, of course, would be absolutely impossible in the State of Kansas and in a large part of America. The liquor business in Great Britain is still respectable on account of the social prestige and wealth of those engaged in it. Large numbers of the members of the House of Lords and House of Commons are directly concerned with the manufacture and sale of intoxicating liquors. One of the last members to qualify as a member of the House of Commons, whose name I saw on the book which is on the famous desk in front of the Speaker, is a liquor man, and his standing in the House, so far as social standing is concerned, is equal to that of any other member. In three of the most important brewery companies in England the shareholders include 4 dukes, 42 peers, 17 earls, 5 viscounts, 84 baronets, 31 knights, 106 honorables, 2 archdeacons, 1 dean, 2 canons and 82 other reverend gentlemen. King Edward received many congratulations from the Labor party of Great Britain last summer for knighting a stone mason who is now mayor of Cardiff, but within a few weeks of the knighting of the honest stone mason the King also knighted the largest whisky manufacturer in Great Britain, and I saw no comments in any paper and heard very few from any persons unfavorable to this conferring of knighthood on a man who has done more in one way to ruin the lives and business of his majesty's subjects than any other man in the realm. Several of the largest towns in Great Britain have had recently for mayors the leading brewer of the town, and it is only within very recent times that any opposition has been exprest to such a selection for the head of the municipality. The most honored man in Dublin at the time of my visit there was a man who was at the head of large brewing interests, and who had given several thousand pounds to one of the churches for necessary repairs. In other words, he had taken the revenue from the ruins of mankind and repaired the ruins of a building, but the people did not see it in that light, and honored him as a great public benefactor.

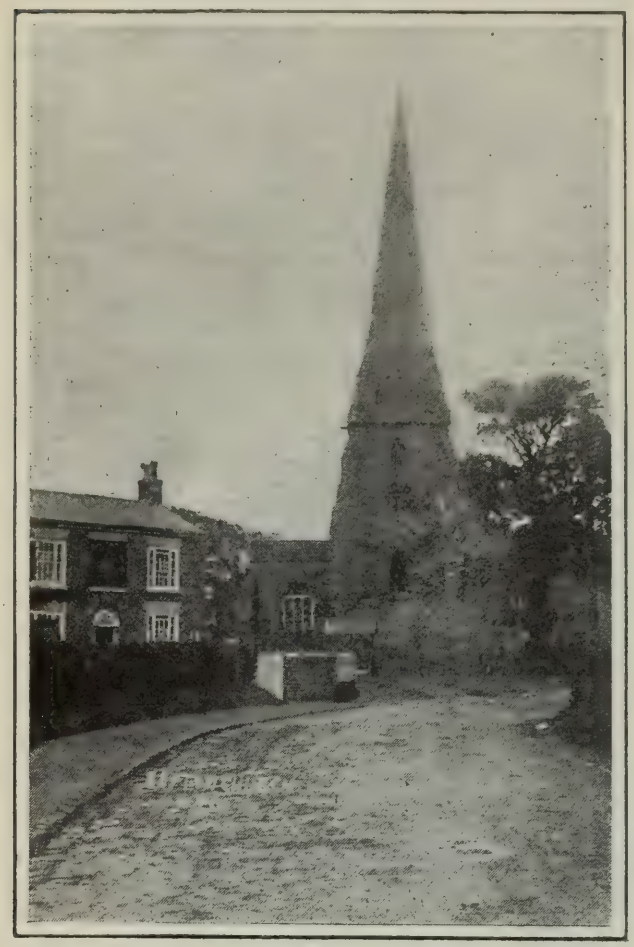
In the second place, it must be remembered that in Great Britain the people have as yet practically nothing to say about the liquor business so far as the closing of the saloon is concerned. License to conduct the business of a public-house is granted by a board of magistrates. This board of magistrates is appointed by the crown, for life. The people in a town, village, or city have practically no voice in the matter. The magistrates have full authority to say how many pub-

lic-houses there shall be and where. There is no law preventing the location of a public-house next door to a church or school house. The magistrates decide the location. In the city of Glasgow one can stand at a certain corner and count eleven saloons within one block of a large Wesleyan Methodist church. Three of these saloons are in the same block and one of them on the same corner. In one town in Scotland when the congregation goes out of one of the large churches which faces a narrow street, the people shall have a public-house in the neighborhood or not, and in the second place of taking out of the hands of the magistrates the power which up to the present time has been simply oligarchical. In one town in Yorkshire I found that owing to temperance sentiment and education, which has been going on for years, three-fourths of the population were abstainers, but there were sixteen saloons in the town licensed by the board of magistrates. If the people of that town could vote on the question they would vote the

BEAUTIFUL TEMPERANCE HALL IN TOWN IN YORKSHIRE.
The majority of the people are for local option, but there are sixteen saloons in the town and the people cannot vote on the question.

are crowded over on the opposite sidewalk, and might easily be pushed thru the doors of a public-house. It is a common sight to see a saloon and a church fronting each other in many parts of Great Britain, and not an infrequent sight to see people going out of one into the other.

The injustice of all this is being recognized by the people of Great Britain, and for the first time in its history there has been agitation looking toward what is called the "local veto," that is, giving the people themselves the right to determine by vote in the first place whether they sixteen saloons out of business immediately. Under present conditions they are absolutely powerless to do anything in the matter.



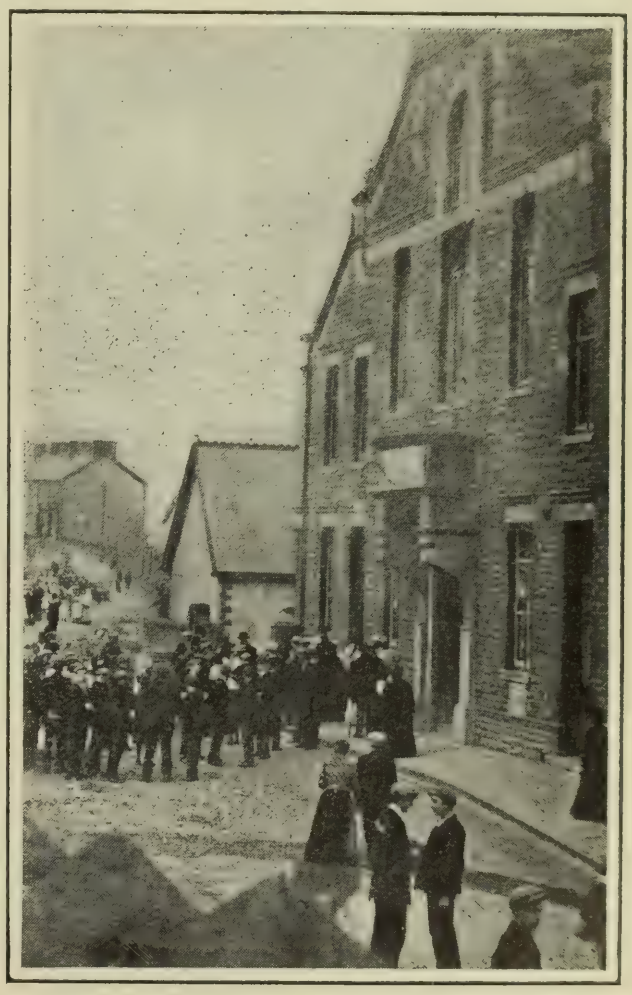
In the third place, the liquor business is still so strong politically that no bill has ever been past by Parliament forbidding children entering a public-house to get liquor for their parents, or preventing mothers carrying their little children into public-houses. During our campaign meetings were held in different parts of the country protesting against this custom and a few of the English

papers have taken up the cause of the children, notably thru the London *Tribune,* which has printed some remarkably startling facts concerning the habits of mothers who bring little children into the public-house, and in many cases give them drink to keep them quiet. There is also agitation against the employment of barmaids—young women who stand behind the bar in public-houses or in the public refreshment rooms in railway stations and sell liquor. Strange as it may seem, the barmaids themselves have had indignation meetings and past resolutions against the temperance people, claiming their right to continue in the business. It is an astonishing fact that at one of these indignation meetings there was present an official member of a certain church who argued that the Government should not prevent children from going into the public-house, for, he said, "Who will there be to lead home their drunken fathers and mothers if the children are not permitted to go in?" This was actually given out as a good argument in a meeting of remonstrance against the fanaticism of the temperance cranks. It may also be said in this connection that in an indignation meeting held by the brewers in one of the largest manufacturing towns of England the statement was made in resolutions that the brewers were among the most useful men of the city because they contributed so largely to the hospitals, churches, and charitable institutions.

The hold which the liquor business has yet on the people of Great Britain is illustrated in a great variety of ways socially and religiously. An interesting case is at present under discussion. The Bishop of Manchester has recently declined to license a deacon to an assistant curacy at Christ Church, Blackburn. He says the vicar of that church is not fit to be intrusted with the trainings of deacons so long as he continues to use unfermented wine at the holy communion. This vicar in his own defense says that the people in his parish, which is largely a workingmen's parish, have many of them been addicted to drunkenness, but have been converted and received into the church, and the use of intoxicating liquors on the Lord's table is a strong temptation to them to go back to their old habits; but the Bishop ignores this argument, and, in fact, treats it with utter contempt. People are taking both sides in the argument, some defending the Bishop and others the vicar. The instance is one out of hundreds which indicates the strength which the social habits and customs of the English people still have with the country at large.

In spite, however, of all the prestige and social and political influence and respectability which still clings to the liquor business it is true that the foundations of the business are beginning to crumble, and the fabric itself is tottering to its fall. The first proof of this is found in the fact that for fifty years several strong temperance organizations, notably the United Kingdom Alliance, have been educating and training the people thru constant public meetings, the public press, and finally the pressure brought to bear on the British Parliament for legislative enactment. Added to these has been the work of the total abstinence insurance companies, which have called attention in the business world to the vast preference which can always be given to the total abstainer. Another hopeful sign of the present awakening in Great Britain on this question is the improvement in personal habits. I saw during my visit in Wales an old temperance handbill, published by one of the first agitators seventy-five years ago. It was stated at the foot of the bill that the lecturer had not tasted liquor for twelve months and that he was well and hearty. When that bill was printed practically all the English people believed that liquor was necessary not only to good fellowship, but to health. The practice of total abstinence in Parliament itself is encouraging. The entire constituency in Parliament from Wales is in favor of giving the people the power of veto. Sixty-one out of 72 members of Parliament from Scotland are also in favor of this measure, and the majority of the House of Commons is in favor of it, including the Prime Minister. Speaking of Wales, it is one of the sad facts concerning the after results of the great revival, that in many of the colliery towns especially, the public-house has come back and is doing a large business. If at the time of the revival the people of Wales had had the

power, as they did not have, to vote on the question of license or no license they could have and would have swept the public-house and the liquor business completely out of Wales. As it was, in



A CHURCH AND A PUBLIC HOUSE OPPOSITE EACH OTHER.

scores of towns the public-house went out of business during the revival, but it is now coming back again, and in some towns, not many, but some, the conditions are deplorable. The same thing is also true of Father Mathew's great pledge-taking campaign in Ireland. If at the close of that campaign the people of Ireland could have voted on the question of the public-house they would have undoubtedly in scores of towns voted no license. As it is now, the liquor business has its heel on the neck of the people of Ireland, and the pledge-signing campaign of Father Mathew was in a large degree ineffective, so far as getting permanent results was concerned. Dublin spends $17,000 every day for drink.

Another hopeful sign of the times marking progress is the fact that social ostracism has begun. Discussion has been flung into the political arena over the question of a brewer for mayor. It never used to be questioned. It is beginning to be questioned now. Another hopeful sign is the decrease in drinking habits, especially on the part of workingmen. This is especially noticeable in the leaders of Parliament. I do not know of one Labor leader in the House of Commons who drinks at all. Twenty-five years ago the workingmen of Great Britain had no great leaders in the sense of moral enthusiasts such as they have now in Keir Hardie, John Burns and William Crooks. These men are types of many others who practise and preach total abstinence, and are powerful in their influence over the working class generally. Twenty years ago, after spending many nights in the East Side of London in the Whitechapel district, I was simply appalled at the sight of the vast numbers of workingmen who crowded the public-house and swarmed out into the streets fighting drunk. Going thru the same district last summer at different times of day and night the contrast was simply astonishing so far as the decrease in numbers of drunken men and women is concerned. This condition is also noticeable in restaurants, hotels and in the dining cars. Many times I counted the bottles of intoxicating liquors in dining cars, hotels and restaurants, and in the majority of cases there were more bottles of mineral water than of intoxicating liquor. There was a time twenty years ago in Great Britain when the teetotaler or abstainer apologized. It is the other man who apologizes now. In this connection the saddest thing which must be said concerning the drinking habits of the English people must be said about the women. It is generally said that more women drink than men and that the practice is increasing. This is explained in various ways, but the majority of those who give reasons say it is largely due to the unfortunate act of Gladstone, in what is known as the Grocer's License, which permits the grocer to sell certain kinds of liquor as he sells food. In this way women have become accustomed to ordering drink with the household food. Another sign of the progress of this reform is found in the decrease of liquor values. I saw eight years ago a

list of members of churches and of Parliament who had large shares in brewing interests in Great Britain. Most of these individuals today would be very glad if they could dispose of their shares, even at a loss. There has been a tremendous depreciation of the value of these shares within the last two years.

The great thing which the people of Great Britain face today is the probability of legislation which for the first time in English history will put a real check on the liquor business as a business. What the Christian people of Great Britain want, I think, by an overwhelming majority, is the right of local option or local veto. The Government is pledged to bring in at its next session a strong licensing bill. Whether it will go so far as giving the people the right to vote on the question of license or no license is a question. It would be an exceedingly drastic measure for the people of Great Britain. But the Government stands committed and cannot well avoid doing something in the matter. I had the privilege of being in the House of Commons last summer when the Government, through the Prime Minister, Sir Henry Campbell-Bannerman, outlined the policy of the Government during its next session. Standing before a crowded house, facing benches full of members of the House of Lords, he said with great emphasis, that the question in regard to the liquor business of Great Britain was the most important and serious question which faces the people of the empire. Every one credits the Prime Minister with great sincerity. His convictions on the question are well understood. He is for the most radical measure himself, but it is doubtful if he could carry his Cabinet with him. But it must be remembered that this is the first time in British history when the liquor interest confronted the possibility of any real legislation hostile to itself. The liquor men up to the present time have been pillars in the Church. They have been, and are still, strong and influential members of the House of Lords and the House of Commons. One member of the English Cabinet, as is well known, is the largest shareholder in one of the greatest liquor concerns of Europe. It is not likely that he would vote against his own interests. The liquor business is still strong socially and tremendously strong as a political and commercial factor, but it faces, none the less, a serious and determined opposition. At the heart of this opposition is the Nonconformist conscience of Great Britain. The Free Church and its constituency in pulpit and pew are determined that this iniquity shall come to an end; and altho the House of Lords would probably throw out a bill which included local option it would simply be delaying the final result. The time is coming very soon when the people of Great Britain will have a right to vote on the question of the establishment of the saloon as a part of the life of the town; and when that time comes it will be the beginning of the end for the tremendous social, political and even religious power which the liquor business has held all these centuries in the midst of a free people. When the people of Great

LARGE TEMPERANCE HALL IN COLLIERY TOWN IN WALES.

During the revival this town had no open public houses. Now it has many and there is much drunkenness.

Britain are free from this tyranny and free from the terrible results which have played such havoc with her men, women and children she can take on a new lease of life. Many other problems, as of housing, unemployed labor, pauperism and the like, can be solved with comparative ease if once the people are rid of that which produces such a large amount of misery. In a conversation with John Burns, who is now in the Cabinet and one of the most honored men in Great Britain, he said: "Tell the people of America that England's face is toward the light." I believe that it is, and that it means for the people of Great Britain the light of life. The sun is coming up over the homes of the Anglo-Saxon people all around the world, and it will not be prophesying vain things to say that within twenty-five years, both in England and Great Britain and thruout the English-speaking world, the liquor business will be a thing of the past historically; and we will look back with astonishment on a time when we permitted it to exist, even as our children ask us questions concerning the fact of chattel slavery. We shall wonder that we endured so long as we did the tyranny and slavery of this gigantic iniquity which is now near to its coming down. "Why cumbereth it the ground?" "Let the axe be laid to the root of the tree."

Triumph of a Turkish Exile

BY FRANKLIN E. HOSKINS

[The most astonishing revolution of the century is that which was described in an article two weeks ago by Dr. Hoskins, a missionary of many years in Turkey. Our readers will be glad to see this account of the return from exile of Fuad Pasha, the most distinguished living Turkish soldier.—EDITOR.]

IF a prophet had appeared in July and had announced that within a month the famous and infamous "camarilla" known as the "Palace party" at Constantinople would be broken up and scattered forever, no one could have believed. For years their cup of iniquity has been full and while we felt that almost anything could happen, this seemed far away from the first scenes of the great tragedy. But it has come with the swiftness of the lightning. Some are dead; some are in prison; many have fled, and more are cowering about the city and avoiding public gaze lest they should be hooted and taunted for their downfall.

On July 22d the first scene of the tragedy was enacted in the fall of the Albanian Vizier and the coming of Said Pasha for the fourth time to that high post. The next day the Constitution, promulgated in December, 1876, and practically strangled in April, 1877, was again resurrected and proclaimed thruout the empire. Three days later the freedom of the press was confirmed by a special edict, and the whole government spy system abolished. Then on July 28th, the seventh day of wonders, the pardon of all political exiles was announced.

Over in Damascus, a thousand miles away from Constantinople, at the corner of the big parade ground of the new barracks, stood a high wooden stockade enclosing a space not more than 50 feet long and 40 feet wide, within which was a poorly built wooden chalet. For seven long years the windows and doors have been barricaded in such a way that no one could peep in if he dared, and the passers by rarely turned their faces that way, tho they never failed to speak of the distinguished prisoner confined there like a rat in a trap. During these seven long years this unfortunate exile lived out his almost solitary confinement, within hearing of the ceaseless hum of the great city of Damascus, peeping at

the soldier life of the barracks and parade ground, listening to the bugle calls that meant everything to him in life as a great soldier; waiting, waiting, hoping, despairing, at times wishing for death; never knowing when he might be poisoned, or strangled, or shot. Cut off from all his own family and relatives, brooding over his wrongs, while his enemies at Constantinople were still holding their high carnival of crime, it is no wonder that only six weeks ago he made a desperate attempt to starve himself to death. This was the man who had served his imperial master for nearly thirty years; in Paris; on many a famous battlefield in two wars; as a marshal of the First Army Corps of the Empire; in many diplomatic missions; and as a personal friend and aide de camp. This was the man who sinned by telling his master the truth and, falling under the displeasure of that iniquitous "camarilla," was deposed, stripped of his epaulets and sword, disgraced, banished, and then imprisoned under circumstances of excruciating rigor and cruelty. There was no known crime, no legal process of law, and any death would have been a mercy compared with the torture of these seven years. This was Fuad Pasha, former friend and favorite of the Sultan, victim of the horrible wickedness of the Palace spies. And now he was free.

Fuad Pasha was born in Egypt in 1840. His father was another Mushir (Marshal) Hasan Pasha, and a Circassian. Fuad went from Egypt to a preparatory school in Constantinople and afterward to the Military Academy, where he distinguished himself in the branches there taught and was graduated with honors. Leaving school he was appointed a lieutenant of the Turkish Guards, and being well versed in French the Government sent him to Paris as military attaché of the Turkish Embassy. After staying there for a time he was promoted to a general of brigade and sent into Bulgaria to reorganize the forces there. When war broke out between Turkey and Russia in 1877 he was on the River Elena with 8,000 troops ready to face the invading army. On the 4th of December, 1877, he was attacked by a Russian force of 40,000 men, which he defeated with great slaughter. On that occasion his officers crowded round him, kissing his hands, because they had not been able to believe victory possible against such a superior force. A year later he was made a marshal and given command of the Constantinople Army Corps, the highest military position in the Turkish Empire. Then he served as Yawar, or Honorary Aide de Camp to His Majesty the Sultan, and was sent on many high commissions into the diplomatic world. In 1897, when the war broke out with Greece, Fuad took the field and went thru that campaign. On his return to Constantinople he was again the trusted friend of his royal master, commanded his bodyguard and enjoyed every mark of his honor and confidence. It was during this period that he had many disputes and controversies with Othman Pasha el-Ghazy and came into serious conflict with the Palace camarilla.

Fuad Pasha is a man of polite address and conversation, given to making bright speeches. One of his most famous bonmots and which contributed to his downfall, was to the Sultan himself when a certain sword swallower was amusing His Majesty with an exhibition of his prowess in that line. The Sultan had exprest his wonder at the sword swallower's skill, when Fuad Pasha smiled, and, with a secret gesture toward Hasan Pasha, the famous Secretary of the Turkish Navy, who for years had been making way with the whole of the appropriations, said: "Don't let this surprise Your Majesty, because we have here among us a greater wonder—we have one who can swallow a whole man of war." His Majesty is said to have laughed immoderately at this sally. But the spies and his enemies had marked him for destruction, and in 1901 it was whispered that Fuad was in communication with the "Young Turkey" party, and according to the Palace code a *traitor* to His Majesty. His house was watched and his movements harassed until his spirit rebelled at the iniquitous imputations upon his honor and his integrity. Pretending to regard the cowardly spies as burglars he armed his household and ordered them to repel the vermin of the Palace. This quickly issued in bloodshed. Fuad was arrested,

allowed a single interview with the Sultan, sent aboard the private yacht of His Majesty, which carried him swiftly to Syria. Disembarking at Beirut he was taken under heavy guard to Damascus, where in exile, in cruel confinement, he has spent seven weary years. On July 28th, all unexpected, he was roused from his growing despair and told that he was again free. It seemed too good to be true, but his love of honor was stronger than his desire to escape from confinement. He refused to quit his prison house until after they had restored his epaulets and his sword. Then he came forth to receive ovation after ovation and military honors such as have seldom fallen to the lot of any human being. After nearly a week of bewildering telegrams and conferences it was decided that he should make his way back from exile to Constantinople, and so on August 6th he came over the Lebanons in a special train of the French railroad. The city of Beirut, already wild with joy, since the Feast of Liberty had been in progress for seven days, prepared a marvelous reception for this unique guest which it delighted to honor. Never, except at the coming of the German Emperor, had the city seen any demonstration worthy to be compared with that offered to Fuad Pasha, the returning exile. The German Emperor was received by the most important officials of the Empire and all that official military pomp could furnish. But Fuad Pasha was received by the people. On the afternoon of his arrival they hurried in thousands to the railway station at the port and filled every possible space within half a mile of the train. Many carried flags and banners and others sang songs of welcome. A detachment of cavalry and the military band were but a small feature in the mass of humanity, which seemed to have but one heart and one throat. As the train moved slowly in, hundreds clambered to the roofs of the cars, while a perfect sea of heads surged round them in every direction, each one struggling to get a glimpse of the famous man and helping swell the ceaseless shouts of "Long live Fuad Pasha!"

With difficulty he made his way to the carriage in waiting. When that particular carriage was known the crowd unharnessed the horses and literally lifted the carriage and its occupants into the air and carried it forward toward the city. At the earnest entreaty of Fuad Pasha himself the carriage was lowered, and dragged by hundreds of hands upon the ropes up thru the streets. The excitement became frenzy, and no such scene was ever witnessed before. He was taken straight to the barracks, where the officers and men of the army corps cheered his entrance most vociferously. He was welcomed with speeches in Arabic and Turkish. A little later he drove, surrounded by cavalry, to a club in the city, and just before entering addressed the crowd: "My friends, if you think I am lacking in expressions of gratitude, know that I have not had a moment's rest for five days. . . . So pardon me." Inside the club he again thanked the city of Beirut for its wonderful welcome, and among other things said: "My brethren, I thank you for your love and zeal and the evidences of affection you have extended to me. . . . Be sure that I shall treasure this love in my heart as long as I live and will repay you with my blood and life." Later on he said to an editor: "They judged me absent by default, even tho I was in Constantinople at the time, and this was contrary to all law and justice. Then they issued an order for my banishment, which has lasted for seven long years. But I assure you that I will not accept a restoration to the rank of marshal after these indignities until cleared according to law. I prefer to be a common soldier rather than to forego my right to carry a sword. And I will be a corporal at the order of the people rather than a marshal by any other means."

Such words point clearly to his love for his country, and there is no minimizing his services in years past nor the high respect accorded to him by the foreign powers. On his breast were thirty-four medals and decorations of the first order, not to mention the Ottoman ones that he did not wear. One of the speeches of welcome contrasted the scene in Beirut with the days immediately after his exile, when no one in Con-

stantinople dared mention the disgraced man's name or venture to assist in burying Fuad's dead daughter. So great was the terror of a system which could strike the man who stood nearest the thorne. But that hideous nightmare is past, and the people see in the person of Fuad the end of a frightful régime and the personification of a new era for Turkey. He is only one, albeit the most prominent one, of sixty thousand exiles within and beyond the borders of the Empire. He sailed out of Beirut harbor on August 8th. Two days later the city of Smyrna attempted to hold the returning exile, while they vied with Beirut in expressing their joy. By this time Fuad has reached Constantinople, and has no doubt touched that city to its depths—a savor of life to the new order of the Empire and a parting knell to the Reign of Terror just closed.

BEIRUT, SYRIA.

The Fifteenth Amendment

BY J. W. HOOD, D.D., LL.D.

[Bishop Hood is the Senior Bishop of the Strong African Methodist Episcopal Zion Church.—EDITOR.]

THE good editor of the *Star of Zion* wants to know how Bishop Hood is going to vote in the coming election. I supposed that I had made my position sufficiently clear, but I have no objection to giving line upon line and precept upon precept when called upon to do so. I have not asked the editor for an explanation, but shall not question his right to catechize me. Those in authority in this land of freedom are permitted to assume great liberties. A few preliminary remarks may not be out of place.

Soon after I was set apart to the episcopal office I announced that when there was no party in this country opposing the rights of my people I should cease to take an active part in politics. In that same year the Democratic party nominated Horace Greeley, a long-standing Abolitionist, on his manhood suffrage platform. It looked then as if that for which I had been hoping had come. Therefore for thirty-six years my time has been mainly spent with my episcopal duties.

But at this time I have noticed a sentiment in favor of the repeal of the Fifteenth Amendment.

This is a renewal of the attack upon the rights of my people, and the fact that some distinguished negro ministers have enrolled themselves with those with whom this unholy attack has originated makes the matter more serious. It has been said that the Fifteenth Amendment was a mistake. The man who has this opinion has not carefully considered the subject, or is ignorant of the facts, or is too narrow minded to take a broad view of the situation, or is blinded by prejudice and so unreasonable and unfair that he cannot grasp that which is just and right. The Fifteenth Amendment is the sheet anchor of the negro's rights in this land. It may be nullified in some places and disregarded in others. But while it holds its place in the Constitution, it stands as a rock of defense against which the waves of race hate may lash themselves to fury in vain. Without this the emancipation would have been a cruel mockery. There were many negroes born nominally free before the emancipation, but a Democratic Chief Justice had announced from the Supreme Court bench that negroes had no rights that man was bound to respect, and this became the law of the land. It was the Fifteenth Amendment that reversed that wicked decision and raised the negro to the exalted position of an American citizen, and equal to the white man before the law. Had the negro been freed and left under the curse of the Dred Scott decision, the conditions that are now being brought to light in Georgia would have been general in all of the

former slave-holding States. The papers state that conditions there are worse than anything known in the days of slavery.

That is natural; it is what might have been expected.

In the days of slavery every slave had an owner, and on account of the owner's humane feelings or his moneyed interest in his slave he would no more have permitted such treatment than if it had been his horse. It must be admitted that the worst condition is to be a slave and have no owner. This I say would have been the condition of the negro without the Fifteenth Amendment.

The people of Georgia are not sinners above all others. But it happens that in that State the Fifteenth Amendment has been less regarded than elsewhere. And for this reason the same rights are not accorded to the negroes in that State as elsewhere. I was once traveling South on a first class ticket; I had reached Atlanta in a first class car, but was there told to go into the second class car, where white and black smokers prepared a place of torment for all who were not used to that evil. I said I had a first class ticket. The answer I received was, "You are in Georgia now!" The man's manner indicated very clearly that unless I wanted to pose as a martyr there was nothing else for me to do but move. They in Georgia seem to take pride in their idea of *"making a nigger know his place."* It is certainly the interest, and I think it is also the duty, of every black man to take his stand against this attack upon the Fifteenth Amendment. The Republican party is pledged to its maintenance. It has maintained it for forty years, and an overwhelming victory at this time will set the matter at rest. The Fifteenth Amendment is the one thing that has delivered us from the crushing effect of Judge Taney's decision. It is the one thing that gives us the right to the ballot box and jury box and the protection of the flag at home and abroad. The ballot is more powerful than the sword. It has done for the negro in this country what a standing army could not have done. A sword in every man's hand would produce violence and bloodshed. But a ballot in every man's hand would promote peace, prosperity and happiness. But to the question as to how I shall vote. My purpose is to support the ticket of the National Republican party, along with thousands of good Democrats both north and South, along with the *Baltimore Sun* and *Brooklyn Eagle,* which, with other high-toned journals, represent the best sentiment of the land. I am sure I shall never be ashamed of the company I am in, and thousands in the South will envy me my liberty and will regret that they do not feel themselves free to enjoy the same privilege. On State and county issues I shall do as I have suggested that others may do with safety. I shall take my choice of the candidates of the two parties according to my judgment of their fitness for office. This I feel justified in doing so long as the two leading parties continue to occupy the same positions with respect to the rights of my people.

PORT CHESTER, N. Y.

The Alchemist

BY PAULINE FRANCES CAMP

LOVE is the filling from one's own
Another's cup.
Love is a daily laying down
And taking up.
A choosing of the stony path
Thru each new day,
That other feet may tread at ease
The smoother way.
Love is not blind, but looks abroad
Thru other eyes;
And asks not, "Must I give?" but "May
I sacrifice?"
Love hides its grief, that other hearts
And lips may sing;
And burdened, walks, that other lives
May, buoyant, wing.
Sinner, hast thou a love like this
Within thy soul?
'Twill change thy name to saint, ere thou
Hast reached thy goal.

SPRINGFIELD, MO.

Politics in Canada

BY EDWARD PORRITT

THE approaching Dominion General Election will be an extremely critical one for the Liberals, who have been in power at Ottawa since 1896. In the last six months they have been overwhelmingly defeated in provincial elections in New Brunswick and Ontario. They have also lost ground in Quebec—Laurier's own province—and Saskatchewan. The popular reaction against Liberalism has now gone so far that the Tories are in control in Ontario, New Brunswick, Manitoba and British Columbia, leaving the Liberals in power only in Quebec, Prince Edward Island, Nova Scotia, Saskatchewan and Alberta. In round numbers the population in the eight English-speaking provinces of the Dominion now numbers four and three-quarter millions, and, at most, not more than 850,000 are in provinces with a government of the same political complexion as the Government at Ottawa.

In this country since 1884 elections have been turning more and more on great political principles. Social scandals and charges of graft are of the past in presidential campaigns. In Canada, during recent years, the movement has been in a contrary direction, with a corresponding deterioration in political life and loss of keen and continuous interest in politics. In the twelve years between 1896 and 1908 Canada has kept pace with the material growth of the United States and England. It has added a million and a quarter to its population, and has secured a large volume of desirable immigration. Two new provinces—Alberta and Saskatchewan—have been carved out of the western territories, and considerable progress has been made with the construction of a second transcontinental railway. In every way it has been a period of world-wide recognition and of material prosperity for the Dominion.

None the less this period has been one of political stagnation—a period not comparable with any other either before or since Confederation. From the second decade of the nineteenth century, until 1896, there was never a time when there was not in British North America a vigorous Liberal party continuously pointing the way to political progress, making much of progress in England, and impelling the provinces, or, after 1867, the Dominion, in a similar direction. From 1830 to 1896 Liberalism in Canada drew its inspiration from England. Its forces were recruited from England, and the conflicts in which it was engaged were on the same lines as the conflicts waged by Liberalism in England between the repeal of the Test Acts and Catholic enfranchisement in 1828 and 1829 and the reform of local government in the smaller areas of rural England in 1894.

For the first thirty or forty years of this period Canadian Liberalism was slowly overcoming the Family Compacts of United Empire Loyalist origin which existed in all the older provinces from the Great Lakes to the Atlantic Ocean. These compacts were organized by the Tories in Canada in the first half of the nineteenth century; and it was against the Tories thus entrenched that Liberalism secured a wide extension of the electoral franchise, democratic municipal institutions, the freedom of the press, the disestablishment of the Episcopal Church in Ontario, law reform, and also, in most of the provinces, some measure of civil service reform.

These and other minor reforms, varying in the different provinces, had been achieved before Confederation in 1867; and from 1867 to 1896, when, except for four years the Liberals were in opposition in the Dominion Parliament, Liberalism stood for a tariff for revenue only, no bounties nor government largess to industry, religious equality, provincial rights, purity in elections, reform of the Senate, and, above all, for an economical administration of public funds and public lands. For eighteen years prior to 1896 the Liberals were in a minority in the House of Commons;

and at the close of this period they had scarcely any representation in the Senate, to which all appointments are made by the Government.

By 1893 the campaign of education of the Liberals had begun to tell. In that year the most representative and enthusiastic national political convention ever held in Canada was in session for four days at Ottawa. The Tories were apprehensive of their own shortcomings and of the hope and enthusiasm which possest the Liberals from Cape Breton to Vancouver. They dreaded a general election, and accordingly continued Parliament to the last day of its statutory term. But in 1896 the general election came; the Tory Government, with Tupper, of Nova Scotia, as Premier, was disastrously defeated, and since then the Liberals have been in power at Ottawa. This change in the Government marks the beginning of the end of the old Liberalism and also the beginning of the era of political stagnation. From the first the Government had no effective opposition to keep it up to the mark; and no sooner were the Liberals in power than they began to repudiate or abandon all the principles and reforms for which they had so strenuously contended in opposition.

With one modification—the preference for England, established in 1897—the Liberals adopted the national policy of the Tories. By a long series of enactments, orders in council and departmental orders, they have carried the protectionism of the national policy much further than it had been carried in 1894, when the Tories for the last time revised the tariff. There were a few trivial reductions in duties when the Liberals revised the tariff in 1897. There were, however, scores of protective increases when they revised it again in 1906, and owing to the great upward movement in prices since 1897, Canadians are today paying higher duties on nearly all lines of imports than at any time since the United Provinces of Ontario and Quebec first went on a protectionist basis in 1858. In 1883 the Tories had established the bounty system for the benefit of the pig iron industry of Quebec and Nova Scotia. By 1906 this system was costing Canada $110,000 a year. Since 1897 the bounty system has been enormously extended by the Laurier Government, and today bounties are payable on pig iron, steel ingots, wire rods, lead, binder twine and petroleum; and the system is now costing the Dominion nearly three million dollars a year, and will have cost not much less than twenty-two million dollars before the expiration of the present laws in 1911. It has, in short, been the aim of Liberal Governments since 1897 to remodel the old national policy into a Noah's Ark policy. The patent laws, the "made in Canada" amendment to the Railways Subsidies Acts, and the exclusion of foreign shipping from the coastwise trade are illustrations of this policy, and so was the cancellation of the postal convention with the United States, so far as concerned the rate on newspapers and periodicals exchanged between the two countries, because the advertising of American manufacturers induced Canadians to spend money in the United States.

The Liberals have similarly abandoned all their old contentions in favor of economy and reduced taxation. When they came into power, twelve years ago, the per capita expenditure on Dominion Government was $8.14. In 1895-6 the total expenditure was $41,700,000. For the financial year 1907-8 the per capita expenditure was $18, and the total expenditure $112,000,000. In the old days the Liberals insisted that recurring surpluses were unsound finance, and that the Government had no right to take from the people one cent more than was necessary to meet the current expenditures of an economically administered government. As a result of ad valorem tariff duties and the upward movement in prices since 1897, and also as a result of the material growth of the Dominion, every year since 1897 there has been a surplus. It was $8,000,000 in 1899-1900; $14,345,000 in 1902-3; over $16,000,000 in 1903-4 and 1906-7, and $19,000,000 in 1907-8. In each year the surplus was due to the customs duties, for Canada raises by far the larger part of her revenues at the customs house.

In opposition the Liberals stood for religious equality and for no favors

from the State for any church. It was the Liberals who secured the abandonment of the clergy reserves in Ontario. In 1905, when the Laurier Government was creating the new provinces of Saskatchewan and Alberta, it forestalled action with regard to the schools by the legislatures of the new provinces. It thereby departed from the old Liberal doctrine of provincial rights, and guaranteed the support of the Catholic parochial schools out of public funds. Today, in these schools, according to a recent article by the Rev. Abbé Berubé, pastor at Vonda, Saskatchewan, in the *Courrier de l'Ouest*, there is "a full hour of religious instruction every day, and the rest of the teaching given in a Christian spirit and by a Catholic teacher." "In what Catholic country, with the exception, perhaps, of the Province of Quebec and Belgium," asked Abbé Berubé, "are the Catholics better treated as regards the schools than in the Northwest Provinces?" In comparing their position with that in the United States, the Abbé added: "Having lived under both régimes, I have no hesitation in stating that our position is a paradise compared with that of our co-religionists on the other side of the line." When the legislation granting autonomy to these provinces was going thru the House of Commons in 1905 Papal Delegate Sbarretti went so far as to hint that there might soon be a favorable settlement of the boundaries of Manitoba if Manitoba members facilitated the enactment of the clauses guaranteeing Catholic schools for Alberta and Saskatchewan.

Senate reform was for many years a plank in the Liberal platform when the Liberals were in opposition. The uselessness of the Senate was then much emphasized. There were Liberals between 1878 and 1896 who urged its abolition. Others advocated the election of Senators by the vote of the people at large in the several provinces; and so long as the Liberals were in opposition the Senate was the most threatened political institution in Canada. Since 1897, however, the Liberals have used the Senate in exactly the same way as the Tories had done during their term of power. It was then an exclusive preserve for adherents of the Tory party—a refuge for men whom the constituencies had rejected and a reward for men who had contributed to the campaign funds of the party. Since 1897 the Red Chamber has been gradually converted into a preserve of the Liberal Government; and from the time the first Liberal was appointed to the Senate, in 1897, not a word has been uttered by the Laurier Government to advance the reform which the Liberals seemed to have so much at heart between 1878 and 1896.

It is not any principles for which the Tory party is standing that will attract Liberal voters to it at the coming Dominion election. It is the long series of miserable scandals that have been laid bare since 1906 that is giving the Tories a chance of displacing the Laurier Government. These scandals can be traced in the records of the Committee on Public Accounts, in the report of a Royal Commission appointed by the Government, which reported in March, 1908, and in proceedings in courts at Halifax, Fredericton and Toronto. They concern sordidly corrupt practices in Dominion elections, the alienation of the public domain in the West for the gain of friends for revenue only of the Government, and the system under which other friends of the Government have been enabled to collect enormous tolls as middlemen when the Government needed printing work, supplies or equipment, a site for a roundhouse for the Intercolonial Railway or any other public building. There will be much exaggeration of these scandals in the campaign, and some transactions will undoubtedly be susceptible of explanation by the Liberals; but it is because there is an undeniable basis of fact for many of the allegations that Canada is in for a scandal campaign of more than usual unsavoriness.

The campaign of 1908 is depressing to watch for any one who believes in democracy. It is especially so for one who recalls the Laurier and the Cartwright of the Liberal Opposition of 1878-1896; who realizes what Canadian Liberalism then stood for, what were its achievements and traditions, and also the opportunities which opened before Laurier and Cartwright in the summer of 1896, and the popular expectations as to the use which would be made of these splen-

did opportunities. But it is exactly the kind of campaign that might be expected as the culmination of the era of Liberal stagnation. Liberalism, if it is to survive as a national force, must continually head forward. Liberalism at Ottawa for many years past has been heading in no particular direction. It has been submerged in the effort to keep a group of Liberals in power—men who long ago lost their ardor for Liberalism. In a word, in the last twelve years Family Compactism has been revived at Ottawa in a new form, but a form no more likable than that in which it existed when Liberalism first began to assert itself in British North America.

HARTFORD, CONN.

The Crow Indian Fair

BY LOTTA ALLEN MEACHAM

TO many unfamiliar with the progress of the American Indian, the Crow Indian Industrial Fair, on their reservation in Montana, would be an eye-opener.

Yet, often, the American people expect a very great deal of their wards, and are apt to set them up by the white man and be disappointed at the comparison. Unless the fact is taken into account that the red man has only a few years of what we choose to call civilization behind him, compared to the generations back of the paleface, a just comparison cannot be made.

The Crow Indians were born and bred to a picturesque, migratory life, following the wanderings of the buffalo, and riding fleet Indian ponies over the beautiful hills and valleys of Montana and Wyoming. Not until thirty years ago was there ever a thought of or inclination toward settling down in one spot to till the soil or build a substantial home. In such a short while, any degree of perfection in civilized arts is a considerable jump from the wild, care-free past toward an industrious present.

By nature the Crow Indians do not take to agriculture, but necessity can do many things, and, with a cutting off of Government rations, a giving of individual allotments to the Indians, and examples of what the rich reservation will yield when even moderately urged, the boss farmers, under the supervision of the agent, accomplished unexpected results.

There never has been among the Crow Indians a dearth of horses and cattle, for the raising of these comes naturally to the red man. Of late years, however, the decrease has been in quantity, with a marked increase in breed and quality, even tho they yet own some two thousand wild horses, a relic of the past.

Not until the last few years, however, has general farming been advanced, and that more especially under the régime of the present agent, Major S. G. Reynolds.

At the present time, the Crow Indians have something over two thousand five hundred acres of land in wheat, which yields at least twenty bushels to the acre. In the past year they have begun to raise a little oats, and annually put up a considerable amount of hay, alfalfa, and native grass. Each winter they sell over five thousand tons of this native hay to the sheep men, who rent a part of the grazing lands.

The Indian is childlike in his love of rivalry, and this trait comes in good play as an inducement toward raising gardens, sowing grain, and cutting hay.

To give this good-natured rivalry full play, and put it to good use, Major Reynolds, a few years ago, conceived the idea of having an old-fashioned fair, where each Indian could see the results of his own farming, and his horses and cattle shown and compared with those of his fellow tribesmen. Thus, each fall for the last three years, the Crows plan for weeks in advance and get together for a display of the results of the year's work and a general good time.

The fair program is made up of races by speedy Indian ponies, industrial parades, excellent exhibitions of two and four horse farm teams, and a live stock parade, and other spectacular features.

There are prizes for the best display of farm products from districts and individuals; for the best variety farming,

and the finest collection of vegetables, and rewards for the best exhibition of stock, grain and poultry.

The women are induced by substantial prizes to bring canned fruit, jelly, cake, bread and pies. Fifteen dollars is given to the Indian woman who can show the best kept tepee, much inspected by the less aspiring. The Indian judges, who have full charge, and discuss the merits of the different exhibits in their native tongue, are not averse to giving careful attention to the award of ten dollars to the woman who has furnished the best meal and best set table.

The biggest pumpkin, squash, melon, cabbage and potato bring a prize of one dollar each, and a prize of five dollars is given to the woman doing the best sewing.

Considering that the Crow Indians still live in tepees, and, more than any other Northern tribe, cling to the old life and customs, this fair introduces a very modern element into their lives.

The Exhibit Hall is a most interesting place. A few of the helpful agency people showed their own garden products in order that the Indian might compare them with his own. Major Reynolds had a big pumpkin and cabbage he was saving for the occasion, but the pumpkin had a green shell and looked like a watermelon, and one morning it was no more. His favorite Jersey cow was fond of cabbage, and, in an unwatchful moment, took a luscious bite, making an end of his exhibition aspirations.

Mr. Small, a native of Scotland, the manager of the reservation mill, who each year has a garden scarce possible to surpass, showed large beets, turnips, onions, potatoes, carrots and tomatoes. In addition, he had on display, for the benefit of the Indians, the results of the ten processes in the milling of flour, up to the bread and biscuit of Mrs. Small, made from a sack of the Crow brand, and unexcelled by any one.

To the Indian, however, their own exhibits were of the most interest, much looked at, compared and jabbered over, alike by school child and adult. There were Blue Victor potatoes sixteen inches around, a sugar beet over two feet long, large heads of cauliflower, cabbage and other well-grown vegetables. Plenty-Wing, Packs-the-Hat and Yellow-Tail had pumpkins that would weigh over one hundred pounds each. Rides-a-White-Hipped-Horse brought potatoes as big as a white man could raise. Medicine-Tail and Plenty-Buffalo showed good-sized Hubbard squash. Takes-a-Gray-Horse made a tempting chocolate cake, and Full-Mouth and Flathead-Woman also displayed big pumpkins. Spotted-Rabbit had a sample of his oats from the fall threshing, and Long-Bear a fine melon.

The Lodge Grass Mission schoolboys made a model farm with a red log house and barn, fences, fields of wheat, oats and alfalfa, and a cunning axe and hay fork, all the work of Leo Medicine-Crow, Carson Yellow-Tail, McKinley Backbone and Stanley Bull-Weasel. Porter Knows-the-Gun, from the same school, drew a good picture of a man on horseback. There were dressed Indian dolls, very pretty pieces of fancy work, and excellent school work, of which the boys and girls were justly proud.

The Government school at Crow Agency had a very creditable display of sewing, baskets, school work and industrial work. Mary Littlenest made a loaf of bread, Nellie Scratchface a layer cake and Katie Whitefox prepared a can of crab preserves. Janie Stops, Ethel Plenty-Hawk, Christine Many-Enemies and Hannah Other-Medicine had made baskets of native willow. Mary Black-hair dressed a very pretty doll, and Mark Realbird had some well-drawn calendars.

The sewing and darning by the girls from the Saint Xavier Mission School were most praiseworthy. Josephine Pretty-Medicine and Magdalene Horse-Mane had darned stockings much better than most white girls can do them. A gingham shirt by Emerettina He-Knows-It was well cut and sewed.

From the Prior School there was a loaf of bread made by Lily Rides-a-Pretty-Horse, a pie by Libbie Whitebirds, and sofa pillows by Louise Comes-Up and Stella Turns-Back. Lucy Plain-Bull brought a very pretty pincushion.

Among the officers of the association were Frank Shane, president; Fair-Bear and Takes-a-Gun, vice-presidents. Flat-Boy, Black-Hawk, Pretty-on-Top, Little-Daylight, Coyote-Runs, Old-Tail and Spotted-Rabbit were among the judges of the exhibits. The committee was composed of Does-Everything, Knows-his-Coos, Takes-Everything, Stops,

Raise-Up, Don't-Mix, Covers-Up, Bear-Don't-Walk, Bad-Man, Flathead-Woman, Stray-Calf, Crooked-Arm, Sings-in-the-Mountains, Comes-up-Red, Old-Coyote, Bull-Tail, Swallow-Bird and other Crow Indians. Some of the policemen for the occasion were Bear-in-Middle, Takes-a-Horse, Cut-Ears, Walking-Bird, Blanket-Bull, Bear-in-High-Land, Sits-Down-Eagle and Bad-Horse. The gatekeepers were Plays, Red-Wolf, Blanket-Bull and Old-White-Man, and the starter of the races Medicine-Tail.

WASHINGTON, IOWA.

The Improbability of Life on Mars

BY JAMES H. STOLLER Ph D.

PROFESSOR OF BIOLOGY IN UNION COLLEGE.

THE idea that the planet Mars is the home of intelligent beings not unlike ourselves is a pleasing one. The confident opinion of Prof. Percival Lowell, based on observations made at his private astronomical observatory at Flagstaff, Ariz., that Mars is inhabited by beings capable of devising and constructing a great system of canals, has aroused a great deal of popular interest and has likewise received the respectful attention of men of science.

It is not the purpose of this paper to review the astronomical data on this question nor to undertake to estimate the validity of the deductions made therefrom, but to consider certain biological implications of the hypothesis that Mars is inhabited. As the considerations here to be presented are based on the differences in physical conditions between the earth and Mars, it will be suitable to begin by stating what the most important of these differences are according to authorities in astronomical science.

The diameter of Mars is 4,200 miles, or a little more than half that of the earth. Its volume is one-seventh part that of the earth and the force of gravity on Mars is but three-eighths of what it is on the earth. On account of the low gravity of Mars its atmosphere must be very rare. Prof. W. H. Pickering, of the Harvard Observatory, estimates that the amount of atmosphere on Mars is one-tenth of that on the earth. Concerning the composition of the atmosphere but little is known (Sir Robert Ball), but it is generally agreed that it contains vapor of water and that therefore clouds float in it. However, clouds are only infrequently observed, and it is considered that over the greater part of the planet a clear sky and almost constant sunshine prevail.

The mean distance of Mars from the sun is 135,000,000 miles, or some 45,000,000 miles more than the earth. The heat which Mars receives from the sun compared with that received by the earth is as 1 to 2. The mean temperature, even of the temperate and tropical regions, is considered to be not much above the freezing point of water. Besides the greater distance from the sun, the thinness of the atmosphere greatly affects the temperature, rendering it lower. It has also been suggested (Sir Robert Ball) that, due to the thin atmosphere, the fluctuations of temperature as between day and night are very great, since the atmosphere could only slightly mitigate the sun's heat by day, while it would permit a rapid loss of heat at night by radiation.

The length of the year on Mars is 687 of our days; the length of the day is nearly the same as ours, being 24 hours and about 38 minutes.

The surface of Mars is generally even, there being no mountains. According to some authorities, there are considerable bodies of water, but Professor Lowell believes that substantially the whole surface of the planet is land. The so-called Martian Seas, described by other astronomers, he regards as areas covered with vegetation. These areas, bordering the polar caps, change in extent and color with the change in seasons of the year. Five-eighths of the surface, including the equatorial region, is of a reddish ochre color, and is believed to consist of desert land, not unlike the Sahara of Africa.

It appears to be generally believed by

astronomers that the white polar caps which increase in size in winter and diminish or disappear in summer are due to accumulations of snow. Besides these polar caps, patches of white are seen even in temperate or tropical latitudes, which Professor Lowell believes to be due to snow or hoar frost.

Having noted these differences in physical conditions as between Earth and Mars, let us now consider what are the probabilities as to Mars being the abode of life, looking at the problem from a biological standpoint. The first question that naturally presents itself is as to the origin of life on Mars.

Life as we know it is inseparably associated with a particular form of matter known as protoplasm. The simplest organisms consist of single microscopic units of protoplasm, and the cells of which the living parts of the bodies of the higher organisms are made up consist similarly of units of the same substance. This substance, the terse definition of which by Huxley as the "physical basis of life" will be remembered, is of such peculiar composition and properties that we can conceive of its origin only under definite and precise conditions.

Our conception of the origin of life on the earth is that many millions of years ago, under certain definite conditions as to temperature, light, presence of water, atmosphere, etc., certain inorganic compounds, impelled by chemical affinities, came together, producing a substance capable of manifesting the phenomena of life. What the compounds were which reacted on each other, and what the exact conditions were under which this took place, are unknown to science; all attempts to construct protoplasm by synthetic chemical processes have failed. The phenomena manifested by the living substance are so recondite that all attempts at a mechanical or psysico-chemical explanation of them have proved futile. How precise then were the conditions under which it originated and how improbable that these conditions were exactly duplicated on another planet.

But, waiving the point thus far discussed and assuming that there is life on Mars, let us consider the probability of there being such forms of life on that planet as those that inhabit the earth, especially the highly organized form of animal life.

If there are animals on Mars, they must be adapted to the physical conditions there existing.

We may note first that, as there are no considerable bodies of water on Mars, it would appear that aquatic life is poorly developed on that planet. Mars has no ocean and is therefore destitute of those many and varied forms of animals which inhabit our oceans. It seems probable that there are rivers on Mars, though none have been reported by observers. Tho it may be noted that if Professor Lowell's theory of the visibility of the so-called canals is true, namely, that a belt of vegetation borders them, the same would be true of natural streams, which should appear not as straight but as irregular lines. It seems probable that the principal natural bodies of water on Mars, whether streams or lakes, are formed by the annual melting of the polar snows. That these icy and shifting waters are the home of aquatic animals resembling those that inhabit our seas, lakes and rivers seems doubtful.

As to land animals on Mars, we have first to remember that by far the larger part of the surface consists either of desert or is covered with snow. The habitable territory is therefore probably restricted to the zones lying between the polar caps and the great desert belt. These zones present no great irregularities of surface, so that they are not mapped out into faunal regions by mountain elevations and barriers, as is the case on our planet. It is due to such barriers that, on the earth, wide differences exist in respect to the kinds of animals inhabiting different geographical regions. For example, the fauna of South America is very different from that of North America, because communication is shut off by the narrow and mountainous Isthmus of Panama. The differences in geographical fauna are always in proportion to the impassableness of the barriers separating them and the length of time these barriers have existed. Now, on Mars there are apparently no such barriers. There are no mountains, no great bodies of water. Under conditions so similar there would be little diversity of animal life. A traveler on Mars, traversing the habitable belt and making the circuit of that

globe, would probably see the same kinds of animals, assuming that any exist there, thruout the journey. We are thus led to the conclusion that there can not be on Mars that wealth and diversity of life which we see on the earth.

The climate of the habitable zones of Mars is much colder than in the same relative latitude of earth. Moreover, the Martian creatures must be able to withstand extreme diurnal changes in temperature, since the loss of heat by night by radiation is very rapid in the thin atmosphere of that planet.

If there are animals on Mars they must be adapted to the condition existing there as to the force of gravity. It is certain that their entire organization would be affected by this factor. They would need a muscular system with only three-eighths of the efficiency of earth animals; their bony skeletons would be correspondingly light and attenuated; their entire build would be slight and spindling. They would have long legs and thin, lank bodies.

But the most remarkable quality possessed by the animals of Mars, if such there are, is their adaptability to live in the thin atmosphere of that planet. Accepting the estimate of Professor Pickering as to the relative densities of the atmospheres of Mars and earth, it follows that the animals of Mars, supposing that they require as much oxygen as those of earth, must have a lung capacity ten times as great as earth animals, or else breathe ten times as often. It is difficult to conceive of animals of high organization whose life processes could be maintained under as meager a supply of oxygen as is afforded by the atmosphere of Mars. We are scarcely warranted in supposing that animal life could be adapted to that atmosphere, since constant oxidation is a fundamental property of the living substance. It does not appear that we can escape this difficulty by supposing that the atmosphere of Mars is composed of a proportionately larger amount of oxygen than that of earth. Even if the atmosphere of Mars consisted entirely of oxygen there would be only half as much per cubic foot as in the earth's atmosphere. But this supposition is impossible, as an air composed wholly of oxygen would have the effect of immediately burning up the animals that tried to breathe it.

There would appear to be even a less chance for birds on Mars than for land animals. We must imagine creatures of exceedingly attenuated and gauze-like structure that could maintain their bodies in that thin atmosphere. It is true that the force of gravity to be overcome would be much less for Martian birds than for those of our planet, but this would fall far short of compensating for the diminished buoyancy of the air. And if we imagine the atmosphere of Mars is heavier than ours, as due to a larger proportion of carbonic acid, we only increase the difficulty of the case in regard to the question of respiration.

According to present day biological conceptions, every species of animal, especially those of a high grade of organization, has behind it a vast background of ancestral history. The biologist's interest is not merely in the animal as he sees it before him, its form, parts, activities, etc., but also in its natural descent from animals that lived in the remote past, types of which have been preserved to us in the state of fossils. Thus, to take an illustration drawn from scientific data which have become a part of popular knowledge, a horse is not merely an animal possessing certain well known characteristics, as a hoofed quadruped, etc., but is a descendant from the Tertiary Eohippus, thru a series of progressively graded forms known to us by the discovery of the fossil remains of their skeletons. Now, every step of this evolution was due to definite causes. Among these causal factors are included the physical conditions of life under which animals exist. For while the physical forces may not produce changes of species by effect of direct stimulus, yet they determine the course of evolution, since organisms must be adapted to their physical environment.

Thus it appears that the species, horse, for example, is the product of causes pertaining to, or whose operation was governed by, strictly terrestrial conditions. And it follows that under conditions existing on Mars this species could not have developed. The same reasoning applies to every other species of animals.

The question, of course, presents its

greatest interest with reference to man. As far as our knowledge goes, man has come to be an inhabitant of this planet as the result of definite causal factors and conditions. Altho he is now a unique being, possessed of powers which render him immensely superior to his nearest animal allies, yet in his natural history he has come up from the lower ranges of life. Every step of this process has been governed by conditions inherent in his physical environment. I have already referred to the tree-apes and to those first adventurous members of their tribe that assumed to stand upon the earth, facing and overcoming their foes. As far as we are able to judge, this was a necessary incident in the evolution of the human species. These animals, erect of body, intelligent and courageous of mind, were the precursors of the first members of the human kind. The incident of the descent from the trees illustrates the dependence upon special physical conditions of the history of species. And the conclusion is that animals of which the earth is the home are the product of conditions peculiar to the earth.

Let us suppose, however, leaving out of account all of the considerations above advanced, that it is possible for man to come into being on Mars. There remains the question whether it is probable that he is an inhabitant of that planet at the present time.

We know that our planet has been the abode of life for many millions of years. The geologist estimates the age of the earth on the basis of the slow rate of the erosion of continents and the accumulation of sediments off the shores of continents and in great inland seas. As all stratified rocks were originally sediments and as the total thickness of stratified rocks is about 27 miles, he arrives at the conclusion that tens of millions of years have passed since the animals now found in the fossil state in the oldest stratified rocks were alive. We know that coal is of vegetable origin, and judging by the rate of accumulation of peat from the decay of vegetation in great swamps, like the Dismal Swamp of Virginia and North Carolina, it has been estimated that a million years were required to produce the coal and stratified rocks of the coal measures. But the coal measures represent only about one-thirtieth of the total thickness of the entire series of stratified rocks. This gives as a result, 30,000,000 years as the age of the earth recorded by the stratified rocks. Dr. Charles D. Walcott, director of the United States Geological Department, adds to this 16,000,000 years to represent the time required for the formation of the lowest series of rocks whose stratification has become obscured and whose fossil remains are meager. The physicist employs a different method of making an estimate. The late Lord Kelvin, on the basis of what is known of the conduct of fused rocks in cooling, asserted that this globe has been in a habitable condition for 24,000,000 years.

Now, of this great length of time man has been an inhabitant of the earth only a few thousands or tens of thousands of years. The earliest relics of man are the chipped stone implements found in the river gravels which date from the Champlain period, or perhaps the latter part of the Glacial period—very recent epochs in geological history. These considerations raise the question whether the present epoch is a human epoch on Mars as it is on the earth. Some other type of life may be dominant there now, just as other types of life have been dominant on the earth in past geological ages. There was an age of mollusks, an age of fishes, an age of reptiles, before there was an age of mammals, and successive orders of mammals appeared and held their sway before man came into existence. Now, we have no ground for supposing that the development of life on Mars has been conterminous with that on the earth. There are so many unknown or only partially known factors that enter into the problem, such as the relative ages of the two planets, the relative rates of progress of the process of cooling from the original molten state common to both, the differences in physical condition as to gravity, temperature, light, etc., that it is certainly an assumption to assert that the present is an epoch of human life on Mars. If man has been on the earth only one three hundredth part of the time that our planet has been the home of living creatures, what is the probability that an exactly contemporary life phase now exists on Mars?

SCHENECTADY, N. Y.

Literature

The Constitutional History of England

STUDENTS of English law and history felt a deep and real sense of personal loss when a little more than a year ago the death of Prof. Frederic William Maitland was announced, for his subtle and fruitful scholarship, laborious researches, genial humor and catholicity of interest marked him as one among ten thousand in the republic of jurisprudence. He combined the sober industry of the German with the brilliant critical faculties of the Gaul, and did his most severely scientific work in a manner that touched the imagination of even the dullest Coke of legal lore. There can be no doubt, accordingly, that the latest published fragment from his pen on the constitutional history of England* will meet a warm reception, even tho it was one of his earliest enterprises and does not form a material contribution to those imperishable monuments of legal learning which the author committed to press himself in the plenitude and maturity of his scholarship. It appears from the preface of the editor, Mr. H. A. L. Fisher (who, by the way, is one of the most brilliant young scholars in England), that the volume before us was compiled out of notes of a course of lectures delivered by Professor Maitland at Cambridge University during the academic year of 1887-88, and that the author never intended his notes for publication—at least without a revision, which he never found time to do.

The plan of the work is unique. It consists of surveys of public law at the close of five periods: at the deaths of Edward I, Henry VII, James I and William III, and at the present day (1887-88), but the method of treatment is historical in form and spirit—the great departures of each epoch being described in their origin and development. For example, the first part, bearing the title of "Public Law at the Death of Edward I," deals with (a) the development of law-making from the Anglo-Saxon dooms thru Magna Carta down to the great statutes of the thirteenth century; (b) the evolution of the land law as the basis of the public law; (c) local government; (d) central government; (e) the administration of justice; and (f) retrospect of feudalism.

The volume is full of delightful revelations to those personally interested in the author, as well as sound information for the student of constitutional history. It shows that in the early years of his too short life, Professor Maitland had emancipated himself from the wayward bias of the Teutonic school, if he was ever under its thrall (see, for instance, p. 58); that he was, as the editor justly contends, a brilliant popularizer of knowledge as well as a profound scholar; that he could write with the same suggestive keenness on things modern as on things medieval; and that at no point in his studies was he deceived by the maskwork of theory which ruling persons have generally thrown around their sustaining institutions. He escaped the Liberal habit of his time of regarding feudalism as a disease, and treated it as a system, giving on page 143 perhaps the most succinct and accurate definition of it to be found in any language. He steadily impressed upon his hearers the wholesome lesson that the student of political institutions must lay his foundations in the study of the law of real and movable property (which, after all, is a branch of political economy if the members of that guild did but know it); "indeed," exclaims Professor Maitland, "our whole constitutional law seems at times to be but an appendix to the law of real property" (p. 538). Taken in its entirety, this volume forms the best general constitutional history of England which can be placed in the hands of university students who have already mastered the elementary outlines of the subject. The lawyer, even in this "kingless commonwealth across the sea," whose law Maitland did not forget while absorbed in black letter lore,

*THE CONSTITUTIONAL HISTORY OF ENGLAND. *By F. W. Maitland.* New York: G. P. Putnam's Sons. $3.50.

will find these lectures stimulating and suggestive, if he loves the law as a noble instrument thru which human relationships are exprest and regulated. The editorial supervision is done with that discrimination and good judgment which characterizes all the work of Mr. Fisher.

Reform of Care for the Insane

It is evident that the newly awakened sense of humanity is not to be satisfied with our present-day methods of caring for the insane. Unfortunately most of those who care for the ever-growing number of the insane do so not from any feeling of humanity, but solely because this is one way of making a living. Nurses for the insane must have considerable physical strength or they are likely to suffer occasionally from the caprices of patients. Besides, a certain hardness of disposition is almost a requisite or they will take up some other occupation in life than this which makes so many calls on the sympathies. It is not hard to understand then that there should be constant complaint with regard to the attendants in public and private insane asylums. What is needed in an attendant on the insane is supreme tact, unalterable gentleness of disposition with absolute firmness of character, lack of all the meaner sides of human nature, and especially of any feeling for revenge or any sense of wounded dignity that would require vindication. With this in mind the review of the two books before us becomes easier. Mr. Beers, a graduate of Yale University, has written a striking psychological monograph in the story of his experiences in insane asylums.[1] As might be expected, he has found much to complain of. Probably the most wonderful thing about this story is the fact that in spite of indulgence in actions and manners and habits that were evidently due to insanity, he still had left the power of reasoning with regard to all that went on around him and a marvelous memory for everything that happened during his confinement.

The emphatic lesson of Mr. Beers's book is that in some of the insane at least there is a sphere of reason entirely untouched by the insanity that may be unable to prevent insane actions, yet can call before the bar of its judgment not only what the patient himself does but all the things that are said and done all round him. Ordinarily there is too much of the presumption that an insane person cannot reason rightly with regard to anything. The consequence is a lack of discrimination in treatment which may have, as here told, serious consequences in the resentment evoked by it.

Mr. Beers's book is already doing much to work the reformation he aims at. The care of the insane is an extremely large question, however, and unfortunately grows ever larger. Dr. Barrus's book[2] brings out very clearly how high the ideal of the nurse for the insane must be. There are here directions not only for the medical and clinical care of the insane, for their occupation and amusements, with directions as to how they may be moved and even the details of the nurse's duties when death intervenes in a case, but above all, there are some very interesting chapters on psychology so that the nurse may appreciate patients' states of minds and sympathize with their peculiarities. There are words of advice in some of these chapters that would remind one of the training of a spiritual director, to be able to help those who come to him in depressed and disturbed conditions of mind. What is needed for the reform of our institutions for the care of the insane is a better class of attendants and then better training than they have so far had. Unless those in charge of asylums pay more than they do at the present time this improvement will be very hard to bring about, and we shall continue to hear intermittently of the abuses to which patients are subjected, not all of them true and many of them more imaginary than real, and there will always be the need of inspection and reformation.

Chapters in Rural Progress. By Kenyon L. Butterfield, President of the Massachusetts Agricultural College. Chicago: University Of Chicago Press. $1.00.

Mr. Butterfield is noted among leaders in industrial education for his advanced

[1] A Mind that Found Itself, an Autobiography. *By Clifford W. Beers.* New York: Longmans, Green & Co. $1.50.

[2] Nursing the Insane. By Clara Barrus, M. D. New York: The Macmillan Co. $2.50.

views of the co-operation of the community and the school. Our schools have gone a long way toward dissevering the farm boy from farm work. They have educated him away from the farm, and he has gone home without any appreciable fitting for helping on the land. His tastes have been biased toward town life, and his fitting has been for trade or the professions. Dr. Butterfield believes that the best education that a boy or girl ever gets is home education, and the school teacher must never forget that his work is complementary to that of the home. There is a capital chapter on "An Untilled Field in Education." It is an exposition of what he calls rural social science. He emphasizes the advantage of preparing teachers as some of our normal schools are now doing, by practical work in the field. The Agricultural College of Michigan led off in 1902 with a great union meeting of the Agricultural College, the Michigan Political Science Association and Farmers' Institutes. Rhode Island has a League for Rural Progress, combining the State Board of Agriculture, Rhode Island College of Agriculture, State Federation of Churches, State Grange, State Association of School Superintendents, Rhode Island Horticultural Society, and many more similar associations. The idea is that all such associations have one common object in view; the advancement of rural knowledge and its application to human betterment. But Dr. Butterfield himself has added a more notable movement of the same sort, when, celebrating the fortieth anniversary of the Massachusetts Agricultural College, he brought into co-operation the State Grange and the Civic League and the Connecticut Valley Congregational Association, with the Y. M. C. A., and the State Library Club. This is a grand move in sociology, on an industrial basis.

On the Witness Stand. By Hugo Münsterberg. New York: The McClure Co. $1.50.

Professor Münsterberg declines to stay shut up in his study in accordance with the old ideal of the cloistered scholar. He is possest of the fixt idea that science — even his own science, which, being a young thing yet, is not treated with respect by the world at large —has a right to say something about how the ordinary affairs of life shall be managed. And since he always says things that are interesting and pertinent, differing in this from most of his profession, he often gets into trouble, if he would call it getting into trouble to call down on himself the scorn and ridicule of the newspapers. Finally, and most startling of all, he ventures to suggest the invasion by the specialist into the courts of justice, the place that the people have most jealously reserved to their own unaided common sense. Judge and jury are forced by law to choose between two categories, guilty or not guilty, sane or insane, truthful or lying, but Professor Münsterberg shows how impossible such an arbitrary distinction is and how little account is taken of the influences that may distort evidence. He asked his college students to give the size of a full moon by comparison with some object which at arm's length would just cover it, and the estimates include soup-plate, butter-plate, pea, cantaloupe, orange, carriage wheel, and all the coins from one cent to a dollar. He explains how the accuracy of a witness may be tested and a criminal brought to confession by discovering his association of ideas. He tells of men who made a full confession of murder and then the murdered man turned up alive and well, of alternating personality and lapses of consciousness, and of a hypnotized lady who willed him all her property. Still he has not convinced us that the psychological expert is yet qualified to take entire charge of things.

Socialists at Work. By Robert Hunter. New Hunter. New York: The Macmillan Co. $1.50.

The writer of this study spent some months in Europe, attending congresses, interviewing labor and socialist leaders, watching parliaments in session and reading socialist publications. Himself a socialist, officially allied to the class-conscious wing, he naturally reports with enthusiasm and some exaggeration the triumphs of the European parties that bear the same label as himself. He shows that, under the general name of socialist, powerful political parties are forming in

most European countries, parties that exercise an influence incomparably greater than the socialist parties in America. But, while all these parties profess ideals that have important points of resemblance, a candid reader of this exposition will feel that actually the label rarely means the same thing in two countries. In Italy the Socialist party "has been forced to occupy itself mainly with purely political questions"; in Austria its great conquest of recent years, won after bitter struggle, has been a law that gives men when twenty-four years old the right to vote; in Belgium also its battle is for electoral reforms; in France antimilitarism, freedom from work on Sundays and the right of state employees to organize have been the live questions; in Germany the ever-present topic of army and navy is now joined by the demand, so far ineffectual, for abolition of the medieval suffrage scheme in Prussia; in England old-age pensions and relief for the unemployed have been dominant issues; while in Russia the socialists are revolutionists, whose right to live is still in dispute. Therefore, tho there is some excuse for assuming that all socialist parties are of one faith, in political action they are really no more alike than Republicans, Democrats, Populists and Prohibitionists. Nevertheless, their international congresses and their aspiration for the solidarity of the workers of all lands are valuable, for they give a consoling promise for the world's future peace. Of necessity socialist schemes for social reconstruction will wait for fulfilment in each country upon that country's political and industrial development; but if the by-product of the dream of a united proletariat be the refusal of socialists to take arms against each other, the world will surely be the gainer for their amiable illusion. Being a party man, our author is true to the old party precept: "Claim everything." For example, he puts down pretty well every social improvement of modern times in Germany to the credit of the Social Democratic party. Altho the socialists have had a negligible representation in city governments, and, until recently, scoffed at municipal reform, he attributes to them well nigh all the merit for the widespread municipal ownership, the drastic building and sanitary laws, the abolition of slums, and the fine educational system which the professional mayors, the intelligent bureaucracy and the enlightened citizenship of all creeds in German cities have secured.

The Romance of the Reaper. By Herbert N. Casson. New York: Doubleday, Page & Co. $1.00.

The Story of Iron and Steel. By Joseph Russell Smith. New York: Appleton & Co. 75 cents.

These two volumes illustrate the different ways of telling a similar story. Mr. Casson is primarily a magazine writer, with a marked gift for putting information in a striking way. At every paragraph's end he seems to catch his reader ready to snooze, and, instantly, to wake him up, he devises a new sensation—a startling comparison ("Like Mohammed, Cyrus McCormick had his visions and a period of preparatory solitude"), an amazing calculation ("Iowa with her hog money could pay the salaries of all the monarchs of Europe"), or a challenging epigram ("The harvester is the best barometer of civilization"). Reading a chapter by Mr. Casson is like holding the handle of an electric machine — one gets a series of shocks that make the nerves tingle. On the other hand, Dr. Smith's book is the outgrowth of courses of lectures prepared for his students at the University of Pennsylvania. His style is clear and simple; he has succeeded in his purpose to "make every paragraph intelligible to the lay reader," but it would still be possible for an unregenerate man to take a nap while scanning the pages. In a previous work Mr. Casson has told the same story in his sharpshooter way, and how different was the effect! Both methods have their merits. Both give the essential facts accurately; but while the style for the million puts a point on the fact to make it pierce the dulled mind of the reader returning home fagged from business, the academic style expects the reader to bring brains to his reading clear enough to grasp a simple pellucid statement. A trained mind is irritated by the touch of exaggeration, the constant electric flashes and the straining after effect which make the successful ten-cent mag-

azine manner. The more dignified way of the professor must, alas! pay for its dignity by losing readers. Literature, religion, art, science—all must take a tinge of yellow before they can reach the multitude. Mr. Casson's subject is truly a romance. The tenacious struggle of the inventors of the reaping machine, their Titanic combats for supremacy, the succession of mechanical triumphs that have produced the modern self-binder and the final development of the Harvester Trust, together form a wonder tale of modern industry as marvelous as a story from the Arabian Nights. The story of steel is equally thrilling to those who have eyes to see, a story of terrific energy, prolific invention, daring enterprise and stupendous success. Both steel and the reaper will take a high place in the history of our own times.

Motor Days in England. By John M. Dillon. New York: G. P. Putnam's Sons. Pp. xxi, 283. $3.50.

As a privately printed book, designed only for a small circle composed of those who actually took part in the motor tour of England and their most intimate friends, *Motor Days in England* might have some *raison d'etre*. It is a beautiful specimen of book-making and is profusely illustrated. Some of the views are familiar reproductions from well-known photographs, but many of them are from photographs and pencil sketches taken during the trip. There is, however, no justification for its being offered to the general public. The route chosen is quite on the beaten track; and the author and his friends do not appear to have gained the least insight into English life, or even to have attained to a fair acquaintance with English scenery. The literary and historic notes are the merest gossip, frequently unreliable and inaccurate, always *jejune* and of little interest. The reader is, at the same time, left in utter ignorance of the personnel of the party, and given glimpses of an almost inexcusable intimacy of some of its members. The whole tone of the book is an answer to the question, sometimes wonderingly asked by stay-at-home Americans, "Why are Americans abroad unpopular?" The supercilious superiority of the party of motorists to the population of the country which was giving them hospitality, the forced and labored jokes, which might well make an Englishman more incredulous concerning American humor than the author expresses himself to be concerning that of Englishmen, and the many banal observations made concerning the various places of interest visited, force on the reader a feeling that an Englishman must have had to put a strong constraint upon himself to retain his courtesy and good humor toward such guests.

The Challenge of the City. By Josiah Strong. Forward Mission Study Courses. New York: Young People's Missionary Movement. $1.00

It is an encouraging fact that this book, designed to stir professing Christians to a sense of their duty to the unchurched swarms in our cities, has already been widely read. The book is well adapted to its purpose, weighty with startling facts, warm with religious zeal, orderly in arrangement and clear in style. In two generations, argues the writer, the urban population rose from 9 to 33 per cent. of the whole population; inevitably the cities will continue to increase; within a few years they will hold more than half our people. Churches decrease as cities increase. Today cities contain not half as many churches proportionately to the population as they did fifty years ago. Therefore Dr. Strong calls for a united forward movement in the form of an interdenominational effort to cover the downtown sections of cities with a network of socialized churches and religious settlements, each church being the center for a number of settlements and supplying accommodations such as a large auditorium and gymnasium, which the separate settlements cannot economically supply.

The Legislature of the Province of Virginia. By Elmer I. Miller, Ph.D. Columbia University Press. New York: The Macmillan Co. Pp. 182. $2.00.

In this little volume Dr. Miller has made a very interesting and readable contribution to the Columbia University Series of Studies in History, Economics and Public Law. Virginia was the first of the American colonies to possess any

kind of representative institutions. On July 30th, 1619, before the Pilgrim Fathers had landed on Plymouth Rock, the first elected assembly of the New World met in the church at Jamestown, and organized itself on the model of the House of Commons at Westminster. Not very much was accomplished by this assembly. It was prorogued on account of the great heat on the 4th of August, but in the short space of six days, one of which was Sunday, the Assembly levied a tax on tobacco to pay for its expenses, and past laws, which were sent to England for confirmation, dealing with land tenure, the relations of whites and Indians, the punishment of idlers, gamblers and drunkards, the payment of church dues, the planting of crops, and the regulation of the duties of ministers and the conduct of servants.

Literary Notes

....A little table talk of little importance is published in *Mr. Gladstone at Oxford, 1890* (Dutton, $1.00).

....Who would have thought that there were 67 ways to cook codfish, 130 ways to cook salmon, and 27 ways to cook frogs' legs? Yet Olive Green has them and other recipes in like profusion in her latest volume, *How to Cook Fish* (Putnam, $1.00).

....Mrs. Cowden-Clark's collection of *Shakespeare Proverbs*, long out of print, is now republished by Putnam's ($1.50), its value much enhanced by notes and an introduction by Prof. W. J. Rolfe, in which he discusses the definitions of the word "proverb," beginning with James Howell's, that it must have "sense, shortness and salt."

....Prescription by correspondence for all manner of patients with only a checked list of symptoms to go by is rightly regarded as a dangerous practice. Still more risky is the recommending of books on no other information than a letter like the following:

Gentlemen:—I am a minister over fifty years of age and belong to an evangelical church. I know a little about higher criticism, psychology and sociology, but very little in comparison with what I should as a minister. I write to ask you to suggest a few (very few) works on these subjects. I would like such as are easily read and understood, for I have not a great deal of spare time, and besides have not been accustomed to think as have some of my brethren. A reply to this note in THE INDEPENDENT would oblige more persons than perhaps you think. I have conversed with brethren on this subject, not a few of whom feel as do I. You will understand why I do not sign my name, but send on anonymously.

A MINISTER.

We take it that our unknown friend wants something to put him in touch with modern movements of importance to the religious world, but not satisfactorily presented, at least by their advocates, in his ordinary denominational literature. In this department we give from week to week comments on the new books that will, we believe, enable any reader to determine which of them will be most likely to suit his needs. But here is a brief list of books published within the last few years, representative of certain new and diverse modes of thought, that are just now sufficiently influential to be worth knowing about: *Sin and Society*, by Prof. E. A. Ross, of the University of Wisconsin (Houghton, $1.00); a lively discussion of financial and political evils of the day. *Folkways*, by Prof. W. G. Sumner, of Yale (Ginn, $3.00); a study of the development of ethical ideals from popular customs. *New Worlds for Old*, by H. G. Wells (Macmillan, $1.50); a roseate view of a socialistic Utopia. *Religion and Medicine*, by Rev. E. Worcester and others (Moffat, $1.50); the mental treatment of nervous disorders as practised in the Emmanuel Church, Boston. *The Religion of a Democrat*, by Charles Zueblin, of the University of Chicago (Huebsch, $1.00); lectures on the decline of orthodoxy and what may take its place. *The Prophet of Nazareth*, by Prof. Nathaniel Schmidt, of Cornell (Macmillan, $2.50); a view of the personality of Jesus from the standpoint of higher criticism. *Christian Faith in an Age of Science*, by Prof. W. N. Rice, of Wesleyan (Armstrong, $1.50); a more conservative discussion of evolution and similar scientific topics. *Pragmatism*, by Prof. William James, of Harvard (Longmans, $1.25); a new way of looking at things that is creating some stir in the metaphysical world.

Pebbles

WE know what Sherman said of war.
I know a clerk
Who claims that saying is by far
More true of work.
—*St. Paul Pioneer Press.*

"WHY is a pancake like the sun?"
"Because," said the Swede, "it rises out of der yeast and sets behind der vest."—*Good Housekeeping.*

"YOU have three pairs of glasses, professor."
"Yes; I use one to read with, one to see at a distance, and the third to find the other two."
—*The Evangelist.*

AMONG the blunders reported from the schools are the following, some of which may be new: "Bigamy is when a man tries to serve two masters." "The law allowing only one wife is called monotony." "A lie is an abomination in the sight of the Lord, and a very present help in time of trouble." "The liver is an infernal organ of the body." "The bowels are five in number, a, e, i, o, u." "The Priest and the Levite passed on the other side because the man had been robbed already." "Soldiers live in a fort; where their wives live is called a fortress." "A buttress is the wife of a butler." "A schoolmaster is called a pedigree." "Filigree means a list of your descendants." "The wife of a Prime Minister is called a Primate."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Jewish Defense

It is very dangerous to make a general statement unless you know; and it is clear from the careful statistics given by Mr. Oppenheimer in The Independent this week that General Bingham did not know when he said in *The North American Review* that the Hebrews in this city, with a quarter of the population, supply half the criminals, and are thus a peculiarly criminal body. We do not wonder that the Jews have been both surprised and indignant that such a statement should have come from the man who is at the head of the city police, and thus exceptionally able to get the facts and responsible for giving them as they are. Jewish committees have been gathering the statistics of crime, and they declare as the result of much more careful tabulation than Commissioner Bingham has made, that his statement is injurious and untrue, and that the Jewish percentage of crime is rather smaller than larger than that of the community as a whole. It will now be for General Bingham to justify his statement if he can, and if he finds himself in error to admit it like a gentleman.

We should expect crime among the Jews, but we should not expect a large percentage. Jews have, to be sure, suffered in Russia, and they come to this country poor; but on the other hand their family life is exceptionally favorable to morality. Family ties are close, and parental care insisted upon in their religion and usually exercised. They have a strong race sentiment, and they are so bound together by religious sentiment and national history that they feel mutually responsible for each other, and accordingly their poor and sick seldom become a charge on the public. All this tends to social morality. We should expect less rather than more crime, and such the figures prove to be the case, notwithstanding General Bingham's impression.

The fact is that racial segregation, whether imposed on a class of people or voluntarily assumed, always acts to the prejudice of those thus separated from the mass of society. They suffer for it often most unjustly, whether they be Jews, segregated by religion; Italians, segregated by language, or negroes, segregated by color. In the case of a crime it is always mentioned that the criminal is a Jew, an Italian or a negro. One sees the race connected so often with crime that one comes to think the race particularly criminal; and the reputation of criminality is increased by numerous plays, stories and witticisms, while their good deeds are credited to the community as a whole with no mention of the fact that they come from the incriminated race.

The one thing that separates the Jews from the rest of the people is not their religion, for it is hardly to be distinguished from that of many others who call themselves Christians, who worship one God, and are governed by the general ethics. It is their refusal to intermarry with others. That compels social segregation, and a certain prejudice if not resentment. But in this they are not peculiar. The Catholic Church presses a similar rule, and requires conversion of the non-Catholic partner. We have seen it lately in a royal marriage. In the case of the Jews their pride of history, with their maintenance of the Semitic rite of

circumcision, holds them apart; for if the so-called Abrahamic rite were discarded and intermarriage were to follow, the Jews as a separate race would cease to exist, even as a religion, since their religion is less distinctive than their rites. But for their rites, and one rite in particular, they would melt into the total community. Therefore they hold it very dear. It is in many cases the one thing that distinguishes them.

Those of us who are Christians owe all our special religious faith to Jews. Jesus was the greatest of Jewish prophets. Paul and Peter and John were Jews. Nothing can be more unreasonable than for Christians to feel an ill-will to the race from which He came whom they call their Lord.

The Wright Brothers

THERE are plenty of men now who have flying machines, but there are only two so far who have learned to fly. As Leonardo da Vinci foretold, man may make himself wings, but he will find it hard to use them, for he must first acquire "the soul of the bird." The Wright brothers have come nearer to acquiring the soul of the bird than any other human beings. The imaginative French journalists are so impressed by it that they cannot help talking about the bird-like profile of Wilbur Wright, his round, unblinking eagle eye, his clawlike fingers and his hopping gait. The admiration now excited in both hemispheres is not because they have beaten the record for time and distance, for this is a mere matter of gasoline capacity, but because they realize what mankind has always dreamed of, the power to move about freely in three dimensions.

The Wrights have pursued what is now held to be the normal course in evolution, the function preceding the organ. They learned to fly before they built their flying machine. They could soar and float, dive and rise, circle and glide, before they attached a motor. Three years they spent in this practice, gradually fitting the machine to their needs as they discovered them. Their rapid progress in the last few weeks is merely the utilization of the knowledge and skill they acquired when they were tumbling around the sand hills of North Carolina eight years ago.

They are also receiving many years' back pay of glory which their retiring disposition has hitherto kept from them. Their conquest of the air is hardly less interesting than their conquest of the public. France, the land of Montgolfier, Santos-Dumont and Farman, received them with incredulity and contempt. The French papers accused them of *le bluff* (an epithet from a foreign language always sounds worse). They spoke of their "pretended achievements" and said that "they argued a great deal and experimented very little," which is rather amusing, since their policy has been to a fault the opposite extreme, to experiment a great deal and not talk at all.

But at the first demonstration of Wilbur Wright's unique powers the French public promptly repudiated its suspicions and became lavish in its praise. M. Delagrange, his closest competitor, was frank to acknowledge his superior skill, tho he confesses that he could not understand his personality. He refused to be lionized, persisted in sleeping on a cot beside his machine, and doing his own cooking on a gasoline stove, rather than lodge at a hotel, and did not show any regard for the crowds who came to see him, except to wish them out of the way. "If it had been I," said Delagrange, "I would have made a flight if I had been likely to smash up at three hundred meters rather than disappoint those ten thousand people." But Wright said he wanted a little more practice before trying even a light wind. He showed himself equally careless of his reputation for courage when in reply to the question whether he would try for the prize to be awarded to the first man to cross the English Channel in an aeroplane, he said that he thought he could do it, but would not try now, because it "would be risky and would not prove anything more than a journey over land." Orville Wright gave a similar answer to the reporters who inquired why he kept over the parade ground. Yet these are the men who were first attracted to aeroplanes by reading that Lilienthal had been killed in using one.

Next to their indifference to spectacular demonstrations, the quality that attracts the attention of the reporters in

France and America is their persistency in doing everything for themselves, not even allowing others to wait on them. But that also is one secret of their success. They have made their own machines from the beginning, even the engines, in their little bicycle shop at Dayton, O. Their machines are more clumsy and heavy than those of their rivals, but they know them, they have grown up with them.

The chief peculiarity of the construction of the Wright machines is the curvature that may be given at will to the aeroplanes by means of wires connecting the outer corners. The front edges are rigid, but the rear edges can be bent by moving a lever at the right hand of the operator. In making, for example, a turn to the left, the right wing is first tipt up at an angle and therefore rises. But since it now offers a greater resistance to the air in this position the machine would tend to turn toward the right with this wing as a pivot. This is opposed by the use of the vertical rudder behind, which is manipulated by a second lever at the right hand. As soon as the machine begins to come around both levers are reversed, and the left wing, offering now greater resistance, becomes the pivot around which the turn is made. A third lever at the left hand controls the horizontal rudder in front, steering the aeroplane up or down. This construction gives great stability, even in a wind, and however high it may be in the air when the power is shut off it glides to earth at a gentle angle like a dirigible parachute. The Wrights have solved their problem in their own way with no masters but the birds. Without money or influence, with no aid from the Government or the scientific research funds, they have worked out their invention in the good old American way, and have earned their success.

A Pyrrhic Victory

THE noisy, indecent and most contemptible bigots who objected to the procession of the Eucharistic Congress in London have won a Pyrrhic victory. They have had their way; but it is the last time. The obsolete law of three centuries ago, which had been quite forgotten, but which these mischief-makers raked up, those who ought to have been buried with Titus Oates, gave them a color of legality, and it compelled Prime Minister Asquith most regretfully to ask the Archbishop of Westminster not to carry the host in procession; and those in charge of the ceremonies immediately and loyally obeyed. Accordingly on Sunday last the host was not carried, and all ecclesiastical vestments pertaining to the Blessed Sacrament were eliminated, and bishops and archbishops wore only their ordinary court dress. Even so they were hooted and insulted by a vulgar mob.

Probably the Prime Minister never performed a duty which gave him so much pain and shame. But he could not help himself. Such processions have been made before many times in England within the last few years and nobody minded it. Had no fussy and vicious bigot protested the Government and the police would not have objected. Indeed consent had been given. But even a dead law has to be respected when raised from its grave, and Mr. Asquith did what he had to, and the Catholic authorities acted like gentlemen and Christians, where their foes had acted even with rude impiety. They belong in the class whom Saint Paul and the town-clerk of Ephesus denounced as robbers of temples.

For just what was their crime? Consider what the occasion was. Many millions of His Majesty's subjects are Catholics. They take literally our Lord's words "This is my body." They and their many visitors from foreign lands were to celebrate the Blessed Sacrament. For the benefit of the multitudes who could not find room in the Cathedral the consecrated bread and wine were to be carried in procession by the celebrants thru a very few streets close by the Cathedral, where the people were mostly Catholics. It was a solemn, a most sacred religious ceremony to be held in the presence of thousands who would kneel in worship of Our Lord as there presented. These profane enemies of religion like jackals have robbed the worshippers of their sacred rites and broken into the celebration of Holy Communion. One cannot sufficiently express indignation at such conduct.

But they succeeded—for just this once.

It is a Pyrrhic victory. Parliament will straighten that out very speedily. There will be a search of the remnants of old acts and we believe every one of them will be repealed, unless an exception be made for that particular act which requires the King to be a Protestant. The only excuse for that one is that he is head of the Church of England; but the Established Church is an anachronism and will soon cease to be ruled after the Erastian pattern by the State.

Mr. Kensitt and his fifty-one protesting societies are jubilant today over their victory, but the triumphing of the wicked is short.

The other side is simply this. The Lambeth Conference had just been held. Its time and place were announced long ago. This Eucharistic Congress seems to have been a sort of reply. Never before had so many Cardinals been present at this congress. Australia, America, Spain, France, Ireland and Germany sent Cardinals. England alone, in whose capital the congress was held, was unrepresented in the Sacred College, gathered under an Italian Cardinal at Westminster. And the reason why was solely because at the moment there is no English Cardinal. The Archbishop of Westminster wears only the purple, and probably will never wear the red, because of the scandals, chiefly financial, at Southwark which came out after his transfer from that see to the metropolitan. Those matters are too fresh in the public mind.

As is the usual practice of Rome, only religious topics were discussed; not even a vote for the restoration of the Temporal Power has been reported in the press. Love and dutiful affection and loyalty to the Sovereign Pontiff; sympathy in his trials, but no appeal to the nations of Europe to take up the lost cause. And yet to suppose that the Sacred Host was the magnet which drew to Westminster a Papal Legate and the Cardinals is to show a poor familiarity with Vatican ways and means.

In Italy, aye in Rome itself, religious processions have had difficulties; so also in parts of Spain, while France—at least many French communes—forbids them. It would have been a telling point if England would have allowed—even in a distant silence—the prepared pageantry. But England cited the old law and the authorities, tho unwilling to go by the book, kindly intimated that the Congress keep within the law, half obsolete as it is.

The Archbishop of Westminster yielded at the eleventh hour, too late to prevent Sunday's row. No matter how well it is shown that the mob were non-representative of the better feeling in England, the fact remains that the English Government took a hand in repressing Catholic exuberance. Before Europe and America, then, official England lines up with Italy and France and Spain partially in their stand toward processions, religious only in ritual but regarded as political in fact.

Making Religion Impracticable

We have, we trust, a sufficiently kindly feeling for Socialism; but it disturbs us when its advocates would tell us that it will banish all poverty and crime, and bring in the ideal golden age. An illustration of a similar extreme claim is to be found in the short address signed by 161 clergymen of 24 religious denominations, members of the Ministers' Socialist Conference, of which the Rev. John D. Long, pastor of the Parkside Presbyterian Church, Brooklyn, is secretary. The declaration we would inculpate is as follows:

> "We believe that the present social system, based as it is on the sin of covetousness, makes the ethical life as inculcated by religion impracticable."

Here are two assertions, one that the present social system is based on the sin of covetousness, and the next that in the present social system the ethical life inculcated by religion is impracticable. Both of these assertions we deny.

Covetousness is "a strong or inordinate desire of obtaining and possessing something, without regard to law or justice," and is so defined in the dictionaries. Now our present social system is based on no such desire. It is based on law, and the purpose of law is justice, however imperfectly formulated or executed. The plan and purpose of our social system, is, so far as physical values (the object of covetousness) are concerned, is to make a fair exchange of value for value,

of labor and money, of barter and sale, of service and salary. There is frequent incitement for covetousness and disregard of law and justice, but that is not essential; it is disapproved and is punished as far as possible by the laws. The chief purpose of law is to prevent infractions of law and justice by covetous people, for the reason that they are condemned by our present social system and we are ever trying by law to restrain covetousness as fast as it invents new methods of injustice.

If the first statement is a libel on our present social system, the second is a libel on millions of men and women who are living "the ethical life inculcated by religion" which it is declared is made "impracticable." They not only do not desire and seek to take their neighbors goods unjustly and unlawfully, but they expect to make fair returns for what they receive in business or work, and they try to live according to the Golden Rule.

Among those of whom this is true are the 161 clergymen who have declared themselves Socialists, but who live within our present social system. They have not found the ethical life impracticable for themselves, however many unethical thieves, embezzlers, and other rich and poor covetous people they see about them. It was within such a social system, based on the rights of personal property, on labor for wages, barter and sale, buying and selling, borrowing and pledging, that the Tenth Commandment forbidding covetousness was formulated for the obedience of the people. It was within such a social system that Our Lord laid down the Golden Rule and the command to love one's neighbor as one's self, and he did not regard it as impracticable.

We have little patience with the feebleness of will which wails out that it is impossible, as things are, to live an ethical life. We do not "covet" the sort of stalwart virtue which will be produced by creating a condition in which covetousness and other temptations will be automatically eliminated, and a lukewarm compulsory goodishness will be imposed on everybody until God himself is sick of it. Indeed we have no idea that "the Co-operative Commonwealth of Socialism," which these ministers ask for, will create such "an environment favorable to the practice of religious life" as they anticipate, a life that can become really valuable and robust not without dust and heat.

We note that this manifesto declares that the secretary holds *in retentis* the names of nearly ten times as many who are in hearty accord with the signers. We trust they will have the courage to tell and teach openly what they believe, and that meanwhile they will not find it "impracticable" to practice their religion ethically.

Jan Pouren Case

Not many persons in this country have seen the full report of the second Russian Duma's committee that investigated the tortures employed in prisons of Livland and Courland. A copy is on file in the Congressional Library at Washington. Toward the end of its redundant specifications, a typical paragraph relates that, in September, 1906, a radical editor was flogged and his wounds "massaged" with whip handles; that four men were trampled on by dragoons and the flesh torn from their calves with spurs; that a railroad watchman's daughter was tortured to death, and that others were treated in like kind. Then follows this sentence: "They beat the eight-year-old Anna Pouren, demanding of her she should tell the whereabouts of her father."

Jan Janoff Pouren is now in the Tombs jail, in New York, but he may soon be taken out and handed over to the Czar to be dealt with for his "crimes." Jan is a mild-appearing, fair-haired Lettish peasant, who came to America about two years ago from the district of Riga, after the revolution there had been put down. His insignificance kept him out of sight of the leading Russian radicals here, but the solicitude of his "Little Father" followed him even to the abysses of the New York East Side. Marvelous is the Czar's omnipresent eye.

Last winter a requisition was made for Pouren's return under the Russian extradition treaty. He was charged with

many high-sounding burglaries, arsons, murders, and attempts to murder. Then his case was looked into by a society of leading local workers for Russian liberty, who arrived at a twofold conclusion: That Pouren was a *bona fide* revolutionist and that this demand was an attempt to overthrow the American right of political asylum. If he should go, why not hundreds of others? From the moment that this became clear, the legal contest has been a struggle to the death between the Russian Government and its united fugitives. Many months the defense has held out, but at last Commissioner Shields, in the United States District Court, has adjudged that Pouren is probably guilty of every named form of crime, except murder, and shall be surrendered.

That Pouren was a genuine political offender engaged in civil war according to the methods of his party the evidence seems to show.

One of the accusing witnesses said of Pouren: "At the time of the revolutionary movement he has taken part in the same and now the rumor is he hides himself in the woods." Professor Schiemann's history of the Baltic revolt fully explains the well-known guerrilla bands called "Forest Friars," or "Brothers of the Wood," in which the Social Democrats operated after they had been scattered by the troops. They constituted a formal guild, with bylaws; forced levies were made upon the property of enemies; spies or informers were attacked, and inn or saloon keepers especially were treated as unfriendly. If Irish anti-landlord riots are of "political" character, as our courts have held, it is absurd to deny equal privilege for the Lettish rebellion, even after it had become a forlorn hope.

Another deponent admits that when "Pouren said that it is necessary to set fire to the inn," the incendiaries ordered him to help the keeper carry out the effects of his father-in-law. Truly a chivalrous discrimination for vulgar perpetrators of arson!

The methodical bookkeeping by which Pouren regulated his practice as a "burglar" appears from such allegations as this: "He aimed his revolver at me and said I must immediately give him 44 rubles. He explained that they have already taken 6 rubles before and now I must give 44 rubles, this being the balance of the 50 rubles due from us."

Existing martial law and the motive of personal assault are both revealed in this accusation: "They beat me for my having indicated to the soldiers where they hide themselves."

The foregoing admissions were not obtained by cross-examination, but appear in the Russian Government's carefully prepared case, which shows evidence gained by torture, which was at its worst in the very district and epoch from which this testimony was drawn. Recently thirty-one members of the third Duma have signed a document containing sixty-seven columns of grewsome recitals. These torments were not mere punitory beatings, but systematic processes to extract information. Victims were afterward commonly put out of the way under pretext that they had tried to escape. With this well-known fact we may compare the Russian officials' naïve remark that two of Pouren's confederates from whom they had elicited murder charges against him were "later killed by the troops at the attempt to escape." Russian sympathizers here affirm if returned that Pouren will be put to torture to wring from him secrets of Lettish societies in New York or elsewhere.

The Russian refugees and their friends are making heroic efforts to save him from extradition. The return of genuine thieves, like the man who stole furs, they do not object to, but they believe Pouren to be simply an escaped revolutionary, like multitudes of others who might as well be extradited. We hope that our Government will refuse to send him back to Russia.

Memory in Plants

THE inaugural address of the president of the British Association for the Advancement of Science, meeting in Dublin, September 2d, had a twofold interest, personal and scientific. Mr. Francis Darwin took this occasion to make a vigorous defense of the theory of the inheritance of acquired characteristics which has of late been discredited by the influence of Weismann. His immediate followers out-Darwined Darwin, for they

made his natural selection the sole factor in evolution, while Darwin himself, tho regarding it as the most important, also gave much weight to the heredity of habits. In fact, we might say that this presidential address constitutes in itself an argument for a still more advanced theory than the speaker attempted to prove, for it seems to be a clear case of the inheritance of acquired ideas. The views now developed by Francis Darwin were in part suggested by Charles Darwin just fifty years ago in his paper on "The Origin of Species," and they are still more strikingly reminiscent of the curious poem of his great-grandfather, Erasmus Darwin, "The Botanic Garden," or "The Loves of the Plants," published in 1789.

Botany is the present Mr. Darwin's peculiar province, and from it he draws his main arguments against the mechanical theories of heredity and of the reactions of living beings now popular and in favor of the mnemic theory of Semon that even the lowest of organisms acquire habits perpetuated by a sort of memory, which he regards as the basis of heredity. When we try to remember the last verse of a poem we usually have to run over rapidly the preceding verses from the beginning. This, he says, is paralleled by the development of the ovum into the perfect organism, during which it passes thru a series of changes believed to represent the successive forms thru which its ancestors past in the process of evolution.

He shows that plants which have become accustomed to sleeping at night retain their twenty-four hour habit when kept continuously in the dark, and that minute animals, which rise and fall with the tides, keep up their tidal rhythm in the aquarium. Both plants and the lowest animals can be trained to an unusual periodicity or to reacting in a certain way to a stimulus, and they therefore behave differently from untrained organisms. This proves that some internal effect has been produced in the organism by the habit of reacting in this way, and there is no dividing line between such a physiological change and a morphological change—that is, a visible and permanent alteration of form, even such as may be inherited. The question of how far these acquired habits may be accompanied with or caused by consciousness he is willing to leave to the psychologists, tho he himself believes that "in all living things there is something psychic" and that even "in plants there exists a faint copy of what we know as consciousness in ourselves."

This is obviously a very different view from that now dominate among our younger biologists tho not necessarily incompatible with it. The main distinction between the inorganic and the organic kingdom is that in the former past history counts for nothing. A pebble brought from the mountains, if it is round enough, rolls on the beach just as well as those that have had daily practice for a thousand years. It is a fundamental principle of thermo-dynamics that it makes no difference whatever by what route a system passes from one point to another in its cycle. If a physicist has a tube full of a certain gas he does not care whether the molecules have been in the habit of being condensed to a liquid once a day for the past year or whether they have just been freed from a salt. He knows they will behave just the same in any case.

But it is otherwise with an organism, even the simplest. Its past history makes a difference with it. The way it has been accustomed to behaving in the past affects its actions in the future, or as Mr. Darwin would say, it has a memory and can acquire a habit. A burnt child dreads the fire. A burnt stick does not. A carnivorous plant or a sea anemone belongs in the same class as that part of the people that you can't fool all the time.

Prof. Jacques Loeb, of the University of California, has been endeavoring to explain the movements of the lower animals as simple tropisms or reactions to stimuli thru physical or chemical means, direct and inevitable like the movements of a compass needle under the influence of a magnet. If a polywog turns toward the light it means no more than that a comet heads to the sun. According to Mr. Darwin's view the reaction, tho it may be regarded as ultimately no less mechanical, is not the direct effect of the stimulus but due to the inherited habit of the organism to behave in a certain way under these circumstances. The two

biologists are, therefore, in a way working on opposite sides. Darwin would extend the psychic factor down thru the whole realm of life. Loeb would extend the physical and chemical interpretations of vital processes as far up as he can. Which view is the more useful remains to be seen. A science generally makes most progress when two interpretations are offered for the same phenomena.

At the conclusion of his address Mr. Darwin showed how his theory applies to evolution in the following words:

"The great engine of natural selection is taunted nowadays, as it was fifty years ago, with being merely a negative power. I venture to think that the mnemic hypothesis of evolution makes the positive value of natural selection more obvious. If evolution is a process of drilling organisms into habits, the elimination of those that cannot learn is an integral part of the process, and is no less real because it is carried out by a self-acting system. It is surely a positive gain to the harmony of the universe that the discordant strings should break. But natural selection does more than this; and just as a trainer insists on his performing dogs accommodating themselves to conditions of increasing complexity, so does natural selection pass on its pupils from one set of conditions to other and more elaborate tests, insisting that they shall endlessly repeat what they have learned and forcing them to learn something new. Natural selection attains in a blind, mechanical way the ends gained by a human breeder; and by an extension of the same metaphor it may be said to have the power of a trainer—of an automatic master, with endless patience and all time at his disposal."

Judge Gray's Decision

It will be noticed that Judge Gray, who wrote the decision declaring the Hepburn law unconstitutional is a Democrat, and one of the most distinguished and trusted of Democrats. He was United States Senator from Delaware, member of the Peace Commission at Paris, is a member of the Permanent Court of Arbitration, was Chairman of the Anthracite Coal-strike Commission, and has been prominentlv suggested as Democratic candidate for the Presidency. The dissenting judge is a Republican from Pittsburg, Pa. The commodity clause of the act makes it unlawful for a railroad to transport from one State to another or to any foreign country any article or commodity mined or produced by it. Lumber is exempt and the clause is aimed particularly at the railroads owning coal mines. The Interstate Commerce Act provides a penalty not to exceed $5,000 for each violation of the clause. It was contended by the defendants that each car of coal shipped in violation of the act could be construed as an offense. This would show a monstrous confiscaton of property, as, for instance, in the case of the Lehigh Valley Railroad, which ships daily 1,200 cars of anthracite in interstate commerce and would be liable to a fine of $6,000,000 per day, which would in a week double the fine imposed on the Standard Oil Trust.

Mr. Kent's "National Monument"

A fine combination of poetic instinct with business tact was that which induced Billy Kent, as they call him out West, to turn over to the government for safe keeping a grove of redwood giants. He had come in possession of one of those grand old California groves, and found that a power company, counting the millions of feet of lumber, had begun condemnation proceedings. He found himself helpless, and turned to the government at Washington. He asked that this grove might become United States property, but Mr. Roosevelt answered that he was unable to accept the magnificent present for the people without a special law. The condemnation proceedings were hurried thru the courts, but Mr. Kent was as determined as the greedy lumber cutters. A statute was found, obscure, and placed on the books just after the Civil War. It provided that plots of ground of historical interest could be accepted by the President of the United States as "national monuments." The intent of the statute had been to make possible national cemeteries and parks of battlefields. Mr. Kent asked the government to make his grove of redwoods a "national monument"; and that is how it happens that, by the glad assent of President Roosevelt, there is a national monument down in the gorges of the California mountains. Billy Kent has provided for the care of the grove for ten years to come, and a flag of the United States warns trespassers and prevents condemnation. This unique gift is to be called the "John Muir

Woods." There are two hundred and ninety-five acres, carefully surveyed, and now the property of the American people. It is a fitting appendix to this story that eleven foreign governments, appreciative of Mr. Kent's public spirit, have decorated him, and this beside a large number of national and international societies. Mr. Kent was at one time an alderman of Chicago, and there gained a lasting reputation for fighting the gang which had control of the city.

The Niagara Movement

The negroes of the Niagara Movement, who met the other day in Oberlin to the number of "about fifty delegates representing eleven States," have presented a very brief address to the negroes of the country. The first recommendation is this:

"We say to our own: Obey the law, defend no crime, conceal no criminal, seek no quarrel; but arm yourselves, and when the mob invades your home, shoot, and shoot to kill."

This is about what any one would recommend to white people. The other is:

"We say to voters: Register and vote whenever and wherever you have a right. Vote, not in the past, but in the present. Remember that the conduct of the Republican party toward negroes has been a disgraceful failure to keep just promises. The dominant Roosevelt faction has sinned in this respect beyond forgiveness. We therefore trust that every black voter will uphold men like Joseph Benson Foraker, and will leave no stone unturned to defeat William H. Taft. Remember Brownsville, and establish next November the principle of negro independence in voting, not only for punishing enemies, but for rebuking false friends."

Doubtless it seems to these strenuous men wise to rush into the arms of their worst foes for the sake of rebuking their lukewarm friends. Some folks will bite off their nose to spite their face, will cut off the leg to cure a corn; but Senator Foraker can advise them better.

Education in the South

At the recent meeting of the Educational Conference of the Methodist Episcopal Church in Atlanta, Dr. James W. Lee reported that the South, with 30 per cent. of the area of the country, furnishes 40 per cent. of our national exports. This same area contains more square miles of coal than all Europe. West Virginia and Kentucky alone have ten billions' worth of coal, estimated at ten cents a ton as mined. The cotton crop is bringing in annually over seven hundred millions of dollars, and that represents but a third of the agricultural production of the South. The growing of fruits and vegetables for the Northern market is increasing with leaps and bounds. The soil of the South, if we take into account the legumes which can be used for soil improvement, and the comparative ease of working such soil in contrast with that of New England, is a mine of unlimited wealth. And yet, says Dr. Lee, Harvard University alone has an annual income greater by nearly twenty thousand dollars than the incomes of all the colleges and universities of the whole South combined. During the last quarter of a century these Southern institutions have not received altogether quite ten millions of dollars. This is not a good showing on the face of it, but we have to bear in mind that Southern institutions really are making comparative progress of a very high sort. Coeducation and industrialism are almost universal, and in Georgia agricultural education has a better frontage than any other State in the Union. Another ten years ought to show a remarkable change thruout the whole South.

National Health

President Roosevelt has seldom said a better thing than when he told us that the gravest problem before us as a people is that of "national efficiency." At the Governors' onference, at Washington, it was agreed that all the States should combine in working for "the beauty, healthfulness and habitability" of the whole country. Mr. Bryan urges a larger appropriation of money for the investigation of diseases that are "affecting our national character," and Mr. Taft proposes a model public health service, aided by "making our national capital a model sanitary city." Dr. William H. Welch, of Johns Hopkins University, has recently exprest the opinion that by proper organization our death rate can be "cut in two." The Committee of One Hundred, established by the Association for the Advancement of Science, insists on a Cabinet position representing Public Health. The league formed by this committee has already twenty thousand

members, and is said to be growing at the rate of two hundred per day. It secured a health plank in both the Republican and Democratic platforms, and both Mr. Bryan and Mr. Taft are committed to vigorous action on the national health question if elected. The point aimed at is not the abolition of certain diseases, so much as the establishment of a high standard of national health—wholeness. We are very far from that national efficiency which makes it sure that we shall be able to survive as the fittest in the struggle of races and people.

No Chimney

The Technical World reports, possibly the first of the kind, a model house for the twentieth century. It is built of cement; the cheapest and healthiest of materials—a material that can be most easily kept in a sanitary condition. The foundations and walls are of concrete blocks, molded right on the ground where the house is built, and using up much of the material thrown out in digging the cellar. The interior is finished in plaster and oak, including the floors. But the most startling feature of this new house is the entire absence of a chimney. There is provision for artificial light and heat, but no provision for a fire. It is a house without a coal bin or a wood pile, and without any dangerous gases or ashes. In size it is thirty-four feet by thirty, and two stories high. It might as well be of any other style desired by its owner. The house is fronted with a large porch, and contains eight rooms on the two main floors. Its cost was less than thirty-five hundred. We believe that this is the first really radical change in house architecture since the introduction of coal. It faces the future, and shows us the way that we shall probably travel to secure our independence of coal mines and forests. We shall not freeze to death when these are gone.

Postal Reform

While our recent Congress denied us the postal reform demanded by the whole American people, in the way of postal savings banks and parcels service, we must not overlook the fact that Postmaster-General Meyer and Postmaster-General Buxton of Great Britain have brought about a reduction of postage between the United States and Great Britain to two cents an ounce, operative after October 1st of the present year. Elihu Burritt, whom we used to know as "The Learned Blacksmith," urged this change fifty years ago. He was at that time consul of the United States at Sheffield. Such a reduction has been urged by both peoples from time to time ever since. Postmaster-General James worked faithfully while in office, and since he has used his pen strenuously in the same cause. Postmaster-General Smith insisted that cheaper ocean postage was a necessity; but he retired from the office before the question could be brought to passage. Our present Postmaster-General is a very determined character, and while Congress has been balking him in one direction he has been quietly working in another. Ocean penny postage is now an accomplished fact. J. Henniker Heaton, another English reformer, has set himself to secure a reduction also in cable tolls. The present charge is twenty-five cents a word, and Mr. Heaton is of the opinion that a rate of two cents per word would be abundantly remunerative, and he hopes to secure such a rate. He argues that it will not only establish better trade relations, but bring the two nations into much closer social intercourse and promote fraternity. Now that both parties are pledged to postal savings banks and other postal reforms, the people must see to it that we are not put off much longer with promises. Postmaster - General Meyer can be relied upon to do his part of the work with promptness and energy. Improved postal and cable service are coordinate reforms.

Infection

The Merchants' Association of New York, whose first purpose is to foster the trade and the welfare of New York, sends out the following rules, governing the sanitation of our homes, the purity of foodstuffs, and the prevention of contagion. They are based on the demonstrated fact that the common house fly is a disease breeder and dispenser. That the fly is a torture during the late summer months all understand, but they do not comprehend the fact that it is also dangerous to human life:

"Keep the flies away from the sick, especially those ill with contagious diseases. Kill

every fly that strays into the sick room. His body is covered with disease germs.

"Do not allow decaying material of any sort to accumulate in or near your premises.

"All refuse that tends in any way to fermentation, such as bedding straw, paper waste and vegetable matter, should be disposed of or covered with lime or kerosene oil.

"Screen all food.

"Keep all receptacles for garbage carefully covered and the can cleaned or sprinkled with oil or lime.

"Keep all stable manure in vault or pit, screened or sprinkled with lime, oil, or other cheap preparation.

"See that your sewage system is in good order; that it does not leak, is up to date and not exposed to flies.

"Pour kerosene into the drains.

"Cover food after a meal; burn or bury all table refuse.

"Screen all food exposed for sale.

"Screen all windows and doors, especially the kitchen and dining room.

"Burn pyrethrum powder in the house to kill the flies.

"Don't forget, if you see flies, their breeding place is in nearby filth. It may be behind the doors, under the table, or in the cuspidor.

"If there is no dirt and filth there will be no flies.

"If there is a nuisance in the neighborhood write at once to the Health Department."

These rules deserve a very general dissemination, and we gladly assist along this line. The subject of national health is barely broached, but it must become one of our profoundest studies.

Turkey is trying hard to make up for lost time, passing in two months thru stages of evolution that have required other European countries two centuries. First, an Oriental despotism under which no man might whisper progress; then a constitution and a parliament granted; next the walls are painted with the inscription *Hurriyet, Musavet, Ukhuvoet* ("Liberty, Equality, Fraternity"), while all the phonographs play the Marseillaise; then a labor union among the railroad men and a strike by the dockers; and, lastly, a paper established at Smyrna with the title of *Erghat* ("The Worker"), and devoted to Marxian socialism. So far, so good. They seem to have skipped Robespierre and Napoleon entirely.

The gift of an island near West Point to the Military Academy by Mrs. Sage and Miss Anna B. Warner brings together the names of two aged and admirable women, of whom one has had the opportunity, come to her shortly before reaching her eightieth birthday, to become the beneficent almoner of many large gifts to the public; while the other, now of equal age, was well known to the reading world of a generation ago as the author, under the name of "Amy Lothrop," of many stories, of which several were in collaboration with her sister, Susan Warner. The island will be the very pleasant memorial of this conjunction of most peaceful givers to the art of war.

Captain Hobson warned the Chicagoans last week that their city was in imminent danger of an attack by the Japanese thru Canada. H. G. Wells, in his current serial, pictures a swarm of samurai in aeroplanes descending out of the clouds upon the city of Buffalo. We do not believe that the Japanese are likely to adopt any such roundabout ways as these. In our opinion the only danger we have to fear from the Japanese is that they may have run a secret tunnel thru the center of the earth to New York and may at any moment take the lid off and enter the subway. We beg Captain Hobson to meet them halfway.

The French court record on the Dreyfus case stands as follows:

December 22d, 1894. Court-martial at Cherche-Midi; Dreyfus guilty and condemned to Devil's Isle for life.

December 31st, 1894. Military Court of Revision; Dreyfus still guilty.

May 29th, 1899. Court of Cassation; Dreyfus innocent.

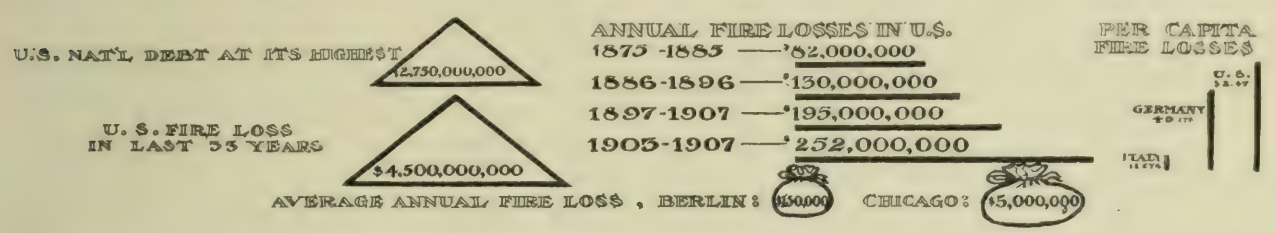
September 9th, 1899, Court-martial at Rennes; Dreyfus guilty and pardoned.

July, 1906. Court of Cassation; Dreyfus innocent and reinstated in the army.

September 11th, 1908. Assize Court; Dreyfus still innocent, but may be shot at with impunity whenever he appears in public.

What next?

It is a matter for general congratulation that Prof. L. H. Bailey has consented to serve at the head of the commission appointed by President Roosevelt to improve the social, economic and sanitary condition on American farms. He will, for a while, be relieved from his duties in Cornell University, altho he is one of those men who are able to carry on at the same time about as many allied lines of work as any man among us.



Insurance

Tremendous Fire Losses

EVERY one knows in a general way that a lot of money annually goes up in smoke. The exact figures are, however, not so well known so that the exhibit made in the diagram herewith reproduced from *The Boston Herald* will seem spectacular to the average man. The increasing frequency of great conflagrations in this country is causing apprehension not only at home but abroad where certain of the great insurance companies are interested in American risks. The accompanying table shows a frightful discrepancy between the fire loss in Berlin and that in Chicago. It is only within a comparatively few years that any organized effort has been made to reduce the constantly growing fire losses. For the most part when the losses increased too greatly the premium rates were advanced and that was about all. Since then the National Fire Protection Association has come into existence and it is carrying on a most excellent work in adapting scientific methods to the permanent reduction of fire losses. We can but shudder when we merely glance at the table and observe the difference between the annual fire losses as they were in 1875 and what they were when last reported.

The annual number of fires in American cities averages forty for each 10,000 of population, as compared with eight for each 10,000 of population in European cities. The annual per capita loss in Australia, Denmark, France, Germany, Italy and Switzerland varies from 12 cents in Italy to 49 cents in Germany, with an average of 33 cents, as compared with $2.47 in the United States. Berlin has a population of 3,000,000. Its average annual fire loss is $150,000. Chicago has about 2,000,000 population and an annual fire loss of nearly $5,000,000.

This is not a record of which the United States can be proud as leading the world, but is rather an example of

American wastefulness as contrasted with the results of European prudence, and should make us pause and consider whether we can indefinitely stand this appalling destruction of property. According to recently published statements by the president of the National Fire Protection Association more than 50 per cent. of the fire loss is now due to what is technically called "faults of management" or what might perhaps be better termed pure carelessness, that is to say, preventable causes. It is not a pleasant thing to stand as an example before the world of a lamentable fire waste, largely due to carelessness and recklessness.

THE International Harvester Company is about to organize a sick benefit association for its 30,000 employees. According to the company's plan as published every employee contributing 2 per cent. of his wages to the insurance fund when established, thereupon becomes a member of the association, and is entitled to all of its benefits during the period covered by his payments. Not only is the contributing employee insured against death but his insurance covers sickness or accident, and he is entitled to half pay while disabled by illness or injury. The wages for two years are paid under the adopted scheme to the family of a man who meets death by accident, either on or off duty. There are other commendable features about the Harvester Company's plan.

Financial

Judge Gray's Decision

REFERENCE has been made elsewhere in THE INDEPENDENT to the decision reached last week in the United States Circuit Court for the Eastern District of Pennsylvania, by means of which the suits of the Federal Government to enforce the commodities clause of the Hepburn Railroad Act against the anthracite coal-carrying railroads of Pennsylvania were dismissed. If the appeal now contemplated by Attorney-General Bonaparte should not result in a reversal the effect on the railroad properties affected cannot but help to strengthen them financially. The mere announcement of the Philadelphia court's decision was followed by an immediate rise of from one and a half to two points, and dealings in the so-called coal stocks immediately after the news of the decision had been published were on an extensive scale.

....Planning to provide cross-ties for its future needs, the Pennsylvania Railroad Company has set out this year 625,000 young trees, making a total of 2,425,000 set out since it began this work.

....According to a report of the Department of Agriculture, the value of farm animals in the United States on January 1st was $4,331,230,000, or less by $92,468,000 than the value one year ago.

....During the first half of 1908 the sales of stocks on the New York Exchange were less by 28 per cent. than in the first half of 1907, but the sales of bonds ($443,316,000) showed an increase of $207,000,000.

....It appears that 56 of the 309 national banks in Oklahoma have accepted the provisions of the Oklahoma law for guaranteeing deposits. Owing to the Attorney-General's decision that their action was unlawful they are now required to withdraw from the agreement. A bank's refusal to do this will be regarded as just cause for the forfeiture of its charter.

....The Canadian Government will soon propose legislation, it is said, for the construction of a railroad to Fort Churchill or Fort Nelson, on Hudson Bay, to provide a new outlet for exports of grain. The water route thru Hudson Bay to the Atlantic can be used for about three and a half months in each year. A surveying party of one hundred men left Winnipeg last week to locate the route. Parliament will receive the surveyors' report in January.

....A third indictment (41 counts) against Charles W. Morse and Alfred H. Curtis, formerly vice-president and president respectively of the National Bank of North America, was recently reported by the Federal grand jury in this city. The offenses in question were closely associated with the beginning of the panic. E. R. Thomas, another bank officer who was disciplined by the Clearing House Association in October, has agreed to turn over to his creditors $100,000 of his annual income of $180,000 until his debts are paid. He also gives up his racing stable and stock farm.

....Pending the results of the Presidential election, financial affairs are somewhat inclined to drag. New enterprises are being carefully scrutinized and undertaken only with the greatest conservatism. A well-known banker, in an interview this week, said to the financial editor of THE INDEPENDENT: "Political uncertainties are likely to loom up from now on until election. Shrewd observers of the political situation think the Republicans are too apathetic and sure about Taft's election. Campaign money is coming in very slowly. A man who returned from California last week told me there is much Bryan talk out there. While I believe Taft will be elected, I consider the campaign has just commenced, and if we do not get some good scares it will be extraordinary."

VOL. LXV NEW YORK, THURSDAY, SEPTEMBER 24, 1908 No. 3121

Survey of the World

Senator Foraker and the Oil Trust

The political campaign has been enlivened by the publication of several letters, a majority of them addressed to Senator Foraker by John D. Archbold, of the Standard Oil Company. While the opinion is quite generally exprest that these letters make it inexpedient for Senator Foraker to take a prominent part in the campaign, and will probably prevent his re-election, they also affect other persons, one of these being Governor Haskell, of Oklahoma, treasurer of the Democratic National Committee and chairman of the platform committee at the recent Democratic national convention. The Senator had intended to preside, on the 22d, at the convention of the National League of Republican Clubs, in Cincinnati, and to introduce Mr. Taft as the chief speaker. He has now decided not to attend the convention. The letters in question were read by William R. Hearst while he was making political addresses last week at Columbus (Ohio), St. Louis and Memphis. Six of them and part of a seventh were given to the public on the 17th, at Columbus. The six, all addrest to Senator Foraker, are dated at 26 Broadway, New York (the Standard Oil headquarters), and signed by John D. Archbold, vice-president of the company. It may be recalled that Mr. Foraker began in 1898 to serve as a Senator. The first letter, dated February 16th, 1900, is as follows:

"My Dear Senator—Here is still another very objectionable bill. It is so outrageous as to be ridiculous But it needs to be looked after, and I hope there will be no difficulty in killing it. Am anxious to hear from you as to the situation as a whole. Very truly yours,

"John D. Archbold.

"Hon. J. B. Foraker, 1500 Sixteenth Street, Washington, D. C."

The second, dated March 9, 1900, also relates to an objectionable bill:

"My Dear Senator—I have your favor of last night with enclosure, which latter, with letter from Mr. Elliott commenting on same, I beg to send you forthwith. Perhaps it would be better to make a demonstration against the whole bill, but certainly the ninth clause, to which Mr. Elliott refers, should be stricken out, and the same is true of House Bill No. 500, also introduced by Mr. Price, in relation to foreign corporations, in which the same objectionable clause occurs. Am glad to hear that you think the situation is fairly well in hand."

These were bills pending in the Ohio Legislature. Certain paragraphs in them required corporations to report the names of stockholders and the number of shares owned by each. The objectionable provisions were afterward eliminated. Favorable reports were then made, but neither of the bills was enacted. Two letters relating to payments of money follow, dated respectively March 26th and April 17th, 1900:

"Dear Senator—In accordance with our understanding, now beg to enclose you certificate of deposit to your favor for $15,000. Kindly acknowledge receipt and oblige."

"My Dear Senator—I enclose you certificate of deposit to your favor for $14,500. We are really at a loss in the matter, but I send this and will be glad to have a very frank talk with you when opportunity offers, if you so desire. I need scarcely again express our great gratification over the favorable outcome of affairs."

Mr. Archbold wrote two or three years later concerning the candidacy of Judge Burket for re-election and the candidacy of Smith W. Bennett for the office of Attorney-General. Judge Burket, as a judge of the Supreme Court, had voted to dismiss Attorney-General Monnett's ouster suit against the Standard Oil Company. The letters, the first dated

December 18th, 1902, and the second March 20th, 1903, are as follows:

"My Dear Senator—You of course know of Judge Burket's candidacy for re-election to the Supreme Court bench of Ohio. We understand that his re-election to the position would be in the line of usage as followed in such cases in Ohio, and we feel very strongly that his eminent qualifications and great integrity entitle him to this further recognition. We most earnestly hope that you agree with this view and will favor and aid his re-election. Mr. Rogers joins me most heartily in this expression to you."

"My Dear Senator—We are surprised beyond measure to learn that Smith W. Bennett, brother-in-law of F. S. Monnett, recently Attorney-General of Ohio, is in the race for the Attorney-Generalship of Ohio on the Republican ticket. Bennett was associated with Monnett in the case against us in Ohio, and I would like to tell you something of our experiences and impressions of the man gained in that case. If you know him at all I am sure you will agree that his candidacy ought not to be seriously considered from any point of view."

At Columbus, Mr. Hearst also read part of a letter said to have been written to Mr. Archbold by Congressman Joseph P. Sibley, of Pennsylvania, in which the latter spoke of an interview with President Roosevelt:

"For the first time in my life I told the President some plain if unpalatable truths as to the situation politically and that no man should win or deserve to win who depended upon the rabble rather than upon the conservative man of affairs. I don't know as he really liked all I said, but he thanked me with apparent heartiness. Anything you may desire here in my power please advise."

Concerning this, the President's secretary said, on the following day, that Mr. Sibley had been one of several hundred persons who had "appealed to the President not to prosecute the Standard Oil Company," and with whom the President had found himself unable to agree. At St. Louis, on the 18th, Mr. Hearst read two more letters. In one, dated January 27th, 1902, Mr. Archbold said to Senator Foraker:

"My Dear Senator—Responding to your favor of the 25th, it gives me pleasure to hand you herewith certificate of deposit $50,000 per our understanding. Your letter states the conditions correctly, and I trust the transaction will be successfully consummated."

The Senator has explained that a friend of his had an option for the purchase of the *Ohio State Journal,* the price being $135,000. He consented to help this friend and asked the Standard Oil Company for aid. The $50,000 was to be loaned on the security of stock. But the project came to nothing, and the certificate for $50,000 was returned. The second letter, relating to a bill in the United States Senate, and dated February 25th, 1902, is as follows:

"My Dear Senator—I venture to write you a word *re* the bill introduced by Senator Jones of Arkansas, known as S. 469, intended to amend the act 'to protect trade and commerce against unlawful restraints and monopolies, etc.,' introduced by him December 4th. It really seems as tho this bill is very unnecessarily severe and even vicious. Is it not much better to test the Sherman act before resorting to a measure of this kind? I hope you will feel so about it, and I will be greatly pleased to have a word from you on the subject. The bill is, I believe, still in committee."

At Memphis, on the 19th, Mr. Hearst read a long letter, said to have been written by Congressman Sibley to Mr. Archbold on February 26th, 1905, suggesting an interview with "Mr. B.," meaning Senator Bailey. The letter begins as follows:

"My Dear Mr. A.—Yesterday I had a long talk with a friend in the Senate whom you know I have always regarded as one of the strongest men in that body (Mr. B., Democrat). He is wholly and unalterably opposed to the President's and Garfield's policy vs. corporations. I think he is prepared to make a great fight against the vicious principles that the Government can open any books or reveal any trade secrets because some one thinks I am engaged in making too much money. He has the courage and ability to make a legal argument in the floor of the Senate second to no man of that body.

"Had you ought not to have a consultation with him some day? Our great man at the proper time would be a 'tower of strength and safety.' He comes nearer today of being the leader of his party than any one man in it. If you want to see him I think I could arrange for him to call when in New York."

Mr. Sibley goes on to tell about his talks with Democratic Senators, saying he "guesses he could obtain twenty-five" of them. He had argued with them about the oil controversy in Kansas.

"If you think of anything for them to do, let me know, but I guess the members of the H. R., including the Speaker, pretty well understand the situation. I could quietly give away a dozen or more of the little books."

In another letter, addrest to Mr. Sibley, Mr. Archbold says:

"Dear Mr. Sibley—We are anxious to have a talk here at as early a day as possible with Senator Bailey of Texas, and I write to ask if you will do us the favor to communicate with him and find when he can be here."

Governor Haskell Accused

Mr. Hearst asserted that Governor Charles N. Haskell's prominence in the councils of the Democratic party was evidence of the Standard's influence. He found in the affidavits of ex-Attorney-General Monnett and his assistant proof that Charles N. Haskell had been involved in the alleged attempt to bribe Monnett during the prosecutions in Ohio. Governor Haskell replies with a denial and says that probably W. C. Haskell, formerly United States Marshal at Cleveland, was the man. W. C. Haskell says he never has had any connection with the Standard or its officers. Monnett admits that Charles N. Haskell was ready to defend himself in court, but that he had no opportunity to do so. On the 19th, Mr. Hearst produced court records which proved, he said, that Haskell, as Governor, had interfered in behalf of the Prairie Oil Company (controlled by the Standard) and had procured the dissolution of an injunction against this company, obtained by Oklahoma's Attorney-General. Whereupon Monnett says he will not make his projected speeches for the Democratic ticket until this matter is cleared up, together with the alleged discovery in the Democratic treasury of $300,000 left over from the campaign of 1904. He has heard, he says, that the Governor has an interest in the Prairie Oil Company.——Senator Foraker says he assumes the letters are true copies, for he was employed by the Standard as one of its counsel in connection with its affairs in Ohio. He charged for his services, and was paid; but his employment, he adds, had no reference whatever to anything pending in Congress or to action by the Federal Government. It was common knowledge at the time that he was so employed. He served as advisory counsel:

"I never made any effort to conceal the facts. On the contrary, I was pleased to have people know that I had such clients. It had not then become discreditable, but was considered just the reverse, to be employed by such corporations. That employment ended before my first term in the Senate expired. I have not represented the company in any way since long before it was attacked by the Federal Government, nor since before with full general knowledge I was elected to the Senate."

He explains the project for buying the newspaper in Columbus, showing that the $50,000 was sent back. The letters concerning Burket, Bennett and Senator Jones's bill, he says, had no reference to any employment, and his previous employment did not conflict with his duty as a Senator. He has had no relation to the company since that employment ended with the company's reorganization as a New Jersey corporation:

"Neither the Standard Oil nor any other company or individual has ever paid me a cent on account of any public service, nor has that company or anybody else even suggested to me any compensation or reward of any kind in consideration of support for any bill or opposition to any bill, or for any action of any nature whatever."

Mr. Archbold says that such correspondence and relations as he may have had years ago with the Senator were entirely proper and legitimate. In his letter to Mr. Taft, saying that he has decided not to attend the convention, the Senator remarks that he takes this action not because he deems his answer to Mr. Hearst's charge insufficient, "but only because I do not wish to do anything that might injure the cause or embarrass you."

Renomination of Governor Hughes

At the New York Republican convention in Saratoga, on the 15th, Governor Hughes was renominated on the first ballot, receiving 827 votes, while 151 were cast for Speaker Wadsworth and 31 for Congressman Stewart. Until the day when this action was taken the Governor was opposed by substantially all of the party leaders in the State, and on the preceding day they suggested in conference with Secretary Root (chairman of the convention) the name of David J. Hill, Ambassador to Germany. This was done with Dr. Hill's knowledge, and a cable message to him brought the prompt reply that under no circumstances would he permit his name to be used. On the 14th, the President declared in a published statement that while he had no intention of dictating he was saying to all his friends in the strongest possible terms that he favored the Governor's renomination. Secretary Root's influence was exerted in the same direction. The Secretary's address to the convention was one covering both national

and state issues. He compared the administrations of President Roosevelt and the Governor, pointing out their close resemblance in purpose and vigor. The platform, prepared by those who had sought to prevent the Governor's renomination, refers to his race-track gambling bills only when it says that he "approved measures past by a Republican Legislature upholding the integrity of the Constitution." By indirection it opposes his plan for ballot reform, and its remarks about voters' rights at primaries are regarded as inferentially a disapproval of his advocacy of direct primary nominations.——The New York Democratic convention at Rochester, on the 16th, nominated for Governor, by acclamation, Lewis Stuyvesant Chanler, the present Lieutenant-Governor, who is said to regard Governor Hughes's reform projects with much favor. Fractional controversy had been expected, but the proceedings were almost entirely harmonious, owing partly to a message in which Mr. Bryan urged that they should be so. In the platform nothing is said about the race-track gambling laws. It asserts that Governor Hughes has pursued "spectacular methods and self-advertising issues rather than the work of reform," denounces "government by commission," and asserts that in his two Public Service Commissions he has "created office holders who have woefully failed to better the condition of affairs confided to their charge."

The Maine Election

At the election in Maine, on the 13th, the Republican plurality was reduced to 7,700, but it is admitted that national questions had little weight. Prohibition was the paramount issue, the Republicans standing for a strict enforcement of existing statutes in conformity with the constitutional amendment, and the Democrats calling for a resubmission of the amendment to the people. Bert M. Fernald, of Portland, was elected Governor. His opponent, Obadiah Gardner, of Rockland, enjoyed much popularity in the rural districts, having been for several years the head of the State Grange. Four Republican Congressmen were elected, as usual. Constitutional amendments permitting the initiative and referendum appear to have been adopted. National questions were so avoided that in some places Taft and Gardner clubs had been organized to encourage Republicans to vote the Democratic State ticket.——In New Hampshire the reformers, who have been led by Winston Churchill, the novelist, have been defeated in the Republican convention, their candidate for Governor, R. W. Pillsbury, receiving 246 votes against 397 for Henry B. Quinby, who was regarded with favor by the railroad interest; but the convention adopted a radical platform, which demands reform in the taxation of railroad property, penal laws against the issue of railroad passes, and a direct primary law affecting all elective State offices.——Connecticut Democrats have nominated for Governor Judge A. Heaton Robertson, of New Haven. Their platform asks for a commission to deal with all public service corporations, thus advocating a policy denounced by the Democrats of the adjoining State of New York. It also demands a law requiring publication of campaign contributions before and after election.

Cuba and Porto Rico

For the first time an attempt has been made in Cuba to form a political party composed exclusively of negroes. General Estenoz is the leader of the movement, a party name has been chosen, and Governor Magoon has received the necessary application for a place on the official ballot. It is the intention of the negro leaders to make nominations for President, Vice-President and all the other offices which are to be filled at the approaching national election. Estenoz asserts that the negroes are opprest and that they were slighted by all of the old parties at the recent provincial and municipal elections. It is expected that a large majority of the members of the new party will be drawn from the Liberal party's ranks. ——The *Diario Espanol* recently asserted that large quantities of supplies, ostensibly designed for the use of the American troops, were brought into the country free of duty and sold to merchants by American officers. Governor Magoon at once ordered that investigation be made in court by the Secretary of Justice, say-

ing that if the charge were well founded the guilty would be punished, and that if it should be disproved the newspaper would be prosecuted for libel. The latter part of this promise has been denounced in resolutions adopted by the Cuban Press Association as an attack upon the freedom of the press. The investigation shows that there was no warrant for the charge.——Two cases of yellow fever in Havana last week caused the adoption of the usual quarantine precautions for ports of the United States.——The Porto Rican Legislative Assembly refused, last week, to approve the Government's project for an irrigation loan of $3,000,000, because the Government insisted that the Governor should appoint the members of a commission which is to investigate concerning anemia, the disease which has prevailed so widely on the island. The Government yielded, the loan bills were past, and the commissioners will be appointed by the Health Department.—— It is shown by a census enumeration that 50,003 persons reside in the Panama Canal Zone, nearly half of whom are employed in canal or railroad work. There are 34,785 negroes, 14,635 whites, and 583 Chinese.

The Wright Disaster

Orville Wright's aeroplane became disabled while making a flight with Lieutenant Selfridge as a passenger on September 17th at Fort Myer, and fell seventy-five feet to the ground. Mr. Wright's left leg was broken at the thigh and several of his ribs were cracked. Lieutenant Selfridge never recovered consciousness and died in a few hours. The cause of the accident was the breaking of one of the blades of the right propeller, probably from its striking the wires controlling the vertical rudder. This caused the machine to give a sudden turn to the right, and altho Wright shut off the power almost instantly he was not able to control the machine and bring it safely to the ground by gliding, because he could not manage the rudder. The propeller was a new one, with wooden blades nine feet long. This being six inches longer than the one previously used came nearer to the wires as it revolved, and these probably came in contact with it thru excessive vibration while the aeroplane was making a sharp turn. The machine was completely demolished. Lieutenant Thomas E. Selfridge was the nephew of Rear-Admiral T. O. Selfridge, and was born in California twenty-six years ago. He was one of the most promising of American aeronauts, and had been assigned to the Signal Corps for the purpose of directing the tests of dirigible balloons and aeroplanes. He was secretary of the Aeronautic Experiment Association and had taken an active part in the development of the Bell machine, which is constructed of a large number of tetrahedral box kites. He had been successful in managing the Baldwin airship, recently purchased by the Government, and had been ordered to the West to take charge of it.

Cholera in St. Petersburg and Manila

Altho the cholera, which has been epidemic in the interior of Russia, had probably made its appearance in St. Petersburg a month or more ago, it was not until September 10th that it was officially acknowledged by the authorities. Fifteen cases were reported at that date, and soon new cases were appearing at the rate of two or three hundred a day. By the end of the week the total number of cases in the city amounted to 1,278, of which 365 had been fatal. The official bulletins issued on the 19th gave 398 new cases and 141 deaths for the last twenty-four hours. Since the outbreak of the disease last year, 6,747 cases and 3,130 deaths have been reported in Russia, chiefly in the Volga region. Sanitary measures in the capital have been belated and ineffective, and the disease has spread to all parts of the city, attacking the rich as well as the poor. The hospitals are already overcrowded, many of those stricken with the plague die in the streets, and it is impossible to quarantine the patients or disinfect the houses. The Municipal Council has appropriated $250,000 to enlarge the hospital space, purchase disinfectants, and clear away promptly the dead bodies from houses and streets. A number of the schools have been closed in order to use the buildings for hospital wards. Army field kitchens have been opened in the poorer wards to supply free

food. The sale of liquor has been temporarily prohibited. The Metropolitan of St. Petersburg has ordered prayers read in all the churches for deliverance from the pestilence, which he declares has come as a punishment for the lawlessness of the people.——The cholera has invaded Manila from the provinces, and a strict search by the authorities disclosed many persons who had died or were ill from it. On September 20th 58 new cases and 19 deaths were reported for the day. Three of the victims were Americans. The sanitary officers believe that they can keep the epidemic under control, altho the infected areas are spreading in spite of all they can do.

The Socialist Policy

The congress of Social Democrats meeting at Nuremberg was largely occupied with the discussion of how far it was consistent with the principles of the party to co-operate in legislative matters with the parties in power, and the conflict of opinion over this old question excited considerable bitterness and some personal animosity. The Socialist members of the Baden and Bavarian Diets have departed from the orthodox socialistic policy by voting on the budget or appropriation bills. Herr Timm, the Bavarian delegate, argued in favor of this action, that if the Social Democrats were to be a party of the people they must accomplish some practical results, otherwise they had better frankly declare themselves anarchists and condemn all parliamentarism. The Socialists of Baden defended their action on the ground that if they had not taken an active part in parliamentary affairs the Centrists would have come into power. The veteran Herr Bebel defended vigorously the old policy. The Socialists ought to be consistently in opposition to the bourgeois parties, whether clerical or liberal, as it was their aim to undermine present social conditions and to overthrow all reactionary parties. If the policy of the Baden and Bavarian comrades prevailed they must cease to talk Social Democracy and substitute social reform. "We shall never make progress if we crawl on the ground and make allowance for the reactionary element." At the conclusion of the debate Dr. Bebel's resolution that the party should invariably vote against the budget in the Reichstag, except in certain cases provided for in the Lubeck compromise, was carried by a vote of 258 to 119. A dramatic and significant scene of the congress was the public fraternizing of the German and English socialists and trade unionists. Protests were made on both sides against the promotion of warlike feeling between the countries by the jingo press, and the workingmen of both nations agreed to co-operate in all possible ways to secure a reduction in armaments and to prevent the severance of peaceful relations.

The Peace Movement

The Congress of Universal Peace held its 17th session in London this year. Its principal resolutions were to the effect that order should be re-established in Morocco as soon as possible; that in nations of mixed nationality the language of the conquered nation shall be granted the greatest possible equality with that of the conquering nation; arbitration must be made obligatory; that a peace agitation be carried on among academic students, as has already been done by "Corda Fratres"; that the governments follow the lead of Great Britain and provide funds for international hospitality; that private property shall not be captured at sea; that the working people of all the nations shall be invited to join the peace movement, and finally, that all money contributions will be thankfully received at the Berne Peace Bureau, Berne, Switzerland.——Last week the Interparliamentary Union met in Berlin. The Union was founded by the late William Randall Cremer, in 1888, and has held nineteen meetings. It consists of 2,500 members of the 15,000 men who sit in the national parliaments of the world. The American delegates were headed by Hon. Richard Bartholdt, of Missouri, who was later elected vice-president of the Union. Chancellor Von Bülow opened the session with a remarkable speech, which gave the lie to the rumors current in the English press of late that Germany was preparing for war. A telegram was received from the

Kaiser, stating that he hoped the work of the Union would bear fruit. Mr. Bartholdt introduced two resolutions, one having to do with the right of each nation to perpetual possession of its undisputed territory and sovereignty therein; the other with the selection of an international arbitration court, and the best form of a national arbitration treaty. Representative Bartholdt's resolutions were referred to a committee, who will report back at a future meeting of the Union.——England has announced that she will hereafter contribute annually $1,500 to the Interparliamentary Union, and it is expected that all the other national groups will request their governments to do the same. Minister Hill gave a luncheon to the American group; a letter from Mr. Carnegie to Mr. Bartholdt was read, suggesting that if the Kaiser would form an alliance with England and the United States, they could stop war by force; and then the Union adjourned to meet next year in Quebec. On the same day an imposing German workingmen's peace demonstration was held in Berlin. Some 20,000 German workingmen were assembled to welcome a delegation of English workingmen, and great enthusiasm was expressed on both sides when the English delegates presented an address requesting the Germans to co-operate with them in furthering the cause of arbitration.——Germany and Italy have jointly requested Holland to call a second conference of the Powers who were represented at the last Hague Conference to take part in another conference at The Hague, probably in 1909, to discuss international exchange.——New York, Texas and Pennsylvania have now had their great State peace and arbitration congresses, which in each case have been almost national in scope. The next one will be given by North Carolina and held in Wilmington about the middle of October.

The Moroccan Situation

On September 14th identical French and Spanish notes on the recognition of Mulai Hafid as Sultan of Morocco were transmitted to the Powers represented in the Algeciras Conference. The note points out the importance of the unity of action of the Powers and the necessity of requiring from the new Sultan the same guarantees as were granted by Abd-el-Aziz. It specifies that Mulai Hafid should be required to grant honorable treatment to Abd-el-Aziz and his officials; should confirm the treaties and engagements made by the Moroccan Foreign Board with the foreign governments, the diplomatic corps and individuals, and should agree to accept responsibility for debts contracted by the Foreign Board and for the indemnities for the Casablanca massacre, to disavow the letters sent to the tribesmen inciting them to a holy war against foreigners and to adopt all necessary measures to assure the security of the ports and interior trade routes. In an official communication to the public the French Government points out that France has not in any way taken advantage of the situation to obtain any special advantages for herself from the new Sultan precedent to his recognition. The communication concludes as follows:

> "The note is inspired by loyal and friendly sentiments toward all the Powers. It is aimed at none, but is sincerely European, namely, in the interests of all the signatories of the Algeciras act, including America. It respects the rights of all, and any refusal to examine it or its rejection *en bloc* would constitute a proof that the powers so acting entertained *arrière-pensées* incompatible with respect for the Algeciras act."

With the note but distinguished from it as requiring no reply from the Powers a "declaration" is transmitted explaining the intention of France and Spain to secure reimbursements for the expenses incurred in the establishment of order at Casablanca and pointing out that each Government will naturally reserve the right to negotiate concerning its individual claims and interests directly with Sultan Mulai Hafid after his recognition. The note has been favorably received by almost all the Powers with the exception of Germany. Great Britain, Russia, Italy and Holland promptly announced their approval. The United States has made no objections, but since our interests in the matter are so slight, the American reply will be reserved until the other signatories have come to an agreement, in

order not to endanger the concert of the Powers by precipitate action. Germany is not inclined to pass over the declaration of France without consideration by the Powers. There has always been a suspicion in Germany that France had a secret treaty with Sultan Abd-el-Aziz and she will want definite information as to whether this is included among the other obligations of the new Sultan. Germany also fears that enormous bills will be presented by France for her military operations at Casablanca, which will overburden the finances of the country and practically make Mulai Hafid a vassal of France. Germany will not, however, object to a moderate reimbursement for necessary expenses. French opinion is decidedly opposed to letting the matter of her reimbursements be examined into by Germany or determined by the Powers. Mulai Hafid's letter to the diplomatic corps at Tangiers has been published. He announces that his proclamation as Sultan "obliges him to execute the engagements of the Algeciras Convention" and on that ground asks for recognition by the Powers. He refers to the Algeciras Convention as

"the basis of the prosperity and progress of the empire, from the political and the economic standpoint, since it guarantees independence for the country and provides for useful reforms."

Dr. Vassel, the German Consul who left Tangiers secretly for Fez ostensibly on a non-political mission, is nevertheless reported to be taking an active part in the discussion of Moroccan affairs with the new Sultan.——The victory of the French at Dubenib, on the Algerian frontier, was decisive and the surrounding country has been swept of belligerent tribesmen.

Foreign Notes

The passage of the Kongo annexation treaty and of colonial charter by the Belgian Senate by a vote of 63 to 24 practically completes the transfer of the Kongo State to Belgium. None of the Powers have manifested any disposition to interfere or to object to the provisions of the treaty. The details of the obligations assumed by Belgium as given in these pages have not been materially altered.——The central telephone exchange and post office of Paris, near the Place des Victoires, was totally destroyed by fire on September 20th. The direct damage is estimated at $5,000,000, but the loss due to the interruption of telephonic and telegraphic communication within and without the city will be still more serious.——No progress seems to have been made toward the establishment of peace in Tabriz. The city is still under the control of Sata Khan, leader of the Parliamentary party, who is maintaining a tolerable degree of order thru the exercise of dictatorial powers. The efforts of the British and Russian consuls to bring about a compromise between Sata Khan and Ain-ed-Dowleh, who has been sent by the Shah to Tabriz to subdue the insurrection, have been fruitless. Ain-ed-Dowleh has made several ineffectual attacks and now threatens a bombardment of the city unless it surrenders. This is likely to result in foreign intervention. The British and Russian Governments have presented a joint note to the Shah urging him to carry out his promise to convene another national assembly.——The Swedish explorer, Sven Anders Hedin, has completed a journey of unprecedented magnitude and difficulty thruout Tibet from northwest to southeast. He started out in October, 1905, to explore Tibet, in spite of the opposition of the British authorities, and since nothing had been heard from him except twice it was feared that he had perished until his appearance at Simla relieved the apprehensions. To avoid the Tibetans he was obliged to disguise himself as a native, staining his face and hands, destroying his European clothing, and concealing his maps and instruments in his rice bags. His health remained good, altho his feet were frozen by the intense cold of the high altitudes. The geographical results of the expedition are rich and novel, the most important being the discovery of a chain of mountains 2,000 miles long, stretching east and west parallel to the Himalayas and higher in average altitude. Dr. Hedin crossed this range in ten places at altitudes averaging 3,000 feet higher than the Himalayan passes. The mountains are steep, rugged and barren.

Down the Valley

BY E. P. POWELL

Author of "The Country Home," etc.

OPEN before me, from where I write in my balcony, spreads a wide, cordial valley, brimful of sunshine and shadows, and at night level full of moonshine. It is not one of those little private affairs that Nature stowed away among the Berkshire Hills or hid along the Housatonic. It is an open affair that belongs to a thousand homes, and here from my hillside I have no small share in its wealth of beauty. Besides the utterly differentiated farmhouses, with their complement of barns and sheds and orchards, there are small groups of homesteads, and I see not less than half a dozen villages, spreading over the knolls, to get a good vision and good drainage, or winding around the hills, half in sight and half hid by the trees.

Somehow, as I look here and there, the orchards seem more important than the houses, and I think it was a lesson in political economy when God planted a garden "eastward in Eden." Of course, it should have faced the east, for there is something in the morning sun that is not in the noon, or in the after-day. Growth is most in those hours when the dew is still on the leafage, and the odor of the dawn is charged with the night-breathing honeysuckles. It is morning now, not only in the valley, but in my soul. One rises from his dreams full of life and longs to do something bravely. His thoughts flow easily, and he picks up his pen with pleasure. He snuffs the ozone and fills his lungs to their depths. What a grand thing is a man when he feels life-full; dashing forth after the world's poems as freely as he gathers roses and violets. And this is always the way with the morning. It says to us, Drink life's goblet and then stand to your duty. Do not shirk, nor complain, nor compromise.

I hear Tim's scythe in the aftermath, and he tosses over to me his greeting. The morning sun strikes full on the swaths that he is laying low. Tim is old-fashioned, and likes the scythe. "There is music in it, sir, but the machines they only rattle." Then I recite for Tim:

"O sound to rout the brood of cares;
The sweep of scythe in morning dew,
The gust that round the garden flew,
And tumbled half the mellowing pears."

Tim leans for a few moments on his scythe, and then says: "Who said that, sir? For sure it is the truest and most beautiful thing I ever heard. But it's that, sir, that I hear every morning; and it's what I get up for early—and alone—and like to wade thru the meadows, with my scythe for company. Ah, sir, but it do stir up a bit of music in a man's heart. The birds do sing mostly in the early morn, and I like to be out with them." A catbird came thru the apple trees just then, and, lighting almost over Tim's head, poured out a volume of that incomparable music which places him at the head of American singers.

An hour later I still hear Tim's whistle, but as the sun grows warmer he has gone. Like Tim, I believe fondly in the morning. The air is tonic, and the breezes report the night's adventures among the lilies and hollyhocks. The dew is heavy with the perfume of clover fields. The sun does not hurry the tasks of mortals, but leaves us to the good advice of long shadows.

I advise no one to work at night, but to sleep when Nature draws the curtain and to rise with the birds. Give me only the five hours from five in the morning until ten, and I will have accomplished more with either hoe or pen than in a full day of hot sunshine, after a wasted morning. Those who would do good literary work in ripe old age should discover the morning.

I love this valley not only for what was done by Nature, scooping it out and shaping it with glaciers, but because it has been humanized. It is so full of human life that the trees and the orchards and the houses seem to me like so many thoughts, as indeed they are. Once in a

while, however, the mood comes (or is it the need?) to go away into the wild. I know the passion when it is here, but do not exactly understand its origin. There are two things that come over me overwhelmingly—freedom and God. Was it this that took Jesus away from the villages and sent him into the wilderness? At any rate, I do not wish for human companionship. Only my dog is welcome, for he will never intrude his views. So we wander away into the close little glens that cut thru these hills, and are full of hemlocks, blackberry bushes and brooks. These narrow up one's visions and views, showing only one thing at a time. I think no one can live wisely without these occasional retreats. There are too many elbows in the crowd, and there are too many opinions. In the wilderness there are no creeds, nor political parties, nor social functions. We do not care, down there in the Kirkland glen, my dog and I, what the crowd is saying up the village street, nor which party has the most pellets in the box. We care only for the crickets that sing, and the minks that peek out from under logs, and the goldenrods and wild asters and ferns, and the little brook with its quiet little songs.

Somewhere out of the midway of trees comes shrieking thru the groves the call of the valley: This way! this way! I hear it even as it is cuffed from knoll to knoll thru the blackberry glen. But it is not "this way" that we are going. It is not at all needful that our boys and girls desert the farms for the towns, or go elsewhere to lead strong lives and witty ones. I am not afraid of the mollycoddling (or cuddling) of these little home worlds. In some sense the lives lived here are far bigger than the lives of those who go rushing about the world, to pick up salaries or even to hunt the Holy Grails of office and notoriety. I would have my boys to know that to obey well the demands of our home valley is no light thing; even weightier than to teach others to do it. Sciences have roots in this soil as well as corn and potatoes; and the birds that are singing are as much a part of ornithology as those that are stuffed in your museums. I knew a man who went a thousand miles to visit the Smithsonian Institution, and all the while he did not know a song sparrow from a chipping sparrow, nor had he ever persuaded a catbird to sing his repertoire in his pear tree. The Smithsonian has only its cornerstone at Washington, while its apartments and its galleries are everywhere.

The call of the engine is transitory. We Anglo-Saxons must relearn home-love. The fury of pioneering and colonizing a continent must not eradicate our power to create the home. We burst out of Zealand, and we made England; but we also made English character. We shall by and by have created an American character, but it will not be until we have got thru with the passion for expanding and the rage for accumulation. Then there will grow up in our valleys a race that does not defy the world, or brag of its boyish wrestling ability, but writes the Golden Rule in its farm furrows. I am not sorry when they tell me that the age of coal is nearly past and the noise of the steam engine will not be heard in another generation. I like better the trolley that quietly fingers its way up the narrow valleys, hunts out the isolated homes, and makes equal the privileges of town and country. Nobody knows tomorrow; already isolation is past, and the mail carrier is seen driving up the lanes with his message from Boston or Bombay.

I had traveled a good deal before ever I left my home that overlooked this Oriskany Valley. It was good fortune that gave me a father who saw the value of wide vision as well as the need of careful investigation. He led me along the edges of the hills after wild strawberries, and he built miniature waterwheels in the brooks, and he taught me to distinguish the wild flowers, but he also gave me history, and helped me to hear the march of Xenophon toward the sea. He read to me Martin Luther's "I can do no otherwise, so help me God!" and when I was charged with enthusiasm for righteousness, he showed me that the bravest thing one can do is to do nobly each day whatever is placed before the hands to do. So I learned to look down into the valley with no wild wishing, only with a sweet confidence that I should be able to

be heroic. I remember that one day, it does not seem so long ago, a fugitive slave came our way. My father said to me: "It is the same as Jesus; we will care for him." That was better for me than all the baptisms that the world could offer. So the rim of that valley grew holy, and it gradually offered harvest fields of manhood and honor as well as corn and apples. We do not have to go to Palestine to find the footprints of the Beautiful Brother.

And yet, mostly, this valley I know to be an illusion. Those houses in a vague way I know are not full of poetic life, and there is a dull thud about their days. Still, I will not allow any one to disillusion me. I do not care for gossip; it is superficial. It deals in the non-essentials. It is enough for me to know, in a general way, that what is going on works out human progress—God's good will; that we are getting constantly nearer that great benediction, "On earth peace, good will among men." So I am quite happy, for the dunghills are too far away to be distinguishable, and domestic quarrels I need not hear unless I wish to hear them. After all, what I see is the real thing; the big outlines of thrift and love and beauty. As I look I am strongly impelled to make my own life as sweet all thru as the meadows and the trees. I will have no waste heaps, no undrained cellars, but I will have the ozone that may make every human life wholesome. That is a hateful masquerader who pictures decay and rot as human life. The real thing is "the true, beautiful and good." You are right, Plato; it is left to manhood not to disillusion the world.

How shall one do all this, that is, be wholesome? I look down on the farm of a friend who is doing just this sort of work. He is clean in his will and clean in his doing, and so he is a nucleus of good lifting. He believes in straight furrows, well-fed apple trees, clean culture, and these things make his creed. I do not know that he believes very much about another world. It is amazing how he gets things done, and he says to me that the beautiful is the truly useful. I think he means that there is economy in neatness and sweetness. I do not see the doctor often driving to his door. Asa Gray was born just across there, on the opposite hill, and he used to talk about the big elms as his professors and the whole valley as his university. One such man personifies all Nature in himself, and then projects himself into all Nature. His garden becomes the ideal of a hundred neighbors, and his simple individuality ripples from its center till it touches the very edges of society.

I like one of these old valleys for its suggestiveness. Long lines of elms and ash and maple line its driveways, and these wind and wander out among the farms and up the hills. Cannot each man be told somewhat by that which he best loves and most plants—whether the stately elm or the stiff poplar? There are more of these valley people who are planting apples and cherries in the streets. Is it because of their growing thrift or is it out of pure generosity? At all events I find that these wayside fruits are not much meddled with by tramp or philosopher. The owner, I take it, is quite willing that the traveler shall bless him for the very small share which he absorbs. There is nothing more beautiful in American life than the common ownership of the fallen apple. The sod in our orchards is red in autumn with welcome. Let who will take what he will.

The trolley feels its way everywhere among the homesteads, and you can see the wires of the country telephone glittering in the sun. They link all the population into one congratulatory family. Yet, after all, we can never get quite used to this intrusion upon rural beauty and simplicity. We are not even Yankees any longer, for there are whispers from Liverpool and Calcutta in the air. Nor can we ever look quite cheerfully on this reign of the poles. They are the least sightly of all things except garbage. If their multiplication goes on for ten years more all the wayside beauty of these valley roads will be destroyed. But it will not go on for ten years. The age of wireless telegraphy, or something better, is close at hand. Out on the Atlantic the other day we conversed from ship to ship and from ship to land, for one hundred

miles, wherever we were. We will soon take down these leafless poles and restore the rights of green trees.

I always look for unity, for it really exists everywhere, but as I look down into this great basin of life, either by day or by night, the one significant thing is the vast number of creatures, each one working out its own evolution, and yet co-operating for certain great common results. You may phrase this in the religious way, if you like, as working together for the glory of God; but the bottom fact is that not anything can work out its life's end alone. You may think of the bluebird as living and singing for himself, or the saucy oriole as having no distinctive purpose of helping his neighbors. I rather think he has none, for he is the most selfish of birds; yet this very scarlet shuttle among the green boughs is serving the purposes of the trees, and doing not a little for human benefit. He is a ruthless destroyer and waster of fruit, but he is one of the best insect hunters that we have. I know a poet, whose cottage gleams with bright colors, way down in the center of the valley, a singer of no mean quality, yet I should not like to estimate exactly how much his muse owes to the brooks that tangle his meadow and the bees that flit thru his flowers. For the most part it is simply these things that are singing thru him. In turn we may pleasantly consider our own power of feeding and making happy the denizens of air and wood and water. I have not large acreage, as compared with some of these farms in sight, but what I have is a bird paradise. Here we plant not only for ourselves, but that our singers may be happy and well fed.

Some one lately has complained that country noises did not let him sleep and he went back to the city "for quiet." What puzzles me is to sit in my balcony of an evening and study the shrill cry of the insects—it is a song before they get thru with it—millions of them, chirping and harping; what is it all about? Crickets in the grass, cicadas in the trees, innumerable as the buds and the leaves and the blossoms on the bushes. Listen very carefully, and you will be able to differentiate the great voice that fills the whole night air, until you have discovered each piper. However, this does not pay for long, for you had better let it all slip back into the one big melody that rests your brain into peaceful drowsiness. What would happen if conformity should get the better of the world! If the infinite variety of outline among the trees should drop into sameness, and the infinite shades of foliage were all reduced to one color! What if all the homes in this valley, all their owners, exprest the same hopes and purposes and methods and joys! You cannot get, says Emerson, any real society until you have first created real individuals. I think the unity of our valley depends upon this preliminary diversity, and the multiplicity of desires and purposes, and their expression. Spectrum analysis shows you that you cannot get pure white light without putting together seven colors—none of them in the least white. Individualism is all important, but the sunbeam of a loving life is spelled out only by co-operation.

Under the lea of the western hills, where the valley outlook is over the wanderings of the creek, thru goldenrods and under willows, where the harsher winds leap over from the hilltops, and leave a swath of peaceful suburbanism, business men from the city are building their homes, for even a millionaire needs pure air as much as a nanny-goat. So they are creeping out into the country and rediscovering the valleys. I think that inside half a century suburbanism will cover half the country. The centrifugal has displaced the centripetal, and the tide has now set away from congestion. With present transit the crowd and the jam has no excuse. But do not suppose that the proclamation of the simple life and this tide countryward are the same thing. Many of those who are coming out among the hills have no other intention but to cityfy them. They will grade down the knolls, and terrace the hillsides, and fill up the hollows, and will scoop and scrape until every vestige of Nature is obliterated. They have come to exploit themselves and to exhibit the family god—which is money. They build big, blundering mansions. They do not grow anything—least of all a home. Bob-white hates them, and my opinion of

them is that they are out of place. I found one such in the depths of the pine woods in Florida, where he had spent the price of all his neighbors' farms on a house and its appurtenances. He left his stock farm and his gardens and his greenhouses to an army of employees, and found his only enjoyment in a pipe which he smoked in the undisturbed pine woods. As I passed him he said: "I begin to understand Diogenes in his tub, for all I ask of any man is to let the sun shine on me."

The sun and the winds are hard at work in my beautiful valley—all day and all night—leading on the year. The months will come and go, and the great truths of life, some time ago written at large in spring flowers, now proclaim themselves in fruit, until the scarlet buds of autumn say farewell to the birds of passage that flit southward. The years are much alike, and yet they are wonderfully unlike. It is left to a wise man to discover a new world each summer. When will the schools learn that, after all, the best thing that they can do for our boys and girls is to teach them to use well their senses? He that hath ears to hear let him hear! What volumes of poetry are never written! Because no ear hears the voices of Nature. What beautiful thoughts are woven into foliage and flowers, and no one is able to read between the lines, or to find out the meaning of things.

CLINTON, N. Y.

The Philosopher With the Hammer

BY EDWIN E. SLOSSON

"EVERY great philosophy is the confession of its originator, and a species of involuntary and unconscious autobiography." If we apply this aphorism of Nietzsche's to himself we get a curious result, for never was there a greater contrast between the life and the creed of any man, moralist or immoralist, than existed in his case. The eulogist of the strenuous life, he spent his in teaching classical philosophy and in philosophizing. War he regarded as the mother of virtues and pity the greatest of crimes, yet his part in the Franco-Prussian war was that of hospital nurse. His ideal was the great blond beast, ruthless, self-asserting, lustful, healthy, independent and dominant. He himself was frail, near-sighted, dyspeptic, neurasthenic, enslaved to drugs, celibate, timorous and retiring. He contemned and denounced women as inferior beings, to be kept as slaves and toys, yet it was to a woman, his sister, Frau Förster-Nietzsche, that he owed not only his life, during the last eleven years, when he was as helpless and witless as a babe, but also the establishment of his reputation after his death, thru the collection, publication and elucidation of his manuscripts.

If, then, Nietzsche's philosophy was in any sense his autobiography, it was the autobiography, not of his actual, but of his dream life. All he could never be, all men ignored in him, that he was worth to himself. The qualities which he felt himself deficient in appeared to him as the greatest of all virtues, and the things he could not do seemed the most worth doing of all things in the world. We all have moods like this, a form of the natural attraction of opposites, of our awe of the incomprehensible and our admiration for the unattainable. To express it in his own phraseology, Nietzsche, being necessarily a follower of Apollo, becomes a worshipper of Dionysus. Mr. Mencken very appositely quotes the lines that Kipling wrote in the volume of his works, illustrated by Zogbaum, that he sent to Admiral Evans:

"Zogbaum draws with a pencil
And I do things with a pen,
But you sit up in a conning tower,
Bossing eight hundred men.

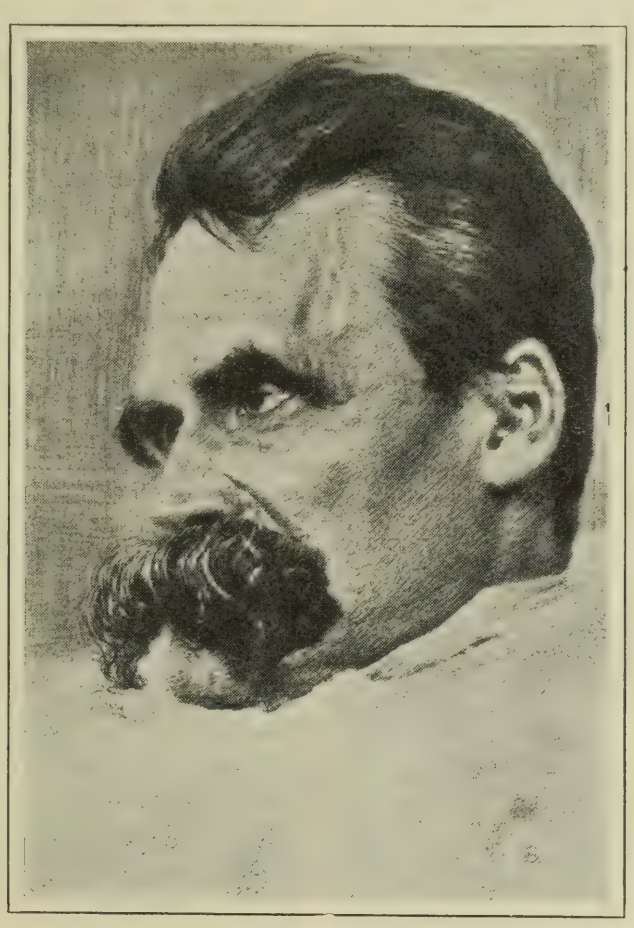
"Zogbaum can handle his shadows
And I can handle my style,
But you can handle a 10-inch gun
To carry seven mile.

"To him that hath shall be given,
And that's why these books are sent
To the man who has lived more stories
Than Zogbaum or I could invent."

Nietzsche was Hegelian in temperament. Every idea suggested to him its opposite and he was equally attracted by it. He reminds one of the pith ball of the laboratory, that is first drawn to an electrified body and clings to it for an instant, then is seized with repulsion and evermore flies from it. So Nietzsche is enamored in turn of Schopenhauer and of Wagner until he becomes charged with their spirit, and then conceives for them an intense aversion and antagonism. He treats even his own ideas in the same way, flying the next moment to the opposite pole of thought, becoming the iconoclast of his own idols. He was like most of us in seeing only one side of a thing. He was unlike most of us in seeing the other side of it soon after with equal intensity and exclusiveness. He never sees both at the same time in their real proportions and relationship. Had he kept to one point of view he would have exerted more influence over the world, but the fascination of his style lies in his vibrant thought. An Audrey Beardsley sketch, with its impossible masses of black and white, is more striking and sometimes brings out an idea better than a half tone.

Nietzsche was the incarnation of the spirit that denies. That a thing was establisht, accepted or fashionable was an incitement to him to challenge. Happening to have been born in what Hugo called "the woman's century," Nietzsche goes beyond his master, Schopenhauer, in his hostility and contempt for the opposite sex.

"A man who has any depth of spirit . . . can only think of women as Orientals do: he must conceive of her as a possession, as confinable property, as a being predestined for service and accomplishing her mission therein —he must take his stand in this matter upon the immense rationality of Asia, upon the superiority of the instinct of Asia, as the Greeks did formerly, who, as is well known, with their *increasing* culture and amplitude of power, from Homer to the time of Pericles, became gradually *stricter* toward woman, in short, more Oriental."



In the same way he attacks all the other dominant ideas of the day. Finding the spirit of democracy everywhere, even penetrating rigid autocracies, he denounced it as a deception and a hindrance to progress, and proclaimed the right of the superior man to rule and trample under his feet the weak. The ethics of Christ being recognized as the highest of ideals, even by those who were most skeptical of the supernatural and hostile to all ecclesiasticism, he preached the gospel of the Anti-Christ. Christianity was, he declared, a trick by which the slaves had conquered their masters by imposing upon them the slave morality, the meaner virtues of humility, obedience, self-denial and altruism. The trend of social development in Nietzsche's time, due to both socialistic and capitalistic forces, was in the direction of a subordination of the individual to organizations that increase his efficiency. In opposition to this Nietzsche taught the most extreme individualism and anarchy. He objected even to the communism of opinion:

"My opinion is *my* opinion; another person has not easily a right to it. One must renounce the bad taste of wishing to agree with many people."

The question naturally arises — not readily to be answered—why should a writer so out of touch with the dominant spirit of his time have attained such an astonishing popularity? The books he printed at his own expense are being translated into all languages. Within less than eight years after his death a library of comment, interpretation and criticism has developed about his writings. His phrases have become household words and his ideas crop up in the most unexpected places in the literature of the day. In explanation of his vogue it might be thought that he appeared at the critical moment when the tide was turning, that he was the herald of reaction. But at present there is no clear evidence that such a reaction is at hand or that Nietzsche's ideas are exerting any considerable influence toward producing one.

The fascination of Nietzsche is doubtless due in large part to his very perversity and extravagance. Any man who runs amuck thru the conventions of civilization is bound to attract attention. He may teach that the world is flat, or

hollow, or stationary, but if he has a lively wit and a bitter tongue and an imperious tone he will gain a hearing. The easy inversion of a proverb is hailed as the foundation of a new philosophy or the overthrow of an old one. We have got used to currents of high voltage nowadays, and what would shock our grandfathers only tickles us. Besides this we are apt to put faith—more faith than experience justifies—in the saying, that we can learn most by reading what we most disagree with, "because he who does not see what you do is most likely to see what you do not."

FRIEDRICH NIETZSCHE.

But it would be too narrow a view to suppose that Nietzsche attracts attention merely because of his audacities or his sharp criticism of the established order. He, too, has his ideal—no mean one. He, too, demands a self-sacrifice, a greater than humanity has dared to contemplate, the sacrifice of the present to the future, of man to the superman. Many a father and mother have denied themselves to give their children a better chance, to give them a culture that might make them ashamed of their parents. But Nietzsche demands that the human race shall sacrifice itself to a coming race that shall be so far above as to be out of sympathy with it and forget to be grateful.

"Man is something that is to be surpassed. All creatures hitherto have created something superior to themselves. Are ye going to be the ebb of that great tide and revert again to the beast rather than surpass man? What is the ape to man? A jest or a shame. So man shall be to the superman, a jest or a shame. The greatness of man is that he is a bridge and not a goal."

So spake Zarathustra; and in so speaking he forced upon the attention of the world what is, after all, the most important of the questions of the future. We may suspend for a time and in a measure the struggle for existence, but the laws of heredity remain in force. Neither better government nor a more equitable distribution of wealth, neither education nor moral training, will prevent a race from deterioration if its physical basis is degenerating thru the multiplication of the unfit. There is a reverse aspect of Darwinism that we are apt to ignore. It may mean retrogression as well as evolution. It is both a threat and a promise. We begin to realize the significance of that threat when we read the statistics of the increase of insanity, criminality and physical inferiority. In Great Britain the ratio of defectives, including deaf, insane, epileptic, crippled and infirm, is reported to have increased from 5.4 per 1,000 in 1874 to 11.6 in 1896. In the past sixty years the number of insane has increased fivefold, while the population has doubled. Thru the inspiration of Christianity and the instrumentality of science we save the weak bodies and weak minds of those who are not the fittest, who are not fit even to survive unaided, still less to propagate their kind and to transmit to posterity their own deficiencies. The rapid fall in the birth rate in all civilized countries within the last few years has made it imperative to consider whether the parents of the next generation are the best of the present. We are beginning to hear of the dangers of indiscriminate charity, of unregulated benevolence and of unlimited altruism. Science points out the necessity of selection to maintain the

standard of the race. Religion insists upon the virtues that tend to soften the struggle for existence and abolish the severer penalties of failure. This is the real conflict of religion and science; not debates on such petty questions as whether the Silurian epoch was longer than twenty-four hours, and why Jonah did not digest. This conflict cannot be settled by the use of such verbal missiles as "sickly sentimentality" on one side and "brutal materialism" on the other, but by the mutual recognition of justice of the essential principles on both sides, and by the consequent discovery of a line of conduct combining them. Already we see many promising attempts made to solve this problem. Francis Galton has inspired a group of young scientists to almost religious zeal in the study of eugenics, for the purpose of showing what can be done toward developing a higher type of the human race by the application of the methods of scientific breeding without violating the laws, morals or sentiments now prevailing. We need, as Nietzsche insisted, a new and higher morality. But we will not get it, as he thought, by abolishing the morality we have attained.

It is in some such way that the issue is to be met, by giving to the benevolent impulses developed by religion the guidance of a wisdom which history shows they have too often lacked. The idea of Nietzsche that sympathy and brotherly love are to be eradicated and vital competition restored in its fiercest form is, of course, impossible and absurd. Whatever may have been the deficiencies and extravagances of Christianity, under its influence there has developed the nearest approach to a race of supermen that the world has yet seen.

Nietzsche seems to have been led to his grotesque misconception of Christianity by blindly following his early master, Schopenhauer, who saw in it only pessimism and asceticism, a view for which there is no historical justification. If we look to its origin we find it regarded, by contrast with Judaism, as being too easy and comfortable. If we look to its present condition we can see no reason for accusing it of undue emphasis on rigor and self-mortification. So far from being enfeebled by this "slave-morality," the Christian Church and Christian State have at times shown a tendency to become altogether too masterly. In reality the ascetic element of Christianity has played a very small part in either its doctrine or its practice, in comparison with other religions. For one St. Simeon Stylites India could produce a thousand fakirs who could beat him at his own game. Much of Nietzsche's arraignment might apply to Buddhism or Brahmanism, but is absurd when applied to Christianity.

Believing, however, that Christianity, democracy and socialism are working together to bring the modern world under the deadening influence of a new Buddhism thru the cultivation of an excessive sympathy for all human beings and all forms of life, Nietzsche demands a transvaluation of all moral values, the establishment of a new ethics "beyond good and evil" as they are at present understood. He distinguishes three periods of ethical development; in the first and longest, the prehistoric, the value of an action was inferred from its *consequences*. He calls this the pre-moral period. In the last ten thousand years, the self-conscious or moral period, actions came to be judged according to the *intentions*. This idea has sometimes been carried so far that the objective valuation has been entirely ignored and the supposed intention of the person doing the action alone considered. So "a good man" came to mean a man who meant well regardless of the fact that he may have done harm in the world. All the progeny of benevolent impulses were named "good deeds." In the third or ultra-moral period, which Nietzsche would usher in, the intention will still be taken into consideration, but only as a sign or indication, often indeed fallacious, of the real value of an action which will again be mainly judged by its ultimate *consequences*.

This position is essentially what we now know as pragmatism. It is not, however, as Nietzsche assumed, anti-Christian. On the contrary, it was one of the most distinctive features of the teachings of Christ that a creed and professions should be judged by their results. When Nietzsche says, "It is not his faith which distinguishes the Christian, it is because he acts differently from others," he is merely paraphrasing

the words of Jesus, "Wherefore by their fruits ye shall know them. Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven, but he that doeth the will of my Father which is in heaven." And when John sent to Jesus for evidence that he was the Christ he did not refer him to his descent from David or his relation to the Logos, but to the pragmatic test of the good that the new faith was accomplishing in the world.

It must be confest that the Christian Church has often shown a tendency to disregard the test of orthodoxy prescribed by its founder. Or to use Nietzsche's own words again: "In reality there has been only one Christian, and he died on the cross." But errant and unfaithful as historic Christianity has been, it still need not fear the application of the test of the effects it has produced in the world. It is now, as it was in the beginning, the strongest of its evidences. If Nietzsche had used the pragmatic method instead of merely talking about it, he would not have so egregiously misconstrued the Christian religion.

German philosophies are, like their plays and operas, shipped over to America when the Germans have got tired of them. France, a little slower in this case than usual, has had the Nietzsche fever only about five years, but its virulence has made up for its delay. We have not yet in English a complete or satisfactory translation of his works, but we are gradually getting it. The first to be issued, in 1896, *The Case of Wagner*,[1] found the public quite unprepared for it and fell flat. The other volumes fared little better. The translations were mostly poor, and *The Dawn of Day* is in places ludicrous and incomprehensible. The other six volumes are promised to be published soon and in better versions. The most useful introduction for the general reader is the volume of selections compiled by Thomas Common,[2] but this is out of print. A cheap edition of *Human, All Too Human*[3] is published by Kerr, but it is fragmentary, altho there is nothing to indicate this in the volume. The original consists of 638 aphorisms; this only contains 144. The translation, by Alexander Harvey of *Current Literature*, is better than most of the Macmillan volumes. The most complete exposition of the Nietzschean philosophy is that by Henry L. Mencken.[4] He writes in a lively and unconventional style, and does as much as any man can toward reducing the incoherent fragments to a consistent system. The author is an enthusiastic admirer, as the exponent of a philosophy should be; in fact, he goes beyond his master in some points. But he is not a blind eulogist. He criticises what he regards as the weak points without mercy, as the following quotation will show:

"So long as he dealt with ideas his mental processes were as exact as the movements of a machine, but when he considered human beings in the concrete—and particularly when he discussed himself—his incredible intolerance, jealousy, spitefulness and egomania, and his savage lust for bitter, useless and unmerciful strife, combined to make his conclusions unreliable and even nonsensical."

It is, however, this "human, all too human," side of Nietzsche which is likely to attract admirers, rather than his real merit, which is a stubborn determination to cut thru conventions and force the world to see what it has unconsciously or intentionally ignored.

It is not likely that he will ever be much read in the United States. Nor is there any reason why he should be. Nietzsche in Germany represents the reaction from Schopenhauer. Never having had the disease in this country we do not need the antidote. We always get our philosophy at second or third hand anyway. It is inevitable that we, like the rest of the world, should be influenced more or less by some phases of Nietzschean thought, but it will not be directly. The process of infiltration thru plays and novels and works on sociology and ethics has already begun.

An Active Policy of Peace

BY W. T. STEAD

[Two weeks ago the versatile editor of *The Review of Reviews* contributed an article, entitled "What Must Follow the Hague Conference." This week he continues the discussion and offers some very practical suggestions.—EDITOR.]

PEACE is in disrepute because it has come to be regarded as a merely negative thing. Peace is popularly defined as "not being at war." It is difficult to get up enthusiasm for a mere negation. What is wanted is a positive policy of peace, an active policy of peace, something that can kindle the heart of man.

The true policy of peace is, then, the levying of war against war, and against the causes of war. We need a plan of campaign for peace as much as a plan of campaign for war. At the Hague Conference we saw the consequences of the lack of such a plan of campaign in the vacillation, the irresolution, and the ineffectiveness of the British delegation, altho they received their instructions from a ministry that had publicly pledged itself to take the lead on the question of armaments. It had prepared nothing. The fatuity of the British war campaign in South Africa was paralleled by that of the British peace campaign at The Hague. Instead of using the two years of preparation to carry on an active propaganda thru their ambassadors, the ambassadors were left uninstructed to follow their own devices, which resulted, not unnaturally, in nothing being done. And what was most conspicuous in the conduct of British policy was more or less evident in that of other delegations.

It is useful to recall the mistakes of the past in order that we may make the memory of our old blunders the stepping stones to future successes. Every civilized government which at The Hague recognized the desirability of attaining certain ends in the interests of the peace and welfare of mankind should instruct its minister in every capital to make his embassy a center for a steady, resolute propaganda for the attainment of these ends. Ambassadors seldom or never receive such instructions, and few of them would do anything to carry them out even if they received them. Diplomatists are not usually missionaries by temperament, and they are officials by training. That they should use their office as a means for converting the diplomatic corps in the capital in which they are stationed to the faith professed by their governments is an idea which would seem preposterous to most of them. Take, for instance, the principles of a permanent International Court of Arbitral Justice, to which the American Government is deeply committed. What has Mr. Whitelaw Reid, to mention one ambassador at random, done to permeate the diplomatic corps in London with the zeal which glows in the bosom of Mr. Elihu Root? What has Mr. James Bryce, to take another instance, done to try to convert the diplomatic and political world of Washington to the views of his government in favor of the abolition of contraband? These things are not considered to be in the day's work of ambassadors, who consider they have done their duty if they punctually discharge the official routine, perform their social duties, and deal with questions which arise for settlement between the government at home and that to which they are accredited.

If ambassadors neglect the duty of

making propaganda for the principles which ought to be embodied in the international world-state, they are hardly less remiss in the discharge of the duties of peacemaking. They do these only fairly well when they have to try, by means of negotiation, to remove differences between governments which endanger peace. But what do they do to allay misunderstandings, to correct mistakes, to contradict falsehoods, to combat all the many influences which inflame international animosities? Precious little. Here and there one is diligent in this high calling, usually, however, confining his activity to the circles of high society in which they naturally move.

But for the most part they do absolutely nothing to influence the great public. Take, for instance, that most mischievous influence in inflaming international animosities, the unscrupulous telegrams by which newspapers at home and abroad goad their readers to hatred, malice and all uncharitableness. What are the relations of ambassadors to the press? What do they do to encourage editors and correspondents who labor to promote friendly feelings between their own country and that to which they are accredited? I can speak with nearly forty years' experience. During the whole of that time I have been, in season and out of season, the constant advocate of friendly relations with Russia, a country with which, at least thrice during that period, England has been on the verge of war. It was a thankless task, occasionally a dangerous one. How often during these forty years have I received a helpful hint, an encouraging word. either from Russian ambassadors in London or from British ambassadors in St. Petersburg?

I can honestly say that, excepting when I literally forced myself upon the embassies, seeking information or directly offering to help the policy to which they were committed, I have never received letter or message from one of these excellencies. It is just the same when the editor or correspondent is working, not for friendship, but for animosity.

No trouble is taken by ambassadors to modify mischievous activities, either directly by an appeal to the journalist or indirectly by securing the immediate publication of the necessary correctives in more friendly journals. Ambassadors were invented before newspapers existed, and they do not appear as yet to have realized the importance of the press in the relations of nations. As it is with the press, so it is with most of the other agencies whose influence is potent in the affairs of nations. Count Metternich, the German Ambassador in London, is one of the exceptions which prove the rule. He never loses an opportunity of combating the senseless jehad that is preached against Germany by the Mad Mullahs of the English press. But for the most part ambassadors ignore everything that does not belong to the narrowly restricted routine of their official duties.

The same lack of any active or intelligent interest in the cause of international peace is to be lamented in almost every department of national life. If we glance over the debates in parliaments and congresses for the last twenty years, how often, if at all, has the subject afforded topic for serious debate? Members of European legislatures are fecund in resolutions on almost every subject under heaven, but how rare it is for any one to raise a discussion upon the question of what steps, if any, should be taken to promote peace and friendly relations between nations. When any evil threatens any interest, trade or section of the nation, even if the contingent loss is measured only by a few hundred thousand dollars, how prompt and untiring are the representatives of the suffering parties. It is demonstrably true that in the ten years that followed the first Hague Conference, where the "Stand still" resolution on armaments was not carried, the increase of expenditure on armaments was equivalent to the imposition of new burdens upon mankind amounting to no less a sum than six hundred million dollars per annum. This enormous confiscation of the funds of human labor has past almost without remark. Here and there a perfunctory debate has taken place, in which the old platitudes have been trotted out once more, only to elicit the conventional expressions of regret over the inevitable. But of earnest, practical, serious grap-

pling with this question of questions there has been none. But for the initiative of the autocrat of Russia there would not even have been a Hague Conference, and excepting at The Hague, parliaments, national and international, have left the question severely alone.

Why should this appalling result of the armed anarchy of the world not be subjected to the same competent and searching examination by a national or a royal commission, which is ordered almost instinctively, as a matter of course, whenever the nation suffers from any misfortune, the diagnosis of which is obscure and the remedy is still to seek? Why should there not be a national or a royal commission appointed to inquire into whether any measures are to be recommended for the purpose of promoting better relations between the nations of the earth, for the avoidance of war, and the reduction of the continually increasing burden of the cost of preparation for war?

It is strange that down to this year of our Lord 1908 no legislature or government, Christian or otherwise, has ever instituted a serious public inquiry whether anything can be done to promote a sense of human brotherhood among the different races of mankind. Perhaps in the twentieth century after the angels' song at Bethlehem, some of the nominally Christian legislatures or governments may venture to ask that a commission of their ablest and their best citizens should be appointed to ascertain whether anything effective cannot be done to combat the tendencies making for war, to stimulate the influences making for peace. Such a commission might at least give us a definite objective toward which humanity might aim. It may be said that the Hague Conference has done something like this. But the Hague Conference was compelled to confine itself to an attempt to formulate the common denominator of the ideas of all the states of the world on the subject. Its scope was limited by its program, but it recognized its own limitations, and in formal resolutions and in the speeches of its members it prest upon the governments of the world to undertake the serious study of the questions which it left unsolved, and especially to take in hand the ethical and political education of their subjects in the importance of founding the international institutions of the coming world-state upon a quickened sense of fraternal sentiment among the nations.

Can anything be done by governments and legislatures in the shape of an active policy of peace? Not only can much be done where nothing is done, but nearly everything can be done if men would but set their minds to consider the question with the same practical common sense that they bring to bear upon other important problems affecting the welfare of the state. At present, the direct efforts of the governments of the world to preserve peace are twofold. One is the maintenance of a diplomatic corps, the fire brigade of the peace of the world, which, like other fire brigades, only comes into action when disputes arise between governments; the other is the maintenance of armaments on a scale sufficiently great to deliver their neighbors from the danger of being led into the temptation to attack undefended frontiers or to loot unprotected cities. For any attempt to damp down the explosive force of popular passion, to dispel prejudice by education, to use any direct or indirect means to recall their subjects to a sense of the criminality of the indulgence in warlike passions, we may look in vain. Most of the articulate and all the inarticulate teachings of governments tend to exalt the pride, pomp and circumstance of glorious war. This is not rational. The governments of the world are today acting like the owners of fiery mines who neglect ventilation, permit the use of open lights, and confine all their energies to creating massive bulkheads to break the force of an explosion, and equip costly salvage corps to rescue the wounded and the dead.

If I should be asked how can governments practically promote the cause of peace, I reply in the words of Prince von Bülow, the Imperial Chancellor of the German Empire: By encouraging in every practical way the growth of international hospitality, so that nations may learn to know each other, so that knowing to understand, and understanding they may sympathize where now they hate. Prince von Bülow told me this last year when I met him in Berlin for

the purpose of discussing this very question. He was most emphatic. "It is the only way," he declared, "that governments can do anything practical to promote peace. Let them make all classes of their subjects visit in their own homes the corresponding classes of other countries. The danger to peace," he said, "lay chiefly in the ease with which mischievous advocates of war can inflame the ignorant or ill-informed masses of the people. The firebrand's occupation would be gone if he had to address a public which was united by innumerable bonds of friendship and fellow feeling with the public in the land of the so-called enemy or rival. Mix them all up, professional men, members of parliament, working men, journalists, professors, pastors; let them come and see us and let us go and see them. Nothing could be better than this to remove the misunderstandings, the ignorances and the prejudices in which wars take their rise."

Prince von Bülow sits in the chair of Prince Bismarck. German policy has always smacked more of blood and iron than of compliments and of soft sawder. But in thus recommending governments to promote good feeling between their own subjects and those of their neighbors, Prince von Bülow was only recommending what he and his imperial master are sedulously practising today. Whether it be working men or mayors, pastors or journalists, the Germans overwhelm their guests with the most lavish hospitality and take care that any invitations from abroad are accepted by their most representative men. In this respect Germany is showing itself much more anxious as a government to cultivate good relations with Great Britain than is the British Government to cultivate good relations with Germany.

The British Government, however, has at last taken a decisive step forward in the same direction. One of the first acts of Mr. Lloyd George on his promotion to the Treasury was to allocate every year an appropriation for the purpose of promoting peace by international hospitality. The sum which he asked his colleagues to vote was $300,000 per annum. They definitely sanctioned a vote of $80,000 per annum, but agreed that it might be exceeded if need arose. The actual sum voted is unimportant. The vital thing is that for the first time in English history the Government of the day has voted national funds for the purpose of showing national hospitality to the foreigner in the interests of international peace.

The most remarkable illustration of what the executive government can do when it sets itself to work to organize the national resources with the prestige of national authority to act as the national host is to be seen in active operation at Ellis Island under the present able and zealous superintendent. No other nation has ever had such a task imposed upon it. No other nation could have risen more magnificently to its opportunities. Upon the doorstep of the United States a million foreigners arrive every year, and on the doorstep welcoming the newcomers to the New World stands the official representative of the Federal Government, protecting them from harpies, supplying them with interpreters, and affording every one the advantage of a skilled and competent adviser, whom they can consult without money and without price. The whole of the religious organizations of the United States, without distinction of creed, have been enrolled into a great benevolent society for the purpose of securing for every immigrant introductions to those who will befriend them in whatever work or corner of the great Republic they may find their way. It is a splendid object lesson of what can be done when the nation recognizes its responsibility to act as international host.

Nothing so onerous is required to provide the proper reception and courteous treatment of the comparatively few influential representatives of foreign nations who cross the Atlantic. But something surely should be done to welcome those who in their own land have achieved sufficient distinction. At present they are left to the tender mercies of the customs official and the interviewer. One ransacks their boxes, and the other tries to ransack their minds. When princes travel in the Old World they are relieved from the ordeal of the customs and on landing they are welcomed by

the representatives of the sovereign whom they visit. Why cannot the American Republic follow this good example and provide for the proper welcome of those who are the untitled princes of the democracy in other lands? Members of Parliament, mayors of great cities, distinguished authors, inventors and explorers, are not so numerous as to render it impossible for the national Government to produce for their escape from the customs and their appropriate welcome to the country which they have come to visit. That this is not impossible was proved last year, when all of the European and British guests invited by Mr. Carnegie to attend his apotheosis at Pittsburgh were allowed to pass into New York without having their trunks examined. What can be done for the guests of a millionaire can assuredly be done for the guests of a nation. It will be done some day when the national self-consciousness is developed and all distinguished servants of the people are recognized at their proper worth by the people of the country which they visit.

There is no more hospitable people in the world than the Americans to strangers who are properly introduced. But many distinguished visitors have few introductions; and when they have introductions to personal friends, there is no security that they will be looked after by the representatives of the nation. I should like to see an international hostel or cosmopolitan club in every city maintained by the civic authorities, whose doors would be open to every notable visitor, and whose managers would see to it that every notable visitor was invited to make it his headquarters. No doubt many clubs do place their resources at the disposition of eminent persons, but sometimes the most influential person from the point of view of the peace of the world is not socially eminent. Newspaper correspondents, trades union leaders, socialist agitators are seldom invited to clubs. But they are often more important than many a duke.

The interchange of students and professors between America, Germany and England is one of the methods by which the mutual understanding of the nations can be effectively promoted. But still more important is the interchange of visits between journalists. The visit of the German editors to England and the return visit of the British editors to Germany brought a most welcome change in the acerbities of the Anglo-German newspaper comment. I confess that there are few things which seem to me more desirable in the interests of the world's peace than a similar interchange of visits between the editors of the United States and of Japan. Merely to cross the wide expanse of the Pacific would bring home to the fire-eaters on both sides the absurdity of blustering about war between two powers held apart by such a vast expanse of unbridged ocean. If in every great city in America and in Japan there was one responsible editor who has spent a fortnight as an honored guest in a Japanese or American city, newspaper criticism would be more rational and well informed than it is today. When I suggested this to M. Tsudzuki, the distinguished representative of Japan at The Hague, he welcomed the idea with so much enthusiasm, that I have no doubt if overtures were made from the American press they would meet with a prompt and cordial response from Japan.

It will be said that the American navy has gone to Japan, and that a visit of journalists would therefore be unnecessary. But the danger to the peace of the world does not arise from the bellicose sentiments of the officers of our navies. The mischief-makers are not sailors, but journalists. The visits of navies are useful in their way, but they are much more expensive and much less efficacious as a means of promoting a pacific sentiment than visits of editors. The Australian Commonwealth appropriated $500,000 for the entertainment of the American battleships. One-tenth of that sum would provide for the reception of American editors in Japan, or of Japanese editors in America. The costliness of naval visits is a serious obstacle to the use of this method of pacification. The unofficial overtures for a visit of the British fleet to St. Petersburg in 1888 were nipped in the bud, owing to the protest of the diplomatists that the expenditure which it would en-

tail would ruin the Ambassadors. Always we come back to the question of money. To promote peace actively we must have a peace appropriation, and the larger the appropriation for peace the less will be the need of appropriation for war.

Of all means of promoting peace the most effective is the familiarization of the public mind with a great and inspiring ideal. Such an ideal lies ready to hand, not in the mere avoidance of war, but in the presentation to the mind of the American youth in school and in college of the great conception of the Americanization of the world. The American people for a hundred years have worked out the great idea of a federation of States within a continent. They have now to secure the acceptance of the same sublime conception thruout the world. The American idea is making the tour of the continents. What more lofty ideal can kindle the imagination of the American youth than the thought of conferring upon all the other nations the benefits of a great federation, which, while recognizing the liberty and independence of each State, unites them all in obedience to the authority of a supreme court? This is no fantastic dream. The outlines of the international world-state have been traced by the Hague Conference. It is for America to take the lead in filling in these outlines and in converting this glorious ideal into an accomplished fact.

LONDON, ENGLAND.

The Remedy for City Congestion

BY N. O. NELSON

[Our readers need no introduction to Mr. Nelson, whose articles in our columns on his various theories and practices in social betterment always excite wide interest. If there were more millionaires like Mr. Nelson this country would be a very different place from what it is.—EDITOR.]

THE Charity Organization Society of New York is the oldest, largest and most scientific of its class in this country. It has long had in its council men and women of statesmanship, people of head as well as heart, people capable of taking stock and ascertaining values.

Last winter the Society celebrated its silver jubilee, its twenty-fifth anniversary meeting. In a three days' session there were many good speeches on many subjects. But one subject and one speech absorbed most of the attention and received a practically unanimous support. Mrs. Florence Kelly made the speech. Mrs. Kelly is the agent of the Consumers' League. She is active in the constructive and preventive charity work. She lived for many years in Hull House. She has enough of the business faculty to see causes as well as results. In substance she said that at the end of twenty-five years of the Society's work conditions in New York were not improved, there was relatively more poverty, more dependence, more crowding than at the beginning. Congestion had not decreased, the congested area was denser and wider, the influx from the country and from across the sea was greater than ever. Their relief work was like turning water into a rat hole or stemming the tide with a broom. In not making efforts to keep people away from the city, they had overlooked or neglected their golden opportunity, the only practical way to stop or reduce congestion in housing and employment. At this late day they must take lessons from the disappointing past, undertake prevention more than palliatives, unfold their hands and look to the country.

Strange as it seems, all speakers but one newcomer joined in a chorus of approval—confirming the statement that New York's poverty and distress were worse, not better than twenty-five years ago, agreeing that mere relief was an endless chain, kept going by congestion, and that to justify its existence and perform its scientific function the Charity Organization Society must organize the rural districts so as to keep the people there, send the foreign immigrants there, and even some of the town people.

These experienced charity workers are right, they are especially commendable for their candor. Mrs. Kelly's Irish spunk broke away from the conventional self-laudation, smashed the glass house which institutions habitually inclose themselves in, and turned on the lights. That she was so vigorously and unanimously supported promises well for the charity work of the future.

The helpless must still be helped. It may be that when the stream from country to city of the empty handed and dependent is greatly reduced that the old-time home relief by friends and neighbors and church, and public relief by the State will suffice. At any rate, the chief work, the scientific work, the constitutional work of charity organizations should be done in the country.

How? Several things must be accomplished. In the prosperous sections of the North and West there must be created social centers and the schools must be improved. The best of the young people are disposed to leave the country because it is dull, there is no social organization or gathering place. The best parents are inclined to move away from the skimpy school, with its one unqualified teacher, a scant dozen children and a little schoolhouse planted on a bare spot of ground. The farmers must be awakened and organized; they must be persuaded to build a hall for social and public purposes, consolidate and grade their schools and adapt the curriculum to rural life. This being done, neither well-to-do farmers nor enterprising young people will desert the farm.

Along with the improvement in education and in social life must come increase in farm production and income. Better methods, better equipment and co-operative trading must be introduced. For one man who is drawn to the city to find outlet for his energy or social opportunity ten drift there because they have failed at farming. Their management or their industry has been deficient. All good farmers do well; only the inferior run behind, lose their farms and drift to town for cash employment. If most of these can be taught and inspired to efficiency on the farms, the stream flowing to the cities will be diverted, it will water the arid rural life.

In several countries and in several parts of this country this task has been undertaken with conspicuous success.

Smith's 500 farm improvement societies in Texas combine the economic and the social. The members are pledged and encouraged to improve their business methods, keep better and more stock, raise a home living, beautify the yards, stop credit buying, get their own farms and co-operate in buying and selling. Such a society composed of neighbors and with a young people's auxiliary is a complete social unit. These members have no temptation to give up their independence and hunt casual work in the towns.

In some thousands of localities in the upper Mississippi Valley co-operative creameries have so greatly systematized butter production and farm improvement that no farmer is poor and no farmer's son is without profitable occupation. Following the creamery has come the co-operative elevator and co-operative store.

On the Pacific Coast a majority of the farm products—fruit and vegetables—are packed and marketed by co-operative associations. The farmers do not depend on raising the price by combinations, but on raising the value by better quality and a larger yield.

This associate action has as much social as dollar value. The members come in closer contact, they learn to do things better, they find that what pays better is also more interesting.

In all parts of the country the consolidation of small district schools into graded schools of two or three rooms not only affords better teaching, but it makes the larger school a social nexus, there is a wider acquaintance, the schoolhouse has a library, it is a meeting hall, it gives rise to social activities.

Women's rural leagues for home, social and educational advancement prevail extensively in some of the Southern States, notably Virginia, North Carolina and Alabama.

In Canada, Mr. Robertson, backed by Sir William McDonald's millions, has so extensively developed dairying and agricultural education that no farmer nor farmer's son is tempted by city wages. Canada's growth will be in the country; it will have the minimum of city problems. Canada's agricultural schools, started by private enterprise, have now become a

part of the Government policy. Not colleges to make professors and statisticians, but to make superior farmers, men who will make two blades grow instead of one, and be stimulated to make attractive homes and interesting social conditions.

In Denmark, rural co-operative societies have revolutionized the land; they have in twenty-five years quadrupled the exports of butter, bacon and eggs, have stopped migration to the towns and emigration to foreign countries. More than four-fifths of the rural population are members of co-operative business associations, which include stores and neighborhood banks.

Most remarkable, perhaps, of all, owing to the peculiar difficulties to overcome, are the results accomplished in Ireland by the Irish Agricultural Organization Society. Some eighteen years ago, a young Irishman named Horace Plunkett, became impressed with the beneficent effects of co-operation on the British factory operatives. It seemed possible that the co-operative idea could be applied to the poverty-stricken Irish tenant. He persuaded some men of standing and others of means to join him in forming the Irish Agricultural Organization Society. The object was to get the Irish to associate in productive and social and educational affairs. At the very first, and for years following, the society was met with the bitter antagonism between Nationalists and Unionists in politics, and between Catholics and Orangemen in religion. These differences were irreconcilable; there was a national pride in them, a pride in the hot hatreds.

The effort of the I. A. O. S. was to stir up the people to act for themselves and to unite them in the self-help movement without in any manner touching the subjects of their cherished hostilities. Irish political leaders like John Redmond indorsed the scheme and took part in the society. Others, like Justin McCarthy, declined on the ground that its success would draw attention from the overshadowing demand for home rule. Many of the Catholic and all of the Protestant clergy were friendly. Business men supported it so long as it was confined to production, but fought it when it came to store-keeping. The Nationalist papers for the most part opposed, insisting that no butter should be made in their towns or in Ireland which did not bear the Nationalist label.

The campaign was opened with meetings and speech making. The spirit of association and neighborliness was appealed to; the advantage of a constant market near at hand and good prices was harped on; the glowing examples of Denmark, England and France were held up. This was followed by the organizers working up membership and pledges of milk supply for a co-operative creamery. Where these efforts brought out a fair prospect, the money was advanced for the cost of the creamery, to be repaid by a percentage of the milk delivered. An experienced buttermaker was brought in. Permanent selling connections were arranged.

Under this patient and persistent program of the I. A. O. S. the movement prospered and grew. The old story was repeated; poor country butter bringing fifteen cents a pound in trade at the grocery was replaced by creamery butter worth thirty cents in cash. The cows were fed and milked regularly, and the butter yield doubled. From the co-operative creamery the farmer received the full proceeds of the butter and got back the skim milk for his pigs; he got advice from the manager, who was an expert dairyman as well as buttermaker; he got the inspiration of his neighbors and co-operators.

Naturally, more feed was raised, the fields were manured, more pigs were kept, more bacon made. More things for home living were raised. Getting cash all the year round for butter, eggs and bacon brought about cash trading and cut down credit trading and credit prices. Improved breeds of cattle and hogs were introduced. Along with this extensive business progress came an impetus in home improvements, in social life, in education.

All of these things were done by the people themselves, but they were promoted by the I. A. O. S., and more or less of the initial capital was borrowed thru the society.

In the first seven years about $200,000 was spent by the society in promotion and organizing expenses.

It then seemed to Mr. Plunkett and his associates best that the British Government should assume the leadership;

the movement had taken on national proportions. An act was worked thru Parliament establishing an agricultural department for Ireland. Of this department Mr. Plunkett was made vice-president and manager. The I. A. O. S. and the new department co-operated, with the result that farmers' co-operative societies dot Ireland from one end to the other. Later, people's neighborhood banks were introduced, and the people themselves took up co-operative stores.

Without at all disrupting or seriously impeding the movement two difficulties have arisen. By political opposition Sir Horace Plunkett, M. P., has been removed from the management of the Government Bureau and the appropriation for the I. A. O. S. cut down, thus illustrating the wisdom of the British co-operators in keeping aloof from government aid or any form of politics. This antagonism is due largely to the fact that the stores have aroused the ire of the country storekeepers, who are also the influential politicians.

Fortunately, the movement is now strong enough to stand alone. The co-operators can go ahead on their own initiative and their own growing capital.

Beyond doubt the sound course of co-operation is entire independence. It is legitimate for the missionary work of organization to be done by outsiders at their own expense. It is legitimate that a portion of the starting capital for productive enterprises be temporarily loaned. But until enough co-operative enthusiasm has been aroused to subscribe the capital necessary for a store or for a good portion of factory or creamery it is not worth while starting.

Already much has been done in this country. The Right Relationship League of Minneapolis is successfully organizing co-operative stores. There is on the Pacific Coast a Co-operative Conference, embracing about a hundred stores. There are State associations of co-operative elevators in Illinois, Iowa, Minnesota and North Dakota. The annual negro farmers' conferences of Atlanta University, Tuskegee Institute and the Texas farmers' societies are potent instruments in organizing rural life and improving farm conditions.

The co-operative movement is manifestly of national proportions. One-fifth of the people of Great Britain are in co-operative store societies and many others are supplied by these stores. Four-fifths of the people of Denmark are members of co-operative business societies. The members learn business ways and means; they learn rationally about the effect of government policies, and individually and as a whole they save money on a large scale. Almost universally educational and social measures are made parts of co-operative organizations. Lectures, libraries, laboratories, scientific courses, tours, conferences and the like are common.

There is every reason that rural education, social organization and business co-operation should be fostered together. As shown by the spread of Smith's Farmers' Improvement Societies, without any paid organizing force, and by the spread of the Rochdale Co-operative System, it is quite possible to make this triumvirate of rural reforms spread so extensively as to affect the whole question of charities and corrections. Education adapted to rural life, social organization and business co-operation will stop the city congestion, will carry out the idea of the C. O. S., and will give interesting constructive work to any number of missionaries, who, like the Franciscans of the far West, will make labor on the land and mutual association the first articles of their creed.

Can the charity organizations legitimately take part in this larger remedy for city congestion; are its members qualified for the task; are they willing to forego the saintly task of relief for the austere task of business? Do they believe it possible to make all people efficient providers on the land, make the country home beautiful and interesting and a "hired job" in town a term of contempt? Yes, they are fit to learn. Let them go live and work and earn their living in the country long enough to know the life, know how to make ends meet, how to make people come together, what to teach. Let them become valiant Pragmatists, disciples of Prince Kropotkin, imitators of Francis, then proceed to redeem the mistake which the New York Charity Organization Society confesses that it has made.

St. Louis, Mo.

The Ministerial Gauntlet

BY THE REV. THOMAS TRAVIS

Pastor of the Pilgrim Congregational Church of Montclair, N. J.

FROM two sister churches in a town on the banks of the Hudson six young men—a law student and five tradesmen—started during the nineties to study for the ministry. Two of the six succeeded in running the gauntlet. For years they were known intimately by me, and a close acquaintance with hundreds of theological students has led me to believe that the experiences of the six are typical, and go far toward explaining why young men of today avoid the ministry as a life work.

The law student was the first to leave. He had had a somewhat deep religious experience in the orthodox setting, but before long, hard study had taught him to find himself he became tangled with the "Millennium Dawn," a fanciful faith concerning the second coming. What libeeral teaching and toleration would have done is hard to say, but excommunication, warning of the Church against him, the resultant ignoring of him by old friends, and insistence on orthodox interpretations, closed the Church to him.

The next to leave was a quiet, studious fellow who had slowly and reluctantly decided that his experience could not honestly be expressed in the creed his Church demanded. His pastor and the teachers of the preparatory school insisted on orthodox teachings, and tho months of anxious groping on the part of the lad showed me that in essence he was orthodox, the Church did not see its way to a reconciliation. He went back to his trade without a protest.

But the third was an active-minded, sturdy youth, with young America's lack of reverence for ancient authorities. Yet certainly he was pure and good and Christlike, with a childlike faith in the Scriptures. His eighteen summers sat lightly on him. As yet he was only a boy, and did not realize a difference between unofficial schoolboy conversation and the carefully considered words which are rightly demanded of any public teacher. So he started out to make a new and modern creed.

Knowing the ideas of his instructor, I went secretly to the professor and told him my friend was penniless, working as a farm helper and leading a pitifully hard life in order that his one hope and joy, the ministry, might some day be his. I pleaded with pastor and professor that this was only a boyish whim and would cure itself if they would not consider the lad so seriously. Out of work and funds, the bar sinister of heresy put on him at home and at school, he was advised to drop out for a year till he could pay his tuition. He did not return.

When a man leaves his business for study he cuts off his income. Thus, with the other three the question of finances became so acute that two of them accepted aid of the Church. The third felt it better to be independent. During the four years of preparatory study he worked, sometimes on the farm at 8½ cents an hour, or in the lumber camps at 12½ cents an hour, in the bitter winter of New England, often with mere shreds of shoes on his feet. I have seen him knock the ice from inside his boots at the end of a day's work. In the long summer vacations he labored in the factory for 15 cents an hour. When the day was over he worked, often till 11 at night, at odd jobs. He held open air services once a week and preached on Sundays.

Yet the economic difficulty was fun to him; the perplexing part was intellectual. Why should his school put a ban on Darwin and Drummond? They also had a way of talking about "Science, falsely so called," and the theory of evolution was, for some reason then unaccountable, untaught.

When the time came to enter college new difficulties arose. Many friends said: "Colleges upset men's faith. Go at once in the ministry. The Lord will give you your message." Even when the college was chosen the Church objected on the grounds that it was not "safe." But a congenial atmosphere was there and the old life of study went on. A goodly

number of men of like aims were foregathered there. Poverty and grinding work were laughed at. In those days it was not unknown for men to almost die of starvation. One lad in a nearby room had a bag of antique doughnuts—the gift of a good woman—for his week's food. For four years he bore extreme poverty. To my earnest advice that he quit for a time he replied: "What shall I do if I quit? Give up my ideals? Go back to the old environment?" Then, with flashing eyes—"I'll die first"—and he almost succeeded. Melancholy set in, but he conquered. He was helped from his bed to receive his diploma. Another fellow came in my room, and, marking a loaf in three parts, said: "A is my dinner for today, B the same for tomorrow, C is ditto for the day after. And A+B+C+a can of condensed milk is my board for the week, Q. E. D. But who cares?" And we gave the college yell.

Those were the days when we attended all church entertainments, and never to this day do I omit refreshments from my sociables, for it was on them we lived when nothing else turned up. Those were the happy days when we borrowed the dress suit of the man lucky enough to have one, and "took in" a banquet with literality, dreaming of it when we retreated to beans at a few cents a quart, cooked by our own hands, and when we dined on a dish composed of odds and ends left from previous repasts and named by us "review." Those were the days when cap and gown covered trousers in picturesque ruin; the days when we paid the last pennies of our bills in postage stamps, carried our baggage down to the freight office in the dark, and walked home or stole rides. Some of the boys are in the foreign field, some in the home ministry, some broken down temporarily, but all laugh at the past and would gladly do it again. Practically all of us would have been called heretics, but every one of those lads had the fundamentals of a really orthodox creed—love of God and humanity.

Then theological days came. One of the six had entered the ministry without theological training, and was therefore excused from the examination which otherwise would have trapped him. Another had become confused in the struggle. He enlisted and crowned a hard losing fight with a soldier's death—a gallant comrade and a man. The last of the six entered a famous old theological seminary in the fall of 1900 with the expectation that study under trained teachers would surely remove all serious difficulties.

On matriculation day the new students were assembled while the president read us a document as follows: "The whole of Sunday was to be spent in devotional exercises. None but specifically religious literature was to be read on that day. It was recommended that at least one day a month be set apart for fasting and introspection. No worldly dress was to be worn." The students were called forward to sign individually, and each was told that by this, the act of matriculation, he publicly and solemnly gave his assent to the above.

No hint of this had been given previously. Surely this was not serious? It was. An investigation revealed the fact that few, if any, even of the faculty, actually kept the pledge they had signed. The Sunday edition of the New York *Journal* can hardly by any stretch of exegesis be called "specifically religious literature," yet this was read. My friend went to the faculty for an official interpretation, with this result: "If you read any religious book you are all right, but if, for example, you read a magazine article for your intellectual enjoyment, you break your pledge."

With regard to the fasting and worldly dress clauses we found that a very few of the boys kept both from necessity; most kept neither, from choice. Indeed, many of the older classmen seemed to have forgotten all about the pledge.

Scholarships were given, but only to those who signed that neither they nor their parents were able to pay expenses. As we had paid our expenses thru college, and these were less, we could not well sign. Yet many who were receiving scholarships were afterward seen at expensive football games and grand opera with the naïve excuse that everybody knew these helps were given by the Church in order that a "theolog" might get culture and recreation with education. There were at least two lads who, tho penniless, did not sign.

In the classes really interesting things happened. The doctrine of absolute Biblical infallibility was applied as the basis of every department. The question of biological evolution and creation arose. My friend put the question reverently, but with frankness: "How could green things grow before the sun was created? How could there be a night and day before the sun?" To which the professor: "The fact that the Bible says 'Day one' and not 'one day' shows that there is no sequence meant in the narrative. The days and nights might have been ages apart." Adam was an actual person: Eve was formed from his rib. With regard to the age of the Patriarchs in Genesis 5, in paraphrase verse 5, for example, was given: "All the days that the tribe of Adam continued in prominence were 930 years, and the tribe of Adam went out of prominence." Naturally we asked about Enoch (verses 21-22), to which unhesitatingly the professor in paraphrase: "The tribe of Enoch continued in prominence 65 years, and then Enoch, one man from the tribe of Enoch, was not, for God took him." Concerning the Flood, our professor figured out, and has actually printed in his book, the fact that, allowing one or two square feet per animal, two representatives of all the species in existence could have been put on the ark, and therefore his explanation of the Biblical narrative was credible. Also the locality in which Lot's wife was turned to salt was made up of eruptive matter; an explosion took place and a mass of salty matter covered the unfortunate woman, taking her form. Seeing my friend's puzzled face, the professor said: "Young men come here with their heads full of ideas like a keg of crooked nails. We must straighten out each idea before they are fit for the ministry."

One of the most famous theologians presided over a discussion concerning two differing reports of the number of men killed in a battle. How could both be infallible? And the professor: "How many men are there in this room?" . . . "About twenty." . . . "Suppose I should say that there were ten, I should be correct, for if there are twenty there are surely ten. Thus in the Bible; the more inclusive is the fuller report merely." And to his class: "I pity the man who cannot believe that every apparent error of the Holy Scripture is capable of explanation." He then put the following question to the class: "What will become of the man who does not accept Christ?" —really, his view of Christ; and answering his own question he said: "His soul will fester in sin in hell forever."

Those were the days of hot discussion. In after-dinner groups the argument was taken up. With regard to the creation one senior said: "Isn't it possible for an almighty God to have done the things as interpreted by us?" "Yes," said my friend, "but not more possible than that an almighty God could create the universe out of pie crust." With blazing eyes he answered: "Well, if it is possible and the Bible says so, I shall believe it, and there's an end."

Phi Beta Kappa men, honor men of our best colleges, professors who knew the original languages well, claimed to believe these things. Doubt was the devil's alluring. My room-mate summed up the matter so: "Well, I believe what the Bible says." "No, you don't! You only think you believe what your professor says the Bible says." "Well, old fellow, if you think you know more than all these professors, go ahead; I don't think you know enough to judge." I began to wonder whose head was the keg of nails.

Hunting out my friend who had refused to sign the scholarship, "Sam," said I, "what do you think of this?" And Sam: "Well, I don't see my way clearly. If I only knew positively which was right! I can't fully accept what they say; but my mother will break her heart if I leave. She believes all this, and I'd rather die than have her think I'd fallen away."

There could be no answer to this save reverent silence. We tried to believe, prayed to believe, these doctrines, but could not.

On examination day we had to answer or be marked failures; so when our professor asked his question of the unbeliever's destiny, I wrote in quotation marks: *"His soul will fester in sin in hell forever,"* and I past.

We determined to leave. Students

came and begged us: "Do not go to —— Seminary. Don't let them take your Bible away from you. You will not be able to enter the ministry. No church will accept you." We were conscious of the truth contained in this, but my friend replied: "Then I'll have to do something else. I'd rather do anything under heaven than devote my life to your doctrines."

With sinking hearts we entered the tabooed institution. The old pastor was tragic in his sadness. Old friends kept silence or with noble loyalty tried to express sympathy without committal to the heresy. We determined to try the new and also to prepare for a professorate, so that if the Church refused to accept us we might find some place in the world's activity.

But the new seminary brought us joy. Here any sincere and reverent question was frankly threshed out. The atmosphere was as free and truth-seeking as any classroom in any college in any land. It seemed as if there were gathered here men who had run the gauntlet and proved their sincerity. Some had come from seminaries worse than our old one; places where grown men, ministerial students, were kept under the eye of a chaperon, required to ask permission to be out after ten, and whose reading and thinking were censored as were the contents of their trunks. This in our American Protestant Church!

Yet in this place were men glad to suffer for their faith; 75 per cent. of them were Phi Beta Kappa men. They seemed gifted with the power to think thru words and authorities to sources and realities. Out of a class of forty-one almost thirty have devoted themselves to foreign and home missions because they felt that there they could come nearer the need of the world. Without regard to salary, fame or personal comfort, they have gone with enthusiasm wherever the Christ ideal called.

In this atmosphere, questions of creed were seen to be only questions of words and explanations. Even as stars and flowers exist, whatever explanation is given of them, so these men saw that God and the Christ ideal are, no matter how you explain them, and they strove to control the sources of these powers; simply to get and follow God and Christ.

Many were the tragedies of these four years. For such men wrestle with life, not with books or verbosities. Some of the boys died by reason of their struggle to find in intellect and religion the God of things as they now are. Some, unable to explain themselves in words even fairly orthodox, these became professors or went into business. Some few fell from their moral ideals under the temptations of a big city. Could God forgive a man who could not forgive himself? For another they would have answered, "Yes, gladly," but for themselves there was only bitter disappointment and despair.

Yet there is always a way for a man to find himself and to rediscover his God in the process. Into the life of the city we plunged with this idea.

In those busy days and nights spent in settlement, slum and club work, as well as in church and study, we saw men struggle and pray against temptation—and fall. We saw boys die in the gutters of life, with their mother's prayers ringing in our ears. We saw in prisons men so born that they become inevitably criminal, "born criminals," and we saw our credo and our God.

When the day of examination for entrance in the ministry came it found us with one great aim for which we felt we could live, and, if need were, cheerfully die. It was the theme of Christ's first sermon in his native village: "He hath anointed me to preach good tidings to the poor; He hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." Being members of a nearby church, we applied there for license. It was hopeless. One leader told us frankly and kindly that we could never enter his Church. Another, the pastor of a large and wealthy congregation, said: "As a private man I sympathize with your belief, but as an official I am paid to uphold the doctrines of my Church. Yet I want you in and I'll tell you what I'll do. When you come before the committee and they ask you a question that will compromise you, hesitate, and I will have men come to your rescue with a question you can answer in the affirmative." With embarrassment at his apparent ingratitude for so well meant an offer my

friend answered, "No, I cannot begin my ministry with evasions. I am willing to avoid a truth for love's sake, as when an answer will upset some poor fellow's faith; but if I cannot state my credo frankly and unequivocally to scholarly men, my brethren in the ministry, I will not enter."

Other seminary mates met similar conditions. Some, considering honestly that it were better to compromise than drop out, gave equivocal answers and were accepted. My friend tutored one student for examination and he passed the very body that had rejected his tutor.

Another classmate who had spent years as the unordained pastor of a little slum chapel, and had possibly contracted consumption in his constant life among the lowly, came up before a different committee. He was so ill that I had urged him to drop all work and go on a farm, but he said: "No, I am only one month from the day I have been anticipating for fifteen years. I shall get the degree of Ph. D. from the university and that of B. D. from the seminary; then I will go on the farm as soon as I am ordained, and can thus rest without thinking that I shall have to review all my work for examinations." The examining body asked him if he believed Adam to be an historic person. He answered in the negative and was rejected. When I saw him the next day he was ill with disappointment and told me that all his hopes were shattered. That night he was in the hospital. Hearing of his condition and its cause, the committee reversed its decision, and sent a man to tell him so, but the news came too late. Broken by the disappointment, he was dead. Over his coffin the degrees were conferred, and we buried him with honor for his fidelity to truth.

But he was ill. Most of the boys took the decisions of this association with humor. One of our favorite stories was of Dr. John Lord, who came before a certain council and was asked if he would be willing to be damned for the glory of God. He answered that he did not feel sure for himself, but that he was perfectly willing that the questioner be so damned. They rejected him for undue levity and refused to reconsider their decision.

My friend had prepared for the foreign field, but at the last moment three calls came, and he accepted the first, at just about half the salary he was then getting for three lessons a week as club leader. Even there the taint of heresy seemed to be discovered by some official. But tho the pastor had been there only a few months the people came to the rescue and said, "We will have this man or none." The minister of the mother church said to the candidate: "You are a heretic, but we will stand by you. You shall be ordained whether the committee say so or not." After twelve years of toil and study the last of the six had run the gauntlet.

And now we may answer the question: "What prevents young men of today from entering the ministry?"

It is not the economic difficulty, tho it is sometimes strenuous to keep a wife and family at an educated man's standard of living on $500 a year. It is not the vanishing of emotion under the introspection induced by the student's life, for that is only natural. The will to be called is an excellent substitute for the feeling of being called to the ministry. It is not that modern conditions make for materialism and irreverent heresy. There is no class of men in the world, and there probably never has existed a class of men, so sanely and beautifully idealistic, so deeply reverent for the genuine thing or so really orthodox in essential belief as the American college man of today.

There is just one great difficulty, and that is orthodoxy, verbal orthodoxy; all other obstacles spring from this. This it is which makes a youth unaccustomed to antique vocables believe that his experience of God is really opposed to those of the fathers. It is orthodoxy, superficial orthodoxy, which prevents the good and noble men of the Church from seeing the priceless treasure they have in a youth who will suffer and toil for his religion. They do not see that his experience and theirs are really the same—only the explanations differ. It is orthodoxy, mere external orthodoxy, which is unable to see clearly thru words and which keeps a fossil form of theological seminary merely because it speaks the ancient patois, tho soul and

life be unspeakably gone. Thinking to build up faith, it does its blind best to tear faith down. I have seen dozens of men floored by this kind of orthodoxy, but I have never yet seen a virile youth upset by the so-called liberal teaching, or by real orthodoxy.

In my experience it is orthodoxy of the merely verbal kind which is the arch enemy of the modern ministry. This it is which keeps some of the keenest and best young men from the Church. Yet we must give these earnest and kindly men who stand for such orthodoxy their due. No man has a right to ignore the work they have done. They undoubtedly furnish the motive power which starts most youths in the religious life, and then, unmeaningly, proceed to annihilate all but the truly predestined by making them run the gauntlet.

MONTCLAIR, N. J.

The Palace of Peace at The Hague

BY PHILIP STAFFORD MOXOM

CHEER up, my heart, the better day is dawning,
The better day of which thou dreamedst long,
When, on the god of war no longer fawning,
Mankind shall sweep away the ancient wrong.

The land which Alva's hordes once desolated,
Where Dutchmen checked the power of haughty Spain,
Where faith and love of freedom new-created
The shrines which war had leveled to the plain,

Has now become the holy place of meeting
Of messengers of good from many lands,
And East and West engage, with friendly greeting,
In weaving strong world-wide fraternal bands.

Where sabers flashed and belching cannon thundered
Is heard the music of the builders' toil,
And near the field where Gaul's great captain blundered
The shrine of Peace now rises from the soil.

Not to sweet notes evoked by bright Apollo,
Nor Orpheus' lyre, these sacred walls arise,
But rhythmic heart-beats of the world they follow
By light of love-gleams in the nations' eyes.

The level fields of Holland, water-cinctured,
Sublimer grow than templed hills of Rome,
And lovelier than Athens, glory-tinctured,
The Hague becomes benignant Justice's home.

Here sovran Law shall dim War's ancient splendor,
Rebuking with strong truth the nations' wrath;
Here Peace, with gracious mien and accents tender,
Shall lead them onward in her fruitful path.

Then sing, my heart; the glorious day draws nearer,
When strife no more with blood shall drench the earth,
And, each to all and all to each grown dearer,
The peoples, glad, shall thrive in wealth and worth.

SPRINGFIELD, MASS.

The Cup

BY MAY PRESTON SLOSSON

THE Cup was beautiful, quaintly and curiously wrought with figures of gleeful baby Loves, molded of rosy gold with half-extended wings, as tho they had lighted on the brim a moment before to sip of its nectar. An old, old Cup of rare design and dearer because old and rich of service to many generations of men and of maidens fair as she.

The untasted liquid seemed fathomless as she gazed down into it; deep as all the longing that had looked from the brooding eyes of those who had past it on from hand to hand, from lip to lip, from one generation to another. There were red gleams of fire and of roses; greens and blues that shimmered into each other in the shifting hues of a dove's soft breast; the purple of ripe grapes; the yellow of sunlight in the heart of a water lily; the gray-blue bloom of a plum under a passing shadow; the white flash of tears falling upon marble; the joy-light of eyes that had wept themselves bright again.

The maiden stood among the meadow-drifts of daisies; all about her the sound of wings; of low, soft notes; of the whisper of gossiping grasses.

A shaft of sunlight touched her shining hair, slid down the rounded arm, trembled on the rose-leaf palm curved about the handle of the Cup and quivered in the restless liquid, disclosing strange, vivid colors, unnamed as yet. Was the draft cordial or poison?

She lifted the dread Cup and drank to the Giver.

NEW YORK CITY.

The Breakdown of Party Government

BY LUCIUS F. C. GARVIN

EX-GOVERNOR OF RHODE ISLAND

POLITICAL parties have been considered natural subdivisions of a free people. Theoretically, they serve as means to a common end, the public welfare.

Party government is best illustrated in Great Britain, its source and home. It is possible in that country to transfer the administration of government, in all its departments, from one party to another, as the result of a single election.

In the United States such complete overturn of the party in power has seldom occurred. Nothing less than an overwhelming and widespread public sentiment can carry the Presidency, the House of Representatives and the Senate against the party in power.

But aside from this inability of an opposition party to carry its policy speedily into effect, there exists in the United States, and is not wholly absent elsewhere, evidence of weakness in the old method of carrying on campaigns and deciding their result. It is not too much to say that, in the United States at least, government by parties has broken down.

The theory of political parties is, not only that the people will divide upon important public questions, but also that an opposition party, represented in the legislative department of the government, will at all times act as a critic and a spur to the majority, and to such good effect that the party in power, if unfaithful, will be rejected at the next election and be made to give way to the opponents who have exposed its inefficiency. If this theory of party government ever were true, it has ceased to be so, and indeed in this country is becoming more manifestly false each succeeding year.

Even the division of the people along important lines of policy is indistinct and uncertain. In the last Presidential election there were those who vehemently maintained that Mr. Roosevelt, the candidate of the Republican party, was much more of a Democrat than his opponent, Judge Parker.

As a matter of fact the opposition not infrequently is controlled by the organization of the dominant party. Numerous examples of this might be cited.

Minute but pertinent illustrations may be found in the town elections of Rhode Island. In one instance, which is by no means an isolated case, in the year 1905, the Republican boss supplied the local boss of one of the small towns with $650 for campaign expenses. The only condition imposed upon expenditure was that the Republican legislative ticket should be successful. That assured, the town boss was told he might pocket as much of the fund as he chose. The course pursued was as follows: One hundred dollars was applied to hiring the Democratic town committee to put no legislative ticket into the field; a like sum was used to pay fifty venal voters $2 apiece for going to the polls and voting aright. This left $450 to the local boss, as his share of the spoils. Evidently in that small field the whole theory of an opposition party collapsed.

But it is not necessary to confine the examination to the smallest constituencies. In the great city of Providence, R. I., the Democrats in the year 1903 elected the twelve representatives to the General Assembly, including men of first class ability. As the minority of an almost equally divided House, they served with signal force and to the eminent satisfaction of their constituents. By every rule of common sense and theory of party government these men should have been renominated. On the contrary, eight of the twelve failed of a renomination, and those rejected included the ablest, most active, and best known legislators. The eight were superseded by obscure and less reliable candidates, whose selection was made by the Republican machine and whose nomination was effected by the liberal expenditure of Republican money in the Democratic primary meetings. It was expected that the twelve men so nominated would easily be defeated, but, to the surprise of the Republican manipulators, they were elected. The delegation, however, was weak, made no mark in the Legislature, and at the next election was defeated easily by their Republican opponents.

In the pivotal State election of 1906, it was only by the most herculean efforts that, by a bare majority of the wards, the Democratic convention in Providence was wrested from the control of the Republican machine.

Turning to a larger field of politics, we learn that in New Hampshire the railroads which rule the State were able in the year 1906 to dictate to each of the opposing parties its candidate for Governor—and that, too, after the people had been well waked up by the canvass of Winston Churchill for the Republican nomination.

How is it in the nation? Judge Charles S. Bradley told me that, in his opinion, the Democratic nomination of President in 1872 was influenced, if not dictated, by the Republican party. He was a delegate from Rhode Island to the convention held in Baltimore. Immediately after the nomination of Horace Greeley, a delegate sitting near the judge said to another in an audible voice: "Now we have got them," indicating thereby that Greeley's candidacy meant, as it really did, a walkover for General Grant.

In the opinion of many Democrats no very distinct line of demarcation was drawn between the Republican and Democratic platforms, or their respective candidates for President and Vice-President, in the campaign of 1904.

In many of the States the minority party in the Legislature has little influence upon legislation.

A legislator from another State, who was visiting Rhode Island last year, enquired somewhat curiously of Secretary of State Bennett concerning the course pursued in dealing with reform measures in the little commonwealth. The visitor had been informed that popular petitions, and bills and resolutions based upon them, had for the previous five years been buried in the committees of the House of Representatives, and consequently neither reported nor discussed. The Secretary of State admitted the truth of the rumor and defended the custom. The gentleman replied that in his State such measures were reported from committee, fought out upon the floor of the House, and there killed incontinently.

The material fact brought out by this conversation was that in both States progressive legislation met only with defeat. In such States, which are the rule rather than the exception, the minority exercises but little restraint upon the wrong-doing of the party in power be-

cause it has no chance of gaining a complete victory at the polls.

Take for illustration the States of Vermont, Pennsylvania, Georgia, or even Massachusetts, what possibility is there for the opposition to oust the party which for a generation has dominated the State? In Pennsylvania and in Massachusetts it is true that a Democrat has at rare intervals been chosen Governor, but the Legislature, where the real power rests and where party policy is formulated, is absolutely beyond the hope of capture. This statement is true, not only of the above named States, but of nearly all the rest.

The organization of the dominant party, because of this lack of effective opposition, has become so arrogant that it disregards the wishes, not merely of the voters of the other parties, but even of the rank and file of its own party.

For example, in Rhode Island an overwhelming majority of the Republican voters are desirous that the veto power shall be conferred upon the Governor, but they, with the active assistance of all the other parties, have been able to get nothing of the kind, because the party boss objects.

So helpless do the people feel, so helpless have they become in all matters affecting the common welfare, so accustomed are they to bow to the will of the machine, that they maintain the same subservient attitude outside of politics.

Fear and hatred of the trusts are almost universal, but these monopolies continue their depredations practically unchecked.

The recent exposure of the great insurance companies horrified the country, but when an opportunity was offered to the stockholders of the two great New York mutuals, whose officers had paid themselves extravagant salaries, had used the enormous sums entrusted to them for their own emolument, had contributed to campaign funds and to lobbyists hundreds of thousands of dollars of the stockholders' money—but, I say, when the time came to punish the administrators and secure better conditions for the future, the stockholders, an exceptionally intelligent class, allowed themselves to be wheedled by interested agents into keeping in power some of the very men who had betrayed them. The two insurance machines which fooled their policyholders were patterned closely after the party machine which so long has fooled the voters.

Clearly, party government has broken down in the United States. The existence of an opposition party in perhaps forty of the forty-six States serves only as a scarecrow to be utilized by the dominant machine for keeping its own followers in line. The disorganized and too often purchasable opposition is placarded as the only alternative to existing conditions, until dissatisfied members of the dominant party have come to believe that, however bad the party in power, it is far superior to its opponent—that a change of parties would only be to jump from the frying pan into the fire.

What is true of the several States seems to be coming true of the nation as a whole. The possibility of ousting the Republican party from its control of the national Government is becoming less and less. Most Republicans, as well as the members of the other parties, are tired of the tyranny of Congress and are growing suspicious of the judicial department of the Government. This is manifest from the enthusiasm with which they side with the President in his controversy with the Senate and his denunciation of judicial action. But it must be borne in mind that the presence in the executive department of a man who sides with the people is a mere chance. He was nominated for Vice-President, not only to get him out of New York, but also to take him out of line of succession to the Presidency. The unexpected death of President McKinley gave Roosevelt a Presidential term of almost four years, during which he made it impossible for the Republican leaders to sidetrack him. Judging by the past, the probability is that one or both of the leading candidates for President in 1908 will be satisfactory to the trusts, and that none other can be elected.

If party government in the United States has broken down, what possible substitute can be found?

Two conceivable remedies suggest themselves as a means of delivery from the hateful and demoralizing duel between the opposing parties.

A possible scheme is for the party which is in a hopeless minority in any State to disband. If, for example, in Vermont, the Democrats should decide with unanimity to dissolve their organization, to name no more candidates, to cease to call themselves Democrats, and to ally themselves completely in all respects with their Republican neighbors, it seems quite possible that there the two party conflicts would come to an end.

Already the rivalry of the ambitious in that State has been transferred from the polls to the Republican caucuses and conventions. With no Democratic candidates to appear upon the ballot, and former Democrats in attendance at the Republican primaries, not only candidates but issues and policies would be fought out before election day.

It may be said that the abolition of the opposition party would only transfer the conflict of opinions from the polls to the party meetings. That is true, and it is very possible that the primary meetings might be so regulated by law as to develop a faction fight analogous to that which now takes place at the polls between Republicans and Democrats. But, since these factional contests would be local, without the name or prestige of national party titles, it would be easier for the contestants to change from the one side to the other. It would not be so difficult for the common people, who constitute a large majority in every party, to combine against the monopolists who now control the dominant party, if not both parties.

It is conceivable that under the changed conditions the single party remaining might be controlled by that four-fifths of its members who desire the common good and are satisfied with equal rights for all.

However, the disbandment of the minor party is neither the probable nor the manly way of correcting the countless evils resulting from party spirit.

The effectual remedy is to abandon the present method of electing legislative bodies and to substitute therefor *proportional representation*.

This can be done for a Legislature by adding to the State Constitution an amendment substantially as follows:

The Legislature shall consist of a single chamber of fifty members. Candidates for the Legislature shall be chosen upon a general ticket for the entire State. No party shall nominate more than forty candidates. No elector shall vote for more than one candidate. The fifty candidates receiving the highest number of votes shall be declared elected.

As a result of such constitutional requirement caucus laws would become unnecessary, nominations would be made by voluntary association without much regard to any national party names, all sides of important questions would be represented in the State Legislature, instead of two sides only. Any one-fiftieth of the voters, by uniting upon the same candidate, could elect him.

The ablest and best known men in the State would consent to be candidates and would be elected. In office they would be independent, beyond the control of interested outsiders either by money or other influence; they would possess both the ability and the will to serve all the people; they would continue to be re-elected so long as they were willing to serve, which, under the circumstances, would be for many years. In the transaction of legitimate business the members would cease to divide upon two party lines, and there would be a new alignment upon every question that arose.

It may confidently be expected that with the best qualified men in the State serving for long terms, all laws would be improved and systematized. The powers and duties of the executive departments of the Government would be changed for the better. Municipalities, in their own sphere, would be made supreme, the local legislative bodies being elected by proportional representation. The prolix, foolish and unjust legislation which disfigures all of our statute books would be repealed, and, instead of the present futile attempts to restrain evils which are caused by bad enactments, a few just laws would be substituted.

Upon the ruins of the two-party monstrosity which has now broken down will be erected a government truly representative of the people. When it acts, the mature judgment and the conscience of the whole community will be exprest, justice and good government will prevail.

LONSDALE, R. I.

Literature

The Works of James Buchanan

JAMES BUCHANAN was so essentially a diplomatist that it was quite fitting to hand over the task of editing his writings to the most eminent of American jurists. Professor Moore has much more than a national reputation as an international lawyer, while his monumental compilations upon arbitration and the law of nations have fully established his standing as an able and conscientious editor. In the four volumes now ready* he has arranged the papers of Buchanan for the years before 1842.

The public life of James Buchanan covered those forty critical years between the Missouri compromise and the Civil War. He entered Congress from Pennsylvania in 1821. Of his writings previous to his first speech in the House his editor has found ten pages. During the years covered by these volumes his reputation as a Pennsylvania politician was being established, and in 1841 he had for six years been a Senator of the United States. Yet in these twenty years of public life there had been no time when Buchanan had played an important part in national affairs. His speeches and letters might as well have been those of any politician of good ability, honesty and fortune.

The documents here presented, then, have their interest in the light they throw upon the ordinary workings of life and government in the thirties and forties. Even here their new interest is slight, for most of them are merely the speeches already accessible in the pages of the Annals of Congress, and without special concern for the general public. The Library of Congress and the Pennsylvania State Historical Society have given up some manuscripts which here see the light, but these are so few in number that we are forced to conclude that Buchanan took no special care for the preservation of his correspondence.

*THE WORKS OF JAMES BUCHANAN. Collected and Edited by John Bassett Moore. Volumes 1-4, 1813-1841. Philadelphia: J. B. Lippincott & Company. **$5.00 each.**

The earliest letters of interest are those which portray the rising young Democrat in the years of Adams's administration, 1825-29. A few letters here show how carefully Buchanan established his connection with Jackson and looked after his own future by tying himself to the chief, now abused, but soon to be triumphant. The unsavory scandal raised by the Jackson men over the alleged bargain by which Clay received the portfolio of State in return for his support to Adams made life difficult for the Pennsylvanian. He allowed himself to approach Jackson in a way which might be misinterpreted as being an embassy from Clay hinting at a promise on Jackson's part which might secure to Jackson the aid of Clay and an election to the Presidency. Jackson misunderstood the approach and stated in public that Clay had made overtures to him thru Buchanan. For Buchanan it was a nice problem in practical politics to correct the statement of his chief without losing his friendship. It has a curious ring today, to hear a Pennsylvania Congressman, in this connection, declare: "I feel proud that my native State has thus early shewn herself to the world to be true to her principles and to be beyond the influence of executive patronage."

Before the thirties had ended Buchanan had begun to show great interest in affairs of diplomacy. The fourth volume is full of speeches on international matters, such as the Maine boundary, the Texas recognition, and the McLeod case. In this last controversy he displayed the jurist overcome by the State rights Democratic politician. Webster, as Secretary of State, realized fully the danger to the Federal Government if New York should hang for murder a man who had acted under orders as a British soldier, and whose responsibility had been shouldered by the British Government. One of the weak spots in the Federal Constitution is the ease with which a disgruntled State might involve the whole United States in unnecessary complications. But Buchanan was in the opposition, and

charged it against the statecraft of Webster that Demosthenes, another orator, had been a coward and had accepted a bribe, while Cicero had been timid and irresolute. After this convincing argument he tried to prove that McLeod ought to hang whether England assumed responsibility for his act or not.

As editor, Professor Moore has in most instances contented himself with giving the source of the documents which he prints. We have no complaint to make of his editing or of the printing. But unless subsequent volumes shall bring to light large quantities of new manuscript materials, we are inclined to doubt the need for issuing Buchanan's works on this elaborate scale. It is hardly worth while to reprint the Annals and the *Globe,* even to gratify the family piety which provided for this work.

Peter

NEW YORK owes a debt of gratitude to Mr. F. Hopkinson Smith. For years the novelists, from Ernest Poole and Upton Sinclair to Robert Chambers and Mrs. Wharton, have laid in it the scenes of the most disgraceful transactions, shocking scandals and revolting tragedies to be found anywhere in fiction. Now comes Mr. Smith, working out his story* in the same scenes, and, while admitting all they portray of vice in shadowy sentences here and there, he reveals with a veracity and grace that is a moral triumph in his art the other element in society which holds it together in spite of the scandals and tragedies. He has restored the honorable tone of time to character, and redeemed the terrible Street itself from the money changers with an artist's eye.

Peter, he expains, is not the hero of the story. Peter is simply the assessor of permanent things in the whirl of life about him, and the godfather of any goodness he can discover in his friends. He is a gentleman, the rarest of all creatures (it being so much less difficult to be a lady!), with a mind in which wisdom is a kind of fragrance, and a spirit suited to all elegances here and hereafter. He is sixty years of age, the receiving teller in an old-fashioned bank on the Street, with a salary of three thousand dollars a year, which is evidently supplemented by a pension of Paradise ideas from the angels in Heaven.

In the first chapter, Mr. Smith leaves Peter himself to lay the scene of the story as he clatters home with the Major after banking hours, and you are made to see the Street as he sees it—thru "the fog which had earlier in the afternoon been but a blue haze, softening the hard lines of the Street, had now settled down in earnest, choking up doorways, wiping out tops of buildings, . . . making a smudge drawing of the columns of the Custom House, etc." There is not a hint of the fierce, pushing crowd of strained white-faced men hurrying to the ferries. Peter sees not these transient figures, but the huge piles that hang in the fog like columns and corners out of eternity.

And the author is a long time getting down to his story. When he does, it is told in such a way as to contrast the substantial, honest, social and home life of the elegant, elect poor with the insubstantial, dishonest, inelegant life of the rich. This is done more by character drawing than by the incidents of the story. John Breen, a young Marylander, is the hero, and he intends that this youth shall represent what is best in the manhood of the South, just as Peter Grayson represents what is best in that of the North. The boy is stupid, but is so made that he thinks right with his heart. Like all of his kind he has no ignoble care of consequences. He denounces his uncle, Arthur Breen, banker and speculator in Wall Street, for dishonest methods, and quits his employ in a virtuous tantrum. Peter's influence secures him a position with a great civil engineer. The stolid, unaffected way with which he clings to what is honorable, his ability for accomplishing hard manual work, and his modesty as a lover make up the interest of the tale and give Mr. Smith the opportunity he seeks for showing that the best manhood of the South depends now, as it has always depended, not so much upon the development of wit, but of spirit. It is a matter of birth, an invincible quality in the blood which does not make a man intellectual,

*PETER. *By F. Hopkinson Smith.* New York: Charles Scribner's Sons. $1.50.

but brave; not shrewd, but honorable. The point is well taken, and this type does still exist in the South, but it is by no means a common one, which is fortunate. But for a generation of overseer's sons, with no blood or breeding worth mentioning, who went into business there immediately after the war, that section would be more nearly in the hands of Northern financiers than it is. And Mr. Smith virtually concedes this when he shows that Breen would have been destitute and in debt but for Peter's management in discovering a purchaser of a mine which Breen in his ignorance and improvidence believed to be worthless.

There are other interesting and significant characters in the book besides Peter and John Breen, but its great charm lies in the author's marvelous descriptions and his genius for picking the good instead of the evil out of life—not ascetic, attenuated goodness of the kind which makes a trellis of Jacob's ladder to Heaven, but a high, fine, friendly goodness that belongs to earth and mortality here and now.

The Philippine Islands

Only a few years after the war with Spain, Miss Emma Helen Blair and Mr. James Alexander Robertson had worked out a plan for the publication, in a series of volumes, of documents regarding the history of those islands. The Arthur H. Clark Company undertook the work, and their prospectus of it in 1902 proposed a series of fifty-five octavo volumes, with an average of 320 pages each, covering the history of the islands beginning with Magellan's expedition and running to 1800. The object was primarily to secure and translate important documents from the archives in Spain and elsewhere, also to reproduce portions of the rarer old printed works on the Philippines, either in translations or abstracts. Printed works on the nineteenth century being relatively easy to obtain, the original plan did not cover that period; but, at the request of many subscribers, the scope of the work was, after its first volumes had appeared in 1903, changed to cover the entire period of Spanish rule, and the title was correspondingly altered.*

This series has now reached its completion, except for the issuance (expected before 1908 is over) of Volumes 54 and 55, entirely devoted to an analytical index of the series as a whole. Volumes 51 and 52, whose fifty predecessors have all been noted in these columns as they appeared, covered the years 1801-1840 and 1841-1898, respectively, and the historical text of the work was ended with them. Volume 53, also separately printed in a volume of 437 pages, edition limited, is a *Bibliography of the Philippine Islands: Printed Works and Manuscripts,* compiled by Mr. Robertson. Those libraries which have not subscribed for the series as a whole cannot afford to be without this volume as a separate. In its specialty, the history of Philippine manuscripts, it is unique. Its introduction brings together in one place more information regarding collections of Philippine books and manuscripts than is elsewhere available. It gives complete lists of printed works, covering Philippine bibliography in whole or in part. A special list of rarer printed Philippina contains data elsewhere obtainable only in fragmentary form.

The two volumes on the nineteenth century are so packed with information especially pertinent to the problem of the Philippines as it has appeared since 1898 that one regrets that only two volumes were assigned to this final century of Spanish rule. The reason, connected with the original plan of the work, has already been mentioned; still, one would prefer to have sacrificed some of the material in the preceding fifty volumes, particularly some of the space given to translations or abstracts from friars' chronicles of seventeenth century happenings—chronicles not always valuable or interesting. In part, a number of excellent appendices to the later volumes of the series, wherein the editors have treated education, commerce, the Moros, etc., during the entire period of Spanish rule, help to remedy this defect in distribution of material. Moreover, besides synopses of the main events in Philippine history

*The Philippine Islands, 1493-1898. *Edited by Emma Helen Blair and James Alexander Robertson.* Cleveland: The A. H. Clark Co., 1903-1908. 55 vols.

printed in the closing volumes of the series, there is in Volume 52 a special contribution of about one hundred pages by James A. LeRoy, which, besides an editorial discussion of the main features of the years 1860-1898, treated as the closing period of Spanish rule, furnishes a working bibliography for the study of this period under the heads of social, economic and political development. The bibliographical data, comments and notes furnish information nowhere else brought together in one place, and especially is this true of the story of the Filipino reform propaganda and its culmination in revolt. Until some one publishes a thoro review of the period here treated, this little study, hasty and rather formless as it is, will remain quite indispensable to every one who seriously proposes to get an understanding of the final years of Spanish rule or of the Filipino national movement since 1898.

At least a mention must be made also of three other documents of Volume 52, viz., the translation (partly in abstract) of the hitherto almost unknown third volume of Sinibaldo de Mas's "Informe" of 1841, privately printed; the translation of the statutes of the Philippine League, as drawn by Rizal in 1892; and the translation of the defense and protest of the religious orders of the Philippines addrest to the Spanish Minister for the Colonies a few days before the outbreak of war in 1898, but never formally presented. All are documents of prime importance. Curiosity regarding the private expressions of the diplomat Mas may be whetted by the remark that over fifty years before the close of Spanish rule he suggested a policy looking to the fostering of a nation in the Philippines and the future recognition of their independence.

When the volumes containing the analytical index to this series are out, it is to be recommended that any one desiring to investigate any phase of the Philippine problem in the light of past history shall consult this work, if he has access to a library containing it. He will almost surely find in the index references to passages bearing directly on the particular subject, or at least notes which will set him on the trail of the sources best to consult. This is especially true of the later volumes of the series, the editing of which has improved constantly, as the editors have more thoroly familiarized themselves with their field. The work has not been a financial success, owing to its being attempted too early, or at least on too large a scale. But this is only the more a reason why the conscientious and in the main very efficient work of its editors — laboring long after they had lost any hope of other rewards than the recognition of their efforts for the extension of knowledge—should be heralded abroad, that the measure of their usefulness may be increased as much as possible. The time has come to disregard the many ephemeral books about the Philippines that have appeared since 1898—and "ephemeral" applies to almost every one of them—and to be guided in the search for accurate information by this work. Certainly whoever pretends to be a special student of the Philippines *must* do so, and even the general reader may be advised to do the same in his more casual way.

Which College for the Boy? By John Corbin. Boston: Houghton, Mifflin & Co. $1.50.

This is a much more interesting and valuable book than would be inferred from its title, the responsibility for which the author takes the first opportunity to disclaim. It is a series of character sketches of Princeton, Harvard, Michigan, Cornell, Chicago and Wisconsin, with incidental references to other institutions, something well worth doing and here done well. College catalogs are intolerably dull and notoriously unreliable, not because they do not tell the truth, but because they leave out what one wants most to know—that is, the spirit of the place and wherein it differs from others. Mr. Corbin puts the flesh on these dry bones. His own training was received at Harvard and Oxford (in the pre-Rhodesian days), therefore one is surprised to find that he is generous in his praise of the Western State universities and most sharply critical of Harvard. One would have thought that Harvard was so accustomed to being criticised, by both outsiders and insiders, as not to mind it, but this attack, when it first appeared in a periodical, was resented and

called out some vigorous replies. Mr. Corbin prefers the English to the German ideal, and believes that the most needed reforms in our universities are the abolition of the free elective system and the cultivation of an orderly social life among the students, something like that in Oxford. But the book is all the more valuable from its frankly personal tone, since this does not interfere with a fair appreciation of the distinctive merits of each university.

Chautauqua Home Reading Series. Foundations of Modern Europe, by Emil Reich. Seen in Germany, by Ray Stannard Baker. Man and the Earth, by Nathaniel S. Shaler. Studies in European Literature, by various writers. The Chautauquan Magazine. New York: Chautauqua Press. $5.00.

This is the course for 1908-9 provided for the Chautauqua Literary and Scientific Circle, the oldest and most popular of the home-reading culture courses. The subjects are well chosen and the books interesting and adapted to their purpose. The only one to which objection could be made is the first mentioned. We paid our respects to Dr. Reich in a disrespectful way in THE INDEPENDENT of August 13th. His glittering generalities and dogmatic judgment are particularly unsafe to readers like many of those in the C. L. S. C., who are inclined to take everything in print as gospel truth. But they ought to start lively discussions in a local circle that has any life at all. Mr. Baker has a good journalistic style and gives a graphic account of important characters and characteristics of modern Germany. The late Professor Shaler was one of the few scientists who could write for the general public. To survey European literature from Roland and Montaigne to Maeterlinck and Ibsen in 300 pages is as confusing as to be introduced to twenty distinguished people at an evening reception; still acquaintances made at such a reception do sometimes become close friends. Lastly the *Chautauquan* itself, with its questions and comment and encouragement, makes such a course much more valuable than the independent reading of an equivalent number of volumes. The Chautauqua course, like Alice's "lessens," gets easier year by year, as the writer of this paragraph, one of the few survivors of the Timayenis epoch, can testify.

The Commonsense of the Milk Question. By John Spargo. New York: The Macmillan Co. $1.50.

"Why do babies die so fast, especially in summer, so that one-third of them never reach five years of age?" This is the question alert health officers have asked with increasing persistence in recent years. Among the most terrible of the death-dealing enemies in this slaughter of the innocents is dirty milk. Therefore the interest in the milk question is growing apace and the literature of the subject has become too bulky for a layman to devour, while most of it is too dry and sinewy for him to digest. So Mr. Spargo has peptonized and predigested great masses of stuff, which he now presents in a form assimilable by the average cultivated intelligence. A busy doctor, farmer, milk dealer or reformer will find in *The Commonsense of the Milk Question* facts, arguments and program to persuade, to convince, to inspire. While, from every point of view, it is desirable that mothers should suckle their infants, an increasing number are compelled, it appears against their will, by physical necessity to find a substitute food. A mother in a tenement cannot buy bottled milk from a model dairy nor follow her infants' food back thru the retail store, the railroad depot and the alleged refrigerator car to the barnyard and stable from which it came. She must rely on health boards and sanitary codes to give her the chance to select a fluid fairly clean. Absolutely clean it will rarely be. Not in time for the present generation of infants will the supply in big cities be perfected. So city depots, argues the author, should be establisht in places of over 25,000 inhabitants, for retailing milk pasteurized and modified on which our diminishing crop of babies would thrive. Also hospitals, almshouses and other public institutions should be supplied by public dairies, such as some English cities operate, where everybody could see what cleanliness means in connection with milk, and a standard could be set to which outside private dairies might gradually be made to conform. When

that happy consummation is reached the pasteurizing will be no longer necessary, and the citizens will look back with wonder to the complacent period of dairy dirt.

An Open Letter to Cardinal Gibbons. By Paul Sabatier. Translated by John Richard Slattery. Boston: Sherman, French & Co. 60 cents.

Whatever men may think of the recent legislation of the French Republic with regard to the Catholic Church, few who are acquainted with the facts will give much weight to the criticisms published by Cardinal Gibbons against the Briand law. His Eminence takes so unfair and partisan a view that a man of much less intelligence than Paul Sabatier would find it easy to answer him. The *loi Briand* is not spoliation, and those that voted for it are not robbers, as the Cardinal maintains. There would have been no sequestration of Church property had the Catholic Church in France loyally accepted a law not one article of which is in opposition to Catholic doctrine. Not a foot of land nor a franc's worth of property of any kind possest by Catholics would have past from its ecclesiastical holders if the French episcopate had been listened to in Rome, or if the petition of the most notable laymen in France had been respectfully received. Neither would there have been any "crisis" if Pius X were half as conciliating toward the French law of property tenure as one of his predecessors was toward the far more anti-Catholic Prussian law regulating mixt marriages. But there is in the Catholic Church a Roman Curia whose sinister history is laden with disaster; and it is to this bureaucracy that Catholics must look in their search for the cause of the late misfortunes in France. How unfair and incompetent the Baltimore prelate's protest is M. Sabatier shows in this little book with acumen and convincing argument.

Studies in Judaism. Second Series. By S. Schechter. Philadelphia: The Jewish Publication Society of America. $2.00.

The author is president of the Jewish Theological Seminary in New York and obtained prominence before coming to this country by his labors in the rich storehouse of Hebrew manuscripts in the synagogue at Cairo, Egypt, with which his first two essays deal. In the essay "On the Study of the Talmud," Dr. Schechter says: "But if the rabbis have nothing to tell us about the personality of Jesus, rabbinical literature has a good deal to tell us about the times in which he lived and labored." Dr. Schechter's conception of the "mission" of the Jews is presented in the essay "Four Epistles to the Jews of England," thus:

> "Whatever our political destiny may be our religious destiny can never be worked out by the West in isolation. The religious energies of all our brethren of the West and of the East, in closest communion, will be required for its consummation. We have got the men, we have got the money, and a good deal of system, too, but they have the simple faith, they have the knowledge of Jewish lore, and they have the will and the strength, inured as they are to suffering, to live and to die for their conception of Judaism. They permit no 'free love' in religion. Universality means with them what it meant with the prophets and their *Jewish* successors—that the whole world should become Jews, not that Judaism should fade out into the world."

Municipal Ownership. By Leonard Darwin. New York: Dutton & Co. $1.25.

"Both the advocates and opponents of municipal trading," says Professor Lowell in his new work, "The Government of England," "are now so intrenched with arguments and statistics that the field can hardly be examined except by a reconnaissance in force, supported by a battery of figures." Major Darwin, before these words were written, had essayed, in these four lectures delivered at Harvard University, to examine municipal ownership by abstract argument without the aid of more than a stray statistical reference. His effort is not so successful as to commend the method. A few gleanings from his argument will best show its quality:

> "The tendency is for all lenders of capital to obtain the same real rate of interest for their capital. The city will therefore have to pay about the same amount in interest for capital (with which to purchase or construct municipal undertakings) as was paid away by private proprietors in interest on shares and loans."

This is reasoning *in vacuo!* New York City regularly raises loans at less than 4

per cent. The private operating corporation guarantees 7 per cent. on the stock, lavishly watered, of the New York elevated railways. How can four equal seven? Every city could quote similar experiences from real life which contradict Major Darwin's abstract reasoning. Another example:

"The conclusion arrived at from a study of English statistics—(tho only about four sum totals were considered!)—was that municipal ownership is a source of no great gain or loss; whilst the *a priori* arguments pointed to the conclusion that it is considerably more likely to be a source of loss than of gain."

Examination of the facts of experience, tho made in a way which would hardly satisfy an impartial mind, "shows no great gain or loss." If there be a loss surely a lecturer specially imported from England could have exposed it. Is it possible that an audience at Harvard, in default of such an exposure, was impressed by an *a priori* argument which showed that a loss is "considerably more likely"? Such reasoning would delight the bribers of aldermen and debauchers of legislatures and courts. One more quaint example for the climax. After proving by abstract argument thru several pages that bonds issued by cities for municipal undertakings may lead to an increase of taxation which will drive away manufactures, leave houses empty, make the tax rate for the remainder higher, which will drive away other manufacturers and so on to hideous ruin, the author remarks "it is true that such a catastrophe is not on record." With a naïve generosity he supplies his own *reductio ad absurdum*.

Literary Notes

....Who reads Finlay's "Byzantine Empire," Speke's "Sources of the Nile," Miller's "Old Red Sandstone" and Boswell's "Johnson" nowadays? A good many thousand persons, for these are selling in Dutton's *Everyman's Library* at a rate that would make a popular novelist jealous. In six months after it was issued in this edition over seven thousand copies of Dante's "Divine Comedy" were sold. But the New Testament and Shakespeare stand at the head of the "best sellers," some 50,000 volumes having been called for, and next come Palgrave's "Golden Treasury" and Emerson's "Essays" at 30,000. These are mostly bought by people who want books to read, not merely to upholster their rooms. Evidently the way to get the classics read is not to scold people for not reading them, but to publish them cheap enough so they can.

....Careful readers have been accustomed to keeping their encyclopedias up to date by writing addenda in the margin, such as the date of the death of distinguished persons and recent statistics. This laborious and altogether inadequate method is now superseded by the "loose-leaf" system adopted by *Nelson's Encyclopedia*. In our reviews of the first edition of this work, August 12th and November 21st, 1907, we noted that one of its special aims was to furnish recent information of practical value. This it is now able to accomplish with unprecedented success by keeping a permanent editorial staff and supplying the purchasers of the encyclopedia with new pages to replace or supplement the original matter. By an ingenious form of binding these can be easily inserted as they are received. Persons who have hesitated to buy an encyclopedia because it meant the investment of a considerable sum of money in something that would lose in value at an increasing rate year by year, will now find this objection removed. It is safe to say that the owners of *Nelson's* are the only ones whose encyclopedias contain accounts of the recent events in Portugal and of progress in aeronautics and the Republican and Democratic platforms.

Pebbles

THE TELL-TALE BELL.

THE BUTLER—Beg pardon, Miss Gladys, but didn't you ring?—*Harper's Magazine.*

WHENEVER a girl gets literary aspirations she begins to use the word "erstwhile."—*Atchison Globe.*

"HAD a case today in which two men claimed a rabbit."

"Well, judge, why didn't you divide it?"

"I don't split hares in my court."—*Exchange.*

AN ENCOURAGING REPLY.

PRUDENT SWAIN—If I were to steal a kiss would it scare you so that you would scream?

Timid Maiden—I couldn't. Fright always makes me dumb.—*Baltimore American.*

AS the ralroad train was stopping an old lady, not accustomed to traveling, hailed the passing conductor and asked:

"Conductor, what door shall I get out by?"

"Either door, ma'am," graciously answered the conductor, "the car stops at both ends."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Index Crosses the Atlantic

THE most serious blow the Catholic Church in America has ever received from Rome is now announced in the condemnation of articles in *The New York Review,* the organ of the Dunwoodie Seminary, where the Catholic priests of this archdiocese are educated, and the disapprobation of articles in the new Catholic Encyclopedia. It is announced that *The New York Review* suspends publication, and the same fate may await the Catholic Encyclopedia. Such is the report, in part contradicted but which must have a basis of truth.

The first condemnation by the Index of anything published in this country was of a mere *brochure* attacking the Bishop of Philadelphia by the Rev. William Hogan some seventy years ago. Henry George's "Progress and Poverty" was condemned, but the bishops were strictly commanded not to publish the condemnation. That was to please both Archbishop Corrigan, who insisted on condemnation, and Archbishops Gibbons and Ireland, who wished to protect their priests. The next case was Elliott's "Life of Hecker," which was suppressed, if not condemned. But even the condemnation of Americanism was not so serious a thing as this condemnation, for then it could be denied that what was defined as Americanism was a heresy that prevailed in the Church; but now the very best and leading Catholic institutions of learning in the country, in the person of their professors, and in the case of their written teachings, and even in the case of a priest so highly esteemed that he had been chosen to be the coadjutor of the Archbishop of San Francisco, are declared to have imbibed the Modernist heresy.

There have been many victims of Modernism in Europe. The first victim in this country is *The New York Review,* approved by Archbishop Farley, and edited by the president of Dunwoodie Seminary, the Very Rev. James F. Driscoll, D. D.; the Rev. John F. Brady, Professor of Dogmatic Theology, and the Rev. Francis P. Duffy, Professor of Philosophy. All are known as superior scholars, and loyal to the Church. While it was the purpose of the *Review* in a quiet way to represent the more liberal element in the Church, it has tried carefully to remain within permitted limits, but the new edict against Modernism has been too much for its existence. Among the writers condemned are Father Tyrrell, from whom two articles were received before his late condemnation; Father McSorley, the Paulist, and Father Clifford, and, particularly, the Rev. Edward J. Hanna, D. D., Professor of Dogmatic Theology in Bishop McQuaid's seminary at Rochester, N. Y. It was he who was chosen to San Francisco with the right of succession to Archbishop Riordan, who has scarce an equal for scholarship among Catholic ecclesiastics. His heresy seems to appear in this, that in articles on the nature of Christ's knowledge he enlarged on and magnified our Lord's "acquired" knowledge as against his "beatific" and divine knowledge.

The same number of the *Analecta* which contains the condemnation by the Congregation of the Index of the Dunwoodie *Review,* forbidding the numbers containing those articles to be allowed in Catholic libraries, also repudiates, if not formally condemns, articles in the great Catholic Encyclopedia, of which three volumes have appeared. One, on "Abso-

lution," is by the same Dr. Hanna. This encyclopedia, which has issued three of the fifteen volumes, is edited by Prof. Charles G. Herberman, LL.D., of the College of the City of New York, and president of the U. S. Catholic Historical Society; Condé B. Pallen, D. D., an author and editor of New York; and, for all theological matters, the Very Rev. Edward A. Pace, D. D., Professor of Philosophy in the Catholic University of Washington, and the Very Rev. Thomas J. Shahan, D. D., Professor of Church History in the same institution, and the Rev. John J. Wynne, of this city, who, as a Jesuit priest, might be presumed to guard orthodoxy. We have read the article on "Absolution," by Dr. Hanna, the only one named in the cable dispatch as incriminated, but have failed to discover anything suspicious. The "repudiation" of Dr. Hanna's article, and the "strong disapprobation" of other articles are a severe blow to the encyclopedia, but more to the Catholic University, and, indeed, to Catholic scholarship of America; for here Rome has put its condemnation on the best teaching of the two leading theological institutions of the Church in America. Who the "delators" are, the busybodies who have "informed" against their brethren for the purity of the faith, no one may know, but in the Church the Jesuits will have the credit of it. The delators have succeeded in blocking Dr. Hanna's transfer to San Francisco.

If thus Modernism suffers its first blow in this country, there have been many blows abroad since the accession of Pius X. The Biblical Commission has within the last two years declared in favor of the Mosaic authorship of the Pentateuch, the authorship and historic truth of the Gospel of John, and against a second Isaiah. It would seem that this has been done by a change in the body of Consultors. The commission consists of five Italian and Spanish Cardinals, who ask the advice of a number of learned Consultors. In 1905 Pius X dismissed the French Dominican, Vincent Rose, very shortly after having appointed him. In 1907 he removed Mgr. Umberto Fracassini, Superior of the Seminary of Perugia. Other Consultors got timely warning to mend their ways, among whom were the Jesuit Hummelauer, and Dr. Poels, of Ruremonde, Holland, who is now in this country, we believe.

Among the first Catholic scholars to be condemned of Modernism was the Abbé Loisy, of the Catholic Institute, Paris. The most illustrious after him was Mgr. Battifol, who was driven, in November, 1907, from the rectorship of the Catholic Institute of Toulouse. In fact, few dioceses and few learned French priests escaped. Many were changed to lesser posts, like Turmel, Professor of the Grand Seminary of Rennes, now a simple chaplain. The same was done to the Abbé Nogues, formerly Professor of Sacred Scripture; the last was the Abbé Portal, Superior of the Lazarist Seminary in Paris, well known for the leading part he took in the discussion over the validity of the Anglican orders, whose *nom de plume* was "Dalbies." Pius X ordered his removal as president of the seminary, as well as editor of *La Revue Catholique des Eglises.*

Italy has been little behind France. Besides Mgr. Fracassini, removed as a Consultor from the Biblical Commission, Mgr. Buonaiute was removed from his professorship in the Apollinaris College and from the editorship of *La Rivista Storico-critico delle Scienze Teologiche.* Professor Minocchi, of Florence, was suspended because of a conference entitled "The Riddle of Genesis in Ancient and Modern Thought."

Germany has had her share; at Münster Reuz, at Bonn Schroers, at Tübingen Günther, at Würzburg Engert, at Strasburg Ehrhardt, at Munich Schnitzer.

Not only have individuals been removed, suspended or banished, but also many periodicals have suffered. In France *La Justice Sociale* and *La Vie Catholique* were condemned at Rome February 13th, 1908. In 1907 *La Revue d'Histoire et de Litterature Religieuses* was condemned by thirty French bishops, and a similar ban put on *L'Eveil Democratique,* the organ of *Le Sillon,* a band of young Catholics who labored in union with their Protestant countrymen for the improvement of morals. The *Sillon* was itself condemned in August of this year by thirty-seven obedient archbishops and bishops. Italy has a long list of periodicals condemned or suppressed. All the editors, directors and writers of *Il Rinnovamento* suffered the major excom-

munication, but it keeps on just the same, as does *Nova et Vetera,* banned by the Cardinal Vicar. At Rome Murri obeyed and suspended *La Rivista di Cultura* in June, 1908, while Minocchi in Florence suspended *Studi Religiosi* late in 1907. About the same time the Archbishop of Florence condemned *La Justicia Sociale,* and in March of this year *La Vita Religiosa.* At Milan *La Tribuna Sociale* was suppress, while at Naples the *Battaglia d'Oggi* (*Today's Battles*) was condemned. Finally, in various places, the Church has put the ban on *La Parola Fraterna.*

All this is evidence how the big stick is wielded. At last, with all its prudence, America's turn has come. What will be the result? General silence, we presume, formal submission of those convinced against their will, the bowing of the bulrush till the blast has past.

What we have said of American conditions is based on the belief that the announcement from Washington is substantially correct and apparently inspired. It is the fact, that the *Review* is suspended with the coming issue. It has as yet received no official censure, but has been criticised by ultra-conservative writers, and some of its articles pronounced unorthodox by Father Lepicier, a very narrow neo-scholastic professor of theology at Rome. The subtitle, "A Journal of the Ancient Faith and Modern Thought," smacked of heterodoxy in the present reactionary movement. It was clear that its mediating purpose was distasteful to the present authorities in Rome, and there was no assurance that it would not be suppress in the near future. Besides, contributors were afraid to write what they think on scriptural and other topics, and subscribers, we presume, were equally hesitant. The relatively few who appreciate such a journal are precisely those now obliged to keep silent.

The Foraker Letters

In publishing the letters of Mr. Archbold, the present actual manager of the Standard Oil Trust, Mr. Hearst has given Senator Foraker a staggering body blow. They are, of course, such private letters as neither Mr. Archbold, who wrote them, nor Mr. Foraker, who received them, would ever wish to see the light, and it follows that they were surreptitiously procured, and whatever criminality attaches to the purveyor must attach also to the receiver of the goods. But all that is none of our business nor that of the public. That is a matter for the detective police and a public prosecutor. The public is interested in the contents of the letters and the political results.

No one knew that Mr. Foraker, while United States Senator, was the paid counsel for the Standard Oil, and was serving it in matters of State legislation. He says in his exculpatory statements that all his doings were perfectly legitimate. So be it; nevertheless, the damaging fact is that he did all his service in the dark, so that no one ever suspected that he was its paid attorney and was receiving nearly thirty thousand dollars for his services, no small sum, which implies that the services rendered were of considerable value to the company. Further, the amount received was such that it may be presumed to have assured a kindly disposition toward the Standard Oil Trust whenever its interests might be endangered. The secrecy of it all is evidence that he either thought it questionable, or at least thought the public would not think the better of him for it. At a time when the big trusts were being threatened and likely to be hurt by legislation, it would be better form for some other man than a member of Congress to act as counsel.

Mr. Foraker goes at great length into a full explanation of his receipt from Mr. Archbold of a subsequent draft for fifty thousand dollars. He shows that he got no financial profit from it, and that it was returned to Mr. Archbold. That clears him of the suspicion that here was another big payment intended to affect his conduct as a legislator. But here the plain fact is that he wished to control a paper for his own political fortunes, and was willing to join forces for its purchase with the Standard Oil, and of course knew that this large ownership by the Standard Oil would make the paper

its defender in any matter that might come up. He and the Standard Oil would be partners, mutually profiting by the transaction. The paper would help him and the Standard Oil, and each would help the other; and once more the Standard Oil's ownership would have been a secret. No explanation can explain this away. Less than a month after sending that $50,000 Mr. Archbold asks Senator Foraker to oppose a bill introduced into the Senate.

Equally difficult, if not impossible, is it to explain away the bearing of the political requests made by Mr. Archbold to Senator Foraker. There was question as to a hostile bill introduced in 1900, while he was paid counsel; then later as to the nomination of a prosecuting attorney and as to the election of a judge. The Senator was kept informed as to what the Standard Oil would like. Perhaps it was not for these things that the Senator was paid, but for something else, for help in drawing up an incorporation under the laws of Ohio—which never came to anything. Very likely, but these other things are all the correspondence tells of, and people will be suspicious and have a right to be suspicious where secrecy is observed.

We are not here raising the question whether the Standard Oil is to be regarded as a creditable or a discreditable concern, but we do deny that Senator Foraker had a lawyer's right to act as its attorney. He was the people's attorney, paid by the people to guard their interests. He took big money from a corporation under fire, and was expected and asked to use his position to help it in its fight against undesired legislation. No casuistry can justify such duplicity. His action as its secret counsel, paid by it to do its political work, as the letters imply, must damage the Senator sadly, and it is not strange that he has been forced to withdraw his engagements to speak on the platform with Mr. Taft. He is fighting for re-election to the Senate, and this exposure may and should defeat him, and in that case end the political career of one of the most picturesque and vigorous men in public life. And Hearst has done it. What other goods has he in his pawn shop? Who next?

The Victims of Aviation

This year of wonders in aviation records its triumphs and its tragedies together. Count Zeppelin at Stuttgart, at the close of his unparalleled voyage down the Rhine, sees his airship burned up and four of his mechanics badly injured. The Wright brothers would this week have gained their fortune and established their fame, but Orville Wright is disabled and his passenger killed thru the first serious accident of their eight years' experience. The spot where Lieutenant Selfridge fell is now marked with a stake, and it is expected that a monument will be erected to his memory. There should be. He was a brave soldier, and he lost his life in a good cause, the conquest of the air. He was doing better service to his country and at greater danger to himself than if he had carried a sword or aimed a gun in battle. The deaths that are least to be deplored and most to be honored are those that result from the effort to extend the powers of all mankind. The explorer who is killed by savages, the chemist who is blown up by his new compound, the physician who is innoculated with the disease germs he is studying, the structural ironsmith who is crushed by the fall of a bridge of unprecedented length, and the caisson worker who is smothered in the great tunnel, these are the men whose lives have counted and whose deaths must be regarded as the price which humanity must pay for each forward step into the unknown.

Futile deaths are those that shock us and rouse our indignation, the foolish balloon ascensions at county fairs, in which the only interest is in seeing how much risk a man, or, better still, a woman, will run for a few dollars, performing trapeze acts, hanging by the teeth, setting off fireworks, or playing with a tiger cub. There is nothing new to be learned from such feats. Everybody knows that a parachute will open and float to the ground—that is, it generally will. The possibility that it may not attracts the crowd. Last week twenty-one men were killed and 250 disabled in the German army maneuvers in Al-

sace-Lorraine, in order to give the Kaiser and his generals a little practice in handling troops. Last Fourth of July 103 persons were killed in this country, uselessly so far as we can see, since it was well known that gunpowder would explode and that Americans were patriotic. Swimming and boating have been practised for over ten thousand years, yet the number of persons who lost their lives at these pastimes last summer is too great to have been reported.

The Affectation of Incapacity

THE man who pretends to know more than he does is a very disagreeable person to associate with, but he is not nearly so exasperating as the man who pretends to know less than he does. You may be able to learn something from the pretentious individual, but one who affects ignorance has you at a disadvantage, and is liable to lead you into making a fool of yourself thru thinking he is one. It is dangerous to play with a man who has cards up his sleeve or to converse with a man who secretes his information.

This inverted hypocrisy of the intellect is one of the cultivated vices of the age. In some of its forms it is affected by women even more than men. There still exist women, the kind who strive after seventeen-inch waists, who think that men are fond of simpletons and apt to choose them for wives. A young man showing a feminine friend about the city in the evening stops for a moment before the open door of the power-house of the trolley line and points out the big dynamos. She exclaims: "Electricity is all *so* mysterious. I've tried and tried, but I never *could* understand how those things worked." Her escort knows she is mistaken, and suspects she is lying, because a dynamo is much less complicated than a steam engine, over which she would have exhibited no astonishment or perplexity. If he is in a tolerant and good-natured mood he expresses a polite regret at her mental incapacity and passes on. If he feels a bit malicious at being expected to swallow so silly a remark, he offers to explain its workings, and she, realizing that he has caught her, either refuses to listen, thereby confirming his suspicion, or, after listening, thanks him gravely, for thus telling her that which she knew before or did not wish to know at all. If she had told the truth in the first place, that she had never studied the subject, or was not interested in it, or did not think it worth while, or was too lazy, she would have kept a larger part of his respect.

Most of the protestations of awe, astonishment and incomprehensibility called out by new machinery is of this fictitious character, because the progress of invention is usually from the complex to the simple. Wireless telegraphy is easier to understand than the quadruplex system commonly used. An aeroplane is simpler in construction than a horse.

Formerly travelers in foreign lands professed to know all about the history, art and literature of the places they visisted, and they complimented the reader by ascribing to him equal omniscience. Nowadays they write books to display their ignorance and to boast of their inattention. In the old-style book we would read "Everybody knows the story of the reconciliation between Emp. Fred. Barbarossa and Pope Alexander III effected here on 23d July, 1177, thru the mediation of Doge Seb. Ziani, commemorated by these three red slabs." In the modern volume of travel sketches we should find: "The guide pointed out some red stones in the porch and said something happened there some time, but I did not pay any attention to what he said, and it is too much trouble to look it up." If a man has not enough energy even to copy from Baedeker, he ought never to travel, still less to write about it. No doubt the second writer knew as much or more about Pope and Emperor as the first, but he preferred to assume a shallow pretense of ignorance, idleness and indifference. So the volumes with mock modest titles continually swarm out from the presses: "The Roundabout Rambles of an Absent-Minded Man," "The Log of a Lazy Voyager" and "Sightseeing by a Blind Tourist." Now if any man has information to give let him give it and with as little condescension as possible;

but we have ignorance enough of our own without buying it at the rate of $3 a volume.

All branches of art are impeded in their progress by this hypocrisy of incapacity. The people are too docile. If they are told that they ought to admire certain paintings or poems or music, they dutifully do so. If they are told that certain others possess recondite virtues only to be appreciated by a few gifted and well-trained minds, they accept that also and meekly admit their incapacity. A few years later, after the connoisseurs have tired of their pretense of esotericism, the work of art is taken from the sacred shrine and given freely to the people, who straightway discover that it is not hopelessly above their heads after all. It takes its place among the other idols of the market place and attracts a proper number of sincere worshipers.

Who complains of the obscurity of Browning nowadays? Anybody can read him without regarding it as a literary feat. This is not due to the labors of the Browning Society in supplying lexicons, keys, elucidations and diagrams, nor does it prove that the schoolboys and schoolgirls of today are smarter than their parents. It only means that the ban is off. Meredith's novels become comprehensible just as soon as one by one the copyright drops off and they come out in cheap edition. Ibsen's plays, once the monopoly of the elect (self-elected), now get worn out at the public library more rapidly than "David Harum." A quotation from the Rubaiyat no longer serves as a password of the Society of the Illuminati. It is too common to use even as the title of a short story in a Sunday supplement. The superstition of incomprehensibility still shadows Henry James, but it will not last much longer. Before long we shall discover that the few who profess to be able to understand all he has written and the many who profess not to be able to understand anything he has written are equally false in their pretensions.

On summer afternoons the band in the park plays Wagner between Verdi and Sousa. The crowd frankly enjoys it and applauds. Nobody stops his ears to shut out the horrid cacophony that shocked our parents. Nobody puts on a mystified and baffled expression. They save their protestations of unappreciativeness and distaste for Strauss and Debussy, not because they really find this music difficult or inharmonious, but because it is just now fashionable to pretend that it is. What we call the elevation of popular taste consists principally in inducing the people to reveal their taste instead of masking it under the affectation of incapacity.

Making Faces

One who is favored with a leisure hour every day, to be spent on the subway or elevated train, has an exceptionally good opportunity for the proper study of mankind. After we have learned by heart the row of advertisements of health foods and unhealthful drinks along the top of the car, our eyes drop to the level of our fellow passengers, and we find them all making faces. Not at us or at anybody else; on the contrary, they are apparently unconscious of the existence of others. The noise of the train prevents conversation and gives one the impression of being shut up alone in a box. Each person thereupon devotes his or her time to practising grimaces. The physical culturists say that a great deal can be accomplished in the way of developing a set of muscles if they are worked persistently for a half hour or so a day. It seems that this is true, for some of the people on the opposite side of the car have certainly done wonders with their features, things we would believe impossible if we had not watched the doing of them.

Here is a woman, for example, who wants to get her mouth on one side. She has evidently been working at it for years and has got it a good way over, but she still is not satisfied, so she keeps pulling it into her left cheek all the time. It could not have been a very good-looking mouth when she parted it in the middle, but we feel inclined to tell her that it will not look any better when she gets it clear over where she wants it. She will look like a flounder then. A flounder is born with symmetrical features, but he grows lazy as he gets older and moves both eyes to the same side, so

he never has to turn over. He has a good reason for this, but why the woman does it is a mystery. If it were her right cheek, now, we might imagine that she were trying to get her mouth around where she could feed herself handily.

The next lady is practising another trick. She has a dainty manner and carefully matched attire. As she steps off the car she holds her skirt neatly to one side with her left hand, leaving the other free to get off backward with. And to match the folding of the skirt on that side she has the left corner of her upper lip tucked in at the bottom and fastened with the tip of a pearly tooth. It would have quite a unique effect if so many other women did not do the same.

More people seem to be dissatisfied with their mouths than with any other feature. Some put them into a parenthesis of wrinkles, as tho what they said was of no particular importance. Others draw deep lines diagonally down from the corners. Men have the advantage, because they can twist their lips around by tugging at their mustaches. Later, when it becomes fashionable to shave clean, they find that it is necessary to retain the mustache to hide the expression they have made by means of it.

Not very much can be done with ears, as few people can move them. The nose is also quite refractory. We find that most people desirous of remodeling these two features have to use their fingers on them very persistently. Eyes can be manipulated so as to develop very remarkable bunches of wrinkles on the sides. The forehead affords great opportunity for plastic decoration, according to one's personal taste. Some wear their wrinkles horizontally, usually in sets of three. Others prefer the perpendicular or Tudor style, putting one or two lines between the brows. Some ladies go so far as to use box pleating on their foreheads.

Men are apt to be more sober and conventional in their expressions, as in their attire. Most of them content themselves with cultivating a strong stare and an indifferent and exclusive cast of countenance; the sort of expression which says to all the world "I am a gentleman; nothing that pertains to human beings has any interest for me."

Probably the attire has a good deal to do with the expression. This would account for the fact that the ladies who have on the prettiest clothes wear the crossest expressions. In the costume that fashion now prescribes a woman cannot be expected to look happy. It is only by vigorous exertion of her will power that she can momentarily succeed in looking unagonized. All the ill humor is squeezed up into her face. Perhaps a physiologist could tell from the particular form of facial contortion in any case just where the shoe pinches, or other garment. It may be that she is blushing over her tight collar. It may be that the aeroplane she wears on her head is not properly balanced and so drags up the skin on one side of her face. The Superintendent of Schools in New York City issued orders that the pupils should carry their book satchels on alternate days on their right and left arms. Would it not be advisable to make the *directoire* hats reversible, so as to avoid asymmetry?

For it is dangerous nowadays to possess asymmetrical features. The psychologists, according to Lombroso and Münsterburg, are going to get control of the courtroom, and it will be evidence presumptive of guilt if a suspected person has one eyebrow higher than the other. If he could not prove that it was an acquired characteristic he might be convicted of atavism and condemned as a congenital criminal. It may be that those whom we see engaged in contortion exercises are trying to make over their faces to match their souls, so they will not impose upon the world, but we should dislike to believe that there are so many asymmetrical souls.

Governor Hughes

Some shrewd man has said that "the Lord reigns, and the Devil hasn't all the umbrellas." We have had an illustration of the fact in the triumphant renomination of Governor Hughes. There was a fair supply of umbrellas, but not all the advocates of the race gamblers and "personal liberty" were able to get under cover. Most of the "leaders" learned that the people would not be led, and, following Mr. Parsons, and accepting the advice of Mr. Roosevelt and Mr. Taft,

they put up their umbrellas and were not wholly drenched. A few, like Mr. Barnes, declared it would not be much of a shower, and they were soaked.

In the renomination of Governor Hughes by an overwhelming majority we have had another illustration that the people do rule, when once they wake up, and that there are no fools like those that think that vice can conquer in a fair contest. We are having interesting illustrations nowadays of the power of positive and organized moral reform. Besides New York we have it in the repeated victories of organized temperance against the saloon, of which Ohio just now offers an example. We believe that Governor Hughes's renomination will strongly help the national ticket, and no one can help seeing that he would make a most formidable candidate for the next President's successor. The people love a good fighter, and one who has a mind of his own, and is passionately determined to do his whole duty.

Governor Hughes is a puzzle to the politicians, but not a bit of a puzzle to the common people. He understands the simple tactics of telling the truth and telling it persistently. He does not understand the method and value of chicanery; and neither do the common people. The people love a square deal and a frank utterance of plain morality. We have been told that the new American diplomacy is of the rude shirt-sleeve order, quite beneath the contempt of the old masters of the art. Its characteristic is its truthfulness. That is the style of Governor Hughes's politics, an art whose lucidity balks the wit of the bosses, and actually rises to the level of statesmanship. We shall hear more of Charles E. Hughes in the thirty years to come. He is only forty-six years old.

Was Jesus a Semite?

Professor Haupt, of Johns Hopkins, seems to think this a very important question. First he propounded it at a meeting in Philadelphia of the American Philosophical Society, and his argument was published at column length in the papers. In the last few weeks he has repeated it at meetings of Semitists in England and on the Continent, and in both cases the cable reports much discussion and opposition. It gives us the curious phenomenon of the Jewish scholars claiming Jesus as of their race, and an Aryan denying it. The argument is, in few words this: The Bible says in 2 Kings 15:29, that Tiglath-pileser carried away captive all the people of Galilee to Assyria. This conquest is not mentioned in the Assyrian King's annals, but he and King Sargon sent to Hamath the colonists he had taken as prisoners in the Armenian region. Now, says Dr. Haupt, Hamath was not the Hamath of the Orontes, but was the older name of Tiberias on the Sea of Galilee. Therefore the later Galileans were not Semites, but Armenian Aryans. They remained pagans, he tells us, "Galilee of the Gentiles." At 164 B. C., Judas Maccabeus rescued and brought away the remaining believing Jews who were opprest by their neighbors; but in 103 B. C. John Hyrcanus Judaized Galilee, forced the inhabitants to accept circumcision and the Jewish law, but still they were regarded as impure by the Southern Jews. So we have the Galileans of Christ's time Jewish in religion, but Aryans in blood. As to the Bible genealogy that makes Jesus a descendant of David, that he dismisses as a concession to Jewish hope. The argument is more ingenious than conclusive. And what difference does it make? Josephus does not know that they were not of Hebrew blood, and if there were some thousand Median or Armenian prisoners sent as colonists to this newly discovered Hamath in Galilee they would have mixt their blood with that of the people. The Bible is full of evidence that the northern Hebrews were half pagans; but later all accepted the Mosaic faith. In religion, in language and in all probability in blood Jesus was what was called Jew, or Semite, altho his blood may well have had an infusion of Aryan or Mongolian blood as well as of early Moabite.

Commissioner Bingham's Retraction

Nothing could be handsomer than Commissioner Bingham's retraction of his mistaken generalization of the great prevalence of crime among the immigrant Jews in New York. He was deceived, he says, by erroneous information given him, and he takes back completely that portion of

his article in *The North American Review* in which he spoke so unfavorably of them. We are glad that we have been able, thru the article in our last week's issue by Mr. Oppenheimer, to set the Commissioner right in this matter. It is greatly to his credit as a bluff soldier that he made no attempt to defend himself or wriggle out of it, but frankly admitted his error. Such an admission leaves no rankling behind, and is wholly creditable. Equally creditable was the Jewish defense. It was no attempt to punish him, or to remove him from his position at the head of the police; but they set to work to find out whether the charge was true, and in a dignified way they met it with better facts. The only result will be to increase the care with which our Hebrews seek to reduce criminality among the lower classes of their own people.

A Railroad "Beautiful"

An ideal roadbed and right-of-way, the sight of which will be a pleasure to people riding along its Schuylkill Division, is what the Pennsylvania management is working for. To secure this end a movement has been started by the railroad to secure the co-operation of people living along the right-of-way in keeping it clean and free from rubbish. From Fifty-second street, in Philadelphia, to Pottsville, the terminus of the division, the company expects to have a railroad beautiful. The scenery is there, its officials declare, and the railroad is to be kept in harmony with it if possible. For years it has been the practice of some people with property backing on the railroad to throw refuse of all kinds, empty tin cans, garbage and paper over the back fences to the tracks. This has made it impossible to keep the tracks clean. While the railroad has been forced to cart the rubbish away, it has not been able to keep the roadbed sightly, as the strong winds caused by the passing of a train scatter the papers along the tracks for miles. Dumping garbage on or near the tracks is also a practice that endangers the health and mars the comfort of both the residents and train passengers. On this division sixty passenger trains are operated daily, and these carry hundreds of passengers who do not enjoy the sight of tomato cans. In addition to this very interesting and significant experiment, the Pennsylvania Railroad is making every effort to beautify its roadbed and station grounds over the entire system. Its forestry department has this year made large plantings of shrubbery and ornamental trees for use in parking station grounds and available places on the right-of-way. This is done that these places which are natural centers may furnish as much pleasure as possible to the public. Joseph T. Richards, superintendent of the right-of-way, is authority for the statement in an address before the American Civic Association that it pays a railroad in hard dollars and cents to pursue a policy of civic improvement. The present policy of this company serves as a shining example of what railroads can do for the pleasures of their passengers and for the upbuilding of the communities thru which they pass. In time it expects to make its line from Jersey City to Washington a constant succession of pleasing views.

"Personal Government"

In his address opening the New York Democratic Convention Justice O'Brien said:

"It would have been difficult for the Republican party to have chosen a candidate for Governor whose personality would have presented in clearer relief the essential distinction between the Republican and the Democratic theories of government. We are informed by the public press that Governor Hughes reluctantly consented to accept a renomination because he considered that his work of reform was not yet finished. The Governor apparently considers it wholly unnecessary to consult the people in advance about his legislative plans. He even seems to consider it unnecessary to consult his party associates about these plans. His mental attitude toward the voters is that of a ruler who thinks he knows better what is good for them than they do themselves, and therefore declines to consult them, because if they knew in advance of the election the good things he intended to do for them they might be foolish enough to disapprove of the program and by electing his opponent defeat it.

"The example of personal government at the Federal Capital has been closely followed at the State Capital, and the vital question in this election, both national and State, is whether the people want to govern themselves or be governed by public servants, in violation of the great doctrine of the division of power, which is the cornerstone of American political life."

That is, the candidate of one party puts his ear to the ground, thinks he hears

what the people are mumbling, and then utters it articulately; still listens, and when they say No then he retracts. Example, Sixteen to one. But his idea is that the other party leaders, Roosevelt and Hughes, urge what they think ought to be done, and then appeal to the people to endorse and follow. And the people follow; and that is autocratic dictation.

Lawlessness as a Cause of Pestilence

The Metropolitan of St. Petersburg has proclaimed to his people that the plague of cholera has come upon them as a punishment for their sin of lawlessness, and he orders prayers to be said in all the churches for their deliverance. He is quite right, and we hope his warning will be heeded. The cablegram does not say whether he specified the particular forms of lawlessness which are directly responsible for the epidemic, but we hope he did, for the people should get sound doctrine in plain language from their religious leaders on a subject of such vital importance. We hope that he told them that the laws of health are as divine in origin and as justly penalized as the laws of the spiritual nature; that long before the dawn of medical science the Church assumed the function of establishing quarantine and prescribing disinfection; that the sacred books of all nations are largely occupied with such sanitary codes; that the more exact medical knowledge of the present day is ineffective because it is dependent on the vigilance of the authorities for its enforcement instead of being placed upon the consciences of the individual as part of his religious duty; that their prayers for relief will be unavailing unless they show their sincerity by acting in accordance with all they know of the laws which God has ordained for the preservation of health. Such preaching at this crisis would do a great deal of good, and constitute the best of arguments for the existence of a State Church.

At the late meeting in this city of the American Playground Congress, the purpose of which is to provide opportunities for decent and healthy exercise and play for children and youth, one of the speakers offered a sharp and just criticism of the comic sections of our Sunday newspapers. Of all their evils perhaps this is the greatest. They are the portion first picked up by children, and the lessons taught are deceit, cunning and disrespect for gray hairs. The stories told in coarse pictures are of rudeness and indecent tricks played on the old and the helpless. If the morals of these pictures were better, yet the art is usually insufferably vulgar. If the papers that offer such sections are admitted into a house where are children—or older folks for that matter—the comic section ought immediately to be committed to the flames. They fitly combine shocking art with corrupting morals.

The Chinese Governor of Manchuria, Tang Shao Yi, was educated in the United States. He is the right-hand man of Yuan Shih Kai, the most influential Chinese living. Tang Shao Yi was the Chinese representative who concluded the Tibetan treaty with England in 1904, and he is now in Peking negotiating with Japan the settlement of the Manchurian question. Alfred Sze is another young Chinese who has been advanced to high posts of responsibility and talked of as Minister to Washington. He was educated at Cornell, there cordially taken into societies and clubs, induced to write for the college papers, and made to feel perfectly at home. That is the way to receive the one hundred young men who are to be sent by China to this country for education. The future of good will and even international peace may rest on the fellowships created in American schools.

It has been a sad week of forest fires, in which hundreds of thousands of acres of timber land, and property to the value of millions, have been consumed in the Lake States and in the Adirondacks, with considerable loss of life. These fires emphasize the need of more care and protection of our forests. They could every one be put out before they had got beyond control. A sad case is that of the most destructive forest fire of recent years near Hinckley, Minn., September 1st, 1894. Seven towns were burned, five hundred lives lost and the loss in property $25,000,000. It was wholly unnecessary. It had burned slowly for several days close to the town of Hinckley

before the high wind came and drove it into uncontrollable fury, and it could have been easily put out; but it was nobody's business.

While the Emperor of Germany is now talking peace and proposing to lead the Powers for arbitration, we are told by authority of the General Staff of the German Army that a war against another European nation would cost Germany a billion and a half dollars a year while it lasted, and would put 4,750,000 German soldiers into the field. Further, the loss of life would be heavier than in the case of the Russo-Japanese war, and it would be a veritable orgy of blood. The indirect money loss would be far greater than the direct. Such a war would devastate half of Europe. Thus the growing cost of war in life and wealth makes for peace. And the flying machines will make defense impossible.

That some British tramways can be run as municipal enterprises appears from statistics in the last issue of the London *Municipal Journal.* Glasgow has a population of 1,050,000, and has owned its tramways for ten years. Last year the total receipts were $4,551,590 and the working expenses were $2,549,475, leaving net receipts over $2,000,000, which goes to pay interest and principal and provide for depreciation and reserve; in all a handsome example of municipal thrift. The ciity of Huddersfield has 120,000 population, and runs its own tramways, and its net receipts above working expenses are $215,000, which is a little more than half the total receipts.

We printed last week a note about the meeting of the members of the Niagara Movement at Oberlin, in which resolutions were adopted against Mr. Taft; but our information was imperfect, according to an Oberlin correspondent, Mr. A. B. Allen. He says that of the membership reported at 450 only 19 were present and that the resolution committing the organization against Taft was debated four hours and adopted by the historical division of eight to seven. Our informant adds that as far as he is aware not a colored man in Oberlin will follow the Niagara advice.

Exactly what is the reason and meaning of the labor with which the New York *Herald* is filling its space with stuff about a proposed alliance with China to suppress Japan is beyond intelligent explanation. Nobody minds it, for it is nonsense as a proposition and appears to be malicious as it is certainlv mischievous. Japan might well take offense, if it should consider it as seriously indicating American feeling. But nobody pays any attention to it. It is looked upon as one of the freaks by which a paper which avoids American politics can try to develop a sensation.

Our brave sailor boys evidently think that the words of welcome which have been addrest to them, indicate a desire on the part of the Australians for their permanent society. Eighty of them stayed behind at Sydney and 115 at Melbourne, doubtless expecting the free lunches and other forms of hospitality will continue indefinitely. At this rate how will the fleet get back home? Will it not be necessary to establish a series of manning stations, like the coaling stations, around the world where human supplies are kept in storage?

The Canadian Province of Ontario proposes to go into partnership with any of its cities within 150 miles of Niagara Falls for their electric lighting. It will supply the power from the Falls, and then contract with the cities for a fixt charge per horsepower, and expense of upkeep of the line. That is, the Province of Ontario will take the place of the contracting company which has hitherto done the work.

The following change of address of one of our esteemed contemporaries is worthy of note. The *Mechveret,* the bi-monthly organ of the Young Turkey party, which has been published in Paris for the past thirteen years, will issue its next number from Constantinople. We wish it the greatest success in its new quarters.

Definition: A wealthy man is one who can afford to contribute to a party campaign fund.

Insurance

A Life Insurance Policy in Hard Times

LIFE insurance is primarily intended to provide a money compensation for the death of the insured in behalf of the beneficiary. The widow, the children, the aged parent, the brother, the sister or the business associate is thus provided for as they could not be except for the policy that death matures. Almost every one knows this much about life insurance. There is, however, another feature of life insurance that is not so well known. It is incidental in value, but nevertheless exceedingly important in function. Times of financial stringency tend to accent this particular side of life insurance, which lies in the ability of the policyholder to borrow money on the security of the policy in force.

In the very nature of things, the man of affairs, as well as the small tradesman, is often in sore need of ready money. During hard times, financial conditions become acute, and the best banks are not always in a position to extend all the accommodation their dealers would like. It is in cases of this kind, when a little financial help means so much and is frequently so difficult to obtain, that life insurance policies may be used as security on which to obtain needed loans. It is a matter of record that the life insurance corporations have loaned millions of dollars to their policyholders. During the period that followed closely upon the curtailment of credit that arose because of overspeculation in copper and other stocks, that led to disaster on the part of so many banking institutions, this was especially the case.

The money thus obtained from insurance companies carried on many personal undertakings that would otherwise have been seriously if not fatally embarrassed. Such money was again used as an investment medium when securities slumped until the quotations took on the quality of bargain counter prices. The man, then, who had a life insurance policy found himself far better off, irrespective of the idea of protection which a policy basically signifies, than the man who lacked such a policy.

Life insurance is a good thing and always will be, but certain features of its beneficence are emphasized and made more pronounced during times of financial stress than would be the case at other times.

A FIRE at Johns Hopkins University last week destroyed a very valuable collection of papyri and archeological specimens from Thebes and Memphis. The fire also did much damage to the Roman and Hellenic collection that came into the University's possession last year. This collection included many very interesting examples of Roman jewelry from Herculaneum. Some 30,000 books and 25,000 unbound periodicals were also seriously damaged, if not utterly ruined, by water and smoke. It is difficult to fix the amount of loss in a case like this, as many of the specimens were unique.

A RECENT news item dealt with the match hazard as follows:

"James, the three-year-old son of Mr. and Mrs. Jeremiah Cronin, of No. 267 Forty-fourth street, Brooklyn, is dying in the Norwegian Hospital of burns received while playing with matches yesterday.

"The boy climbed up on a chair and took the matches from the mantel. He ignited one which slipped from his fingers and he was enveloped in flames. His mother heard his cries, but reached him too late to save him from being fatally burned."

This boy was just like thousands of other boys, but he played with matches just once and died in consequence. In the case cited death came because of the innocent-looking matches and not a property loss, that might easily have been covered by insurance. In the incident we have additional evidence that matches are dangerous, and that it is impossible to be too careful about them.

Financial

Secretary Root on Bank Guarantee

SECRETARY ROOT, in his address as chairman before the Republican Convention, at Saratoga, last week, touched upon many themes. He covered, in fact, the whole field of national and State politics. The general excellence of his remarks on the subject very recently agitated, of the guaranteeing of bank deposits, leads us to reproduce them in their entirety. Mr. Root said of bank guarantee:

"The other proposition of the Democratic platform is to require all national banks to guarantee the payment of deposits by all other national banks. This is another patent financial nostrum, advertised to catch the fancy of the multitude; and it should be suppressed under the pure food law until it is correctly labelled 'a measure to compel legitimate business to bear the risk of speculation.' It might well be called a measure to destroy the national banking system, for who will wish to invest his money in a business where it is not merely subject to the risks assumed by the men whom he and his associates select to manage it, but is subject also to be called upon for the payment of an unlimited amount of debts of an indefinite number of persons over whom and whose obligations he and his associates have no control whatever?

"A bank deposit is a very simple business transaction. The depositor in effect loans his money to the bank, which borrows it upon a promise to repay it on the lender's order, with or without a stipulated interest. Banks seldom fail to pay the debts thus contracted. Altho the deposits are ordinarily many times the capital, losses are exceedingly small. The principal reason why this is so is, that bankers are ordinarily men who have established a good reputation in the community for honesty and business sense. People ordinarily will not risk their money by lending it to men who have not these claims to confidence. Under the law any one who can furnish $25,000 can start a bank, but in practice, as a rule, no one can start a bank who cannot also furnish a character which leads the community to trust him and deposit their money with him. If, however, the sound and honest banks of the country guarantee the debts of every bank, a well-earned reputation for honesty and business judgment will no longer be necessary as a part of the banker's capital. It will no longer be necessary for the community to consider whether a banker is honest or not. Any scalawag can start a bank and obtain deposits on the credit of all the banks of the country. Any one who wishes to use funds in speculative enterprises can start a bank, invite deposits, and thus borrow money on the credit of the entire banking capital of the United States. With such opportunities, who can doubt that the standard of character of the bankers of the country would deteriorate and the use of banking funds for speculative enterprises would increase and that the losses which the honest bankers would be required to make good would increase correspondingly?

"This burden will not fall merely upon the stockholders of the banks, but upon the depositors also. Much banking capital would inevitably be driven out of the business and such as remained would have to make good its losses by reducing the rate of interest to its depositors and increasing the rate of interest upon loans. The profits of the banking business, like those of the merchant, the manufacturer, and the farmer, depend upon good management. The attempt to make all the profits of good management bear all the losses of bad management is a step in the socialistic process which would level all distinctions between thrift, enterprise and sound judgment on the one hand, and recklessness, incapacity and failure on the other."

....Hon. Leslie M. Shaw, ex-Secretary of the Treasury, has accepted the presidency of the First Mortgage Guarantee and Trust Company, a new company in Philadelphia, which has an authorized capital of $1,000,000 and a surplus of $500,000.

....As revealing the decline in activity in the building trade this year as compared with last, the figures for eight months printed in *Bradstreet's*, covering statistics gathered in a number of cities, are instructive. They are as follows:

	1908.	1907.	
January, 75 cities..	$22,242,942	$40,769,654	Dec. 45.4
February, 74 cities.	24,924,104	41,612,493	Dec. 40.1
March, 78 cities...	41,555,716	66,350,350	Dec. 37.3
April, 76 cities....	53,560,286	77,046,489	Dec. 30.4
May, 78 cities.....	48,602,316	66,621,207	Dec. 27.0
June, 83 cities.....	60,132,491	73,009,435	Dec. 17.6
July, 87 cities.....	60,564,281	61,532,108	Dec. 1.5
August, 88 cities..	47,899,888	56,138,094	Dec. 14.6
Eight months...	$359,482,024	$483,079,830	Dec. 25.6

There is here shown a decrease of 25.6 per cent. from the same period of 1907. The building outlook is thus seen to be anything but encouraging at the present time.

The Independent

VOL. LXV NEW YORK, THURSDAY, OCTOBER 1, 1908 No. 3122

Survey of the World

The Oil Trust and the Campaign

Owing to the discussion excited by the publication of the Archbold letters and the attacks upon Governor Charles N. Haskell, of Oklahoma, the latter is no longer Treasurer of the Democratic National Committee, and T. Coleman Du Pont (of the Powder Trust) has resigned as a member of the Executive Committee and as Director of the Speakers' Bureau in the Republican National Committee. During last week many long statements were given to the pubiic. President Roosevelt and Mr. Bryan took part in the controversy. On the 22d, Mr. Roosevelt gave to the press a letter written by Mr. Taft on July 20th, 1907, "to a friend prominent in Ohio politics," who had asked whether he would object to the passage by the Ohio Republican Committee of a resolution indorsing him for President and Mr. Foraker for Senator, in the interest of harmony. Mr. Taft was subjected to great pressure, the President said, by party leaders who urged him to consent, asserting that if he should do so all opposition on the part of Mr. Foraker and the latter's influential friends would cease and his nomination for the Presidency would be assured:

"But Mr. Taft declined for one moment to consider any possible advantage to himself where what he regarded as a great principle was at stake. His attitude on this question, as well as on countless such questions, convinced me that of all the men in this Union he was the man pre-eminently fit in point of uprightness and character of fearless and aggressive honesty and of fitness for championing the rights of the people as a whole to be President."

Mr. Taft began his letter (said to have been addrest to Mr. Vorys) by saying that such a resolution would be something more than a great mistake. It would be accepted as a compromise on his own behalf:

"It would totally misrepresent my position. I don't care for the Presidency if it has to come by compromise with Senator Foraker or any one else on a matter of principle. He has opposed the vital policies and principles of the Administration, and in his opposition has seized upon and magnified an important but incidental manner to embarass the Administration, using in this, without scruple, a blind race prejudice to accomplish his main purpose."

It was a question of political principle, he continued. The Senator had declined to follow the Ohio Legislature's resolution asking him to support the Railroad Rate bill:

"When the issue is whether he shall be returned, it must be determined, if this is to be a representative form of government, not by the question whether he has followed his conscience, but by the question whether he really represents the principles that his constituents desire supported and put into practice. The issue really is whether the Republicans of Ohio, therefore, as the constituents of either a Senator or a Presidential candidate, support the main policies maintained by the Administration or the opposition to those policies. Representing the policies of the Administration, I cannot stultify myself by acquiescence in any proposed compromise which necessarily involves the admission that the Republicans of Ohio regard this fundamental difference of opinion as of no importance and one that can be waived in the interest of party harmony or the settlement of factional differences."

This letter, the President said, he was publishing without Mr. Taft's knowledge. Turning to Senator Foraker, he remarked that the latter had been a leader among those members of Congress who had resolutely opposed the great policies of internal reform for which the Administration had made itself responsible:

"His attitude has been that of certain other public men, notably (as shown in this same

correspondence published by Mr. Hearst) Governor Haskell, of Oklahoma. There is a striking difference in one respect, however, in the present positions of Governor Haskell and Senator Foraker. Governor Haskell stands high in the councils of Mr. Bryan and is the treasurer of his National Campaign Committee. Senator Foraker represents only the forces which in embittered fashion fought the nomination of Mr. Taft, and which were definitely deprived of power within the Republican party when Mr. Taft was nominated."

The publication of the correspondence not merely justified the action of the Administration, but cast "a curious sidelight upon the attacks made upon the Administration both in the Denver convention which nominated Mr. Bryan and in Mr. Bryan's campaign":

"There is but one way to preserve and perpetuate the great reforms, the great advances in righteousness and upright and fair dealing, which have marked the management of the affairs of the National Government during the last seven years, and that is by electing Mr. Taft. To defeat him will bring lasting satisfaction to but one set of men, namely, to those men who, as shown in the correspondence published by Mr. Hearst, were behind Mr. Foraker, the opponent of Mr. Taft within his own party, and who now are behind Governor Haskell and his associates, the opponents of Mr. Taft in the opposite party. The great and sinister moneyed interests which have shown such hostility to the Administraton, and now to Mr. Taft, have grown to oppose the Administration on various matters not connected with those which mark the real point of difference. For instance, the entire agitation over Brownsville was in large part not a genuine agitation on behalf of colored men at all, but merely one phase of the effort by the representatives of certain law-defying corporations to bring discredit upon the Administration because it was seeking to cut out the evils connected not only with the corrupt use of wealth, but especially with the corrupt alliance between certain business men of large fortune and certain politicians of great influence. The venomous hostility of these interests and of their special representatives in the public life and in the press to the nomination of Mr. Taft was merely the natural sequence of their hostility to the measures of the Administration for the regulation of great corporations doing an interstate business, and to the attitude of the Administration in consistently prosecuting all offenders of great wealth, precisely as it has prosecuted all other offenders. Mr. Taft has been nominated for the very reason that he is the antithesis of the forces that were responsible for Mr. Foraker."

It is asserted that after the appearance of the Archbold letters Mr. Taft was urged to comment publicly upon Senator Foraker's position, and that he refused, saying: "I would not hit Foraker when he is down even if it would win me all the votes in the United States."

Letters of Mr. Bryan and Mr Roosevelt

Mr. Bryan, then in Detroit, at once sent a long telegram to the President concerning the latter's remarks about Governor Haskell. "I agree with you," said he, "that if Governor Haskell is guilty as charged, he is unfit to be connected with the committee, and I am sure you will agree with me that if he is innocent he deserves to be exonerated." As the Governor, who asserted his innocence, had been selected as chairman of the Platform Commiteee and also as treasurer with his (Mr. Bryan's) approval and indorsement, it was his duty to demand an immediate investigation. He respectfully asked Mr. Roosevelt to furnish any proof in his possession. Mr. Haskell would appear before any tribunal the President might indicate:

"I will agree that his connection with the National Committee and with the campaign shall cease in the event that the decision of such a tribunal connects him in any way with this charge, or in case you, after an investigation of the facts, say that you believe him guilty of the charges made. As the candidate of the Democratic party, I shall not permit any responsible member of the Republican organization to misrepresent the attitude of the Democratic party in the present campaign. I have assisted you to the extent of my ability in remedial measures, which I deemed for the public good which you have undertaken; I have urged Democrats to support such measures, and I have advocated more radical measures against private monopoly than either you or your party associates have been willing to undertake. The platform of the Democratic party is clear and specific on this subject, as on others, while the platform of the Republican party is uncertain and evasive."

In its rulings concerning contributions, he added, the Democratic committee had given better evidence than the Republican committee had given of its freedom from connection with or obligation to the predatory interests. It had not knowingly received, and would not receive, a dollar from an official of any corporation known as a Trust. Chairman Mack telegraphed to the President, denying the story that he had received $300,000 from the committee of four years ago, and saying he had not received a cent from that committee or from any

one connected with it. Mr. Roosevelt promptly replied to Mr. Bryan in a statement of more than three thousand words. He had, he said, made no specific allusion to the Monnett charges against Haskell, and should make none at this time, altho Haskell's close relation with the Standard Oil interests while he was in Ohio had been a matter of common notoriety. In Oklahoma, however, it was a matter of court record. He then cited the record of Governor Haskell's successful attempt, a few weeks ago, to procure a dissolution of the injunction obtained by his own Attorney-General to prevent the Prairie Oil and Gas Company (owned by the Standard) to lay a pipe line without authority of law, his action having been "as inexcusable as it was wanton, except upon the theory that in defiance of the Attorney-General of the State and at all hazards he intended for some reasons of his own to protect the interests of a great corporation against the law." Mr. Taft had refused to be a party to the renomination of Senator Foraker:

"With a hundredfold clearer evidence before you as to the connection of Governor Haskell with the Standard Oil than Mr. Taft then had as to the connection of Senator Foraker with any corporation, you nevertheless, having secured Governor Haskell as chairman of the committee to write the platform on which you stand, put him in as treasurer of your Campaign Committee. Let me add that Governor Haskell's utter unfitness for any public position of trust or for association with any man anxious to make an appeal on a moral issue to the American people, has been abundantly shown wholly irrespective of this action of his in connection with the Standard Oil interests. As an American citizen who prizes his Americanism and his citizenship far above any question of partisanship, I regard it as a scandal and a disgrace that Governor Haskell should be connected with the management of any national campaign."

Mr. Roosevelt then spoke of the Governor's veto of a child labor bill, of "his conduct in prostituting to base purposes the State University," and of other matters to his discredit. No further investigation, he said, was required. Turning then to questions of national policy, he continued as follows:

"You say that you have advocated more radical measures against private monopolies than either I or my party associates have been willing to undertake. You have indeed advocated measures that sound more radical, but they have the prime defect that in practice they would not work. I should not in this letter to you discuss your attitude on this question if you did not yourself bring it up, but as you have brought it up, I answer you that in my judgment the measures you advocate would be wholly ineffective in curing a single evil, and so far as they had any effect at all, would merely throw the entire business of the country into hopeless and utter confusion.

"I put Mr. Taft's deeds against your words. I ask that Mr. Taft be judged by all his deeds, for he wishes none of them forgotten. I ask that you be judged both by the words you wish remembered and the words that, seemingly, you and your party now desire to have forgotten. I ask that your present plan for regulating the Trusts be judged in connection with your past utterances that you did not believe in their regulation, but in their destruction, and again in connection with your past utterances to the effect that only Government ownership by a complicated national and State system of railroads would avail, and again by your past utterances when you proposed to remedy all the sufferings of our people by a depreciated currency.

"For several years now I have been steadfastly fighting to secure thorogoing and far-reaching control in the interest of the public over the great business combinations which do an interstate business. In this effort I have been as much hampered by the extremists, well-meaning or otherwise, who demanded visionary and impracticable radicalism, as by those other extremists, no less dangerous, who stand for the reactionary refusal to remedy any grievance. One side, the side on which I am obliged to say you have placed yourself, has shown itself to be just as much the enemy of progress as the other.

"I hold it entirely natural for any great law-defying corporation to wish to see you placed in the Presidency rather than Mr. Taft. Your plans to put a stop to the abuses of these corporations are wholly chimerical."

He then quoted with commendation what Governor Hughes had said about Mr. Bryan's Trust projects in his speech at Youngstown. "Let me repeat," said he, "that no law-defying corporation has anything to fear from you save what it would suffer in the general paralysis of business which any attempt on your part to reduce to practice what you have advocated would bring." This letter was published on the morning of the 24th.

Mr. Bryan Writes Again

Governor Haskell resigned at a late hour on the night of the 24th, having arrived in Chicago from Oklahoma that day in response to telegrams from the Democratic National Commit-

tee. He had not intended to resign and had been saying that his resignation was "out of the question." At Milwaukee, on the 26th, Mr. Bryan wrote a long letter to Mr. Roosevelt. Mr. Haskell had resigned voluntarily, he said, in order that he might be more free to prosecute those who had brought charges against him. He had never been informed of any charge against Mr. Haskell connecting him with the Standard Oil or any other Trust, but had known him as a leader in the Oklahoma constitutional convention and as one of the men chiefly responsible for the excellent Constitution afterward adopted. If Haskell's connection with the Standard was a matter of common notoriety, why had not Mr. Taft mentioned it in his speeches against Haskell in Oklahoma? He (Mr. Bryan) had not known of the Prairie Oil suit, and could not have known of it, before Haskell was made chairman of the Platform Committee, nor had he known of it before Haskell became treasurer. He sharply resented Mr. Roosevelt's charge that the selection of Haskell raised a question as to his (Bryan's) sincerity as an opponent of Trusts and monopolies. Comparing the two platforms, he defended his anti-Trust program as being in the interest of the consumer:

"It has been stated that the Steel Corporation, with your express consent, purchased one of its largest rivals and thus obtained control of more than 50 per cent. of the total output. Will your insist that in permitting this you showed less favor to the monopolistic corporations than I do in opposing it?"

Had not Governor Hughes, who ridiculed the Democratic anti-Trust plan, sought to prevent the nomination of Taft? Had not J. P. Morgan, John D. Rockefeller, W. E. Corey and W. F. Havemeyer contributed large sums (as shown by official report) to the fund for the election of Governor Hughes? Would this fact "strengthen or weaken his testimony against the reasonableness of our anti-Trust remedy?" Had Mr. Roosevelt quoted the Governor because Mr. Taft had not yet exprest himself in a satisfactory manner on the subject? Referring to Mr. Roosevelt's remark about a "general paralysis of business," he said:

"I might question your ability to act as an expert as to panic preventives, since you now have one on your hands, but as to your charge that no law-defying corporation has reason to fear the direct effect of the anti-Trust remedies which I favor permit me to suggest that your testimony on this subject is not conclusive. You are a witness, to be sure, but your interest in the result of the election must be taken into consideration in weighing your testimony. There is better evidence. The Trust magnates know their own interests and they are supporting Judge Taft. Not one of the Trust magnates helped to secure my nomination, while it is a matter of 'common notoriety' that they were conspicuous in the Republican convention, and it is equally a matter of common notoriety that they are supporting your party in this campaign."

Mr. Bryan again compared the records of the two parties as to publicity for campaign contributions, saying that his party's plan raised a presumption in its favor. Mr. Roosevelt had asked support for Taft because the latter stood for the moral uplift of the nations, because of his deeds, and because of his policies:

"I dare to compare my efforts for the moral uplift of the nation with his efforts, my deeds with his deeds, and the policies to which I am committed with the policies to which he is committed; and more than that, if I may assume that he will follow in your footsteps, I dare to compare my ideal of the Presidency with his.

"I do not regard it as proper for the President to urge his prestige, his influence or his patronage to aid one member of his party as against another who aspires to office, and I regard it as a violation of the obligation that the President owes to the whole people to use an office that belongs to the whole people as a party asset for the advancement of a personal friend and a political protégé. Believing that the President should not be tempted to use that power for his own advantage—and it is equally repugnant to the spirit of our institutions that he should use it for any one else's advantage—I tried to secure an amendment to the Constitution limiting the President to a single term, and I have announced in three campaigns that if elected I would not be a candidate for renomination. I believe that the occupant of so high an office, with such enormous power at his command, should be absolutely free to devote himself unselfishly to his country's welfare, and I am sanguine enough to believe that if intrusted with power I would be able to make my administration so successful that the members of my party could, without interference from me, select the one most worthy to carry on the work begun by me so successfully that the administration would speak for itself and that it would not be necessary for me to defend it in bulletin or pronunciamentos. I think I could in this way give to the members of the opposite party, as well as to the members of my own party, a 'square deal.'"

The President's Second Reply

On the 28th the President's second reply to Mr. Bryan was published. Speaking of unlawful combinations and railway abuses, he said: "You merely promise that you intend to do just what this Administration has actually done and is doing." Having pointed to the long list of prosecutions as "a record of actual achievement," he compared it with the few suits brought during the last Democratic administration. He explained as follows his action concerning the Steel Corporation's purchase of the Tennessee Coal and Iron Company:

"You state that the Steel Company, with my express consent, purchased one of its largest rivals and thus obtained control of over 50 per cent. of the total output. This action of the Steel Company (which increased its share of the total output by only about 4 per cent. and in no way altered the standing of the company under the law) may have been a violation of your plan, the absurdity of which has been exposed by Governor Hughes. But there was no violation of the law. I was cognizant of the entire transaction. It was not entered into by the Steel Corporation of its own desire, but solely at the urgent request of the corporation purchased and of the big banks holding that corporation's securities, in order to enable them to prevent a crash which would have turned the panic of last fall into the most widespread disaster. I should indeed have been derelict in my duty if I had not so acted and efficiently used all the power of the Government, where it could be legally and properly use (as it was in this case), to see that the panic was kept within the smallest possible radius and the damage caused as slight as possible."

He promised to proceed immediately against the leaders in the Steel Corporation if they should violate the law. Judge Priest, attorney for the Standard Oil Company at St. Louis, he pointed out, supported Mr. Bryan and had reported that Wall Street believed the latter would be elected:

"My belief is that those Trust magnates, whose fear of being prosecuted under the law by Mr. Taft is greater than their fear of general adversity under you, will support you and not Mr. Taft."

Owners of silver mines who made large contributions to Mr. Bryan's campaign fund in 1896 saw that they could make more out of the free coinage of fifty-cent dollars than from general industrial prosperity. Examination of the records of Governor Hughes and himself would show whether either had been improperly influenced by the campaign contributions Mr. Bryan had mentioned:

"You have quoted the subscriptions furnished to Governor Hughes as giving reason to distrust Governor Hughes's attitude toward corporations, and I am obliged to say that this cannot be sincere on your part, for you know well what the Governor's attitude has been thruout his term. You quote the subscription of Mr. Harriman to my campaign, altho you know well that it did not interfere with any action taken by me as against Mr. Harriman, and ask if it would not have affected the campaign if known. I emphatically approve of the publication of campaign expenses after the election, whether provided for by law or not. You have shown by your letter that if the contributions to Governor Hughes's campaign fund had been made public before election you and those who act with you would have striven to give the false impression that Mr. Hughes was unfit to be entrusted with the position of Governor, and that if Mr. Harriman's contribution to the campaign fund of 1904 had been made known before the election you and your supporters would have endeavored to use the fact of it having been made as an insincere and untruthful argument to show that I could not be trusted to deal out exact justice to Mr. Harriman. No stronger argument against your proposition has yet been advanced than this that you have thus unconsciously advanced."

The second half of Mr. Roosevelt's long letter relates to Governor Haskell. Mr. Bryan is sharply criticised for setting up in Haskell's case the standard of "law honesty" and for uttering no word of condemnation of Haskell's "gross offenses against public decency and honesty." If Mr. Bryan was ignorant of Haskell's record, the President says it was wilful ignorance, because he refused last fall to read a statement of the charges against the man. He produces a letter in which the attorney for the Creek Nation says that Haskell secured deeds to lands in Oklahoma by conspiracy and fraud, on account of which he has been sued by this attorney. Reference is made to large unsatisfied judgments against Haskell in New York. In the course of a long reply to Haskell's assertions about the Prairie Oil and Gas Company, the President quotes a statement made by Oklahoma's Attorney-General, Charles E. West, in sharp opposition to the Governor. The latter, Mr. Roosevelt says, "against the law and ev-

ery principle of honesty and fair dealing, discriminated in favor of the Standard Oil corporation":

"Of all corruption the most far-reaching for evil is that which hides itself behind the mask of furious demagogy, seeking to arouse and to pander to the basest passions of mankind. No better exemplification of this type of corruption could be found than in the case of Mr. Haskell. You have uttered no word of condemnation of Haskellism as we thus see it. That you have consciously sought to bring it about I do not believe. That it was the natural result of the effort to apply in practice your teachings I have no question."

More Archbold Letters

At the State convention of the Independence party, in New York City, on the 24th (when Clarence J. Shearn was nominated for Governor), Mr. Hearst read a few more letters alleged to have been written by or addressed to Vice-President John D. Archbold, of the Standard Oil Company. He also read the record of a suit for enforcing a claim of $50,000 on behalf of Governor Haskell for his services in connection with the organization of the Federal Steel Company, which became a part of the Steel Corporation, together with the report of a speech in which Haskell, at a banquet in Oklahoma, last February, highly commended the Standard Oil Company. In the first of the letters (December 12, 1901), Mr. Archbold, replying to a letter from Senator John L. McLaurin, of South Carolina, says:

"We have, of course, noted your recent disagreeable experience with T. with the utmost interest. Think you would have done just right in not being guided by him into doing a foolish thing. I am greatly interested in the suggestion of the law practice and will see to it that it is kept in mind, with the hope that something may develop in which I can be of service to you in connection therewith."

The second, dated on May 29, 1902, at Bennettsville, S. C., and signed by the same Senator, is as follows:

"DEAR MR. ARCHBOLD—I have pushed my fights so vigorously that they have called on Tillman. I met him at Gaffney and beat him at his own game. I called his bluff, and now the fight is for two seats in the Senate instead of one. I can beat Tillman if properly and generously supported. There is no time to lose, however."

In the third letter Mr. Archbold introduces the Senator to Vice-President Eldridge, of the Knickerbocker Trust Company, saying the Senator desires to discuss "some business questions of mutual interest," and that he cannot speak of Mr. McLaurin in too high terms. The greater part of the fourth letter, bearing the signature of Congressman Joseph C. Sibley, and dated at Washington, November 22, 1903, is as follows:

"MY DEAR MR. A.—A (Rep.) United States Senator came to me today to make a loan of $1,000. I told him I did not have it, but would try and get it for him and would let him know in a day or two. Do you want to make the investment? He is one who will do anything in the world that is right for his friends if ever needed. Please telegraph me *yes* or *no*. I will give you name when I see you. I don't know but what I ought to come over and see you. Events are crowding, and I am on the *inside* of them. And think I am playing no small hand, and want to know whether to go ahead."

In another letter, addressed to M. H. Clark, at Pittsburgh, Mr. Archbold points out that probably a Democratic Senator is to be elected in West Virginia, "to succeed Faulkner," and asks whether Governor Fleming has intimated that he will be a candidate:

"There is probably no man in West Virginia better qualified or who could make a more capable and honorable Senator than he. If he has said nothing to you, won't you please raise the question with him and tell him that we all here would be greatly interested in having him make an effort for the place, and would be only too happy to extend any aid that may be in our power. I would like to hear from you just as promptly as possible on this subject. If it is possible for you to confer with him either personally or by telephone at once will be glad to have you do so, and please telegraph me in cipher the result."

It is stated that ex-Governor Fleming was then an attorney for the Standard Oil Company. In the last letter John P. Elkin, writing from Indiana, Pa., October 31st, 1904, asks Mr. Archbold to exert the influence of the interests of "your people" for the regular Republican ticket in Lancaster County and against an independent movement there.

Turks and Bulgarians

The reorganization of Turkey in accordance with the principles of the new *régime* seems to be proceeding with remarkable smoothness and harmony considering the difficulty of the problems. All parties in Macedonia are still on their good behavior, and fraternal demonstrations be-

tween the hostile races continue. Political exiles, outlaws and refugees, including some like Sandansky and Panitza, the murderer of Boris Saraffof, who are more criminals than patriots, have been allowed to return home, and now appear in public without molestation by their late victims and enemies. An exception to this universal tolerance and forgiveness is the arrest of Silvio Ricci, who is charged with throwing the bomb in the Grand Mosque two years ago for the purpose of assassinating the Sultan, but which killed instead twenty-five of the attendants. He returned to Constantinople with the expectation of taking advantage of the general amnesty for political offenders, but the Government decided that such a crime was not covered by it and he was arrested. At first the new administration undertook to make a clean sweep of all the old officeholders who were suspected of corruption, but the wholesale dismissals and substitution of inexperienced men brought affairs into confusion in many departments, so, recognizing that their faults were in many cases due more to the former political system than to any personal viciousness, this policy has been changed, and the officials in charge will be retained in so far as they are believed to be loyal and amenable to the new *régime*. The country is practically ruled by the committees of Union and Progress at Constantinople and Salonika, which sit in modest offices without guard or formality and show no disposition to abuse their power for revenge or personal advantage. They have practically effected a union with the other wing of the Young Turk party, the Committee of Decentralization and Private Initiative, led by Prince Sabah-ed-Din, the champion of Greek and Christian interests. The Union and Progress committees, which have led in the revolution, favor a strong, centralized and uniform government. They want a single Ottoman army, not mere local militia, altho they are willing to have separate battalions for different races and religions. They insist that Turkish shall be the only official language and instruction in it compulsory, but profess that they have no hostility to Bulgarian or other languages and are willing to have primary education in the language of a majority of the population. In secondary schools they would have Turkish obligatory, and in higher institutions exclusive. They will consent to a considerable degree of local self-government, but are opposed to granting local autonomy to Macedonia anything like that enjoyed by Samos and the Lebanon province. This program meets with some opposition on the part of the other races of Macedonia, the Bulgarians, Greeks, Vlachs and Serbs, which in this region outnumber the Ottomans. The Christian educational institutions that have been founded for the benefit of these nationalities will be seriously injured if the language requirement is stringently enforced. The Bulgarian clubs in Macedonia have elected representatives to a congress meeting in Salonika September 30th for the purpose of organizing a Bulgarian constitutional party for the purpose of defending their national interests. Nevertheless negotiations have been carried on between the Bulgarian and Young Turk committees in the most friendly spirit, and some progress has been made toward a compromise, the Committee of Union and Progress agreeing to complete equality of races and religions, and the Bulgarian organization withdrawing their demands for complete autonomy and for the deposition of the Sultan. But this question is the most serious that the Young Turks have to face at present in their effort to maintain the territorial integrity of the Empire, because Bulgaria seems to be planning to take advantage of this crisis to throw off entirely the suzerainty of Turkey, and the Bulgarians in the Macedonian provinces will then be more inclined to press for annexation than to make peace with the Ottomans. The Bulgarian diplomatic agent has left Constantinople, ostensibly because he was not invited to an official dinner given to the diplomatic corps, and a cause of disagreement between the two countries has been found in the seizure of the eastern Rumelian section of the Orient Railroad. This line, which belongs to Turkey, was recently tied up by a strike, when the Bulgarian Government took charge of it and ran the trains by troops. The strike ended September 20th, but Bulgaria refuses to release the road, declaring that the matter will be settled with the com-

pany leasing it. The Porte has appealed to the Powers signatory to the Treaty of Berlin to compel Bulgaria to withdraw her troops.

The Cholera

The cholera epidemic still rages in St. Petersburg, altho it appears to be on the decline, as the following reports show: September 23d, 436 new cases, 158 deaths; September 24th, 396 new cases, 172 deaths; September 25th, 357 new cases, 162 deaths; September 26th, 312 new cases, 153 deaths. The total deaths in St. Petersburg reported are 1,875, and in Russia, 5,220. The diminution is due more to the colder weather than to the efforts of the sanitary authorities, for little has been accomplished in the way of cleaning up the city or the isolation of cases. It has not been possible to dig graves fast enough and the dead lie for days unburied. In the Preobraghenskoe Cemetery, where they are taken by train twice a day, there were last week 150 coffins piled up waiting burial, many of them unmarked. Funeral services are held for a hundred at a time. The Russian frontier is closely watched by German, Austrian and Rumanian troops, and ships from Russia are carefully quarantined at all ports. Four cases have appeared in Berlin.—— In Manila there has on the whole been a decline during the week. September 22d, 55 new cases; September 23d, 35; September 24th, 36; September 25th, 40. The native sections of Tondo and Meisic are the chief centers of infection. The death rate is about one-third. The fleet will be obliged to coal at Cavite, but probably no shore leave will be granted and there will be as little intercourse as posible with Manila.——The American battleships "Alabama" and "Maine" have been warned not to stop at St. Michael's because the Azores are infected with the bubonic plague. The people on the island of Fayal, which is quarantined, are dying from hunger as well as disease. The Governor ordered troops to prevent the landing of a boat from Rico Island loaded with supplies, but the people attacked the soldiers and after a hard fight obtained the food.

Foreign Notes

In accordance with the suggestions of the Emperor of Germany and the King of Italy, the Government of the Netherlands has issued invitations for an international conference at The Hague to promote uniform legislation in regard to commercial drafts and exchange.——At Moita, Portugal, when a bullfight was about to begin, the pen was opened by accident and twenty-two bulls charged the crowd. Seven persons were killed and forty injured in the resulting stampede. Ten of the bulls were killed by the soldiers and the rest escaped into the country.——The Imperial Zoological Society of St. Petersburg has obtained the carcass of a mammoth which had been preserved in ice from prehistoric times in Northern Siberia. It is more nearly complete than any other hitherto discovered. The hide, covered with long hair, is well preserved, the head and most of the trunk is in good condition, and the entire skeleton is intact.——The wireless station at Circle City, Alaska, in charge of the Signal Corps, is now opened for commercial business. It recently received messages from Fort Gibbon, at the mouth of the Yukon, 600 miles to the westward, and Fort Gibbon was at the same time in communication with Nome. —— Undeterred by his brother's disaster, Wilbur Wright has continued his experiments with the aeroplane at Le Mans, France. On the 21st he made a flight of over an hour and a half, circling continuously about the ground until it was dark and covering nearly 61 miles. Unless this record is beaten before September 30 he wins the Michelin cup for distance and the Aero Club prize of $1,000 for the longest time spent in the air. Only the time taken before sunset, however, fifty-two minutes, can be officially counted for the prize contests. A few days later he took a passenger, Paul Zens on a five-minute flight.——The cardroom employees of the Lancashire cotton mills refused to accept the reduction of 5 per cent. in their wages which the employers declared was necessary, and in consequence the spinners and others who had consented to it are involved in a lockout which affects more than 100,000 operatives.

Unto the Last

BY ALFRED AUSTIN

Poet Laureate of England.

When autumn leaves
  Float from the tree,
And, of all the sheaves,
  None are left to see;

When the plover flaps
  O'er the idle plow
And the woodpecker taps
  On the rotting bough;

When the eave-drops freeze,
  And the rivulets swell,
And warm keep the bees
  In the waxen cell;

When the wild geese wheel
  Round the water's edge,
And the wet winds steal
  Under seeded sedge;

When the starved rook pecks
  At the tight-stacked grain,
And the tattered nest
  Flecks the leafless lane;

When I sit and cast
  Up the kindly years,
And my heart for the past
  Overflows with tears;

Then, then will you love
  Me, and still no less
When the grass waves above
  My dreamlessness?

Swinford Old Manor, Ashford, Kent, England.

An Address to Freshmen

BY WILLIAM DE WITT HYDE, D.D., LL.D.

[The following address was delivered last week, Friday, by the president of Bowdoin College to the incoming class. We commend this advice not only to undergraduates of other colleges, to whom it equally applies, but also to young men whether students or entering business life, for the ethical principles that should govern life have no narrow application. —EDITOR.]

A GRADUATE of Christ Church College, Oxford, recently remarked to me: "One can have such a good time at Oxford, that it's a great waste of opportunity to work." The humor of this remark, however, was turned to pathos when his wife told me sadly that: "An Oxford training does not fit a man for anything. There is absolutely nothing my husband can do"; and then I learned that the only thing this thirty-year-old husband and father had ever done was to hold a sinecure political office, which he lost when the Conservative party went out of power; and the only thing he ever expected to do was to loaf about summer resorts in summer, and winter resorts in winter, until his father should die and leave him the estate. Fortunately, American society does not tolerate in its sons so worthless a career; yet the philosophy of college life which was behind that worthlessness, translated into such phrases as "Don't let your studies interfere with your college life," and "C is a gentleman's grade," is coming to prevail in certain academic circles in America.

Put your studies first; and that for three reasons: First, you will have a better time in college. Hard work is a necessary background for the enjoyment of everything else. Second, after the first three months you will stand better with your fellows. At first there will appear to be cheaper roads to distinction, but their cheapness is soon found out. Scholarship alone will not give you the highest standing with your fellows; but you will not get their highest respect without showing that you can do well something that is intellectually difficult. Third, your future career depends upon it. On a little card, five by eight inches, every grade you get is recorded. Four or eight years hence, when you are looking for business or professional openings, that record will, to some extent, determine your start in life. But you are making a more permanent record than that upon the card; you are writing in the nerve cells and films of your brain habits of accuracy, thoroness, order, power, or their opposites; and twenty, thirty, forty years hence that record will make or mar your success in whatever you undertake.

Make up your minds, then, to take a rank of A in some subject, at least B in pretty nearly everything, and nothing lower than C in anything. If you ask why I place such stress upon these letters let me tell you what they mean.

A means that you have grasped a subject; thought about it; reacted upon it; made it your own; so that you can give it out again with the stamp of your individual insight upon it.

B means that you have taken it in, and can give it out again in the same form in which it came to you. In details, what you say and write sounds like what the A man says and writes; but the words come from the book or the teacher, not from you. No B man can ever make a scholar; he will be a receiver rather than a giver, a creature rather than a creator, to the end of his days.

C means the same as B, only that your second-hand information is partial and fragmentary, rather than complete.

D means that you have been exposed to a subject often enough and long enough to leave on the plate of your memory a few faint traces, which the charity of the examiner is able to identify. Poor and pitiful as such an exhibition is, we allow a limited number of D's to count toward a degree.

E means total failure. Two E's bring a letter to your parents, stating that if the college were to allow you to remain longer, under the impression that you are getting an education, it would be receiving money under false pretenses.

Please keep these definitions in mind, and send a copy to your parents for reference when the reports come home.

Whatever you do, do not try to cheat in examinations or written work. If you succeed, you write fraud, fraud, fraud, all over your diploma; and if you get caught—there will be no diploma for you.

Your own interest and taste are so much more important factors than any cut-and-dried scheme of symmetrical development, that we leave you free to choose your studies. At the same time, the subjects open to choice are so limited by conflict of hours, and the requirement of a major and minors, that you can hardly miss the two essentials of wise choice; the consecutive, prolonged, concentrated pursuit of one or two main subjects, and some slight acquaintance with each of the three great human interests—language and literature, mathematics and science, and history, economics and philosophy.

Having put study first, college life is a close second. College is a world artificially created for the express purpose of your development and enjoyment. You little dream how rich and varied it is. I was myself surprised in looking over the record of the last senior class to find that the members of that class won four hundred and sixty-seven kinds of connection and distinction, of sufficient importance to be printed in the official records of college achievement. On the other hand, I was a little disappointed to find that one hundred and forty-two of these distinctions were taken by five men, showing that the law, "to him that hath shall be given," applies in college as well as out of it. Some colleges, like Wellesley, have attempted to limit the number of these non-academic points an individual student may win.

Aim to win some of these distinctions, but not too many. Concentrate on a few for which you care most. Do you ask what they are?

There are eight fraternities, each with its own chapter house and its committees for the control of its own affairs; twelve sectional clubs, covering most of the geographical divisions from which students come; a Christian Association, of which a majority of the students, and a much larger majority of the best fellows among them, are members, and which every one of you ought to join, who wants help and support in living the life you know you ought to live, and is willing to give help and support to others in living the Christian life in college. There is the Deutscher Verein, the Rumania, the History Club, the Good Government Club, the Chemical Club, devoted to their special subjects; the Ibis, which represents the combination of high scholarship and good fellowship, and whose members, together with the undergraduate members of Phi Betta Kappa, are ex-officio members of the Faculty Club, a literary club composed of members of the faculty and their families.

There is the Inter-fraternity Council; the Athletic Council; the Debating Council; there is the Glee Club; the Mandolin Club; the Chapel Choir; the College Band; the Dramatic Club; the Press Club; the Republican Club; the Democratic Club. We have three papers—the *Quill* for literature, the *Orient* for college news, the *Bugle* for college records and college humor.

Besides, there are public functions with their management and their subjects; rallies, banquets, assemblies, Ivy Day, Class Day, college teas, fraternity house parties.

Last, but not least, come athletics—baseball, football, track, tennis, hockey, fencing, gymnastics, cross country running, with first and second teams, captains, managers and assistant managers.

With all these positions open to you in these four years, every one of you ought to find opportunity for association with your fellows in congenial pursuits, and training in leadership and responsibility in the conduct of affairs.

As I said at the outset, taken apart from study these things are trivial, and absorption in them amounts to little more than mental dissipation; but taken in their proper relation to study, which is your main purpose here, the social experience and capacity for leadership they give are so valuable that if you take no responsible and effective part in them, you miss the pleasantest, and in some respects the most profitable, part of what the college offers you.

I suppose I ought to say a word about college temptations, tho the man who enters heartily into his studies and these college activities will not be much troubled by them. That is the case with nine-tenths of the men who come here. But

in every class there is a weaker 5 or 10 per cent., and I suppose this class of 1912 is no exception. I suppose there are half a dozen of you who are already addicted to vicious practices, and half a dozen more weak fellows, who are only waiting for some one to show them the ways before they fall into them. I do not know yet who you are; but within three months everybody here will know. Then we shall first do our best to change your plans; and if that fails, we shall promptly ask you to withdraw. You all know what these temptations are: they are the temptations of youth everywhere—smoking, drinking, gambling and licentiousness.

To begin with the least serious. There is nothing intrinsically evil in the inhalation and exhalation of smoke. Among mature men, some are seriously injured by it; some apparently suffer little harm. Almost all youth of your age are seriously injured by it.

In the first place, it weakens your heart and makes your nerves unsteady. In the second place, it destroys your power of mental concentration and makes you scatter-brained. These evils are generally recognized. The most serious consequence is not so well understood. The habitual smoker tends to become content with himself as he is; he ceases to wrestle earnestly with moral and spiritual problems; falls out of the struggle to be continually rising to hights hitherto unattained. For the man who has attained his moral growth (if such there are) it is not so serious; but for the youth of eighteen or twenty it means arrested spiritual development, and an easy-going compromise instead of the more strenuous ideals. As you go up in a college class, the proportion of smokers falls; as you go down, it rises. While the college does not make smoking directly a subject of discipline, it is no mere coincidence that nineteen out of every twenty students whom we send away for either low scholarship or bad conduct are inveterate smokers. If you train for an athletic team, you have to stop smoking while training; if you are in the most earnest training for life, you will leave it off altogether.

Drinking, however excusable a consolation for hard-worked men of meager mental and social resources, is inexcusable in young men with such a wealth of physical, intellectual and social stimulus about them as college life affords. All the fraternities, of their own accord, exclude it from their chapter houses. Any student who injures himself or others by this abuse is liable to be requested to leave college in consequence.

Gambling is so utterly inconsistent with the purpose for which you come here, and, when once started, spreads so insidiously, that we always remove a student from college as soon as we discover that he is addicted to the practice.

Licentiousness involves such a hardening of the heart of the offender, such an anti-social attitude toward its victims, and brings such scandal on the institution, that "notorious and evil livers" in this respect are quietly, but firmly, removed at the end of an early year or term.

In dealing with these offenses, we hold no legal trial; we offer no formal proof of specific acts; we do not always succeed in convincing either students or parents of the justice of our action. In a little community like this, where everybody is intensely interested in everybody else, we know with absolute certainty; and, while we cannot always make public the nature and source of our knowledge, we act upon that knowledge. If this seems arbitrary, if any one of you does not wish to take his chance of summary dismissal, without formal proof of specific charges, on any of these grounds, he would do well to withdraw voluntarily at the outset. This is our way of dealing with there matters, and you have fair warning in advance.

Such is college work; college life; college temptation. A million dollars in buildings and equipment; another million of endowment; the services of a score of trained, devoted teachers; the fellowship of hundreds of alumni, fellow-students and younger brothers who will follow in the years to come; the name and fame, the traditions and influence of this ancient seat of learning; the rich and varied physical, intellectual and social life among yourselves; all are freely yours on the single condition that you use them for your own good, and to the harm of no one else.

BRUNSWICK, ME.

Bee Houses

BY MAX A. R. BRÜNNER

GERMANY is known for the numerous beer gardens found in every city, but one little place contains a bee garden instead of a beer garden. It is entirely the idea of its owner, a school teacher, who has also executed the many houses in it, altho he had not, of course, any experience in it thru his profession. As can be seen the bees do not live in the ordinary hives, but in finely modeled houses, each representing a different type.

It is a fact that bees always return to the same hive, which they recognize by the color, form or shape of opening. To facilitate this searching for their residence the beehives are often of different color and size. In this garden this has been carried on to the extreme, for every beehive represents a different shape. Among the buildings are a fine castle, with sentry, a dwelling house, an inn and a windmill. There are also men and animals, carved in wood, all in the service of the bees. There is, of course, an opening in all these models, to give access to the interior for taking out the honey.

BERLIN, GERMANY.

International Marriages

BY ABBY G. BAKER

HE shrugged his aristocratic shoulders just the least bit contemptuously.

"Unhappy marriages?" he repeated. "The American women who are looking for foreign titles don't stop to weigh whether the marriage will be happy or otherwise, do they—provided they make the title? The wholesale rush there seems to have been in the matrimonial market during the past few years for bargains between American dollars and European titles would lead one to believe that happiness or unhappiness are mere bagatelles, after considerations of minor importance, would it not?"

He was a titled European himself, cultured, scholarly, gallant, and he flushed a little shamefacedly at his own words, and then, nervously adjusting his eyeglasses, he continued hurriedly, as tho in deprecation of what he had said:

"The American woman is most charming. She has beauty, superb physique, grace, tact, wit, remarkable adaptability, and it is safe to rely upon her kind heart dominating her brain. Is it any wonder that we foreigners are taken captive by her charms? Then when to all this is added the convenient equipment, so common in the United States, of an unlimited purse, why, of course, titles and castles capitulate before the siege. No, no, I do not mean to use the word 'siege' offensively, but you will have to agree with me that the rich American, especially his wife and daughter, have besieged most successfully in a social way the European capitals. From London to St. Peters-

burg and from Paris to Rome you find them settled—temporarily, to be sure, but to all intents and purposes settled—in gorgeous establishments. The American girl of wealth finishes her education abroad, where later she is introduced in the town and country houses of society, and in turn her mother entertains far

LADY HERBERT,
Widow of Sir Michael, whose marriage made her a member of one of the aristocratic titled families of England.

more elaborately than the average European could think of doing. "It may not be a siege," he added, smiling whimsically, "but it frequently follows that the daughter of wealth marries the man of title. With them it is a *quid pro quo* transaction, more often than otherwise resulting satisfactorily to the interested parties. So I really do not know as it is a matter over which the Continental and American press need grow hysterical, when, as has happened lately, it comes to the surface that an occasional alliance has proven unsatisfactory.

"But you also know that these cases," he went on, settling back in his big leather-covered library chair and waving his hand as if dismissing all marriages of that description, "are not typical either

THE WIFE OF LT. COMMANDER FARAMOND DE LAFAJOLE, OF THE FRENCH EMBASSY, WASHINGTON.
She was Miss Lily Langham, of Kentucky.

of American women or European noblemen. The enormously rich American who seeks titles and castles and the impecunious, mercenary nobleman who has his family escutcheon on sale are not typical. They only represent a small class in both countries, and it is from that class, almost without exception, that the unhappy marriage alliances have arisen. It is not because they are international that they are unhappy. It is because the people contracting them are what they are, and the results are the same whenever the high ideals of love and the sacredness of marriage are disregarded, whether the contracting parties are American and French, French and French, American and American, or any other nationalities.

"Difference in the countries of birth have but small weight in the happiness of two people who love, who are congenial, and who marry each other on right principles. All history has proven

this. I am very well satisfied that my wife and I are exactly as happy as if we were of the same nationality, and my case is that of thousands of foreigners who have married American girls. Take the marriages that have occurred in the *corps diplomatique* at Washington within the past fifty years—yes, and more than that, take all international marriages between Americans and Europeans of the past one hundred years, and it will be a safe wager that the unhappy ones have been the exceptions, while the great majority have been satisfactory."

At first thought the ambassador's statements seemed entirely too broad. It was preposterous to assert with such assurance that American women "laid siege" to European titles, and surely as wide of the mark the assertion that the great majority of the marriages between American girls and Europeans during the past century had been happy. Yet were these assertions true? The daily press of London, Paris, Berlin, teem with descriptions of the American abroad; the "smart places" they have taken for the season; their magnificent entertainments, at which the king, queen, emperor and court dignitaries of highest rank are frequent guests; their yachts, auto cars and coaching tours, and the splendor of their gowns and jewels are themes of daily recurrence.

Nor does that kind of description confine itself to visiting and unofficial Americans. Our embassies are emblazoned as fields of gold. Ambassador So-and-So has taken such and such a place or hotel and his wife and daughter, or aunts and cousins, are leaders in all the elaborate social functions of the capital. Does any one ever see in the daily press any reference to our Federal representatives abroad except in connection with some such display of their wealth? So assured is this presumption that a short time ago the wife of a returned ambassador (the latter had come home to take a high official position in Washington) made the statement in a newspaper interview that the most important requisite for an American ambassador was that he should have great wealth and be able to keep up a "show establishment" in the European capitals. Great wealth! Brains, culture, fitness for position, honesty, learning, family — all these but of cockleshell weight provided the man who is to represent this nation before the courts of the world has *money!* Small wonder that the *Contemporary Review* can say with biting sarcasm :

"Who would ever hear of the Americans in Europe except for their great wealth? And in the society which they attain where do they represent any moral or political force?"

It is undoubtedly this state of things which justifies a European in believing that Americans are ready to exchange their dollars for titles, and that post-nuptial happiness, or unhappiness, are bagatelles, "after considerations of light weight." That many of them do believe it is a well attested fact.

"How can they help thinking so?" said a woman who a dozen or more years ago married a member of the diplomatic corps at Washington and who has since lived at some of the leading Continental capi-

tals. "Comparatively, you know, the Europeans travel but little in the United States. Their acquaintance with us is confined almost exclusively to the enormously rich of our numbers who travel and live so much abroad, and to the tourists who go to the other side in excursion parties. The one is largely made up of what is termed the vulgar rich, and the other, even if they comprise the cultured American, stay so short a time that they do no more than impress their peculiarities upon those whom they meet. The consequence is that the one thing for which the Americans abroad are notable is their money, and the one impression they make is that they care only for a good time—that they must be entertained, must be on an eternal 'go,' with no love of home nor the stability which attends it. It is a misconception, of course, and totally wrong of the American people as a whole, but it is not wrong of many of our people, who really live in Europe as much as they do in the United States, and who believe themselves that the earth revolves on an axis of the almighty dollar.

"Naturally this class attracts, and when a woman belonging to it—for it is usually the mother of the daughter who pioneers such matrimonial alliances—decides to obtain a title she meets but little difficulty. If she would only stop to examine into the antecedents of the men who carry the titles she would often save herself and her daughters a world of trouble. There are just as large a proportion of high minded, clean living, honest young men among noble families as anywhere else, and many of them have married American girls, but there are plenty of the Boni de Castellane, de Chaulnes, Count Gizycki, Duke of Marlborough, Helie de Sagan type, and if American girls marry them their common sense should teach them that they have no better prospect of happiness than when they marry their own countrymen of the same stamp. The matrimonial market of Europe is well supplied with detrimentals—dissolute, drunken, impoverished noblemen; second sons who have been ostracized by their own class at home and whose families are only too glad to marry them to American girls, whose love of title blinds them to all else. There is no doubt but there are many of Mrs. Burnett's Sir Nigels as well as foolish Rosalie Vanderpoels, and I suppose that there always will be such marriages, but they never will be typical of either country. Why, in every city of Europe and Great Britain," she cried, waving her hands excitedly in her earnestness, "there are to be found innumerable instances of happy international marriages. Look at the Barings, the Churchills, Chamberlains, the Harcourts, Pagets, Curzons, the Rochefoucaulds, the Buisserets, the Jusserands, the von Sternbergs, the Patrenotes, d'Arcos, the Moncheurs, and any number of others I might mention. It undoubtedly would be an easy matter to show that the majority of the alliances are satisfactory."

She was an American girl married to a European title, and prejudiced, to be sure, but she was not altogether wrong. It is as absurd to say that the international marriages are always mercenary on the part of the men who contract them as to say that love never dominates upon the part of the women. If either case were anything like true the American women could not be the success they are in foreign society after their marriages, nor could these marriages have stood the test of years they have stood.

Let us make a little study of the situation, and, while there is no possibility of covering the subject within the limits of a magazine article, yet the cases selected can, and will be, typical of the whole. Take the following table of a few of the international marriages which occurred from the beginning of the nineteenth century up to, say, thirty or forty years ago:

Sally McKean, Pennsylvania, Marquis d'Yrujo, about 1796.
Anne Bingham, Pennsylvania, Alexander Baring, about same date.

MISS FFOULKE, OF WASHINGTON,
Who recently married Mr. E. Havenith, counselor of Belgian Legation.
Copyright 1908 by Harris & Ewing.

Elizabeth Patterson, Baltimore, Jerome Bonapart, 1803.
Harriet Williams, Georgetown, Count de Bodisco.
Marie Matilde Bingham, Pennsylvania, Henry Baring.
Annie Willing, Philadelphia, Mungo Murray.
Ada Benham, Cincinnati, Lord Fairfax.
Elise Bachman, Massachusetts, Count de Portalle.
Bessie Curtis, Boston, Marquis de Talleyrand-Perigord.
Eulalie Montgomery, Louisiana, Count de Sully-Bethune.
Annie Hutton, Count Moltke-Huitfeldt.
Miss Siddell, Virginia, Count de Sainte Romaine.
Helen Magruder, Washington, Lord Abinger.
Cornelia Wadsworth, Washington, John T. Adair.

MADAME GODOY,
Wife of Mexican diplomat, who was Miss Perrin, of San Francisco.

Helen Sanger, Utica, Lord Digby Murray, 1861.
Miss Dahlgren, Washington, Baron von Overbeck, 1867.
Cecilia Riggs, Washington, Lord Henry Howard, 1867.
May Morgan, Philadelphia, Lord Francis R. Plunkett, 1870.

The cases given above were selected indiscriminately without any reference to marital felicity or infelicity, and yet we find in the eighteen but three which history has recorded as unhappy—those of Elizabeth Patterson, Marie Bingham and Bessie Curtis. In those days divorces and separations were rare, very rare, and the marriage contract "for better, for worse, till death do us part" meant, alas, unfortunately, far more than it does today. Yet poor Elizabeth Patterson would have given all the world to have

made her marriage contract hold when the heartless Napoleon called it void. She was quite as ambitious as the Emperor himself, and she loved the faithless Jerome, but not even the intercession of Jefferson could avail in her behalf.

BARONESS MONCHEUR,
Wife of the Belgian Minister at Washington, D. C. Formerly Miss Clayton, daughter of Powell Clayton.

For more than a hundred years the sons of the famous banking house of London, Baring Brothers, have been marrying American daughters, and the only misfit in all the alliances was that between Henry Baring and Miss Marie Bingham. Alexander was the first of the family to make a transatlantic match. He came to "the States" at the latter end of the eighteenth century to look after his company's growing interests. It was at that time that he met, and married, Senator Bingham's eldest daughter, but it was not until a good many years later that he became the first Lord Ashburton and negotiated with Webster the treaty which bears his name. The letters of Sally McKean, who was the daughter of one of Pennsylvania's early Governors, give a delightful picture of the gayety of official life of the young republic and at the same time unconsciously portray her own wedded bliss. Harriet Williams was scarcely more than a schoolgirl of sixteen, and with comparatively no money, when she married Count de Bodisco, the Russian Minister at Washington, who was more than twice her age, and enormously rich, yet the marriage was notably happy. And the same thing doubtless could be told of almost all the

DUCHESS OF MARLBOROUGH,
Formerly Miss Vanderbilt.

international alliances of that day, as well as those cited in the foregoing table.

Another statistical table of interest includes the different countries of the globe to which our American girls, by their marriages, have sworn allegiance in the past few years:

England	54	Hungary	3
France	37	Austria	2
Germany	14	Spain	2
Italy	10	Belgium	2
Russia	4	Portugal	1
Scotland	3	Mexico	1

This table is by no means inclusive, but it is typical of the proportion of the number of marriages contracted in the countries represented. As can be seen the marriages of American girls with Englishmen far exceeds those with men of any other nationality, and the ties of a common language, blood and affinity make this but natural. It may be true,

BARONESS SPECK VON STERNBERG,
Wife of German Ambassador at Washington; *née* Miss Langham, of Kentucky.

as has been sarcastically asserted, that "the invasion of the American heiress in London is more impressive from the capital it represents than from any other cause," yet there is no doubt but that the American colony at the British metropolis contains a group of women of which any country might be proud. Certainly the brilliant Lady Paget (Minnie Stevens), whose name has been synonymous with almost every large charity undertaken in the British kingdom for many years, represents more than capital. And surely the same can be said of the gifted Mrs. Adair; the cultured Mary Endicott, wife of the Honorable Joseph Chamberlain; the capable Mrs. George Cornwallis West, who has taken such an active part in that wonderful Tory organization the Primrose League; that galaxy of titled women who have proven themselves such successful social leaders, the Duchess of Roxburgh, the Duchess of Manchester, Countess Craven, Countess of Orford, Lady Essex, Lady Tankerville, Lady Lister-Kaye, the Leiter sisters, Lady Curzon of sacred memory, Countess Margarite and Mrs. Colin Campbell, who have taken hold of social and economic questhese, and of many other American wotions with so much earnestness. Yes, of men who are filling high stations in the

MADAME AOKI,
German wife of former Japanese Ambassador at Washington.

British capital, it can be said that they are a credit to their country.

If one should make a table of the names of the American women who have married in the diplomatic corps of the foreign nations represented at Washington the list it comprised would be lengthy. It would begin back with Sally McKean and the Marquis d'Yrujo per-

haps, and with but few breaks would come down the years to the present time. With but rare exceptions these marriages have proven satisfactory. For the woman of the world marriage in the diplomatic corps offers unequaled attractions. She knows that thru it she will get more out of life, of the things which to her count for most, than is possible thru any other marriage. She knows that in marrying a ranking European diplomatist she will marry a man of position and consideration at home, and that while conferring these upon her he also can give her far more of his time and attention than is possible with the average American husband, whose avocation in life is business and money-making. And this is the real secret of many of these marriages. Women with social aspirations want more than money in the men they marry. They long for a permanent, recognized, indisputable position; they desire the stability of rank which comes with a title, as well as the romance and glamour that halos it. So much of our literature, art, romance, tradition belong to the older countries. Who can deny that our most cherished colonial heirlooms come from Europe

MADAME COREA,
Wife of Nicauraguan Minister at Washington. Formerly Miss India Bell.

But there is the other side to the question—the miserable, unhappy international marriages which have made such a dark page in our history and whose record tells of the broken hearts, and broken lives, of so many, so *very* many, of our fair American daughters. Here is a table of some of these who have had to seek release in divorce, or separation, and it is a comfort to our pride and much to our credit that the cases have been few where the titled husband could secure the bill of freedom, and far fewer where American women have given their foreign husbands statutory grounds for divorce. Besides Anne Bingham and Bessie Curtis, who have been mentioned already, the table can include:

Countess de Castelmandro, Edith Van Buren.
Countess Paul Hatzfeldt, Helena Moulton.
Consuelo, Dowager Duchess of Manchester, Miss Yznaga.
Madame (Chevalier) de Stuers, Elizabeth Carey.
Mrs. William Haggard, Miss (Carroll) Kenny, Virginia.
The Duchess of Rosslyn, Miss Anna Robinson.
Lady Edmond Fitz Maurice, Miss Fitzgerald, Connecticut.
Mrs. James Burke-Roche, Miss Work, New York.
Princess Edmond de Polignac, Miss Winnaretta Singer, Boston.
Princess Colonna Stigliano, Miss Eva Julia Mackay, San Francisco.
Countess de Villard-Villars, Miss Chapin.
Madame George Clemenceau, Miss Mary Plummer.
Marquise de Talleyrand-Perigord, Mrs. Frederick Livingston, *née* Miss Sampson, New York.
Mrs. Algernon Sartoris, Nellie Grant.
Countess Rudolph Festetics, Miss Ella Haggin, San Francisco.
Lady Arthur Aylmer, Miss Anne Reid, New York.
Princess Paola Camporeale, Miss Mary Binney, New Jersey.
Princess of Monaco, Miss Alice Heine, New Orleans.
Baroness Halkett, Miss Sarah P. Stokes, New York.
Countess Maximilian Pappenheim, Miss Wheeler, Philadelphia.

Of course this list is not exhaustive; it could scarcely be called a beginning of

the long sad catalog; nor does it mention the Yarmouths, the Castellanes, the Marlboroughs, the Gizyckis, nor others whose troubles are still fresh in everybody's memories. These are but a few of those who have had the courage to seek release—the courage which can stand family disapprobation, often social ostracism, and always the torture of scandal and the limelight of newspaper notoriety. These are a few of the cases of unhappy international marriages which have come to public knowledge, but only He who scans the secrets of all hearts knows how many more there are who suffer in silence.

We will concede that the happy international marriages predominate; we will agree with the distinguished ambassador that geography does not have much to do with it, but as love and high ideals must dominate every happy marriage and as no class of men in all the world are more lovable and high principled than our own American men, doesn't it stand to reason that an American girl's best chance of happiness is in marrying one of her own countrymen?

WASHINGTON, D. C.

An Awakening in New York State

BY J. O. HAMMITT

[Mr. Hammitt has just completed a tour of New York State for the purpose of studying the political sentiment concerning Governor Hughes and his measures. He is a newspaper man by profession and last winter spent his time at Albany watching all legislative bills as the secretary of the Citizens' Union.—EDITOR.]

AT Saratoga, on the 15th of September, the voters nominated Charles E. Hughes as the Republican candidate for Governor of New York. The action of the Republican Convention was in many respects unlike anything that had ever happened in the Empire State, and may be recognized as the outcome of an awakening of interest among the sovereign people as to the administration of their State government. This awakening, created by frequent appeals of the Chief Executive over the heads of the legislators to their constituents, is the most important accomplishment of Governor Hughes; and the account of it should be contributed to the records of contemporaneous American history.

The country has heard much of Hughes. He has made enough enemies to stop the public career of an ordinary man—not the few political bosses, for they cannot end the career of even an ordinary man if he is popular, but the thousands of voters at whose interests the cogent force of his reasoning and the power of his veto pen had struck. They are gamblers, employees of race-tracks and horse-breeding farms, insurance agents, police, volunteer firemen, and a varied list of others, some law-respecting and some law-avoiding classes, but all voters, and strong in numbers. The nomination of Governor Hughes for a second term, despite the opposition, not entirely unorganized, of these forces, against the personal wish of a majority of the delegates who voted for him in convention, and despite the antagonism of the men who controlled a majority of those same delegates, is proof of his extraordinary forcefulness. Whether it be considered the triumph of public sentiment, of civic righteousness, of the "Big Stick," or only of newspaper agitation, it indicates to the student of politics that his career as a public man will continue, and that probably no public honor is entirely and utterly beyond his reach.

Not his public career, his personality, or his political future, however, appears as the greatest promise of the Saratoga Convention. Of more real importance is the fact that the mass of the voters dictated the nomination, and that their control of the convention was due to a keener interest among the people of New York in the methods and manner of their State government than they have ever

hitherto shown. The facts will be set forth as found in a study of conditions in seventeen counties of the State, including metropolitan, town, village and rural communities, in all of which the awakening is impressive. But first it will be of advantage to recount the history of this interesting political movement from as far back as its origin can logically be traced.

Since Benjamin B. Odell, Jr., then Governor, resisted and reduced the one-man power of Senator Thomas C. Platt over the Republican party in New York, changes have been coming quickly. From the machine politician's viewpoint, the whole movement has been one of disintegration. Odell, after holding in his own hands for a few years the one-man power, was deposed by a league of smaller bosses, each controlling a fragment of the organization and some of the party patronage. These lesser bosses were unable to rule the destinies of the party as did Odell and Platt and their predecessors. They lacked unity, frequently disagreed as to details, and quarreled in conference. Their jealousies prevented any one of them from assuming leadership. Then was the day of the "Big Stick" in New York; and a message from President Roosevelt forced upon the bickering bosses the nomination of Governor Hughes two years ago. It did not make Roosevelt boss in the sense that Platt and Odell had been boss. This would have necessitated not only obedience to his commands, but constant attention from him to the local politics of the State. The former was not always in evidence, and the President failed to furnish the latter. Hughes, as Governor, did not look to any boss or cabinet of bosses for instructions; and, as Platt and Odell had learned in turn, no boss could be State boss unless he "controlled" the Governor.

Next came the "appeal to the people," a new element in New York politics, introduced by the trained lawyer and untrained politician who had been elevated to the gubernatorial office. Hughes got the idea, perhaps, from the State Constitution, which recognizes the people as ultimate authority. The appeal was bitterly resented by unfriendly legislators, who called it "coercion." This resentment was but human; and it was not less human of the electors that they took the opposite view. Thousands of them who heard the Governor's speeches awoke to their importance as the final authority to determine the policies of their government. It was a perfectly simple principle, drawn from the Constitution itself, but other Governors before Hughes had not thought to use it for an appeal in behalf of their recommendations. By this method he won a Public Service Commissions law and the Anti-Race-Track Gambling laws from unwilling legislatures.

He went with his arguments to the people, pleaded his case before the voters as a court of last resort, and then "rested." The decision being in his favor, legislators were deluged with letters; some were denounced at meetings of citizens, some made to see that they would fail of re-election if they offered opposition to the reform program recommended by the Governor and approved by the people. Before this pressure the legislative opposition broke in 1907, and again in 1908. The procedure was in the nature of a referendum, with the legislators acting as the special agents of the people to carry out their definite decrees. And to remove doubt as to the force of their decrees the electors have retired legislators who refused to accept their decisions.

The effect on the mass of the voters was the discovery that they could have their way if they made it sufficiently clear what they wanted. They were eager for further opportunities to demonstrate their control of the State government, and, quite naturally, looked to Hughes to raise the next issue. He has "stumped the State" from end to end, telling large audiences what legislation he has recommended, offering his reasons and pleading his case before the electors as the tribunal of final authority. On some of his recommendations they have clearly suspended judgment. This is the status of the proposed Massachusetts Ballot law. On others they seem as clearly to have reached a decision. Such is the status of direct nominations and the State regulation of telegraph and telephone companies. If the popular interest in these matters continues, it seems

safe to predict that they will be put on the books among the laws of 1909.

Find a political boss in New York who does not understand this situation, and you have found one whose power is already slipping from him. Seeing one of the league of minor bosses that succeeded Odell rise on the floor of the Saratoga convention and vote his entire delegation for Governor Hughes, the writer could remember the same man's boast of a few weeks earlier that "we have the delegates and we will not nominate him." By the personal pronoun he referred to himself and the other bosses. They stood up one after another and voted for Hughes, hardly understanding the force that compelled them or their strange inability to resist.

A Western New York boss said to the writer within a week before the convention: "In the old days I would go down to New York and see Senator Platt and find out what was going to happen. Then I would come back and get the boys in line. But now I go to New York and learn nothing. I ask the man who, according to the old system, ought to know, and he tells me something. When I get on the train I find myself thinking it over, and likely as not when I am an hour out of New York I have made up my mind that the big man has told me wrong. This is a new state of affairs, and I don't quite understand what it means. When President Roosevelt exprest himself as in favor of the renomination of Governor Hughes, this boss made up his mind that the President must have learned "what was going to happen." He acted accordingly. But if the "big man" whom he suspected of "telling him wrong," had said, "It will be Hughes," and the President had said otherwise, the President would have been mistaken. The only way to retain a semblance of leadership was to accept the clear decision of the electors that Hughes should be the Republican candidate.

The issue was not the same before as after the State convention. No Democratic candidate had been named; and it was not a question of Hughes or Chanler that the people were deciding. No other candidate for the Republican nomination was being seriously considered; and the unmixt issue was, "Shall Hughes have a renomination and go befor the people for a second term?" That he had estranged many voters has already been noted, and that he will be bitterly opposed in the campaign and on election day is beyond question; but it was clearly the consensus of opinion that he should be the choice of the Republican convention. This was the compelling force the bosses could not understand, but inevitably obeyed.

During five weeks before the nominations were made the writer traveled thru New York State from end to end for the purpose of studying public sentiment. It was not difficult to draw the average citizen into a discussion of State politics. With national issues there semed to be little concern; but people were showing unprecedented interest in State issues. This was the most striking and impressive fact brought to the mind of the observer. In New York City, Newburgh, Schenectady, Troy, Amsterdam, Saratoga, Utica, Syracuse, Oswego, Cortland, Auburn, Seneca Falls, Rochester, Buffalo — big and little cities, towns and villages—and in the farming districts, there was a running argument of Hughes and anti-Hughes and continuous debate as to the policies of his administration. Postal card canvasses were being taken, political sermons preached, mass meetings held, and active interest in the minor nominations on the local tickets voiced, in one way and another, by thousands who had never hitherto been deeply concerned about such matters. Apathy in the national campaign was side by side with the keenest interest in the policies of State government to be settled at the election.

"What New York City papers are publishing the most news about the Hughes question?" was the inquiry put to the writer by a clergyman in Schenectady. "I want to subscribe for them." Articles pro and con published in the newspapers and magazines—and there were reams of them—were read with avidity and discussed and analyzed by the average citizen. In Albany, a Taft and Hughes League was organized by citizens who had never before shown any political activity, and its membership

grew in a week to nearly three thousand. In Buffalo, a telegram from a political writer saying, "I am coming from New York to get an article about Hughes sentiment," was all the suggestion needed for the creation almost over night of a Hughes Committee of One Hundred. Petitions were circulated and signed by the men on the streets. A "Personal Liberty League," organized by racing men and writers of sporting news for newspapers, spread its organization over parts of the State, and held mass meetings in opposition to Hughes. For and against him there was such a clamor that there remained nothing for the Republican bosses to do but accept the view of the majority or court sure defeat at the polls.

The situation quickly grew to national importance, not only because the electoral vote of New York is considered almost essential to the success of a national ticket, but because the public mind of the nation had caught the contagion from the public mind of New York. "They are talking more about Hughes in Chicago than about Bryan and Taft," said a member of Mr. Bryan's National Advisory Committee to the writer ten days before the Saratoga convention.

Governor Hughes had set people to thinking so hard about the affairs of government that they wanted to settle them. The bosses were in the way, and that made the people mad. Let a political boss make the people mad, and it is not healthy for him to be in the way. Not all the people were for Hughes, to be sure; but Hughes refused to recognize the authority of anybody but the people to decide whether he should continue as Governor. They were with him in that, and against the bosses. He went before them at the county fairs and at celebrations in Troy, Albany and New York, and told them he was waiting for their decision. The bosses met at headquarters and "interpreted" public sentiment. The people became convinced that the "interpretation" was being guided by the selfish desires of the bosses; and that had probably more than anything else to do with the result at Saratoga.

Coming in contact with the people as he "stumped the State," Governor Hughes was himself imprest with the aroused interest they showed in matters which had hitherto been left largely to those who made a business of politics. To him, with his views of constitutional government, this indicated a healthy situation.

Will it last? Will it spread beyond New York? These are questions which only a prophet can answer. But that the condition exists in New York is known to those who have investigated, and can easily be verified by any campaign leader of any party; and for the present it is, and must be, to the minds of those who, like Governor Hughes, know more and care more about the Constitution than about personal politics, a healthy situation.

New York City.

The Two Stars

BY ETHEL ALLEN MURPHY

Infinite world of wonder,
Woven of snow and of fire,
Shaken with songs and with thunder,
Quickened with hope and desire,
Passion and joy and despair—
When I have done with thy seeming,
Where shall my soul aspire?
Shall I speed swifter than dreaming,
Cleaving the ocean of air,
Winging the ether afar,
Till I am lost in the gleaming
Heart of yon beaconing star?
When on my pinions aspiring
I shall have won to my rest,
Shall I look back with desiring
Unto thy storm-beaten breast?
And thru the distance far streaming,
Bright on my joy-brightened eyes,
Shall I behold thee new-beaming,
Star in my heavenly skies?

Louisville, Ky.

A Temple Court

BY F. CAIRD HOGG

NEAR my house there is a famous Buddhist temple — not a large one—small indeed in comparison with the extensive grounds it stands in, but a very beautiful contrast, with its curved roof and tinted seasoned woodwork, to the plain new buildings which surround it. In front are a few steps on the topmost of which rests the end of a great thick bell rope attached to a bell, small out of all proportion to the rope, and this worshipers ring before they pray. Inside there is only one image—that of the Buddha, beautifully cast in bronze. The face has a sweet, passionless expression. On either side of the steps are great stone lions—impossible dragony lions—on high pedestals. One has its mouth open as if to roar. The other has its mouth shut. This is to show the male and female, for in this country the man is supposed to do the speaking and the woman the listening.

The lions are comparatively new, only three or four decades old, but they have witnessed greater changes than their predecessors that stood for centuries—the new strange, ugly buildings of the treaty port replacing the beautiful picturesque Japanese houses; the trains that pass one corner of the court; the great steamers in the harbor, which is visible over the house tops, for the town is partly on a hill; good changes and bad changes, for terrible plagues and pests are now stamped out as if by magic, and the hospital near by alleviates much pain, but they have seen the descendants of the brave old warriors that came to worship turn into merchants—too many of them dishonest merchants, very, very dishonest merchants. There are some cheap railway trips on just now.

It is the anniversary of Jimmu Tenno, the first Emperor of Japan, and many country people are in town. Dear old

grandfathers and grandmothers wrapt up in blankets, for the weather is still chilly—red, gray, brown, blue blankets, all colors, but red is the favorite, and the kind old folk, for none are kinder than the country folk, have laughing little children on their backs—beady-eyed, round-faced little creatures. Whole families stretch across the street. Many, alas! have spoilt the beautiful national costume by topping it with a foreign hat of most atrocious shape, and some have tortured their feet with ill fitting and worse looking boots, but they feel very "swell" and all look very happy. Many of them have not seen a foreigner before and stare with open-mouthed wonder. The great buildings astonish them, and they finger the chiseled granite in amazement, for their own little houses are light and of wood. Yet there are some Japanese castles which have stood for centuries, and their magnificent masonry will endure for many more unless destroyed by the all too common earthquakes.

The temple court is filled with booths, and on holidays the court is crowded. In the booths all things are sold—beautiful things made from sugar and rice paste, sweety flowers and dolls and toys, but the plain ones taste the best, which is the way of the world. The toy booths are marvels of cheapness and ingenuity, and a few sen can buy most wonderful things, but the old-fashioned clever toys are getting out of date, and guns and swords are taking their places, tho there is no change in the girls' toys; dolls and kitchens as of old still charm them. For one sen can the cinematograph be seen—a stand cinematograph worked by a handle, and the next stall is selling diabolo. All the little boys in the streets are playing at it now—in laughing good-natured little crowds. There are no gamins nor street arabs here, thank Heaven! The neighboring booth is a contrast. The ancient and the modern is everywhere cheek by jowl, tho it seems in no way incongruous. This stall sells little Shinto shrines—beautiful little cabinets of uncolored wood put together with wooden pegs. In all Japanese houses there is one of these, and prayers are made daily before it. In and around it are supposed to be the spirits of the departed ones. Often have I heard women praying before them. I remember once in a country inn, early in the morning, hearing the mistress of the house, a dear, little hospitable woman, praying before such a little shrine, praying for a son who had done well in his studies at Tokyo and to the spirit of her other son, who was further off than Tokyo, too far off ever to come back again, but to her simple faith his spirit came to the little shrine and took the essence of the offerings placed before it. Was she so very different from Western mothers, who put wreaths and flowers upon the railed-in space and treasure up little odds and ends that were once bulging out little pockets? I did not tell her she was wrong—our prayers will get no precedence.

Up in the western corner is a wax-work show, and tho the posters outside are lurid, the scenes inside are more lurid still—fiery Samurai standing on their enemies' necks, while the vanquished one's eyes stand out four inches from their sockets, something like the horns of a snail, only gory and very ghastly. This scene is the least sanguinary, for the audience likes realism, and is well catered to. Yet they are an artistic nation, and even these sights are rendered artistically, and compare favorably with our "Chamber of Horrors." In the eastern corner is a menagerie, and here for a few sen are to be seen the wonders of the animal world—a tiger with which the raw Japanese winter has dealt hardly. Assiduous poking elicits an angry growl, which the keeper tries to pass off as untamable ferocity; an immense python sitting on a heap of white leathery eggs; a crocodile, wolves, a panther, a dear little chimpanzee, cuddlesome but for the fleas, and specimens of the feathered world. All are in cages much too small for them, for the lower orders are unkind to animals, some merely unthinkingly, others devilishly cruel. There are dead plucked fowls that one can buy to feed the carnivora. The black panther tore his as if possessed by the eight terrible devils, but the tiger lingered over his share with the jaded air of a patient over the thousandth water biscuit. The panther gets the most, for ferocity is always interesting, unless wedded to. A

garrulous old man goes around the cages and tells fairy tales. From him I learned for the first time that the crocodile's sole diet was negroes, varied by an occasional lion or buffalo. The python was gifted with swallowing anything short of houses, and every beast was similarly treated to make it interesting, tho I know that the hairless horse was shaved, because I had seen it in transit two days previously.

Of all the booths the most interesting to me is that which sells old prints, sketches and kakemonos, and there I often get many treasures—little sketch books containing the dainty pencilings of hands long since dead, of little incidents in the sketcher's life and scenes that had appealed to his artistic instinct—wayside shrines with offerings of flowers and humble fare, of which the spirit is supposed to take the essence, great eaved temples, temple bells whose boom is like the deep vibration of an organ, weird hillside "hakabas," with innumerable old gray headstones and wooden wands with the spirit names of the dead enscribed thereon, and stone carved statues of the sweet-faced Buddha. All done with marvelously few strokes, yet all most realistic, conveying the *feeling* of the scene in a way that our more practical Western hand can never hope to do. In one of these booths I came across a view that I knew well—a little statue of the children's god Jizo, carved out of living rock, half-way up a cliff, for I had climbed the cliff and seen it, nearly a hundred miles from here, at Ikeguchi. When nearly at the image my foot slipped, and I came clutching down the cliff in great jumping stages, lucky not to break my neck, but with a sprain that caused me pain enough. Not many worshipers climb there, and the offerings were old and wilted. As I lay resting in the little inn, old Shimidzu San, the landlord, told me of the little image and how it had come there. From the inn I could not see it; only the cliff and rocky ledge on which it stood. It was spring, and the view was beautiful. In front there was a little garden of dainty trees and little paths and mounds and pools with gray stone lamps, green with age, and queer-shaped stones; beyond that were the rice fields and further off a hill. Near the top were pines and maples, but from the base to half-way up was covered with a glorious sea of pink—cherry blossoms—called by the poets the spirit of Japan. In the alcove of my room they had put a little spray, daintily arranged. Truly it was very beautiful. Toward the west there was a rushing, rocky river, and on one bank a cliff and half-way up a little bank of sward whereon some bushes grew; behind they say there is a cave; the bushes hide it and the Jizo.

For long there lived a hermit there—not one who voluntarily lived alone, but one whom the hand of all was hard against. Many generations back lived a youth called Iketa; truly an evil youth, with a spirit like a gaki—a goblin, one of those in torment—who showed his parents no reverence, laughed at the priests and at the aged—very terrible in a country where filial piety is so deeply ingrained, and for a punishment he grew very old and could not die. Children were born and lived to gray old age and died, and their children's children tilled their land, yet he lived on. His house at one time was a hovel up the river's bank, but some one passing by that spot at night walked thru the place where the house stood; only the cold chill that came upon him made him stop and look—*no house was there;* so they watched. The house was there by day; at night all trace of it was gone, so they burned that hovel. Then he lived in the cave.

Often he tried to kill himself, but could not. Those who have seen him bathing in the pool where the sakeya was drowned (and many people not long since dead have seen him), told that upon his body were great wounds and scars where he had tried to commit harakiri, but that is an honorable death, and however deep he struck the wounds healed up. He tried to drown himself, but the water sank. Then he flung himself down the cliff side and landed on his face among the stones. That made him look more horrible, and children when they saw him shrieked and ran. He consorted with the kitsune and tanuke—the foxes and badgers—for these beasts are uncanny and can take on human shape, cast spells and lead souls to torment. Often he took on these shapes, for it was

a relief to find his old limbs grow young and full of vigor, tho in bestial form. I know many educated Japanese who firmly believe these things possible, and all have a father or some relation who has seen them, tho no one himself has seen them personally.

In the period Ansei, about fifty years ago, Kaoru San lost her husband, and her family was too young to help her. They were very poor. She had some fields, but not enough rice to plant them. With what she had she worked day and night so that she could plant it by herself alone. She could not afford help; others did not know of her poverty till afterward. At length the night came when she had no more seed to plant. What she had done could not support them. As she looked on the little planted patch in sorrow an old countryman in a deep straw rain-cloak approached her; behind him ran to and fro his dogs, but were they dogs, for in the dim moonlight their eyes glowed like fire and their tails were bushy? His face was hidden by a great straw hat. "Kaoru San," he said, "I know you are in difficulty. The coming year will be a hard one, even for those whose crops are plentiful, and you will all die—you and your three little ones. To die by starvation is hard, very hard, and soon there will be no one left to place the 'ihai' of yourself, your little Ito, Tamanosuke and the blossom O Haru. She will die first, because she is not strong. Give me but one year of your soul and I will save you all this misery." Then thought Kaoru: "This is some devil from gigoku (which is hell), and in his word one can place no trust, and in one year what fearful harm can come." "Nay," she answered. "If it is their karma that my little ones should die then will the good Jizo wait for them kindly in the Land of Souls that devils do not get them, and tho since the great illness past thru the village, taking my husband and many others, my arms are weak to weave, mother love gives strength. Now get thee gone. 'Namu Amida Butsu.'" At these holy words, which is a greeting to the Buddha, the old man fled. Then Kaoru heard fierce howls and shrieks as if the devils in the nether world were loose. Once more the countryman came back, and he bore baskets full of seed. "Help me to plant," he said. "I wish no soul." So they planted all the fields, leaving room for planting out. Very quickly they did it; ere the morning they had finished. Then he disappeared. Next day the villagers were surprised to see an image of the god Jizo carved in the living rock above the river, and climbing up they saw offerings had been newly placed before it. Some more venturesome peered in the cave, and there they saw scattered human bones, the flesh not long stripped off, and round about the signs of a great struggle—the hermit's last fight with the devil-foxes, hungry for his soul. And now the spot once haunted by the erstwhile doomed Iketa is hallowed by the image of the good Jizo, carved by no human hands. For his one good deed the hermit had obtained forgiveness.

Truly this stall is interesting. Doubtless each sketch has such a little story.

KOBE, JAPAN.

The New Vocabulary

BY JAMES HERBERT MORSE

AUTHOR OF "SUMMER HAVEN SONGS."

PROFESSOR LOUNSBURY of Yale in a recent essay presses the question whether we may not reasonably let up a little on the rules of a too exact definition of adjectives. It is not a generation since Professor James Russell Lowell admitted that "no man, or body of men, can dam the stream of language." Where the masters of English in two great universities thus lift the boards, is it for the young generation to be too nice in the use of vocables?

We are just now in a wild hurly-burly of the vernacular. From every quarter freshly washed vocables are streaming in —some rolled down the sands of time,

some recently thrown up in the latest linguistic convulsion. The youth from the college classroom contributes what is to him a taking rendering of some Æschylean compound that has given life to a dull hour. The young clerk, home with sweet company from the comic opera, whistles the latest air just tiptoed over the stage, and the glad pair burst into song together. A bit of the technical jargon of the ball-field is caught up by the unfledged schoolboy and, generally incoherently connected with unrelated topics, is reproduced at the family table. It thus of course becomes slang; it may be innocent slang, soon to be relegated to a corner lot, in the comprehensive dictionary. "Bally," and "snide," and "hike," and "corking," will very naturally have but a brief day. The new words are often clean and wholesome, amusing, and altogether harmless. There is much to recommend the argument of some easy-tempered old gentlemen, who say: "If the words do not require shutters, why should they not for a brief time swell the racy list of joy-giving vocables? They show what the weather is in youth—what the April winds are saying. There is the bubbling of springs about the rootlets of language. Occasionally a blossom will come of it—a new, fresh, aromatic Sophoclean word. The lexicon will be permanently enriched, and the nations be gladdened. Old men will smile, and maidens clap glad hands."

Addison, in his day, gently complained of those mild abbreviations—"mayn't," "can't," "sha'n't," "won't." We have "very much untuned the language," he says. "To favor our natural taciturnity, when obliged to utter our thoughts, we give as quick a birth to our conceptions as possible." But how little he understood the necessities of an expanding civilization! In these hurly-burly days we draw the very poetry of language from the mills, the sporting field, the prize ring, the pool room,—most notably perhaps from the expressive vocabulary of Wall Street. On the ball-field for instance, we "put up a gilt-edge game"; we "grab a lead"; "bunch a couple of hits." In emergencies, we "pop up to B." "gobble up a sizzler," "slam out a win," "come to the scratch at the show-down," "start the fireworks with a clean single," or "rap out a hot single," and then unhappily "stagnate on first base."

How eminently condensed all this is, and yet how joyfully Sophoclean! Fresh from college, the reporter evidently is, and yet how much he has lost of what a great metropolitan daily calls "the flashing note of femininity!" A first degree has been taken in the "manly arts." There were college "sports" fifty years ago who read approvingly in the public journals of the day how an eminent compatriot with his "bunch of fives" leveled on the "peepers" of an equally eminent gentleman of foreign extraction,—how he "drew the claret" from his "mug," and touched his lips with an ungentle osculation. For the parlor these of course were vulgar expressions. But then they seldom got admission to the parlor. They belonged wholly to the stable, and it stands to reason that words wholly from the stable will not always have company manners. There will be words—"rotten," for instance—touching even the electric bell, that are "best recommended by frequent intervals of absence." They should only occasionally attach themselves to good company. Then there are dingy words, that barely escape stripes: explosive words, peculiarly adapted to the use of "our army in Flanders"; they should not be heard in Sunday-school, or seen in the Sunday papers. Sunday has its privileges: clean hands, clean dickeys, clean and wholesome words are among them. There are also ill-assorted words, like winter greenings in March,—the sound tumbled in with the "spect," so that the whole collocation leaves in the nostrils the sensation of decay. "Blooming" was once an excellent word; it went in good company; but of late it has taken to evil association, and it is at least suspicious. A blooming maid is still always welcome; but a "blooming cuss," a "blooming shame," only at rare intervals. Frequent absences are desirable. Not that one may object to the word "cuss." Like the poor, it is always with us. Yet let it sometimes be a "knowing cuss," a "radiant cuss." Again, one is willing to see, at a distance, a "bum" fellow—even a long succession of him—always in one pattern of trousers—checked. But to have grace at table "bum," the meats "bum," and all the guests "bum" we feel, with lit-

tle Marjorie Fleming, that we would like to be "transported far beyond the wicked sons of men, where there is nothing but strife and envying, pilfering and murder, where neither contentment dwells, but there dwells drunkenness."

It is hardly ten years—contemporary, in fact, with the beginning of the automobiliary record, that a modest and learned professor at Harvard was described, not as lecturing to his class, but as "blowing off his mouth," "letting out hot air." These are now archaic expressions. New times, new men, new vocables! The college youth is now on the more public "oval." He wears a jauntier air; breathes in his manners the fragrance of violets sometimes. He advises a distinguished statesman who aspires to the Presidency to "go west and spread fragrance" in Ohio. He has become a reporter, and is picturesque in his linguistic artistry. From the "diamond," the racecourse—one hardly knows what—he fills his daily column with Pindaric odes, singing how so-and-so "got in a whirlwind of a lick," with his bat, and then "rammed a homer"; how A., "like a human cornucopia, poured out his gifts with lavish hand"; how B. "spread himself out to catch the hurtling sphere"; how C. "wrapt his feet around his foe." These are all manly heroes. Turning to the softer sex, he lets us for a moment admire the girlish gaiety of a pair of mares that merrily "romped home from a second race" at the jockey club meet. There was joy in Israel. Another day, haunting the athletic field, he observes "a lull punctured with games." What an airy restfulness in that "punctured lull!" If we did not know exactly "where we were at," it was restful to be there. The words had on their "glad rags." They smacked of parlor associations. We feel the presence of ladies, and not, as in the case of those faint adumbrations of far-off explosives, "bum" and "blooming," a suggestion of Milton's nether notables—

"Princes, potentates,
And powers of heaven, once ours, now lost."

In this new stream that refuses to be dammed, there is everywhere the tumult of contention. Human thought is on the "rush line"; it is determined to "get there." Events mean to "arrive." Great powers are "pooling their interests." A whole contingent is "lining up" for a game. On every side the "shouters," the "heelers," the "backers," the "bummers," the "grafters," are "in evidence." Is it not a time when we should be easy on the language—when the young journalists should be allowed to "set the pace," and "leg it home" with the vocabulary?

NEW YORK CITY.

Fallen Leaves

BY W. W. PINSON

O LEAVES that late your pleading palms
Spread wide for Summer's gentle alms,
Drew life from out the boundless blue
And drank from crystal cups of dew—
  What time the birds sang low and sweet
  Within your shadowy, safe retreat:

How blithe ye murmured, trilled and crooned,
To all earth's minstrelsy attuned!
And laughed in wanton happiness
At every zephyr's shy caress,
  The while ye quenched in shadow sweet
  The fierceness of each noonday's heat!

Ye generous leaves, how large and free
Ye lived and gave; how cheerily
Ye met your doom, all unafraid,
In crimson-tinted robes arrayed;
  Then wooing breezes kissed you free
  To fall in whirling ecstasy.

At last, your dower of blessing spent,
Ye lie serene and full content,
Till Spring her verdant banners waves,
Firm-rooted in your fertile graves.
  O beauteous parable divine,
  I fain would make your meanings mine.

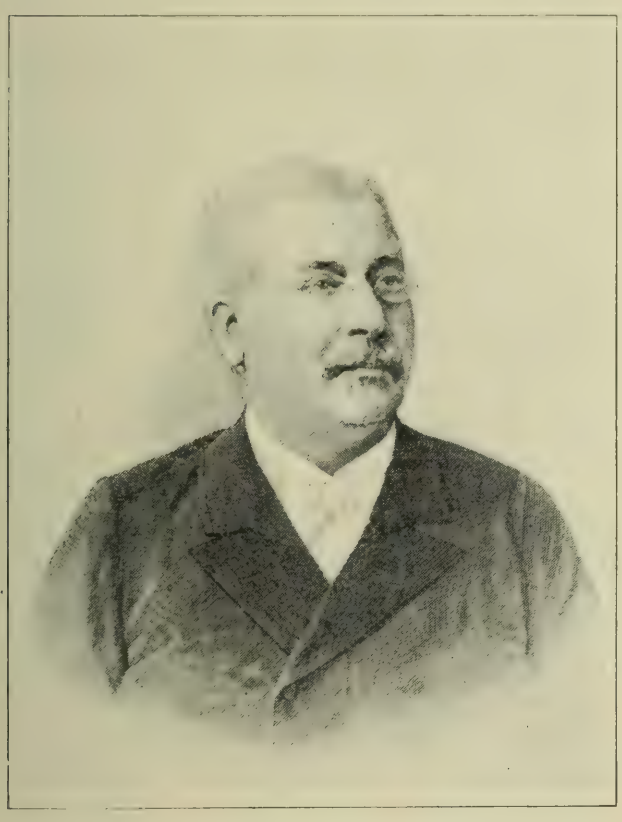
NASHVILLE, TENN.

Kaiser Wilhelm and the World's Peace

BY EDOUARD TALLICHET

[A year ago, M. Tallichet, editor of *The Swiss Review*, published a pamphlet on the peace question, which contained some strictures on Germany and her ruler. A copy of this pamphlet was sent to Mr. Carnegie, and at the recent great peace gathering in this city Mr. Carnegie criticised M. Tallichet's criticisms. The editor of the *Bibliotheque Universelle*, the venerable and able Swiss monthly, replies to Mr. Carnegie in the following article, in which the Kaiser is made out to be a real danger to the world's peace. Since this was written the German Reichstag has granted the naval appropriation asked by the Kaiser. —EDITOR.]

FOR a number of years the Emperor William has been regarded as the chief obstacle to that universal peace which is now the dominant idea of the world. For his dangerous preponderance in this respect he is indebted to a military establishment of a kind that never was seen before, not even in the days of the Roman Empire, which supplied its first model. He himself did not organize it; he inherited it, and has limited himself to the task of increasing and perfecting it. It is an extraordinary visible sign of power. It is not surprising that its master should believe himself the mightiest monarch on earth, specially called to direct the course of the universe. Its existence explains his claims to supremacy. Yet this mighty engine has not helped him in his policy. All his enterprises have failed and sometimes produced results the very opposite of those intended. Thus, no sovereign has contributed as much as he has done to destroy the *ancien régime*, and that by the very endeavors he has made to give it a new life and a new splendor. He has been the real originator of the perilous enterprise in China which preceded a series of events necessary for the transformation of the world: the war in the extreme East, the defeat of Russia, and the revolution that has been its consequence. He has been the principal agent in awakening the Mussulman world from its torpor and inspiring it with the determination to renew its life. He prepared with Kruger the South African war, and sought at Tangier the means of removing from his path the results so disastrous to his policy, of that war which moved the entire civilized world and forced it into the pathway of the great changes that followed, and that must be succeeded by changes still more momentous.



In addition to all these attempts, his armaments on sea and land, from their continual growth, had become a menace to every nation that had reason to dread the consequences of his ambition, as well as to the ever-increasing number of the friends of peace and of public and private liberties. Yet, while all deplored the policy he had adopted, it cannot be denied that that policy has rendered precious services to Europe by compelling the several States, great and small, to watch over their interests, to prepare for dangerous demonstrations, and to combine together in order to make their union a rampart against possible assaults.

Has the Emperor been at length forced to recognize the potency of that force of resistance which he has provoked? His last discourses, and especially his reconciliation with his uncle, Edward VII, would seem to prove that he has, would seem to demonstrate clearly that he perceives the change that has been accomplished in Europe, and is disposed to abide by its consequences. Never, probably, will he find circumstances more favorable for a change in the direction of his policy. He may be assured in any case that if he make this change in that spirit of liberty which is every day growing more powerful; if he renounce the *régime* of force and all that it implies, the whole of Europe, not excepting Germany itself, will applaud his course and will testify that neither he nor his empire will any longer be regard-

ed as an enemy when they accept, without mental reservation, the common life that exists between nations, based on simple justice, without privilege or exclusion for any of them.

But how can such a transformation be effected?

A change of *régime,* in which the German people should strongly co-operate—and the revelations of the Harden trial supply them with the means of doing so—would probably be the first and principal remedy for ameliorating a situation

EDOUARD TALLICHET,
Directeur de la Bibliotheque universelle depuis, 1886.

that is truly critical and may be dangerously aggravated if nothing is done, or if the measures adopted be insufficient or bad. In any case, it cannot be concealed that the change will be difficult to manage and will take a long time to produce results. Even tho the Emperor desire it, he will encounter obstacles he can surmount in no other way than by having a strong majority of the German people on his side. But this he can only hope for by arming himself with patience, by assuring himself that great results are won by persuasion and mildness rather than by force.

One of the first reforms to be undertaken is that of the army, which must always be the holy ark of Prussia, for it is the army which has made and aggrandized the country. But the agent of its triumph may now be the agent of its destruction, because circumstances have changed as a result of that very triumph itself. When the army was small the system could be maintained in a certain measure, and yet, after the death of Frederick II, who had organized it, a few years brought about its corruption, led to the defeat of Jena, and exhibited all its weaknesses. Rendered again strong and warlike by such illustrious leaders as Moltke, von Roon and Bismarck, it became the instrument of the fall of the second French Empire in 1870; but it had the good fortune, as its chiefs well knew, to have to deal with an army that had past thru the same corrupting influences which had demoralized that of Prussia before Jena. Has the German army progressed since these victories? Undoubtedly. Its organization has been perfected, as well as its armament. But, like the army of Napoleon III, it rests on vicious bases which tend to weaken it. In the first place, it has become almost Pretorian, both because of its organization and of the class from which its officers are selected. A continual state of war could alone save it from this fundamental vice, while leading to other vices not less pernicious. In peace these disastrous consequences were sure to manifest themselves. How could it be otherwise with troops so numerous, who pass their lives in irksome occupations that never vary, and with no ultimate object in view?

Something analagous was seen recently—the same causes producing the same effects—in the war in Manchuria, where the Russian officers gave themselves up wholly to licenciousness, taking no thought of their men, who were themselves allowed to give free play to their evil passions. This explains better than anything else why they were outrageously beaten by forces in many respects inferior, but led by devoted officers, who lived with their men, and as soberly as the men themselves, communicating to them incessantly their own patriotic ardor.

It may be concluded, then, without ex-

aggeration that if the German army, which, in spite of its crushing superiority, has had the greatest difficulty in getting the better of a few badly armed Hottentots, wished to renew the war of 1870, it would encounter something that was not exactly victory, and that the Emperor would risk, not only his power, but the very existence of his dynasty.

Many indications, therefore, concur in showing that the time has come for Germany to wake up and make an energetic and persevering effort, in conjunction with her sovereign, to search for the best means of entering into the modern spirit.

Does it follow from what we have been saying that we are near the goal of a general peace? For the moment, indeed, such a consummation would seem assured; and yet we cannot place absolute trust in the perspective. During the last forty years two great wars suddenly broke out at the very moment when no one believed them possible. In 1870 the thunderbolt fell from a sky which an English statesman described as one of the serenest that had ever been observed. More recently, on the very eve of the attack on Port Arthur, who ever thought of the struggle in Manchuria which has shaken the universe?

We are now in presence of more favorable auspices. Whether it be in consequence of William II's state of health, or whether it be because of the reflections he has been led to make on his situation, one thing appears certain, and that is, that a change has been wrought in him. One clear indication of this was his reconciliation with his uncle, Edward VII, with whom he had been so long at variance., followed by the visit of the English King to Wilhelmshöhe and that of the German Emperor and Empress to London.

In any case, the difficulty of raising money banishes for the present the probability of a great war. With the enormous accessories of the armies of today, the mere setting in motion of these machines would require the expenditure of such capital, and afterward so many millions for every month—nay, for every day—that it may well be asked where is Germany to find them, seeing that she is at present unable to make provision for all her needs and in search of new methods of collecting taxes to make up for the deficit in the taxes recently imposed, the returns from which have been a terrible disappointment.

In this relation also the imperial policy has been condemned as resting on a false basis, namely, the desire to establish the supremacy of Germany over Europe—nay, over the entire world; and to do so not by rendering services to humanity, but by the employment of armed force and of all the methods followed unscrupulously by the old diplomacy, but rejected by the modern spirit, and now in its last agony. William II has on several occasions been a pure revolutionist: in China, in the Ottoman Empire; and, altho it was far from his intention, he has, by arousing the spirit of patriotism in several nations, helped the cause of civilization. His services in this respect should not fail to be appreciated, especially as his actions have involved the utter ruin of his policy. In this connection the weighty and profound words of Aristotle may be recalled: "Every political *régime* perishes by the exaggeration of its principle." Seeking to become stronger and stronger by his military system, the Emperor has driven other states to follow his example, and this again has compelled him to increase his forces on land and sea and to expend ever increasing millions for the purpose, throwing the public finances into disorder, necesitating loans and new imposts, which have aroused the discontent of his subjects, and more and more trammeled the prosperity of commerce and industry. The necessary result must be, in a few years, particularly if a financial crisis should arise, to render the present evil situation disastrous.

All this might have been foreseen, and has been. No potentate can escape the consequences of his acts. Personal power will always be a source of vertigo and of ruin. The desire of aggrandizement, of increasing his power, will always lead to precipices that are waiting for their prey. But there are ways of avoiding catastrophes for those who can see the peril, stop in time, and retrace their steps. The enemies of Germany need do nothing but look on while she proceeds on her course. Her friends are those who will frankly tell her the truth and point out the path of an honorable retreat.

Now, the situation that is equally alarming for Europe and for Germany is this: The Emperor is almost omnipotent. As regards his foreign policy, his power is confined within no limits. He can declare war suddenly and can set his army in motion without leaving room for retreat. This is the peril which is terrifying Europe. He can prepare in silence an aggression which his adversary may even not suspect. In his interior policy he has often done so, and has avoided the consequences of his impulsiveness by a prompt recoil when the opposition encountered was too strong for him. But a state of war would be quite a different affair. Once in motion, the army could no longer halt, and the danger would be, at least, as great for Germany as for her adversaries.

One fact is quite certain, however: Whether on account of the state of his health or because he has been induced to reflect on his position, a profound change has been wrought in the Emperor. One indication of this is his reconciliation with his uncle, Edward VII, with whom he has been so long embroiled. Unfortunately, whatever his peaceful intentions may be, they afford too striking a contrast to the budget which has just been laid before the Reichstag, and which demands a strong increase of military and naval expenses.

The Reichstag has only one power, but it is that of the purse; and that power has enabled the English Parliament gradually to asert its predominance and to produce a condition of perfect harmony between the people and the Crown, because the latter discovered that it could not govern without the assent of the nation, represented by the House of Commons. The German Parliament has now an opportunity to assume its proper position by asserting its rights and establishing them in the best conditions. Let it do so, respectfully but firmly, and it will have laid the first foundations of a change well calculated to rejoice the friends of Germany and the friends of peace. And the reason is obvious. Surely Germany must understand that the cause of the present uneasiness of Europe is its political *régime,* a survival of the Middle Ages, which gives to its sovereign on the questions which most closely affect its neighbors a power that threatens them all, because it can be exercised without control, even against the will of his subjects.

BERNE, SWITZERLAND.

Contrast

BY NORA ARCHIBALD SMITH

A FOAM-WHITE daisy, with golden heart,
  Is swaying out in the meadow;
The grasses whisper, the swallows dart,
  And cool is the elm tree's shadow.
Everything's crystalline-fresh and fair,
  Everything's turned to flower,
Grubs into butterflies, feet into wings,
  Touch'd by the summer's power.

A pallid child, with a tousled head,
  Is playing down in the gutter;
The air is heavy with noisome scent,
  And dense with the city's mutter.
Everything's wanting, but dust and heat,
  Everything's lacking but people;
Everything's noisy, from folk in the street
  To the noisy bells in the steeple.

Growing asunder, these flowers of earth,
  Yet are they sister and brother;
Meadow-bred, gutter-bred, tho they may be,
  Still they have need of each other.
Shut in the hand of the pallid child,
  Deep in the grasses lying,
Daisy will give him her golden heart
  And love him the more in dying.

HOLLIS, ME.

Two Things I Know

BY O. W. FIRKINS

Two things I know more tender
  Than spring in Arctic clime,
Than bluebells in November,
  Than berries in the rime;
Than laugh of babe in cloister,
  Than fonts in desert soil:
The joy of those who suffer,
  The rest of those who toil.

Two things I know more sacred
  Than blossoms sprung from graves,
Than stains of gold or purple
  In depths of glooming naves,
Than shrines in marts of traffic,
  Than hymns in battle broil:
The joy of those who suffer,
  The rest of those who toil.

UNIVERSITY OF MINNESOTA, MINNEAPOLIS, MINN.

An American Girl in a Prison of the Czar

BY ROSE STRUNSKY

I HAD spent about two years in Russia and Finland traveling about, looking at conditions, meeting people with the express purpose of learning about the great struggle for liberty, of studying its psychology and philosophy, of understanding its men and women. I had scarcely come in touch with the pillars of society. It was others that held and fascinated me. They were my own, tho I was not part of them. I did not live their life, I only snatched little glimpses. The Russian revolutionist comes and goes. He is off agitating among the peasants, organizing the soldiers, or put away for some time by the respectable hand of society. Then he comes back again unexpectedly with his long hair and gentle smile, drinks a glass of tea in fellowship and goes away again. So many hundreds have past thru my life thus winding thru me like fine threads. Often I have sat alone weaving out these lives, the lives of the many hundreds I knew, and of the hundred thousands I did not know, but whose numbers I had read of. I felt the warm, human heart pulsating in them. They were giving their lives for love.

But for one whole night I was of them.

I had been sitting open-eyed with my head in both my hands watching, when for a day I was caught in the loom. The pillars of society took me, to my pride distrusted me, and put me away with revolutionists. I stopped watching to live. It happened last October in St. Petersburg. I was accompanying my friend, a well known Finnish author, to the station when we were both arrested. It was unexpected and quick. The train was due and we were hurrying along the platform unconscious of spy or police, when a gendarme stept up and asked us to enter the little police-room which exists on every railroad station in Russia. There was something offensive in this sudden manifestation of power. I had an engagement for lunch, my friend was to be met at this train, what right had anyone to interfere with our little natural plans? We walked into the room and the door closed on us. Well, what is it they wanted? No one seemed to know. We were not to be arrested, we were only to wait till the captain came; he would investigate.

We sat down. The room had little in it to impress us with the dignity of the law. There was a black horse-hair sofa slit up in the middle, the long table where the gendarmes sat was littered with papers, and above the dusty desk of the captain hung a large fly-bespecked chromo of the Czar in a gilt frame and in the corner was the inevitable Ikon. The gendarmes in the room looked maliciously happy. It was something to have recognized crime under the mask of respectability. On a chair, leaning over very close to us, so that he could hear every word we said, sat our spy. He was a tall, blond, uncouth-looking man with a loose jaw. This great agent for detecting crime must have followed us for some time, tho in our unconsciousness we had not noticed him. His open eavesdropping angered my friend beyond control. We had a few hasty words in which every one in the room but the spy took part. When it was over we all maintained a moody silence till the captain came. He was a small thin man of about fifty with a great many orders on his coat. He assured us that we were not arrested; we were only held by the secret police for investigation. It seemed a worthy distinction since he suggested that we might be free in a few hours. Not being used to methods of State, we believed him.

I was not permitted to telephone home and we were searched. My friend's suit case was opened. Waists and skirts were eagerly looked thru, but nothing was found. The look of disappointment on the men's faces was keen. There was one more hope left them; there was the personal search. My turn came first. My friend and the men left the room and an old woman was sent in. "It looks as if it were for a long stay," she said. "Everything is being sealed up." "But they haven't found anything," I protested. When my friend was being searched I walked up and down the platform, which was crowded with people. They smiled at me sympathetically and a young student tipt his hat. I was pleased; evidently he thought I was a "comrade." As I was reading the time-table on the wall the captain spoke to me. "From the bottom of my heart I am sorry. This whole affair distresses me." "Then why do you do it, and may I ask why we are arrested?"

"I don't know, but perhaps you will be out soon."

"That is not the point; the thing lies deeper. I do not like this kidnapping, this snatching me up and secreting me away. If I have committed a crime arrest me on a warrant openly. This is Eastern, Turkish. You act as if Petersburg were on the Bosphorus."

"My dear young lady, I am sorry, but I can't help it; I am only under orders."

"Why be under such orders?"

"One must live," he said blandly.

There was living and living, I thought to myself. His way seemed ignoble and I did not answer.

We had to go back to the little dirty room. The captain had disappeared. There was yet a search in my room to be made, I supposed, and then the "investigation" would be over. We wondered what our people at home were thinking. If we could only let them know. Suddenly the door opened and my brother-in-law and the correspondent of the London *Tribune* entered. They had been looking for us, and accidentally

found us. How good it was to see their clean, handsome and enlightened faces! But they left as quickly as they entered, and the two were gone like a mirage to seek the captain. This outwitting of the secret police brought him back very

MISS ROSE STRUNSKY.

quickly. He came with two sheets of paper in his hand and an apology. He had been telephoning to the secret police to give his impressions, but it seems we are to be kept and would we mind signing that we are sent from the Finland station to the detention prison. We did mind, and we did not sign. We did not know what the detention prison was and we asked if it had a woman's division. The captain did not know, but he supposed so. We were worried because we knew that many police stations had not.

My friend and I were separated and were driven over to the prison in isvostchiks, each under guard of a gendarme. In the prison we were left waiting in the corridor an interminable time, as it seemed to us, already worn out by a six hours' wait. Haste is not a Russian vice. At the other end of the corridor there was a group of about twenty soldiers laughing and joking. We saw no women and again we grew worried. After giving my name, age and religion (my friend was still rebellious and refused, protesting that she had committed no crime and that she was a Finnish citizen and not a Russian), a woman came down, much to our relief, and took us away. We followed her down a very long corridor and up a great many flights of stairs and finally reached the top floor, where there were three rooms with doors made of gratings like gates. Here my friend and I were again separated. She gave my hand a little squeeze and walked into her room. My room was the last and I had no idea what to expect. The woman warder opened the door and I entered a room filled with girls. Some one called out "Rose! Rose!" and threw her arms about me. It was a young girl who had given me Russian lessons the winter before. I was surrounded on all sides. "When were you taken? How? Why, she doesn't speak Russian well! An American!" They fired questions at me. A little slip of a girl dashed to the window. She put her hand up to her mouth like a trumpet. "Comrades," she shouted, "we have a new one, an American—Strunsky—Rose Strunsky—taken on the Finland Station; wait a minute." She called me over to her. "Come, and I will introduce you."

I climbed up to the window sill. Shouts greeted me. Every window seemed alive with heads and waving arms. All were talking to me at once, and thru it all I heard my first name called distinctly. It came from the side of those in solitary cells, where I could see a pale face with dark hair prest against the window bars, smiling and throwing kisses of welcome to me. It was Sasha, whom I had thought dead. Evidently the secret police suspect, but do not know all.

I tried to answer all questions, to greet each one separately, straining my ridiculously weak voice. I was surprised and overcome by their love and fellowship.

I left the window and looked at the room. It was not large and had two windows. There was just enough space for ten canvas litters which were fastened to the walls and a long table which ran down the center of the room. On the wall hung clothes and a bookshelf with a few books. There was a materia medica, Webb's "Trade-Unionism in England" and some English and French dictionaries. The room seemed clean. I learned later that the girls had a system by which each one was housekeeper for a day. They each receive eleven kopeks a day, which

of course is hardly sufficient for bread. The girls are communistic and the housekeeper buys food for all ten thru the agency of some of the women warders, who make quite a profit by it.

Toward evening I lay on the little cot near the door and rested. The girls had arranged that my friend be brought in, as there happened to be room for one more. They formed two little groups around us, talking, discussing, asking questions. "Did they find anything on you?" "No." Was there anything in your room?" "Some personal addresses and photographs." The girls became worried. "They will arrest the people and they will be kept for months before any explanations could be made. But perhaps the comrades have cleaned your room." I shook my head. I belong to no party and my people would not think of it. (I did not know that they were also under arrest). "Does one always sit months here before even an inquiry is made?" "Always, but perhaps you being a stranger, it will be different, but for us," and they smiled. The Russian police psychology is, if you are arrested you are guilty and if you are not it is not their business to say so.

As we talked there came chanting. It was the ordinary convicts across the court who were at their daily vespers. "Lord have mercy upon us," came deep from their hearts. Their voices filled our little room. "Will you sing for us?" I asked. Three girls walked to the window and putting their heads to the bars sang out to the whole prison. They sang about the river Kama and they sang Nekrasoff's beautiful poem about the pedlar lover. "We will sing something for which the soldiers shoot as we stand here in the windows," they said, and they sang the "Warshovianka," the Russian "Marseilleise." They were joined by many voices from many cells. From my place I could see the convicts, or as the Russians say, and I like it better, the "unfortunates," sitting at the windows and listening. The government was educating them.

Late at night the girls left us that we might sleep. They went away only to break into twos and threes to discuss. They sat on each other's beds, hair loose, in petticoats and chemises and heads together. Now and then I caught words. Will they be kept long? Will the police acknowledge a mistake? Americans—Finns—Addresses—the room not cleaned Stolypine—Tourists—The secret police, and they whispered far into the night. Only one girl sat at the table and worked. She was studying medicine.

I could not sleep. The suggestion about the addresses worried me. They will let me out but they will arrest others. Why did I ever keep an address book? Such a thing is unheard of in Russia. I sat up.

"What is the matter?" said the girl who was studying medicine. "Why don't you sleep?"

"I am thinking of those addresses."

"Forget it," came from her laconically.

It sounded so like a translated Americanism I laughed and fell asleep.

MRS. ANIO MALMBERG,

Who was arrested with Miss Strunsky. She is a well-known Russian author.

In the morning we were initiated into the "Constitution." It meant law and order, and keeping silent during working

hours. All the girls studied. They continued the subjects which their arrest had interrupted, whether it was law or political science or medicine. A working girl was taught Russian by a daughter of a nobleman from Moscow. They were reading Chekhoff together. The study of languages was very popular, especially English. I enjoyed very much their method of calling each other to order. If any-one spoke or made a noise during the working hours some one would whisper without raising her head from her book, "Constitution"; and the charm worked. It occurred to me that Russia was singularly like "Alice in the Looking Glass," where everything turned out to be something else and where you went backward to go forward, for the prisons were the universities and the Constitution lived under lock and key. Heartbreaking, mad Russia, where the gentlest steel themselves to be fierce and the fierce are clothed in lambs' skins! When will sanity come? Here we were ten thinking, self-respecting women kept in a little room with iron grating on the windows and iron gratings on the door and locked in with an immense key a foot long! And the three hundred like us in their prisons? And the young martyrs on the scaffolds? Is what they ask so impossible? Good God! How mad it all was!

At noon the girls insisted that my friend and I see the doctor. We protested that we were well and that it was unnecessary. The girls looked at us with scorn. "You go to him and tell him you are sick and cannot stand the prison food, and that you insist upon a first-class dinner from the hospital." We hated to. "Let us wait till tomorrow," we urged. "Who knows, perhaps by that time we will be a little sicker," and we laughed. But the others were serious. "All this imprisonment is unjust and ridiculous. You people always forget the Rights of Man as quickly as if you were one of the Unfortunates across the court. You must always remember to demand and protest. It is the law of life and progress." We went and talked to the doctor, who looked, smiled and refused our demand, and we returned with a very bad conscience as far as maintaining the Rights of Man was concerned.

At one o'clock we were let out into a little triangular court for a forty minutes' walk. I was down there but a few minutes when I heard my name called from every window. "Strunsky is wanted by the secret police," they shouted. I was surprised beyond words. Such haste on the part of the Russian police was unheard of. "Evidently they had struck a hornet's nest somewhere," I thought and smiled. Soon a warder came and called me. I went upstairs for my things and the girls gave me advice and urged me to eat. "You will be kept there for hours," they said. "Don't we know?" I ate hurriedly, for I was burning with impatience. I wanted to talk, to question, to find out.

A gendarme officer was waiting for me below, and we drove off together in an isvostchik. The fresh air from the Neva was sweet and I felt happy. There would be explanations and reasons. I was living in a civilized society after all. It was not just a tremendous press-gang. Soon we arrived. I was told to wait in the little gendarme room "for a minute." I sat down. In the room was a stupid and cynical looking gendarme officer and a big, fine-looking "intellectual," who sat on the inevitable black leather couch. Who knows how long he had been there! He must have been arrested at some station, for he had baggage along, which had already been sealed by the police. He sat crouching like a lion. He lifted his massive head and looked at me curiously. His left hand was wounded, perhaps in a struggle during the arrest.

I sat quietly in my little stiff chair for half an hour, then began to walk up and down. I asked for a paper and was refused. I remembered later that of all things in the world a newspaper was never given to a political prisoner. The man on the couch arose and began walking up and down also. A great many hours past and I grew very tired. The man and I alternated pacing the floor. A spy came in and began making out a long protocol. It grew dark. "If they would only not tire me out so, I could make a fight for myself, but yesterday's long wait and today again!" My head was aching.

Finally a boy came down, "Would the young lady be sent up to give a little aid?" I followed him out. "A little

aid?" I asked myself. I was bewildered. We crossed a court and went up a palatial staircase covered with soft heavy carpets. The doors we passed were mirrors. I was brought into an exquisitely furnished room with bronze candelabra and deep heavy chairs and I was told to wait. I shuddered at the word. On one side of the room was an altar with burning candles of Alexander III, illustrious founder of the Third Department. I was in the spider's parlor.

After waiting over an hour I was led thru another mirrored door under more tapestries and finally reached a room where a middle-aged man in civil clothes sat at a tremendous desk. He arose and asked me to take an armchair. We sat in the position of doctor and patient. Then came his first question. How it puzzled me! Was I the sister of my sister and was she married? Did I ever travel with a certain young man? "Yes, she was married, and No, I had never traveled with the young man." Not a word about my friend, about me, about my work, not a hint for the reason for our arrest. "By the way," he added, casually, "your Ambassador here refuses to vouch for you. We are waiting for a telegram from Berlin." Is the Ambassador an agent of the Russian police? I dismissed the thought. It is one of their lies to puzzle and worry me. I opened my mouth to speak, but he arose. "Kindly step into the next room for a minute, I must see about something."

Again I was trapped and again there was an endless wait till my blood seemed dry. Thru my tired brain I heard voices in the next room. Some one said: "A little punishment won't hurt her." Their impudence offended me and brought the philosophy of Russia into my soul—the philosophy of rebellion. It occurred to me I could fight them in turn, but for the present their practiced machinery conquered. I was worn out, I did not wish to fight, I longed for rest, I longed for the prison and the girls and their love and their idealism.

I was not called for another interview. I was sent back to the prison, where I was happy to go! In the little gendarme room, the man on the couch was still waiting. Good God! What finesse of torture! They did not dare go their lengths with me, but what do they not dare with their own, with the 300,000 young souls whom they hold in their paws? And this is the great civilized capital of all the Russias; but in the province, where every official is Czar, dared one think, what was going on there? O the martyred youth!

The girls were around me again. "How long they have kept you, dear!" And we kissed one another. "What did they ask you?" They questioned eagerly.

"Nothing," I said with bitterness. We talked for hours, we planned, conjectured and argued. The thing stood as it did yesterday. Why this farce? Suddenly the prison began to ring—"Strunsky released!" The warder opened the door, smiled and informed me I was free. I jumped up. All the girls were talking at the same time and the prison was hurrahing and calling. I was bewildered. I shouted "Good-bye" to each one from the window. Why could I not take them all with me? And my friend? Why should she be left? Why should any one remain? Madness, all madness. The girls were trumpeting a reveille, their hands to their mouths. From the court we called to each other. Then the gate was opened and I was on the street alone, free. And after all I had a sense of gratitude for the experience. I had lived with my own for one night. I had seen the love that lay in their hearts. I had seen the life that was lived without compromise. No one looked at me as I hurried along on the street. The lamplights sent out their light in the old way. For the moment it was in the old strange way, for again I felt I was in a world I could not understand, and again I was surrounded by a life of which I was not a part.

I was on fire to reach my people. I would describe all. How happy they would be to see me! When I found an isvostchik I hailed him, "The Hotel de France, Hurry, little uncle," I said to him. I dashed up the steps of the hotel. The astonished porter greeted me warmly.

"Are my people in?" I asked breathlessly.

"They were arrested last night. So

were your guests, the three Finnish gentlemen!" he added.

I tried to talk, but my voice choked, not with tears, but with wrath. So violence and force had really broken into my life. I had been dragged into the great loom which I had watched wonderingly for so long.

PARIS, FRANCE.

Song of the True Woman

BY COLETTA RYAN

WHO am I?
I'm a star in the sky.
I'm an arm of the sea and a wide spreading tree,
A delicate rose and good will that flows
All over the earth. Irresistible mirth,
Happy laughter am I,
Silent weeping am I.
I'm the moon, mild and mellow, the sun kind and yellow,
And all in one breath do I blow away death—
O a heartful of feeling am I!

I'm compassion and strength, and my breadth and my length
Is from meadow to meadow. (Look there is my shadow!)
Follow fast if you choose me, because you may lose me.
O subtle am I,
And elusive am I—
I'm the ghost of your brother, the heart of your mother
And Sympathy's spirit am I!

Oh I must unravel my soul as I travel.
Myself must I be, so full hearted and free.
I must lean forth and sing! (I am one with the spring.)
For your smiles and your tears, your woes and your fears,
I establish my song, genial, tender and strong.
I live for the lover, the rambler, the rover,
The maiden who dances, the youth and his fancies—
The weak man, the good man, the picturesque woodman,
For the light on the altar, and those who may falter.
My flame cannot scorch, I am Love's fairest torch;
And I prize you all so that I must tell you so.
It is sweet to say so, tho you doubt me, you know!

Cold custom has made you so close with your words
That you contradict nature. The generous birds
Tell you daily how cherished you are—
Why not I, for the truth is not far?

But you're all so afraid of the self that God made.
If His angel should show it, I doubt if you'd know it!

. . . . . .

Follow fast, I am going, the west wind is blowing
(Sympathetic am I, thru all seasons I hear
Your well hidden sigh in my finely trained ear).
O hark how the children alone in the lane
Are calling and calling. . . . I hear thru the rain. . . .
Follow fast if you choose me, because you may lose me.
O subtle am I,
And elusive am I.
I'm the ghost of your brother, the heart of your mother,
And Sympathy's spirit am I!

Dear comrades, a word ere I leave you:
I come not to fool and deceive you.
I come to make pleasant the future and present—
O the wings of your longing am I!
Am I,
Simple I,
Like the bird in the tree, I am sorrow and glee.
Something near, something far, like a rose or a star;
But always so true with a fond prayer for you.
O I roam on the hill of immortal good will
With the friends God has given me out of His heaven.
I am youth, I am hope, on this beautiful slope,
And I carry my light thru the deeps of the night.
I am love and good cheer, and the spring of the year—
O a heartful of feeling am I!

Who am I?
I'm a star in the sky.
I'm an arm of the sea and a wide spreading tree;
A delicate rose and good nature that flows
All over the earth. . . . Irresistible mirth,
Joyous laughter am I,
Silent weeping am I,
I'm the moon, mild and mellow, the sun kind and yellow,
And all in one breath do I blow away death—
O just a true woman am I!

JAMAICA PLAIN, BOSTON, MASS.

Literature

The King's Customs

RARELY does a book make so many sided an appeal to readers as is made by *The King's Customs.** Its four hundred and eighty pages are a rich mine of good stories of desperate and resourceful smugglers, and of ineptitude or connivance on the part of officials. The stories are gathered from official records of the ports, from letters addrest by customs house officers to their superiors, and from the reports of cases in the law courts. They are told simply, but with much pawky and caustic humor on the part of the authors, who evidently enjoy the descriptions of the discomfiture of their brother officials of the customs service of olden days, just as heartily as they do the triumphs of law and order over the tricky and ingenious smuggler. But Messrs. Atton and Holland have by no means confined their labor to the collection of good stories. Their work makes a serious appeal to students of political and social science. They have gone back to the earliest records of customs duties, and while little is to be found before the reign of Edward I, from 1327 onward to 1800 they have compiled a scholarly record of the laws and regulations controlling England's outward and inward trade with foreign ports. For Scotland, the story actually begins with the union of 1707, for Scotch commerce was too insignificant before that time to give any scope to the historian of customs. The tragedy of Irish trade is summed up in a short chapter, which, however, is long enough to make understandable the bitterness of the sister isle toward the government in England. Tho so much has recently been written concerning the trade relations of England and the American colonies, a valuable addition to American history is made in this volume. The customs duties levied by George III's Parliament, and the restrictions and annoyances to which colonial trade was subjected, fall into place in the confused and vexatious, restrictive system which was then pursued toward British commerce generally, and the reader is made to feel that the wonder is not that the colonies revolted against so useless and tyrannical a system, but that the English nation ever submitted to it.

To the student of social science the usefulness of Messrs. Atton and Holland's book lies in the light it throws on life in England from the fourteenth to the end of the eighteenth century. Rural life and town life in England have recently been the subject of much study, but the life of the ports and of those long stretches of the coast where small vessels could contrive to land contraband cargoes was a very different thing from life in the inland towns or on the well-ordered and quiet-going manors. The poverty, hard living and turbulence of these parts of Merrie England are vividly depicted. Had honest life been easier, it is inconceivable that men should have been willing to take desperate risks for what were frequently inconsiderable profits.

The authors also bring out very clearly the widespread sympathy that was felt for the smugglers, a sympathy that was by no means confined to the poor or the vagabond classes, but which frequently made it impossible to bring offenders against the revenue laws to justice. Incidentally the reader discovers the hoary-headed antiquity of some of the conceptions which still possess the minds of makers of tariffs. Desperate efforts to keep the money at home, and to encourage foreign trade while preventing the nation from buying abroad, characterize the tariffs which were drawn up before the birth of the American colonies. Duties on pictures and books—taxes on art and knowledge—date back to the seventeenth century, and in 1719 these duties were levied on pictures by the square foot and on books by the hundredweight.

So much could scarcely be gathered

*THE KING'S CUSTOMS—An Account of Maritime Revenue and Contraband Traffic in England, Scotland and Ireland from the Earliest Time to the Year 1800. *By Henry Atton and Henry Hurst Holland.* New York: E. P. Dutton & Co. Pp. xii, 489. $3.50.

into so comparatively few pages and leave room for literary style. The anecdotes and incidents are presented one after another tersely and somewhat abruptly. To the ordinary reader also there is abundant opportunity for judicious skipping; but the parts skipped by the reader in search of entertainment are the parts most valuable to the student and scholar.

Pragmatic Essays

THE importance of the plain man and his views is strikingly illustrated in a volume of essays* by nineteen members of the departments of philosophy and psychology in Columbia University. But now he is to be congratulated not merely upon the fact that his views are important for the philosopher, which is nothing new, but also upon the further fact that his language is rapidly becoming the language of "divine philosophy," if we are to judge from the foremost writers of the pragmatic school. The tribute to Prof. William James, of Harvard, is beyond all doubt well deserved, for, since the publication of the "Principles of Psychology," more than twenty years ago, Professor James has been one of the commanding figures in the world of philosophy, while today his words are as highly valued by thinkers as those of any living philosopher. That such a tribute should come from another university is more than a happy incident.

For those interested in the development of philosophy in America, and qualified to do serious reading on the subject, a more excellent index to the present status could hardly be found. The essays as a group are strikingly anti-idealistic, and while they may call it by different names, every contributor, being either pragmatist or realist of some kind, demands a return to realism in one form or another. Despite this fact, however, one is tempted more than once to ask whether what is here presented as real-

ILLUSTRATION FROM CHAMPNEY'S "ROMANCE OF ROMAN VILLAS."

*ESSAYS PHILOSOPHICAL AND PSYCHOLOGICAL, in Honor of William James by His Colleagues at Columbia University. New York: Longmans, Green & Co. $3.00.

ism is, after all, so far from what some thinkers call idealism, and whether what the contributors to this volume so vigorously attack is not merely a fantastic idealism that few would care to defend.

Probably the most stimulating essay in the whole volume is that by Dr. Dewey, "Has Reality Practical Character?" In view of his relation to the pragmatic movement, of which this volume is the richest storehouse, it may not be amiss to set forth his position. Philosophy, "the most gayly irresponsible of the procedures," is severely arraigned for her failure to enter actively into the living struggles of the present. Today, by reason of the general acceptance of scientific conclusions, the obligations resting upon her are greater than ever before. While pragmatism, whose thesis is that "reality possesses practical character that is most efficaciously exprest in the function of intelligence," does not take the credit for the change of attitude, she does hold that the situation should be squarely faced. While the paper has to do with ethical conclusions, it constitutes for the most part a vigorous attack upon modern epistemology, on the ground that its treatment of realities is theoretical and intellectual rather than practical. It is, then, the duty of philosophy today "to get away from traditional logical theories of knowledge and get to work afresh to form a new theory of knowledge on the basis of the procedure of the common man," for whom reality does possess practical character. Such an epistemology would see in man an organism that, like other organisms, responds to his environment, in the brain an organic device of behavior, while the "subject matter of awareness would not be reality in general, or a metaphysical heaven mimeographed at many removes upon a badly constructed mental carbon, *but things in a process of change*"; and knowing, being closely allied with the vital impulse, would "actively participate in such changes in a way to effect them in a needed fashion." Such knowledge would be valid. Or, to put the whole matter briefly, ethics should be based upon biology rather than upon metaphysics; such a change would completely undermine modern epistemology and would result generally in acceptance of the pragmatic doctrine. All of which means the vindication of the common man in his neglect of many so-called problems of philosophy.

It is to be regretted that none of these admirers of Professor James is capable of imitating his light and lively style.

Recent Works on Foreign Missions

No one nowadays need be ignorant of the latest news from foreign mission fields, and by the same token none need complain that the information is devoid of interest or that it is presented in unattractive guise. For these are the days of rapid and important developments, and missionaries, among their varied tasks, have learned to write. There have been great missionary books in the past, but it may be doubted whether any period of equal length has furnished one-fourth as many books of merit on this subject as have appeared in the last five years. It is but natural. The men are there, their capacity is undoubted, and the situations call loudly for record. One feature of the works noted below is characteristic of the works of the period. Indeed, it marks the newer view of foreign missions. It is the appreciation of the large place that missions occupy in the political and social progress of the so-called heathen peoples. Time was, and not so far back, when the missionary was disregarded as a force for civilization. He was despised as a man whose queer religious ideas had led him to attempt to urge an undesired faith upon people to whom it was ill adapted. If he had a political significance he was rather a menace than otherwise to the *entente cordiale*. Such criticisms today are rarely heard on the part of well-informed men.

The report of the great conference at Shanghai in the spring of 1907[1] is a volume of 823 pages. It makes no attempt to reproduce the devotional part of the conference, being limited to the report of the business sessions. As such it is an invaluable aid to the study of the situation in China. The work of the Prot-

[1] China Centenary Missionary Conference Records. New York: American Tract Society. $2.50.

estant Churches for one hundred years is reviewed, the mistakes are acknowledged and renounced, plans for closer spiritual unity and wiser co-operation are outlined, and the sane and convincing prospect presented of the future of the great work. The book is worthy of the conference, as the conference was worthy of the history and traditions of the Churches uniting in it. Not the least valuable part of the book is the appendix containing, in a remarkable series of statistical tables, the tabulated results of one hundred years of missionary work by all the societies there at work.

Dr. Dennis is no doubt the best informed man in Christendom on the general aspects and problems of missions. His great work on "Christian Missions and Social Progress" and his "Centennial Survey" have revealed his splendid acquaintance with the work and its literature. The students of McCormick Theological Seminary, at Chicago, before whom these lectures[2] were delivered, were especially fortunate to have heard the chapter on the "New Cloud of Witnesses," in which are gathered not only the names of former heathen whose conversion to Christianity was noteworthy, but what we do not remember to have seen elsewhere, the testimonials of many English and American statesmen to the value and necessity of foreign missions. Mr. Taft's tribute we may perhaps expect to see in the second edition.

Dr. Barton, of the American Board, has written for the Student Volunteer Movement some introductory studies in the problem of the world's evangelization.[3] It is one of a series of excellent textbooks intended to be used by mission study classes. It is an attempt to show in small compass just how great is the task before the Church, and to impress upon the younger generation that the task is unfinished. The two chapters on the extent of the task contain a mass of information that for variety and interest has probably not been surpast in any recent survey. The book is well adapted to its purpose.

[2]The New Horoscope of Missions. *By James S. Dennis.* New York: Fleming H. Revell. $1.00.

[3]The Unfinished Task of the Christian Church. *By James L. Barton.* New York: Student Volunteer Movement. 50 cents.

[4]Islam, a Challenge to Faith and The Moslem World. *By Samuel M. Zwemer.* New York: Young People's Missionary Movement. 50 cents.

Dr. Zwemer's books[4] are, however, easily the most illuminating of the works at present under review, for missions to Islam have had slight attention from the Church. The author shows why, and at the same time makes a plea for a larger interest that is unanswerable. Himself a missionary in Arabia for years, and a close student of the religion of the Prophet in its varier phases and in its sources, he is a competent guide. He does not underestimate the difficulties of the assault on the crescent, but he has confidence in the power of the cross. His most effective chapter is that on "The Ethics of Islam."

Mr. Watson has also had the advantage of close-at-hand, sustained study of the country of which he writes.[5] The son of a missionary of the United Presbyterian Church, which has the field in Egypt, he found his materials ready and abundant, while his own experience has taught him to select wisely. He has surveyed the missionary movement in Egypt from the beginnings of Christianity in the Nile Valley down to the present time. His survey of present social and political conditions shows insight and judgment. It should be read by any one desirous of understanding modern Egypt.

No man did more with his life than did Jacob Chamberlain, who was for many years a missionary of the Reformed Church in India. A great preacher, an accomplished scholar, a business man of ability, a medical practitioner of no mean skill, all his talents were devoted with tremendous enthusiasm to the evangelization of India. Author of a number of books, this, his latest, was in press when news came of his death. It was issued as a memorial volume, with a sketch of his life by Rev. Henry N. Cobb, D. D. The book consists of addresses and papers on various phases of Indian missions. All are interesting, but more so after reading Dr. Cobb's appreciation of the veteran.

Romance of the Roman Villas. By Elizabeth W. Champney. With 48 Illustrations. New York : G. P. Putnam's Sons. $3.50

Rome's cardinals of the Renaissance built lavish villas, loved art and—other

[5]In the Valley of the Nile. *By Charles R. Watson.* New York: Fleming H. Revell. $1.00.

[6]The Kingdom in India. *By Jacob Chamberlain.* New York: Fleming H. Revell. $1.50.

things, being very human. About these villas Mrs. Champney has written what isn't a guide book. Who wants a guide book with a red cover and fine print, conveying useful information and mere bald truth in the mysterious sweet air of Rome? What monuments of art and religion (*vide* the excellent illustrations) these villas are! But the author is right: the real things about them are the "half-forgotten faces" of the women who loved and suffered, schemed and coqueted by the fountains and beneath the ilex trees. And when we have finished the book we have a desire to haunt again these ancient places with their alluring memories and half-guessed romances—and that is a desire that guide books do not inspire. It may not be true that Raphael did not love the Fornarina, but his betrothed instead, and died for grief of her—gossip to the contrary—and it may not be true that that little morsel of vanity and coquetry, Pauline Bonaparte, wife of Borghese, smiled and trysted and coqueted with Murat, soldier of fortune, cavalry leader, King of Naples, only that her brother on Elba might again have a chance to set all Europe by the ears. It may not be true, but the author has led us rather alluringly into the meshes of these tangled skeins, and she has told the stories of Raphael and Pauline particularly well.

Inscriptions of the Nile Monuments. A Book of Reference for Tourists. By Garrett C. Pier. New York: G. P. Putnam's Sons. $5.00.

A trip to Egypt has missed its chief interest if the tourist has failed to get a vivid realization of the life of the people at the time when this valley was the center of the world's civilization. One must get over the feeling of strangeness induced by the first sight of the hieroglyphics and monstrous statues, and find behind this veil the same sort of human beings as ourselves. This volume will be of much help toward this, for it gives a great variety of quotations from mural inscriptions and papyri; fairy tales, love stories, poems and romances of adventure as well as the more solid materials of history. There are 110 illustrations from the brilliant Egyptian photographs, handsomely printed.

FILLING WATER JARS AND SKINS ALONG THE SHORE AT LUXOR.
From Pier's "Inscriptions of the Nile Monuments."

The Scarecrow; or, The Glass of Truth. A Tragedy of the Ludicrous. By Percy Mackaye. New York: The Macmillan Co. $1.25.

There can be no doubt that Mr. Percy Mackaye is steadily progressing in the right direction, both as a man of letters and as a dramatist. His ultimate success seems now certain, but it is difficult to say whether it will be attained in poetry or in prose. A very large proportion of prose writers have lisped in numbers, and the fact that Mr. Mackaye has been known for some years as the author of poems which have been more or less successfully staged is no real indication of the literary form that his decided talent will eventually choose for its expression. The appearance of "The Scarecrow" and the remarkable success of "Mater" in San Francisco this summer would seem to indicate that at present Mr. Mackaye is ambitious for success in that field which offers the largest and quickest returns, and where another young poet, Mr. Moody, has had a sudden and amazing triumph. In the preface to the present volume Mr. Mackaye frankly and fully acknowledges his debt to Hawthorne, from whom the theme of the play has been taken. But apart from this one point, the drama is wholly original, both in form and in real substance, for what the author obtained from Hawthorne was a hint rather than an idea. The form here used is that of an acting prose play, with full stage directions; it is fairly well constructed, and has enough movement to keep the reader steadily interested. It is to be hoped that we may soon have an opportunity of actually seeing it put to the test of a stage representation. The *idea* of the play goes deep; in its author's own words, it is "the tragedy of the ludicrous. . . . The element of human sympathy is here substituted for that of irony, as criterion of the common absurdity of mankind." The mere selection of such a theme for a play is a proof that the author has a good heart; that his ideals are pure and noble, and that his attitude toward the only genuine dramatic material—human nature—is the same attitude in which we find all truly great dramatists, from Shakespeare to Rostand. Whether we can regard "The Scarecrow" as a definite success or not, it is full of promise.

The United States as a World Power. By Archibald Cary Coolidge. New York: The Macmillan Co. $2.00.

The title of this volume, altho quite correct, is likely to arouse a certain apprehension of claptrap and jingoism, but this is dispelled by the first glance at its pages. It is written with a studied moderation of statement and avoidance of personal feeling, and there is hardly a phrase that could be criticised as dogmatic or exaggerated, or could be construed as offensive by the most sensitive of our patriots or the most jealous of other world powers. The author keeps strictly to facts and their most obvious deductions without venturing upon prophecy or theorizing. This cautious

ARCHIBALD CARY COOLIDGE,
Author of "The United States as a World Power."

style makes it seem at times rather dull and trite to the American reader, but is accounted for by the fact that the book is based on the lectures delivered by Professor Coolidge at the Paris Sorbonne in 1906-7 on the Hyde Foundation. The first third of the volume deals with the growth and expansion of the United States and the concomitant changes of sentiment on the part of its people. The second is composed of a series of chapters on our relations with the European Powers, and the concluding section discusses the problems arising out of our invasion of the Pacific.

Two Gentlemen of Virginia. By George Cary Eggleston. Boston: Lothrop, Lee & Shepard Co. $1.50.

Mr. Eggleston displays a fecundity in the production of novels that is embarrassing, especially to the reader who demands variety, for the Eggleston series is all of one mold. This last is an attempt to set forth the quaint manners prevalent in Virginia of '57. The book fails of its purpose, because it has not enough virility to save the men of the book from mere foppishness. They assure each other too often in the course of the narrative that they are "gentlemen of Virginia" to convince the gentlemen of today of the sincerity of their claims. The author would do better if he confined himself to histories of the period rather than romances which are too weak to stand alone and which are too dependent upon their mint-julep settings to acquire any strength.

Louise de la Vallière. By Jules Lair. New York: G. P. Putnam's Sons. $3.50.

Louis XIV has been so often represented as the divine Louis, absorbed in the affairs of state and commanding loyalty with his imperious glance, that we ought to welcome the wholesome corrective to this impression which is given in M. Jules Lair's representation of what an "extremely silly young man he proved himself" in private life. In his work on Louise de la Vallière, our author writes more than a mere biography of a royal favorite whose misfortunes and solemn ending compel sympathy, tho not respect; he gives as well a study of the private virtues of Louis which will doubtless prove a titillant for those with appetites for things extremely French. While M. Lair finds in this La Vallière an irresistibly romantic charm, owing to her devotion to Louis, and the religious fortitude with which she suffered innumerable indignities at the hands of the Grand Monarch, it is difficult to discover just how such a gruesome and scandalous tale as he unfolds of court intemperances, to put it mildly, can serve, as he suggests in his preface, for the encouragement of "those principles without which a people can never flourish—love of country and faith in God." The outlines of the story are simple: La Vallière was a favorite of Louis, bore him four children, was discarded for another favorite, and ended her days as a Carmelite nun. The narrative woven around this tale is a revoltingly minute description of the doings of court libertines and intriguers, which is unrelieved by the author's sickly moralizings or extraneous interjections, such as "two small angels were praying in heaven for a mother who had sinned thru love alone." Nor is our respect for the divine monarchy increased by the "horrible revelations" of the she-devil, Voison, who dispensed love potions and devised infanticidal orgies for the delectation of pious court ladies and gentlemen with diabolical schemes to advance by mystic charms. Our author seems to find consolation in the fact that Louise atoned for having loved her Louis by doing forty years' penance in the austere order of Carmelites and composing the pious "Reflexions sur la miséricorde de Dieu," attributed to her. If there were any scheme of social regeneration that would put to hard labor the people who write and read such unnecessary, and to say the least, unesthetic rubbish, it ought to be welcomed by those who have a kindly interest in humanity.

Biology and Its Makers. By W. A. Locy. New York: Henry Holt & Co. $2.75.

It is safe to say that most college and university teachers of any of the biological sciences have at some time bemoaned the fact that there existed no adequate account in English of the history of biology. Until recently Carus's "Geschichte der Zoölogie" has been practically the only comprehensive work on the subject in any language. This book of Carus's, while accurate and comprehensive, is uncommonly dry reading. Professor Locy meets the demand for an up-to-date, reasonably complete and interesting account of the development of biology tolerably well. He gives in outline the history of each of the main currents of biological work—morphology, physiology, taxonomy, paleontology, evolution and the like. Since Professor Locy is himself a zoölogist, the zoölogical phases of biology receive the lion's share of attention, and the history of those lines of work which use plants as materials of study get rela-

tively little discussion. The general plan of the book is excellent. No attempt is made to make it an exhaustive history of biology, to be primarily if not solely a reference work for the specialist. Instead, the aim is to introduce the general reader or the beginning student to present-day conditions and problems, by tracing the historical development and thought relative to these problems. This commendable aim is well attained. The historical accounts are illustrated, chiefly with the portraits of the men who have been leaders in the several lines of thought discussed. Generally speaking, these portraits are very good, tho some are little better than caricatures. Particularly is this true of the portrait of Francis Galton, on page 317, a fact for which there is no excuse, since excellent pictures of Mr. Galton have recently been published. While in the main, in regard to essential points, the book is entirely accurate, minor errors in the spelling of proper names occur with annoying frequency.

The Journal of the Debates in the Convention Which Framed the Constitution of the United States, May-September, 1787, as Recorded by James Madison. Edited by Robert Gaillard Hunt. In Two Volumes. New York: G. P. Putnam's Sons. $4.50.

The new edition of Madison's well-known notes, which Mr. Hunt has prepared to accompany his edition of Madison's writings, calls for little special comment. We have here a careful text, newly compared with the original in the maker's own hand, and supplemented with such additional scraps of information as have been preserved in the letters and notes of other members of the convention. The value of contemporary record as compared with subsequent recollection becomes apparent here in the case of the Pinckney resolutions, whose importance was so much magnified when their author described them for Madison's use thirty years after the event. No further edition of the Madison notes will be needed for many years.

The Spitfire. By Edward Peple. New York: Moffat, Yard & Co. $1.50.

"The Spitfire" is a yacht, and it is strongly suggested by several people, besides the author, that the name describes the heroine of the yacht's log for its last eventful voyage. *The Spitfire* is a good story, of the kind which does not depend upon minute analysis or subtile psychology for its interest. A yacht is always a good scene for a story; its limited space suggests a stage, and its few passengers are merely players. The safe in the main saloon of the yacht contains a case of valuable uncut gems, which belong to somebody on board the boat; the question is to whom, and are stolen from it, by some one of the sixteen persons who make up the cast; the question is which one? It is impossible to avoid using the vocabulary of the stage in discussing *The Spitfire,* for it is essentially

THE SPITFIRE.

a comedy, with dramatic situations and an eye on the audience to see how it takes them. From "H. M. S. Pinafore" to "Peter Pan," the deck of a ship has been favored by playwrights as the setting for emotional scenes; and we imagine Mr. Peple's ingenious yarn of the sea and stolen jewels and characters at cross purposes will eventually take its proper place on the boards beside "The Prince Chap," and we predict a success for the leading lady in the rôle of *The Spitfire,* "tall and straight and fine, with big brown eyes and a glorious red-hot temper." Miss Valda Gerard is not without a few of the more womanly attributes, and is a sufficiently attractive heroine for either play or novel.

The Life and Work of Susan B. Anthony. By Ida Husted Harper. Vol. III. Indianapolis: The Hollenbeck Press. $2.50.

The third volume of *The Life and Work of Susan B. Anthony,* by her friend and coworker, Mrs. Harper, is largely a memorial, as it deals with the closing six years of her long and busy life, and as it contains many tributes selected from "one thousand editorials representing all the papers of consequence in the United States and many other countries," most of them laudatory, and all of them recognizing her importance as a great leader among women. The struggle of fifty years that had once roused bitter opposition had at last won respect and admiration. Her friends loved her; and her biographer has done her work with affectionate devotion to Miss Anthony's memory, as well as with good taste and ability.

South America on the Eve of Emancipation. The Southern Spanish Colonies in the Last Half Century of Their Dependence. By Bernard Moses. New York: G. P. Putnam's Sons. Pp. v, 356. $1.50.

Prof. Bernard Moses, of the University of California, who brought out his "Establishment of Spanish Rule in America" in 1898, and who two years later was appointed a member of the second Philippine Commission, has now continued this work with a volume on South America in the eighteenth century. The tropical portions of Spanish America are left for a later volume, and "the task here undertaken is to present certain conspicuous events, institutions and phases of life, that may illustrate the state of the Southern Spanish colonies on the eve of the revolution which gave them independence." The chapters on An Interior Province, The Colonial City, A Colonial University and The Social Classes, for example, are well calculated, by the selection of typical cases or citations from old works, to enable one to get a very fair general view of South America as it was in these various phases during the closing years of Spanish rule. One questions whether the chapter on the treatment of the Indians and their revolt are not, condensed as the whole scope of treatment is, made up too largely of quotations which paint the picture too darkly; indeed, we really hear only one side of the case. In view of its purely temporary nature, the fifty pages given to the capture of Buenos Aires by the British and its reconquest in the following year (1807) are quite out of proportion in a brief exposition like this. As a study of Spanish colonial administration, it must be stated not only that this work is (as planned) far from being comprehensive even in its own field, but also that it errs in details, sometimes in essential details. When is the English or American writer to appear who will show a full mastery of the history of Spanish colonial administration? Moreover, the German, and even the French, writers on colonial history and administration are not much better in this field. For one thing, the real "authority" in this branch of knowledge, when he does appear, must possess a thoro understanding of Spanish administration at home, particularly in the sixteenth and seventeenth centuries. But this is holding up a high standard for some future accomplishment. The plan of Professor Moses's work forbade any exhaustive treatment; and, for the purpose in view, this must be pronounced a very useful and entertaining little work. A map is needed with it.

Letters of Edward Lear. Edited by Lady Strachey. New York: Duffield & Co. $3.50.

A Book of Limericks. By Edward Lear. Boston: Little, Brown & Co. $1.50.

Edward Lear was the engaging author of "The Owl and the Pussy Cat," "The Yonghy-Bonghy-Bo," and many limericks that we have laughed over without realizing our indebtedness to him for that form of precious nonsense. His *Letters* are in no way remarkable, except for the weird words he coins with a constant unexpectedness. We think we are ready for such adjectives as "scroobious" and "ombliferous," but we are promptly bowled over by some such an epithet as "runcible" or "disturbidous." He spells to suit himself with a gay unconcern, and speaks of his "skrogfrodious temperament" as another man might use the word "artistic"—if that is

what he means. Why it amuses us to have him put four b's into "probably" and write of "being in the sulx" is not easy to say. Some of the gentleness of spirit and real sweetness of this Artist of the Absurd must have stolen into his verbal antics, for we do laugh at them and love Lear. The letters from Corfu ought to be full of interest and of the unusual place, but they are not—they are full of Lear. We do not get much landscape painting in words from this landscape painter, nor more than a chatty reference to contemporary politics and history, altho he lived in moving times, from 1812 to 1888. But we do get more than a passing acquaintance with the lovable, whimsical man, who wrote the *Letters* and the *Limericks.* Both books are fully illustrated by Lear's own work. The following limericks are among his most famous:

There was an old man in a tree,
Who was terribly bored by a bee;
When they said, "Does it buzz?" he replied,
"Yes it does!
It's a regular brute of a bee."

There was an old man who said, "How
Shall I flee from this terrible cow?
I will sit on this stile, and continue to smile,
Which may soften the heart of that cow."

There was an old man with a beard,
Who said, "It is just as I feared.
Two owls and a hen, four larks and a wren
Have all built their nests in my beard."

John Jasper. By W. E. Hatcher. New York: Fleming H. Revell Co. $1.00.

John Jasper began to preach in 1839, twenty-five years before the emancipation of his race. Dr. Hatcher tells the story of his life as a slave and as a freeman, but always a preacher of remarkable power. It is difficult to reconstruct a fame so purely personal as that of an unlettered negro orator, and reported speeches or sermons are lifeless, when the spoken word was all aglow with the eager personality of the preacher. Yet we catch some of the fire with which John Jasper inspired his audiences—often white as well as colored. Several of his sermons are reported by Dr. Hatcher, among them the famous one, "The Sun Do Move" and "Whar Sin Kum Frum." His church began with nine members, and there were over two thousand when he died. After reading his biography and learning something of his simple, sincere and loving nature, glorified by genius, we do not wonder at his success. During the war he often preached to the white soldiers lying wounded in the hospitals of Richmond and these men loved him and listened gladly. His enthusiastic biographer is a white man, a Virginia gentleman, who honored him as he deserved in life, and who brings this tribute to the memory of the great preacher, John Jasper, in an impulse of reverent affection.

The History of the Society of Jesus in North America. Volume I, Documents. Volume II, Text. By Rev. Thomas Hughes, S. J. Cleveland: Burrows Brothers, and New York: Longmans, Green & Co. $4.50.

Father Hughes's history of the Jesuits in America is a source-book of high value for the ecclesiastical history of the American colonies. The first volume contains original documents from the Roman Court, the Jesuit Superior General, Lord Baltimore and other eminent places and persons, and will well serve future historians who may deal with topics within the purview of this work. The second volume is the narrative based upon these documentary sources, and is written with commendable force and skill. As in all other ecclesiastical history, so here we have much that is sordid—disputes about property, quarrels between secular priests and religious and much else of similar character—but on the whole it is a story of sincere devotion and true Christian heroism. It is interesting to note that Andrew White, the first Jesuit of the Maryland colony, was so uncompromisingly vigorous in following the teaching of Thomas Aquinas that the General of the Jesuits felt obliged to reprove him mildly in the name of intellectual liberty. Must we not consider it too bad that, while the Jesuits today have many Andrew Whites, they have commanded silence to those few of their members who are likeminded with the General Vitelleschi?

The Seeming Unreality of the Spiritual Life. By Henry Churchill King. New York: The Macmillan Co. $1.50.

President King, of Oberlin, gave the Taylor Lectures before the students of the Yale Divinity School for 1907. Starting from the question "Why does the spiritual life seem often so unreal?" Dr. King presents the reasoned argument for theism, Christianity and morality, with his customary quiet good sense, as well as with a personal conviction, very persuasive in itself. The closing chapter, "As to Particular Christian Doctrines," has a serene beauty, as a sentence taken at random here and there will show:

"Christ seems to live in the atmosphere of eternity." "If Christ is dead, death must be a delusion." "When our life is most surely of the quality that ought to endure, we find it easier to believe in immortality."

Dr. King faces the unrest and questioning of the age with courage; he does not minimize the difficulty of belief; he attempts to make faith a reasonable thing; he is earnest, thoughtful and honest in his inquiry; and he leaves the impression of a brave and sincere spirit neither rashly radical nor timidly unprogressive.

The Mongols: A History. By Jeremiah Curtin. Boston: Little, Brown & Co. $3.00.

"If we wish to enter upon a branch of inquiry which seems utterly wanting in unity and defying any orderly or rational treatment, we can hardly choose a better one than the history of the Asiatic nomads." Thus Howorth in the preface to his *History of the Mongols,* in four elephantine and closely printed volumes. But it is of the very essence of scientific or historical inquiry that it seeks to discover the unity and order that lie hidden in the chaos of apparently unrelated facts. What method, therefore, ought the historian to adopt who wishes to present a detailed account of the vast sweep of Mongol conquest, which President Roosevelt so forcibly and picturesquely summarizes in the "foreword" to the book before us? Obviously there is but one satisfactory method, namely, that of treating the subject as a chapter of world history. This would require a presentation of the condition of the Mongols before they embarked on their conquering career, so as to disclose the causes which impelled them to enter upon it; the condition of the countries which they conquered, exhibiting the weakness which made those countries a ready prey to the barbarous invaders; and, lastly, the organization, military and governmental, which enabled the Mongols to extend their conquests to so immense a distance from their original base and to maintain their hold over them for centuries. Only in this way would we obtain a section of rational history, instead of a confusing mass of so-called facts. Judged by this standard, Mr. Curtin's book must be pronounced a failure. It fulfills none of the conditions demanded by modern historical methods. Fact and fable are mingled without any attempt at criticism and without reference to sources, and the essential relations of cause and effect are entirely ignored. It is a monotonous and repulsive narrative of battles and sieges, devastation and slaughter.

The Justice of the Mexican War. By Charles H. Owen. New York: G. P. Putnam's Sons. $1.25.

The old prayer that we be delivered from our friends is again justified in Major Owen's brief upon the causes and results of the Mexican War. Despite the introductory chapter in which the author declares and proves his own qualifications to sit as judge, and the preface, in which he intimates that all his errors in "unimportant details" have been expurgated by Prof. George Pierce Garrison, the volume is eloquent in its insistence upon Major Owen's lack of historical training and his ignorance of the sources of information. The chief attempt of this apology is to show that the annexation of Texas was not the result of a conspiracy of slaveocracy. We admit this cheerfully, since we have long believed it; but Major Owen brings no new proof, but only iteration. He goes on to assert that the treaty extorted from Santa Anna in 1836 actually quited all claims of Mexico upon Texas, so that whatever Texas should do in the future Mexico could have no grievance. It is hardly worth while, we think, to answer this. In the whole relation between the United States and Mexico he finds repeated benevolence and consideration shown to the weaker

power. There are many things to be said in explanation of the inevitableness of the independence of Texas and the Mexican War, but Major Owen has not said them. He resents the charge that the frontier was lawless, reckless and adventurous. Yet these were the qualities that subdued a wilderness, with equally small regard for rivers, mountains, deserts and foreign owners. Frontier morality saw no evil in appropriating uncultivated lands, and it is far more useful to understand this attitude than to call it right or wrong. History is full of movements which start in violence or fraud and end in social good. Texas was one of them. There is room for a book which shall bear the title of this one, but it must be written by a student familiar with the westward movement and able to discriminate between sources of information and opinions of irresponsible journalistic historians.

Literary Notes

....Those who want to understand something of the workings of new inventions will find useful the little book just published by Van Nostrand ($1.00) on *Wireless Telegraphy and Telephony,* by W. W. Massie and C. R. Underhill. The explanations are simple and clear and the descriptions are not overloaded with technical details.

....An earnest book with a striking title is *Wanted—A Theology,* by Rev. Dr. Samuel T. Carter (Funk & Wagnalls Co., 75 cents net). What Dr. Carter really wants is a new theology, a milder and gentler doctrine than the old Calvinistic system. Some years ago he wanted revision of the Westminster Confession, and he agitated until he got it. Perhaps the victory has proved a somewhat empty one, because so little attention is paid to the seventeenth century creeds, revised or unrevised. At any rate, Dr. Carter now urges that the whole system be thrown out, bag and baggage, and that a theology more like that of St. John be put in its place.

....The latest dramatic sensation imported from Hungary, *The Devil,* by Ferenc Molnar, which will soon be played all over the country, is published in book form by Mitchell Kennerley, New York ($1.00). This is the version adapted by Oliver Herford and used by the Savage Company. It bears the same marks of haste as the stage production. Grammatical and typographical errors abound, speeches are assigned to the wrong persons, and even the leading characters are misnamed. It is useless to expect people to enjoy reading plays when the stage directions are given in in such technical terms as "steps down one pace R. C., business of entering imaginary door," etc. But it is hardly worth reading anyway. In fact, unless one can see George Arliss, of the Fiske Company, in the title role, he had better let *The Devil* alone.

Pebbles

OWING to the overcrowded condition of our columns, a number of births and deaths have been unavoidably postponed this week.—*Danbury News.*

TURN failure into victory,
Don't let your courage fade;
And if you get a lemon,
Just make the lemon aid.
—*Tribune Hustler.*

As the brisk philanthropist thrust her fare into the cab-driver's hand she saw that he was wet and apparently cold after the half hour of pouring rain. "Do you ever take anything when you get soaked thru?" she asked.

"Yes, ma'am," said the cabman, with humility, "I generally do."

"Wait here in the vestibule," commanded the philanthropist. She inserted her house key in the lock, opened the door and vanished, to reappear a moment later.

"Here," she said, putting a small envelope in the man's outstretched hand. "These are two-grain quinine pills; you take two of them now and two more in half an hour."—*Youth's Companion.*

AMERICAN MILLIONAIRE—So you want to marry my daughter. But you don't know her.

I. D.—I have seen you, her father, whom she probably resembles.

A. M.—But you don't love her.

I. D.—What matters that? I but want to marry her.

A. M.—But you can't marry her—there is an insuperable obstacle to your wedding her.

I. D.—There are no insuperable obstacles to my determination.

A. M. (chuckling)—This one is. I haven't any daughter.—*Baltimore American.*

A BURGLAR was one night engaged in the pleasing occupation of stowing a good haul of swag in his bag when he was startled by a touch on the shoulder, and, turning his head, he beheld a venerable, mild-eyed clergyman gazing sadly at him.

"Oh, my brother," groaned the reverend gentleman, "wouldst thou rob me? Turn, I beseech you—turn from thy evil ways. Return those stolen goods and depart in peace, for I am merciful and forgive. Begone!"

And the burglar, only too thankful at not being given into custody of the police, obeyed and slunk swiftly off.

Then the good old man carefully and quietly packed the swag into another bag and walked softly (so as not to disturb the slumber of the inmates) out of the house and away into the silent night.—*The Sun.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Political Campaign

MANY are asking what is to be the effect at the polls in November of the Archbold letters, the plight of Foraker, the resignations of Haskell and Du Pont, and the debate between Mr. Roosevelt and Mr. Bryan. The disclosures and charges made by Mr. Hearst have been a blow to both the great parties, but it seems to us that, so far as the Presidential candidates are directly concerned, the Republicans suffer less than the Democrats. Mr. Taft gains something by the publication now of the letter in which, two months ago, he declined to enter into an agreement with Mr. Foraker. Mr. Bryan loses by the proof that he was so easily induced to give Governor Haskell offices of much importance in the Denver convention and in the National Committee. Mr. Foraker was already at variance with a great majority of his party; his downfall can have little, if any, effect upon its fortunes. On the other hand, Governor Haskell was in high favor, had been the chairman of the Platform Committee and was his party's treasurer. It had even been said that if Mr. Bryan should be elected he would be placed at the head of the Treasury Department. We do not assume that the Monnett bribery charge against him was well founded. In that case convincing proof cannot be obtained, and he is entitled to the benefit of all the doubts suggested by the testimony. But his record in respect to other matters is such that he was unfit for the offices given to him with Mr. Bryan's approval and indorsement.

We accept Mr. Bryan's assertion that he was ignorant of this record, altho it is not easy to understand how it escaped his attention. There is evidence that a statement of it was offered to him nearly a year ago by the editor of a Democratic newspaper in Oklahoma and that he refused to receive the statement. He tore it up and threw it out of the window, the editor says. If Mr. Bryan had read the story then, he and his party would have avoided a serious blunder and much annoyance.

The chief political value of the recent disclosures which relate to Foraker and Haskell is in the light they throw upon the character and impulses of the two candidates. Mr. Taft was told that if he should sanction a State Committee resolution indorsing himself for the Presidency and Mr. Foraker for another term in the Senate there would no longer be opposition in Ohio and some other States to his nomination. He would not consent. "I don't care for the Presidency," said he, "if it has to come by compromise with Senator Foraker or any one else on a matter of principle."

> "He has opposed the vital policies and principles of the Administration, and in his opposition has seized upon and magnified an important but incidental matter to embarrass the Administration, using in this, without scruple, a blind race prejudice to accomplish his main purpose. . . . Representing the policies of the Administration, I cannot stultify myself by acquiescence in any proposed compromise which necessarily involves the admission that the Republicans of Ohio regard this fundamental difference of opinion as of no importance and one that can be waived in the interest of party harmony or the settlement of factional differences."

The Archbold letters have brought to light this most commendable decision.

It indicates the character of Mr. Taft, and it will not be forgotten. He had no knowledge then of the correspondence the recent publication of which has closed the Senator's political career.

On the other hand, Haskell had notoriously been a financial adventurer, whose operations in bankrupt railroads brought his associates to grief and whose record —apart from his action, alleged or proved, for the benefit of Standard Oil interests—had been sharply at variance with the utterances of the Democratic platform and the political creed of Mr. Bryan. He won Mr. Bryan's admiration and confidence, and it is understood that he could have had charge of the campaign. He preferred to be treasurer. A good judge of men would not have been so deceived. A President should be capable of making a more accurate estimate of character and of fitness for office than was made by Mr. Bryan in this instance. So far as their own action has been brought to public attention by the Hearst disclosures, Mr. Taft gains and Mr. Bryan loses something.

The effect upon the great body of voters is another matter. There are indications that something more than the influence of those whom Mr. Rockefeller calls "occasional overzealous employees" was exerted in both of the old parties by the Standard Oil Company. On the one hand were Foraker, Sibley and Justice Elkin; on the other the voter sees Haskell and McLaurin. The fresh evidence that this great corporation was actively interested in the "killing" of bills, the nomination of judges and prosecutors, and the ownership of newspapers, must increase the hostility with which it is regarded by hosts of people. It is not clear, however, in what way or to what extent the party figures in November will be affected, altho we may safely predict an enlargement of the Socialist total and some fresh support for Mr. Hearst's new party.

While it is true, as we have said, that Mr. Taft has been commended to the public by his letter of July 20th, he has been overshadowed and obscured during the last two weeks by the very active political prominence of the President. We should be glad to see Mr. Taft doing some of the work which Mr. Roosevelt has taken for his own. The President is a shrewd and competent politician, but there is danger that continuous yielding to his desire for the joys of battle will somewhat impair the dignity of his high office. We see Mr. Bryan contending with the President, not with the opposing candidate, Mr. Taft. The President should permit Mr. Taft to make at least a part of the fight, and if he must take a hand, it would be better for him to do it thru the agency of Mr. Taft or some other trusted representative. A change in this direction is required not only by a consideration of the fitness of things, but also, probably, in the interest of the Republican candidate.

The Constitutional Issue

Professor Burgess well improved a good opportunity the other day when, in his address of welcome to faculties and students at Columbia University, he spoke of the threatened "revolution" in our American political system. No living man knows this system from the theoretical and historical viewpoints more thoroly than Professor Burgess knows it. An authority upon our constitutional law, he speaks not as a partisan but as a scholar, and with impartiality he charged both of the great political parties with unfaithfulness to the fundamental principle of our constitutional system. Said he:

> "Both of them have virtually proposed by legislative usurpation the gradual development of the almighty legislature, the parliamentary system, while the system of our republic is, in deepest principle, a system of constitutional limitations upon both the legislature and the executive administered by the courts in behalf of individual liberty and State autonomy."

In thus clearly and authoritatively stating an issue which for a long time past thoughtful men in both parties have seen to be inevitable, Professor Burgess has rendered a public service. It is always best under a popular political system that men should know where they stand and what they uphold. To this end it is necessary that the issues upon

which they divide should as sharply as possible be defined.

If, then, in our further comment we differ with Professor Burgess, it is not because we dissent from his precise statement of the question, but because our idea of what the social and political well-being of the American nation in this twentieth century calls for is not quite coincident with his. If we understand his thought, Professor Burgess not only says that the American constitutional system is one of limitations, therein differing from a parliamentary system, which is true; but he also apparently believes, and we judge wishes to be understood as saying, that our system should be maintained as one of superior excellence. The tendency to change it by mere legislation at all events he characterizes as "a revolution."

From this view we must dissent. The tendency to modify by legislation and judicial complaisance we regard not as a revolution but as an evolution, and an imperatively necessary evolution if revolution is to be avoided. Professor Burgess does not exactly say, but we trust we do not misrepresent him when we assume that he holds and teaches, that our courts do actually administer the constitutional limitations "in behalf of individual liberty and State autonomy." They do this to a certain extent. Nothing is easier than to extract from the decisions of the United States Supreme Court numerous cases in which individual liberty is maintained against governmental authority, and State autonomy against Congressional action, but the fact is not to be ignored that we have a lengthening array of decisions in which the principle of individual liberty is interpreted to mean one or another of three things, any one of which is perilous to popular liberty. These things are, namely: (1) That as between individual liberty to live a healthy and unmaimed life, to think and speak and move freely on the one hand, and individual liberty to amass property and to use it as an industrial power, on the other hand, the liberty to amass and to use property is more important. (2) The extension of individual liberty from the natural individual to the artificial person created by law until the gigantic corporation can plead many of the most important immunities of the weakest natural being. (3) The proposition that necesary legislation for the regulation of a complex industrial world—which did not exist when the Constitution was drafted—is unconstitutional if it curtails individual liberty to amass and use property in the interest of individual liberty to live, think, speak and move.

We wish to keep well within the limits of understatement, and we think that in thus stating the present tendencies of constitutional interpretation by the Federal courts and by many of the State courts, we are not guilty of exaggeration. We are sure that a large proportion of the American people would state the case far more emphatically than we have stated it. We are sure that this proportion is growing larger year by year, and promises to become a majority of such political power that it will find ways and means to check the present juristic tendency to misinterpret individual liberty and to thwart the popular will.

Both the student of political science and the practical statesman should, we think, look these facts in the face and put forth their utmost exertions as leaders of public opinion to shape the new political movement so that it shall act constructively and not destructively. Professor Burgess says that changes which both parties are trying to bring about by acts of "ordinary legislation" can rightfully be accomplished only by constitutional amendment. This is true, but why insist upon this truth and ignore the equally important, and at the present moment more threatening, truth that the framers of the Constitution most unwisely made constitutional amendment so exceedingly difficult that the actual political forces of the nation at every moment threaten to break thru constitutional barriers which cannot be in a legal way removed.

We believe it to be the supreme duty of the master minds of political science, like Professor Burgess, to show us how, under actual political conditions and in the face of our stupendous modern problems, we can introduce such flexibility into our system of constitutional limita-

tions that our further political development shall proceed by evolution rather than thru revolution.

The Devil's Pessimism

THE Devil and all his works are having a hard time of it just now. There has never been a time since slavery was, in the words of Scripture, "buried with the burial of an ass and cast out without the walls of the city," that questions of right and wrong have been so definitely before our people, and so many defeats have been suffered by old offenders against justice and right. Even the debated questions of national policy, such as tariff and the protection of bank deposits, are made moral questions, and the people are told that this is right and that is wrong. We hear it sometimes said that religion is failing in its influence on the people. We suspect that such an assertion gives the Devil no satisfaction so long as he sees that he is being beaten on so many fields of public conflict.

There was, first, the race-track gambling fight in the State of New York. It was a fair fight, and the Devil was utterly routed. He did not expect to be. He had his forces all in the field, every ally giving him aid. But they were driven back in defeat, and not a few taken prisoners to grace the victor's triumph. And the people have endorsed the victory and renominated their leaders.

On a smaller scale we have had, last week, the same defeat of corrupt boss rule in the nominations for State Senator and sheriff in the metropolis of New Jersey, where the people have plainly said that they wished the laws enforced, and no alliance made by corrupt party leaders with sordid vice.

But a much more spectacular defeat is that which long established and profitable wrong has suffered in Georgia. A terrible system of leasing the convicts has prevailed for many years. It was the reestablishment on a smaller scale of slavery. The labor of convicts was sold at auction, and the profit to the State was a large reduction of taxation for the support of education. The lessees were guilty of the greatest cruelty. The prisoners were in convict camps, beaten with whips, and not a few were murdered for failure to do all the tasks required. Even worse, the profit from selling the prisoners was a temptation to impose long terms, and to convict for trivial offenses, so as to supply the lessees with profitable labor. Even those men who were appointed by the State to see that the prisoners received fair treatment were in the pay of the lessees and parties to every cruelty. At last the State was aroused. A special session of the legislature was called. Notwithstanding the demand of the lessees, whose millions were at stake, and notwithstanding the cry that there was no source from which to restore the revenue which would be lost, the legislature has voted to abolish the system, and to put the convicts to work on the public roads under public supervision. One of our greatest national scandals thus comes to an end, and the Devil is sore.

Not to mention other illustrations we must refer to the action last week of the legislature of Indiana on the question of county local option, where Governor Hanby has gained a victory like that of Governor Hughes. To the surprise of all the politicians the members of the lower house followed the Senate in passing the bill, because they could not withstand the demand of the people for the liberty to close the saloons, even tho some of them did it most unwillingly and declared that it ended their political career. This is only a stage in the temperance movement which is passing all over the country and which is now sweeping Indiana and Illinois, so that brewers and distillers in despair are trying to make their resorts more decent to the public eye till the people shall go to sleep again. But just now they are in the depths of pessimism.

It is a day of square deals, of elemental righteousness, of Roosevelt's sermons, of rebates and free passes forbidden, of newer moral standards in business, of forced resignations of political leaders; a day when the records of candidates are strictly examined, and when legislatures are searching for old abuses; a day when men of the "New Idea" and of civic reforms are jubilant and stern, and when the Devil is in the dumps.

Church Union in India

On the 25th of July last there was consummated in Madras a union of the Christians of all Presbyterians and Congregationalists in South India, excepting those connected with the small mission of the Church of Scotland, and two or three independent churches. The new body is called "The United Church of South India," and it brings into organic union a community of 140,000 Christians, 22,000 being communicant members.

For the last eight years and more ministers and laymen representing the missions and churches of four large societies have been working in the interest of this organic union. In 1901 the Madura Mission of the American Board appointed a conference committee to take steps for a union of the Indian churches of that mission with those of the missions of the London Missionary Society. This terminated in the organization in 1905 of the "General Union of the United Churches of Southern India." In this union were brought together the Indian churches of four missions, the Madura and Jaffna missions of the American Board, and the Travancore and South India missions of the London Society.

Before this movement began a similar movement was taking place among the Presbyterians. The Arcot Mission of the Reformed Church of America took the initiative in steps that brought together their own churches and those of the United Free Church of Scotland's mission in the region of Madras. Thus was formed the South Indian United Church.

The South Indian United Church helped to organize in 1904 the Presbyterian Church in India, which brought together into organic union nearly all the many Presbyterian bodies of India. But by doing so the South Indian body gave up its separate organization and became the South India Synod of the Presbyterian Church in India.

Now the interesting thing is that during all these parallel movements none of the parties interested regarded the unions consummated as final. As far back as 1902 an informal meeting of committees representing both the Congregational and Presbyterian bodies was held to consider the wider union. Then when the South India United Church entered the Presbyterian Church in North India as the South India Synod of that Church, it did so with the proviso that whenever the way should be open for it to unite with the United Churches of Southern India, liberty should be given to it to do so. This the Presbyterian Church not only agreed to, but promised to bid their brethren Godspeed in such a happy consummation, realizing that a union of Christians in the south, where languages were not so different, and distances not so great, would mean much more than union with others all over India. This kindly promise of the Presbyterian Church was cordially fulfilled, and in December, 1907, the South India Synod was released from its ties to the larger body.

All preliminary steps having been taken thru separate action and by joint committee, the General Union of the United Churches and the South India Synod, being in different parts of the same church building, came together singing "All Hail the Power of Jesus' Name," and organized under the joint leadership of the presiding officers of the two bodies.

The object of this union is declared to be "to bind the churches together into one body, with a view to developing a self-supporting, self-governing, and self-propagating Indian Church, which shall present a united living testimony to Christ, and worthily represent to the world the Christian ideal."

A Confession of Faith was adopted containing five articles. Two notes are attached to this Confession, which are as follows:

"Note 1.—As the Confession is a human instrument, it is understood that persons assenting to it do not commit themselves to every word or phrase, but accept it as a basis of union, and as embodying substantially the vital truths held in common by the uniting churches.

"Note 2.—The South India United Church reserves to itself the right to revise its general Confession of Faith whenever the consensus of opinion of the united body demands it."

The "constitution" of the United Church states that it "administers its affairs through local churches, church councils, and a General Assembly.

The church councils have the over-

sight and care of the churches. The General Assembly assumes no authority *per se* over the churches, but will consider references that come to it thru and with the approval of the church councils. In this way liberty is given to those that wish it thru church councils, and authority is placed with the General Assembly for those who want it thru the same church councils.

The results of this union are likely to be realized more and more fully as the years go by. At present missionaries and Indians scattered all over the Madras Presidency, and speaking Tamil, Telugu, Malayalam and Canarese separately, but getting together thru the English language, feel that they are one in Christ as never before. But as they proceed the missionary element will decrease in the churches and the Indian element increase. And they will find that, instead of moving on diverging lines, as they were in danger of doing before, they are moving on converging lines of brotherhood and mutual recognition.

Nor is this union to be regarded as final. At the General Assembly in Madras there was a delegate from the Presbyterian Church in India who was directed by his Church to seek federation with the United Church. There were also representatives from the British Wesleyan and American Methodist Episcopal Churches, who, tho they could not see their way for organic union just now, were cordial in expressing their readiness for federation forthwith. And a good Baptist brother also came to indicate his joy in what had been accomplished. The Assembly promptly appointed a committee on federation and union, and will meet all other bodies more than half way in uniting the different branches of Christ's Church.

The criticism has been made on the new creed adopted by the union of the Congregationalists and Presbyterians of South India that it would not suffice for the Methodist Episcopal Church; for conversion, regeneration, "The fruits of the Spirit," the "witness of the Spirit," and the danger of "falling away" after conversion are not mentioned. We have read the creed carefully, and the complaint is only partly justified. We find this passage:

"The Holy Spirit, the Lord, the Giver of Life, maketh us partakers of salvation, *enlightening our minds, convincing us of our sins, persuading us to accept Jesus Christ,* and working in us the fruits of righteousness."

The above is a sufficient definition of regeneration, and the words in italics are suggested by the Assembly's Shorter Catechism. Certainly "the fruits of righteousness" are here said to be fruits of the Spirit. There is nothing said about "falling away," or the "witness of the Spirit." The former is not essential, and the latter is given to but few Christians. There might have been a more definite utterance on conversion, but it is implied plainly enough in the article on regeneration, for "convincing" of sin and the persuasion "to accept Jesus Christ," followed by "the fruits of righteousness" embrace all that is meant by conversion. Nevertheless we wish that the creed of four hundred words had been reduced to one hundred, or to fifty. Jesus reduced it to less than twenty.

An Editorial to Order

We have received a letter from a lady in Michigan asking us as a favor to publish an editorial the first week in October on "Magazines: Their Scope and Influence." She says she wants "an authoritative opinion for the benefit of a literary club" and she appends some complimentary remarks about this magazine, which our modesty will not permit us to quote, but does not prevent us from mentioning.

Now we would not like to establish a precedent in this matter, for we might be called upon to write on something we know nothing about, but this happens to be a subject in which we are deeply interested, and the assurance that an editorial will have one reader is a strong inducement to comply with this unusual request. An editor is like a lecturer with a stereopticon; he has to go on talking into the dark hall, altho he sometimes feels that the audience is asleep or had slipt out when the lights were turned down.

The advertiser keys his contribution to the magazine. If he gets a thousand letters addrest "Andrew J. Smith" and five hundred addrest "A. Jackson Smith" he knows that he is influencing twice as many people thru one periodical as thru

the other. If the editor had laid on his desk every week a statement reading "Editorial I, 3,719 votes changed. Ed. II, 1,424 persons inspired, 523 disgusted. Ed. III, 16,388 eyes opened," he would not be so much in the dark about the scope of his influence. As it is, his influence crosses too many others for him to disentangle it.

About the influence of modern American magazines, as a whole, however, there can be no question. They have, to a large extent, fallen heir to the power exerted formerly by pulpit, lyceum, parliamentary debates and daily newspapers in the molding of public opinion, the development of new issues, and dissemination of information bearing on current questions. The newspapers, while they have become more efficient as newspapers, that is, more timely, more comprehensive, more evenhanded, more detailed, and, on the whole, more accurate, have relinquisht, or at least subordinated, the purpose of their founders, which was generally to make people think with the editor and do what he wanted them to do. The editorials, once the most important feature of a daily paper, are rarely so now. They have become in many cases mere casual comment, in some have been altogether eliminated, in others so neutralized and inoffensive that a man who had bought a certain daily for a year might be puzzled if you asked him its political, religious and sociological views. He would not be in doubt if asked what his favorite magazine was trying to accomplish in the world. Unless it is a mere periodical of amusement it is likely to have a definite purpose, even tho it be nothing more than opposition to some other magazine. If a magazine attacks Mrs. Eddy another gallantly rushes to her defense. If one gets to seeing things at night, the other becomes anti-spirituous. If the first acquires the muckraking habit, the complementary organ publishes an "Uplift Number" that oozes optimism from every paragraph.

The modern editor does not sit in his easy chair, writing essays and sorting over the manuscripts that are sent in by his contributors. He goes hunting for things. The magazine staff is coming to be a group of specialists of similar views, but diverse talents, who are assigned to work up a particular subject, perhaps a year or two before anything is published, and who spend that time in travel and research among the printed and living sources of information.

If the reader has an old copy of *Frank Leslie's Magazine,* let him get it out and lay it beside the *American Magazine,* which is the same periodical, except that everything about it is different. It had no purpose, no principles to defend, no particular interest in vice or virtue. Its descendant, the *American,* is, on the contrary, very much in earnest about certain things; it is not afraid of the charge of offensive partisanship; it rather likes to handle live wires, and its serials, tho not entirely devoid of imaginative and sensational elements, deal with real people and living issues.

THE INDEPENDENT has not been obliged to make such a radical change in its character, for it was founded for the purpose of doing something more than merely to amuse and simply to instruct, and it has been reasonably consistent in pursuing this ideal during the sixty years of its life. It has been our aim—and we believe it is coming to be the aim of all periodicals of the serious class—to supply the reader with material for thought on subjects of importance to him and to assist him in the formation of correct opinions from it. A magazine should be a storehouse of ammunition for the battles being fought from day to day. It should help the people who are doing things that are worth while.

It is sometimes said that the magazine is driving the book out of existence. That is not correct, because more books are publisht every year, but it is true that they are becoming less important in comparison with periodical literature. In some of the most vital and progressive departments of modern thought books have been practically eliminated. Take science, for example. If you go into the chemical library of a large university you will see the walls lined with shelves full of sets of journals, but you will find only a dozen or so books, and of these the only ones used much are dictionaries or compendiums, mere indexes to the periodicals. If you go into the workroom of some great leader of thought, a statesman, preacher, sociologist, editor, edu-

cator or author, you will find stacks of unbound pamphlets, files of clippings and yards of magazines, but very few books in the ordinary sense of the word. He doubtless has plenty of books, not in his "den," but stored in the formal library in glass cases to keep the dust off. In fact, it would not be altogether unfair to estimate a man's intellectual activity by the ratio of unbound to bound volumes in his working library. We could also say, without an exaggerated exaggeration, that the librarian most useful to his community is the one who makes most use of his periodical index.

The superstition still lingers, however, that there is something magical about a binding to enhance the value of its contents, notwithstanding the fact that nowadays most ideas of importance appear first in periodicals. A large and increasing proportion of our books are merely collections of magazine articles by the same author or on the same subject, and in some cases putting them in pasteboard covers is like putting them in coffins, signifying that their life and usefulness are over. The magazine represents intellectual activity in its terminal bud. Its function is to work over old plots into new stories, to rewrite biography and history in accordance with the taste of the times, to resurrect forgotten truths, to make crude information palatable, to convert abstract science into applied science, to throw a searchlight into dark corners of the earth and dark spots of our civilization, to start new movements and to guide old ones, to wake up people who are asleep by sounding the burglar alarm, to twist around the heads of those who are looking backward over their shoulder; in short, to inspire, to instruct and to interest.

Cholera Possibilities

THE papers for the past week have had much to say about the spread of cholera in Russia, the scare at Berlin, the precautions being taken at Hamburg to prevent its importation to America, and the general feeling of unrest that has developed along lines of traffic from the East lest this old folk-epidemic should succeed in gaining a foothold. With the confidence born of never having seen a great epidemic, very probably most intelligent people are inclined to think that the cholera scare is overdone and that there is little if any need of worrying about the possibilities of a serious cholera epidemic. While the advance of modern medicine has probably put us in a position to be able to rest easy with regard to this scourge, which used to carry off thousands and even hundreds of thousands within a century of our own time, there is no reason on the other hand, but, on the contrary, much danger in any self-complacent feeling of security that might lead to the neglect of the most stringent precautions. Cholera has still all its old power to kill and its elusive capacity to spread almost before its presence is realized. The present situation furnishes abundant evidence of that.

It was only about the beginning of July that there began to be suspicions that a rise in the death rate from diarrheic diseases in certain parts of the East meant that cholera was getting into the lines of commerce. The disease is probably endemic in certain portions of India, but ordinarily is kept well confined. Suspicious cases occurred at Hong Kong, and about eight weeks ago a number of similar cases in Manila. It was not until the end of July, however, that the microbe which is now known to cause Asiatic cholera, the spirillum or comma bacillus (so called because of its corkscrew-like or comma form), described by Koch in 1884, was demonstrated to be present. Now it is known to have spread to ten provinces; some two thousand cases have occurred, with probably over a thousand deaths. In the province of Pangasinan there had been before the 1st of September some 700 cases, with nearly 350 deaths. In Misamis there had been 265 cases and 89 deaths. Other provinces were not so widely infected, and yet the death rate was even higher, showing the extreme malignity of the disease. In Nueva Ercija there were 170 cases reported, with 130 deaths. In Ilocos Sur there were 118 cases and 87 deaths.

The United States Public Health Reports for the past week show that cholera is epidemic at Hankow, and that there were probably very many cases of it in China, and that it is very liable to get

into the commercial routes thru Hong Kong. The United States Consul at Nagasaki has telegraphed that there is cholera at Moji and at Yamaguchi-ken, and one case has been reported from Tokushima. These are the official reports of two weeks ago, and since then the newspapers have brought some definite details of the spread of cholera in Japan. In Russia the situation is even more alarming. Suspicious cases began to occur in the eastern provinces early in August. Before September 1st Astrakhan and Saratov had each had over 100 cases, with a mortality of about 50 per cent. Then Odessa began to report cases that first looked suspicious and then proved to be true Asiatic cholera. As soon as suspicion was aroused it was found that a number of cases of a diarrheic disease proving rapidly and largely fatal was occurring in Moscow and St. Petersburg and that the death rate had been increased by it. On September 10th there were known to be fifteen cases in St. Petersburg. Since then the disease has, for the time at least, run from under control, has spread to most of the quarters of the city, and cases have been reported in the barracks and even, it is said, in the palace of the Emperor and the palaces of the Grand Dukes.

There is every reason for being solicitous about the further spread of the disease. Cholera has lost none of its old power to spread almost before its presence is recognized. It is true that in the one serious recent experience in a thorouly organized city, the disease was got well under control, but the epidemic at Hamburg in 1892-3 cost the lives of thousands of citizens before the epidemic subsided. On the other hand, there is the greatest possible encouragement in the fact that by careful quarantine precautions, tho Hamburg is at the present time more closely united commercially with every part of the world than any other city, the disease was not allowed to spread. A few cases were observed in ports in connection with Hamburg, as, for instance, in New York itself, but quarantine regulations prevented its spread, and at no time was there any serious danger of an epidemic. This is a striking triumph of modern medicine, but it must not be forgotten that the conquest of the disease is absolutely dependent on the knowledge of how to combat the malady and then the legal power to enforce quarantine and health regulations.

It is the lack of proper organization in this matter in the East and in certain portions of Russia that has allowed the disease to gain a foothold. It is the same set of causes that is keeping plague alive as a menace to the world in the East. Plague used to cause its millions of deaths in the unregulated medieval towns, but in our twentieth century it is causing millions of deaths in India, where old-time conditions prevail. During the last three months there have been some 15,000 cases, with over 12,000 deaths, in the Punjab alone; in Bombay presidency and Sindh there have been 4,500 cases, with 3,750 deaths; the extreme virulence of the disease will perhaps best be realized from the fact that in Burmah there have been 1,619 cases, with 1,591 deaths. This is a mortality of 98.2 per cent. Altogether in India there have been nearly 25,000 cases of plague and 20,500 deaths. This gives one an idea what sort of conditions might prevail in Western countries only for our quarantine and health regulations. Plague succeeded in finding an entrance into certain of the ports of South America over a year ago and has never been completely eradicated. It now exists in probably a dozen different South American ports, and cases of the disease are being constantly reported from La Guayra and Caracas, where government conditions are not favorable for the enforcement of quarantine regulations.

There does not seem to be much need for alarm with regard to cholera, but there is every reason to insist on the enforcement of quarantine regulations, no matter how costly from a commercial sense these may be. It is at moments like these that the value of our quarantine service, marine hospital reports and our health departments are brought home to us. Sometimes when the citizen is inclined to think that health regulations are meticulous in their nicety, situations like the present might be made to remind him that it is the little things that count in disease, and it is only by the minutest precautions that these little

things can be kept from producing very large results of extremely serious damage to men.

Better Be Right Than President

Out of Judge Taft's letter, written in July, 1907, and just made public by President Roosevelt, we quote one sentence. He had been asked to consent to an agreement, at the time when his name was being presented for the Presidency, and when it was essential that he get the support of his own State, an agreement by which Foraker and the party machine controlled by the Senator should support his claims, in return for Mr. Taft's support of Senator Foraker for re-election to the Senate. Judge Taft refused, to the surprise of his political friends. Thus he wrote: "I don't care for the Presidency if it has to come by compromise with Senator Foraker or any one else in a matter of principles." It was not written epigrammatically for public approval and quotation, but it matches precisely in sharp sentiment the words of Henry Clay more than once repeated, "I had rather be right than be President." He said it in the Senate when discussing the Missouri Compromise. He said it twenty years before when he had consulted Senator Preston, of South Carolina, on a speech he was to make in the Senate. Senator Preston questioned the effect of such a speech on his chances for the Presidency, and his answer was: "I did not send for you to ask what might be the effect of the proposed movement on my prospects, but whether it was right. I had rather be right than be President." The words have thundered down the decades, and will be repeated as long as the people elect Presidents. Mr. Taft's declaration is just as worthy of praise as Mr. Clay's, just as self-denying. Mr. Clay did not get the Presidency; Mr. Taft may not; but each has deserved it. They are not of the class of another Ohio statesman, Congressman Springer. He had made a speech on some subject, and Thomas B. Reed followed, and read in his drawling, rasping tones a speech of Springer's delivered a year or two before in which he had argued the direct contrary to his present speech. "A man has the right to change his mind," said Mr. Springer. "I had rather be right than President." "Well, you'll be neither," again drawled the man from Maine.

The Extremes of Intolerance

The Appeal to Reason is a journal which represents the Socialist party. It declares that it will distribute a million copies of an issue devoted to showing that the Republican party is in league with the Catholic Church, that the Catholic Church is the foe of all liberty, that the settlement of the Friars' land dispute in the Philippines was a bribe for Catholic votes, and that Mr. Taft's mission to Rome to settle the question with the Vatican was a shocking and servile betrayal of public trust. All this does not seem much to disturb Mr. Taft. In an address last Sunday before the Young Men's Christian Association in St. Paul he takes pleasure in his part in this business and says:

> "I went to Rome and effected a general understanding as to what was to be done, and was prepared when the Apostolic Delegate came to the Philippines to close with him, after a great deal of negotiation, the contracts or settlement which, I do not think it too much to say, brought about a result which was both just to the Church and to the people of the islands and to the Government of the United States in that jurisdiction.
>
> "I venture to think that but for the spirit of tolerance both on the part of the Protestant denominations and the Roman Catholic Church that now prevails in this country such a result could not have been obtained. It is due to the spirit of Christian tolerance, and it is a condition in which we should all rejoice."

We stand by Mr. Taft's action in the Friars' land matter. It was his business to go to Rome, to headquarters, to settle the troubles. The attitude of Protestants and Catholics was creditable to both. It is amusing to see these bitter attacks on the one side for his good will to Catholics, and from Illinois and North Carolina almost equal opposition because he has followed his father's Unitarian faith. There is equal intolerance from the most extreme opposites of faith.

Centennial of Religious Journalism

At Portsmouth, N. H., on September 15th to 17th, was celebrated the one hundredth anniversary of what, in all probability, is the oldest religious newspaper in the world. On September 1st, 1808, the Rev. Elias Smith published in Portsmouth his *Herald of Gospel Liberty*, the name of which

is significant of its purpose and times, and which continues publication at Dayton, Ohio, as the organ of The Christian Connection. For not far from the beginning of the nineteenth century, doubtless influenced by the political freedom in state affairs, Methodists of the South became impatient with the Methodist hierarchy, and Presbyterians of the West wrote the "Last Will and Testament" of their presbytery. Baptists of the North also broke thru their Church exclusiveness, and all came out of their respective denominations endeavoring to form Churches of greater fraternity and more in harmony with republican institutions. Much to their surprise they heard of people in other parts of the country that were believing and attempting the same things, and as one result was born the "Christian" denomination, conceived in liberty and dedicated to the proposition that all men have a right to interpret the Bible for themselves. One of the leaders in this movement was Elias Smith, the editor and publisher of *The Herald of Gospel Liberty,* but the idea of a religious newspaper was not original with him. He gives that honor cheerfully to one of his friends, a Congressman of that day, the Hon. Isaac Wilber, of Little Compton, R. I., who offered to furnish funds to help in its publication. But Smith did not desire this, stating frankly that he feared he would not be entirely free to say what he pleased if another owned the paper. The anniversary program and exercises showed in a remarkable way the progress that has been made in religious history in those things for which Smith so valiantly contended. For his days were stirring, debates were warm in more ways than one; sometimes it was necessary for Smith to have the bodily protection of the law. The Baptists excommunicated him one hundred years ago, but today the Rev. Jos. S. Swaim, editor of *The Watchman,* brought fraternal greetings, and Methodists, Congregationalists, Unitarians and Universalists added their good wishes, while both the conservative and the liberal wing of the Christian Connection were represented by three members of the denominational family of the Summerbells. There were some historical incidents that were known, but not emphasized. Elias Smith scandalized his fellow heretics by becoming Universalist in his belief. For this his brethren promptly tried to discipline him, and could hardly become reconciled, even when he repudiated this doctrine. Every family has certain historical incidents that they are willing to pass over lightly, and probably the "Christians" do not have a monopoly in this respect. Elias Smith embraced Universalism four times. How could such actions be looked upon with the least degree of tolerance by any one? Little did Smith care. His outspoken fearlessness, his hot honesty and his great abilities, made him a natural leader. He always felt that he clung to the Bible, and gave it first place in authority. Yet he must have seen the humor of the situation, for one of the historical anecdotes told at the centennial was that when Smith was asked by a very pious lady how, if the truth of the Bible was one and the same thing, he could change in his theology so frequently. His answer was, "The Bible is like a fiddle. You can get out of it any tune that you want." Thus Portsmouth was a hundred years ago the herald of Gospel liberty, as in these late years it has been the herald of the gospel of peace—*sub libertate quietem.*

A Coast Boulevard

It is a magnificent scheme which is proposed by friends of good roads in New Jersey and favored by Governor Fort, to connect what stretches of good roads now exist along the coast line so as to create a grand boulevard from New York to Philadelphia, and all under the control of the State. But this involves something more than mere road-making, for the sea is constantly washing away the coast and carrying the sand to Staten Island and Long Island. There is required also a system of bulkheads and jetties, such as have already been built to protect Atlantic City. The building of such a boulevard, sure to be connected with interior cities, would pay in money. The license fees of automobiles alone paid into the New Jersey treasury more than all the money spent in the repair of its roads. Half a dozen States have commissions empowered to direct the building of good roads. Every State ought to centralize this work and not leave it to local roadmasters, who often make the passage thru a town a penance.

INSURANCE

The Massachusetts Mutual

THE Massachusetts Mutual Life Insurance Company, of Springfield, Mass., which has just moved into its new building, as pictured above, was incorporated in 1851. The company's first home was a single room in the Foot Block, corner of Main and State streets. A five-story building, erected by the company in 1866-7, was subsequently occupied. It was located at 413 Main street, and its occupancy began in 1867. A third home was in the new building on the corner of Main and State streets. The new room of the board of directors occupies the same space as the one room which was the company's first home. The company will occupy the second, third, fourth and fifth floors and one-half of the basement. The sixth, seventh and eighth floors will be rented until they are needed by the company. The building is eight stories high, and is modern in every respect. The ground floor has been leased for banking use. The president of the company is John A. Hall, who succeeded Colonel M. V. B. Edgerly, after his death in 1895. There have been but four presidents, namely, Caleb Rice, E. H. Bond, M. V. B. Edgerly and John A. Hall. The growth of the company has been pronounced during the last ten years.

The Control of the Washington Life Passes

A MAJORITY of the stock of the Washington Life Insurance Company was sold last week, and the holdings of Levi P. Morton and his associates, including Thomas F. Ryan, Harry Payne Whitney and others, are now controlled by William C. Baldwin, who is president and general manager of the Pittsburgh Life and Trust Company, of Pittsburgh, and a group of bankers and Pittsburgh business men for the most part affiliated with the Pittsburgh Life and Trust Company.

Following the sale of the stock the new purchasers took formal possession of the Washington Life. The officers who severed their connection with this insurance company last week were John Tatlock, president; Charles H. Allen, first vice-president; T. T. Johnston, second vice-president; J. W. B. Vandewater, secretary. All the directors resigned except Paul Fuller, Samuel P. Colt, R. C. Leffingwell and James A. Parker. Samuel B. Clarke sold his stock early in the week and ceased to be a director. The other directors who resigned were Richard Billings, George M. Hard, Henry S. Herrman, Charles H. Allen, Dumont Clarke, William A. Street, Harry Payne Whitney, William Corcoran Eustis, Walter S. Johnston, Levi P. Morton, Winthrop Rutherfurd, Valentine P. Snyder, and John Tatlock.

The new officers of the Washington Life Insurance Company are: President, William C. Baldwin; first vice-president, W. Howard Nimick, vice-president of Pittsburgh Life and Trust Company; second vice-president, James H. Mahan, secretary of the Pittsburgh Life; secretary, F. C. Parsons, controller of the Pitsburgh Life. These men have had long experience in the life insurance business. Mr. Baldwin began sixteen years ago with the Equitable and afterward became head of the New York Life Insurance Company's agency in Pittsburgh. He started the Pittsburgh Life and Trust Company six years ago. Mr. Mahan, who for fourteen years had been with the New York Life, also went with the Pittsburgh company when it was incorporated. Mr. Parsons was in the controller's office of the New York Life for twenty years before going to the new company.

The new directors of the Washington Life, all of whom represent Pittsburgh business and financial interests, are W. C. McCausland, V. Q. Hickman, W. C. Baldwin, James Carothers, John H. Murdoch, W. H. Nimick, James H. Mahan, Abner U. Howard, Frank Ewing, F. C. Parsons, F. E. Montgomery, Charles H. Pascoe, W. C. Metcalfe, Morton A. Howard, H. B. Heylman, Clarence E. Mundy and Eugene H. Brock.

The terms of the sale were not made public, but it is generally understood that ex-Governor Morton and his associates came out about even on their investment of four years ago.

The Washington Life is one of the oldest insurance companies in the country. It is capitalized at $600,000. It writes only non-participating business, having elected to do this class of business under the Armstrong law some time ago. The Pittsburgh Life and Trust Company writes only participating business, but by means of its control of the Washington Life it can write both classes, according to the wishes of the insured, the participating policy being written in one, and the non-participating policy in the other company. The Pittsburgh Life and Trust Company is only six years old, but in that time it has built up a total of $27,000,000 of insurance in force. It has been announced that under last week's deal the companies will be kept separate except for the convenient arrangement that both will use the same agency force. This will render possible many economies in operation.

President Baldwin said that at present the Washington Life had $54,000,000 in outstanding insurance. At the beginning of the year the company carried $57,000,000.

It was reported that Mr. Tatlock, the outgoing president of the Washington Life, might return to the business, in which he is an expert. He went with the Washington Life four years ago, when William A. Brewer, Jr., resigned from the presidency, and has given the company of which he now ceases to be president a remarkably efficient administration,

Financial

Farm Prosperity

In the three leading grain market cities of the Middle West the price of wheat for immediate delivery is now above one dollar a bushel, altho a heavy movement to market is in progress. A considerable advance has taken place since July 1st. Corn at Chicago is selling at 79½ cents. Prices of farm products have for some time been singularly high, altho general business conditions, as everybody knows, have been far from satisfactory since October last. There is no indication at present of a decline; on the contrary, still higher figures are predicted, altho the grain crops are on the whole larger than last year's. Consumers feel the burden, but the farmers thruout a large part of the country have been fortunate. It is not surprising that observing travelers have found in the agricultural districts of the Middle West scarcely any indication of that depression which has affected so many interests elsewhere. The profits of Western farming have suggested investments which excite the wonder of travelers accustomed to find strict economy and much self denial in farm life. Political speakers addressing audiences in counties where there is no town or village of more than 3,000 population see hundreds coming to the meetings in motor cars. One of these orators reported last week that he had seen an acre of such cars grouped in front of a circus tent out in Central Kansas. In that part of the Middle West the local banker finds it difficult to place at remunerative rates the money which the farmers are now depositing and upon which they seek interest of from 3 to 4 per cent. One of these bankers says:

"Instead of borrowing money, the farmers are bringing it to us and depositing it for six months or a year, to get the interest. When the corn crop is gathered, I don't know what they will do with their accumulations. A few years ago, nearly all the money loaned by the banks to farmers was to live on or to carry over their mortgage interest. At that time, hardly any money was borrowed by business men. Today the business interests are the borrowers, and it is the farmers' surplus wealth which is loaned to them."

This local supply of money in the West should affect the annual demand upon the East for funds with which to move the crops, and it may be observed that thus far this month the demand for shipments of cash has been very largely from the South. It is not, however, a sharp demand; money rates in New York remain very low. As for the Western farmers' prosperity, this is not only quite satisfactory to the farmers themselves but highly beneficial and of good omen to the entire country and all its interests, altho there may be hard-prest consumers who are prevented by the high cost of living from seeing the broad economic value of it.

* * *

....The number of immigrants arriving in August was only 27,782, against 98,825 in August of last year. Immigration and emigration statistics for the twelve months ending with June showed a net addition of only 209,837 to the population of the country.

....The number of idle freight cars in this country and Canada was 413,338 on April 29th. With one exception, the fortnightly reports since that date have shown reductions, and on September 16th the number had fallen to 170,652, the decrease in the two weeks preceding that date having been 50,562.

....Trade estimates just published set forth that the potato crop of the country is somewhat under that of last year. The demand having been smaller, however, the likelihood is that there will be plenty of potatoes to supply the market without making prices abnormal, altho the present trend is toward a higher level.

....The estimate of Europe's wheat crop has been reduced by 60,000,000 bushels since August 1st. According to the report of Dornbusch's List (London), the world's crop this year is about 3,056,800,000 bushels, against 3,090,000,000 in 1907, and 3,374,280,000 in 1906. Comparison with last year's figures shows notable reductions in France, Italy and India, with considerable increases in Australasia, Canada and the United States.

VOL. LXV NEW YORK, THURSDAY, OCTOBER 8, 1908 No. 3123

Survey of the World

The Roosevelt-Bryan Debate

The debate between President Roosevelt and Mr. Bryan was closed, at least for a time, at the beginning of last week. Mr. Roosevelt's second reply to Mr. Bryan was published on the 28th ult. On the following day Mr. Bryan replied in a letter of about 2,500 words. The President, he said, had attempted to shift the issues raised, and had summarily past judgment upon Governor Haskell without naming a tribunal before which the charges against Haskell could be investigated. As for himself, he submitted to the voters of the country his denial of any knowledge or information that in the remotest manner connected him with any Trust, monopoly or law-defying corporation. "My record," said he, "is sufficient answer to your insinuations. I have lived in vain if your accusations lose me a single friend." Speaking of the President's remark about the support of Judge Priest, he said:

"While the Trust attorney to whom you refer is not an official of a Trust, I will warn him and thru him his clients that if I am elected I will not only vigorously enforce against all offenders the laws which we hope to have enacted in compliance with the Democratic platform, but that I will also vigorously enforce existing laws against any and all who violate them, and that I will enforce them, not spasmodically and intermittently, but persistently and consistently. They will not be suspended, even for the protection of Cabinet officers."

The Trust magnates, he continued, were supporting the Republican party. "The ox knoweth his owner, and the ass his master's crib." He left the people to pass judgment on Mr. Roosevelt's admission that he permitted the Steel Trust to absorb a rival. Turning to campaign funds and to what the President had said about the mine owners' contributions in 1896, he asked why the President did not give the amount and sources of the Republican fund in that year. "I am willing to have both funds published. Are you?" A sum almost as large as the entire Democratic fund had been collected at the President's request in 1904 and had beeen used in only one State. (He referred to the Harriman contribution.) He criticised the reasons given by the President for opposing publicity before election:

"You charge, in effect, that the people are so lacking in intelligence that they might condemn as improper contributions which you declare to be proper. If the voters differ with you on this question are they necessarily ignorant and wrong? Must the members of the party organization act as self-appointed guardians of the people and conceal from them what is going on, lest the people be misled as to the purpose and effect of large contributions? You attempt to make a personal question of it, and ask whether any one will accuse such men as you, Governor Hughes and Mr. Taft of being influenced by contributions. That is not the question. If it is found that a party to a suit has given a sum of money to one of the jurors the court does not stop to inquire whether or not the juror is an incorruptible man or whether in accepting the money he explicitly stated that it was accepted with the understanding that he was under no obligation to consider it in making up his verdict. The court would hold that the giving of money by an interested party or the receiving of money was a contempt of court and an interference with the administration of justice. Public officials occupy much the same position as jurors. They are constantly called upon to decide questions between the favor-seeking corporations on the one hand and the people on the other, and there is a very general impression that officials of those favor-seeking corporations do not put up large sums of money from purely patriotic motives."

He did not mean to say that Mr. Hughes had been influenced by the

contributions of Trust magnates, or that the President had been influenced by the Harriman fund, or that Mr. Taft would hereafter be influenced by the Trust contributions now being made, but that the American people had a right to know who were giving in order that they might judge for themselves as to the givers' motives and the obligation imposed:

"The reflection upon the people involved in your charge that they would misuse the knowledge which publicity would give is unworthy of one who has been elevated to so high an office by the votes of the people, and I venture the assertion that you cannot procure from Mr. Taft an indorsement of your defense. He is now before the people; he is offering himself as a candidate for the Presidency; he dare not tell the people to whom he appeals that they have not sense enough to form a just and correct opinion as to the purpose which leads parties interested in special legislation to make big contributions."

A few hours after the publication of this letter, Secretary Loeb said: "The President feels that inasmuch as the letter is simply an attack upon him personally, there is no reason why he should answer." But Mr. Taft accepted the challenge. His position, he said, was exactly that of the President. The law of Nebraska, he continued, only required publicity after election, and the Democratic managers had flagrantly violated it in 1904 "by failing to return the receipt of $15,000 from Thomas F. Ryan":

"The chief objection to the publication of contributions before the election is that it makes certain that in the heat of the controversy the motives of those who contribute to pay the legitimate expenses of the campaign will be misconstrued, perverted and misrepresented. The candidates in whose behalf the contributions are made will be charged in a most unfair way as being completely under the control of those who make the contributions. It is entirely natural and proper that men who are able to contribute and who are deeply interested from patriotic motives and from motives of a desire to continue the general prosperity, should contribute to the party whose administration of governmental affairs is likely to be in accord with their views of proper government. It is not good policy to discourage those who desire to contribute to the legitimate purposes of the campaign from so contributing by exposing them to the bitter diatribes or unfair attacks or slanderous condemnation of partisans in an electoral fight."

Mr. Bryan then replied to Mr. Taft in a statement of about 2,500 words, repeating the argument against the President's position.

Additional Archbold Letters

Mr. Hearst has given to the public additional letters which past between Vice-President Archbold, of the Standard Oil Company, and various persons. At Denver, on the 30th ult., he produced two which had accompanied checks for $10,000 and $5,000, respectively, paid by Mr. Archbold in the latter part of 1900 to Senator Foraker. Referring to the charge that he and the President had "altered their opinions of each other and were working hand in hand," Mr. Hearst said:

"That is not true. I have exactly the same opinion of Mr. Roosevelt personally that I always have had. I dislike Mr. Roosevelt personally and I have every reason to dislike him. If ever I have an opportunity to even things up with Mr. Roosevelt after he has ceased to be President, I shall do so with peculiar satisfaction. But while Mr. Roosevelt is President of the United States my attitude toward him is that of any loyal citizen of the United States. Every good deed the President performs redounds to the benefit of every good citizen."

In the course of a public address at El Paso, Tex., on the 3d inst., he read letters and records relating to Senator Bailey, Democrat, and Congressman Sibley, Republican. First he produced what he said was the written application of Senator Bailey (March 28th, 1901) to H. C. Pierce, of the Waters-Pierce Oil Company (controlled by the Standard) for $1,750, and a photograph of a book entry showing the payment "for legal expense account"; also a photograph of the note of Senator Bailey (March 1, 1901) for $8,000, payable to Pierce at St. Louis, and one of a book entry of this loan. Then was read a letter (October 25th, 1901), in which Mr. Archbold said to Congressman Sibley: "We are anxious to have you here as early as possible with Senator Bailey of Texas," together with the Senator's statement to the House in 1901:

"I have known Mr. Sibley for several years, and I never knew a truer or more honest man, and I cannot express my indignation at having him assailed before the country as an agent of corruption simply because I happen to enjoy the honor of his friendship."

Mr. Hearst then read the following letter (May 31st, 1900) from Mr. Archbold to Mr. Sibley:

"DEAR MR. SIBLEY—I beg to inclose you herewith certificate of deposit in your favor for $5,000, sent you at the request of Mr. Griscom,

the purpose of which you no doubt understand with him. Permit me to improve this opportunity also to express my high appreciation of your most courteous and efficient action in response to our request regarding the consideration of the subsidy matter with Mr. Griscom."

Also another to Mr. Sibley from Mr. Archbold, in which the latter quoted as follows from a letter to himself in which "Mr. Patton" had referred to the absence of Mr. Cassatt in Europe:

"My attention has already been called to the matter to which you refer, and it is hardly necessary for me to say that we are in full sympathy with your views as exprest in your letter. We have put some influence to work in the various counties thru which our line runs which I hope will help to bring about the result we both desire to obtain."

Mr. Archbold added that he was sure this would be "the sentiment of every person who has to do with property interests." Mr. Hearst then added to his list the following (May 22d, 1900) from Mr. Archbold:

"DEAR MR. SIBLEY—We have it from a confidential source that some distinguished Republican representative is expected to speak in connection with the proposed Ray Constitutional amendment, especially against our company, the statement being that he is loaded against the Standard Oil. I need not tell you that we are pretty weary of the old round of lies and I write to ask your kindly interest in the matter to the end you may if possible discover who this distinguished party is and if it is at all possible to guard against his explosion. It may not be possible for you to accomplish anything in the way of stopping him, but we greatly appreciate your friendly interest. His name is not given us."

In conclusion, there was read a long letter written on November 17th, 1904, by Mr. Sibley to Mr. Archbold, and relating to an interview with Mr. Roosevelt. It begins as follows:

"DEAR MR. ARCHBOLD—I had quite a long session with the President this morning and thought you might like to hear. He was effusively cordial and said he wanted to work in harmony with Congress. I told him that there was a weight of responsibility upon him such as is seldom laid upon Presidents, etc., and that the American people were in for great development and prosperity if we were cautious and conservative, etc., etc. His reply was: 'Yes, by George, Congressman, this is no time for radical action or legislation and you men in Congress must not get radical because of the great victory,' etc. To all of this I assented. He wanted my views on the tariff, and I told him we needed no general revision."

Mr. Sibley said he had told the President that there probably were incongruities and inequalities in the tariff. He thought we needed not "tariff revision," but "tariff equalization." Mr. Roosevelt, he said, pronounced this "a most happy phrase," adding: "That is what we must do; we will correct inequalities." Strictly in confidence, Mr. Sibley reported that Attorney-General Moody had consented to remain in office. "He is manly and fair, and, I think, less liable than Knox to make 'Trust busting' a pastime."

Inquiry Concerning Country Life

Prof. L. H. Bailey, chairman of the Commission on Country Life recently appointed by President Roosevelt, has given to the public a statement as to the Commission's plans. Information will be sought by means of circular letters, there will be hearings in various parts of the country, and special investigations as to certain phases of country life will be made. Professor Bailey says:

"The circular letters asking for opinions and suggestions will be sent to several hundred thousand persons. Replies to the questions are to be tabulated by the Census Bureau. The questions, which will be distributed at or before the middle of October, have to do with the condition of farm homes in the neighborhood; condition of rural schools; whether farmers secure reasonable returns from the sale of their products; whether they secure reasonable service from railroads, highways, trolley lines, etc.; whether they have the most efficient service from postal and telephone communications; whether farmers and farmers' wives are satisfactorily organized to promote their mutual interests; questions concerning the renting of farms, farm labor, and the condition of hired help on the farms; whether farmers have satisfactory facilities for doing business in banking, credit, insurance, and the like; what are the sanitary conditions of farms in the neighborhood; and whether farmers and their wives have sufficient and satisfactory social life. Any persons not receiving the circular and who desire to express themselves on any of these questions may write to the Commission on Country Life, Washington, for copies."

Early in November the Commission will begin a series of hearings, going from Washington through the Southern States to California and returning through the central and northern parts of the country. Dates of the meetings will be given several days in advance, and rural organizations will be invited to send delegates. All persons interested in country life, whether actual farmers or

not, and who have practical suggestions to offer, will be welcomed. Their co-operation is desired.

Cuba and Porto Rico

The political campaign in Cuba has been marked by disorder in several places, notably at Sancti Spiritus, where (September 27th) a parade of Conservatives excited a riot and one man was killed. Sancti Spiritus is the home of José Miguel Gomez, presidential candidate of the Liberal party, and a large majority of its inhabitants are Liberals. The procession was led by Gen. Mario Menocal, presidential candidate of the Conservatives. It is alleged that Blas Gutierrez, the Conservative who was killed, had been waving a Spanish flag and had struck several Liberals with it as he passed them in the street. General Menocal denies that any one in the procession displayed a Spanish flag. In the riot which followed the killing of Gutierrez eight persons were seriously wounded. Governor Magoon at once ordered Judge Guerrera, of Havana, to investigate and to institute criminal proceedings. The Judge reports that Gutierrez was merely cheering for Menocal when Pedro Sandoval, a Liberal, stabbed him in the back, and that a policeman named Leon fired at the wounded man before he fell to the ground. These two assailants and several other persons are in custody and will be prosecuted. In Havana a meeting of the new negro party was broken up by the Liberals.——The Auditor and the Treasurer of Porto Rico have come to New York to consult bankers concerning the loan of $3,000,000 recently authorized for irrigation works.——The school year in Porto Rico has opened. There are 95,000 pupils, 1,575 schools, and 1,650 teachers, three-fourths of them natives. In 1898, the last year of Spanish rule, there were only 525 schools and 25,000 pupils. This year the appropriation is $1,429,590; in 1898 it was $285,000.

Bulgarian Ambition

The chief international interest of the past week has attached itself to the action and purposes of Bulgaria and Austria, and a possible war with Turkey. Bulgaria is governed by a prince and not a king. Nominally she is still a part of the Turkish Empire, altho absolutely independent of Turkey in all matters of government. It may have seemed to Bulgaria a fitting time to seek absolute independence when Turkey is disturbed by its revolution. But the Young Turk party now in control has the most patriotic government known in the later history of the empire, and is far from willing to submit to any more cutting off of the provinces. Its purpose is to strengthen the hold of the central Government and wholly regenerate the country. The first sign of friction was several weeks ago when the Bulgarian representative at Constantinople was not invited with the representatives of the nations to a social function, on the ground that Bulgaria, not being independent, but a portion of the empire, had no claim to be invited. This question of courtesy really involved the claims of Bulgaria, and caused more ill feeling at Sofia than might have been supposed. Next came the right of Bulgaria to hold the Rumelian section of the Orient Railway. There had been a strike, and the Bulgarian Government sent soldiers to protect and manage the line. When the strike was over Bulgaria refused to withdraw, and Turkey vigorously protested, as the railway, under the international agreement of the Powers, is controlled by Turkey. Under that agreement Bulgaria was clearly in the wrong, and the protest of Turkey was favorably answered by the chancelleries of Europe, inasmuch as the action of Bulgaria was a clear violation of the Treaty of Berlin. The Orient Railway belongs to Turkey, but is leased to a company having headquarters in Vienna. The strike ended September 20th, but Bulgaria refused to acknowledge Turkey's rights, and declared that she would negotiate with the leasing company. But when that company was asked to yield to Bulgaria the reply was made that it could not do so without the consent of Turkey. The protest of the Powers seemed likely to be effectual, and the diplomatic communications on both sides have been in language pacific. M. Gueshoff, the Bulgarian diplomatic representative at Constantinople, who withdrew because not invited to the banquet, will be received when he returns. But Bulgaria still holds possession of the

Rumelian section of the railway and is trying in some way to gain permanent control, but a peaceful conclusion is anticipated. Nevertheless, there have been disquieting rumors of preparations for war. It was reported, and then denied, that Turkey had sent an army to the Bulgarian frontier. There seems to be evidence that Bulgaria has been hastening the preparation of war supplies, the factories working night and day, and preparations for mobilizing the army. Bulgaria seems to believe that she would be successful in war. Her war force consists of 210,000 officers and men, with 7,000 cavalry and 500 guns, and there are 170,000 reservists, besides 60,000 trained veterans. Prince Ferdinand, who has been making a tour of Europe, has been summoned home, and on Monday last, at Tirnova, the ancient capital, he declared the complete independence of Bulgaria. A conference of the Powers will now be called to consider this new condition, and the railway question will be settled there.

Austria's Ambition

Meanwhile another war alarm has been reported from Austria. Bosnia and Herzegovina lie next to Austria, and have been acknowledged as within her sphere of influence, and this might be a suitable time to annex those principalities, which are very nearly as much independent of Turkish control as is Bulgaria. A communication has been received in Paris from the Austrian Government, with an autograph letter from the Emperor, which will be submitted to the other governments, and which not only exposes the Austrian Emperor's views on the Eastern question, but puts Europe in the presence of an accomplished fact, which fact concerns both Bosnia and Herzegovina. It is supposed that there was in this an understanding between Austria and Bulgaria, that Prince Ferdinand should proclaim himself Czar of the Bulgars, that is, King of Bulgaria and Rumelia, which has been under Bulgarian control for twenty years, thus breaking off completely from Turkey, and that at the same time Franz Josef should proclaim the assumption of Bosnia and Herzegovina as dominions of Austria. These proposals, accepted as true, have made a tremendous excitement in Eudope, for either act, that by Bulgaria or that by Austria, would end the Treaty of Berlin as to the Balkans. It is also a serious question how the Powers would be aligned in such a case, which might easily involve war between Turkey and Bulgaria. Germany would be behind Austria, and probably Italy, which would look for territorial compensation. Russia and England would strongly object, altho it is difficult to see what objection England could have apart from her desire not to put difficulties in the way of the new rulers in Constantinople. France has no special interests involved, but in case of war might, as in the Crimean War, support the two Powers with which she is in alliance. All this cloud of war may speedily blow over, but as we go to press a real danger appears imminent. ——King Alfonso, of Spain, and Queen Victoria have been visiting Munich, Buda Pesth and Vienna, and the most extraordinary precautions have been taken against possible attempts at assassination. Wherever they go the streets have been lined with troops, and doubtful characters supposed to be anarchists have been held in arrest until Alfonso's departure. But nothing has occurred to mar the pleasure of the royal visit. Thru the Queen-mother Spain has a special relation to the Austrian Court.—— The Austrian Government has issued repeated warnings against the emigration of its subjects to America, and particularly to Pennsylvania. It points out that reports received from the Austro-Hungarian Ambassador at Washington, Baron Hengelmuller, describe conditions in that State as still bad, and says that further dismissals of laborers may be expected.

Japanese Retrenchment

The Japanese Government, under Premier Katsura, has definitely announced its policy of retrenchment. It will borrow no money for ordinary expenses, but live within its income. The greatest difficulty in the Russo-Japanese War was the financial one; and yet after an expenditure of $850,000,000 the general financial condition was not disturbed, and even when peace was restored the nation had some financial reserves. This was undoubtedly due to the

self-sacrificing spirit displayed by the nation, showing that the financial resources of the empire were unexpectedly great. In past Japanese financial programs the actual revenue has been insufficient to meet the expenditures, and the shortage has been made up out of loans. As time went on, however, the flotation of loans became more and more difficult, and on coming into office again Katsura recognized that abolition of this cause of financial maladies was essential to any readjustment of the national finances. The prices of bonds fell largely, and the Government determined not to float any new loans. In view, too, of the approach of the date of issue of the railway bonds, the Government intends to adequately increase the sinking fund in order to raise the price of bonds by increasing the confidence in the nation's finances. The plan, then, is thus outlined:

"Expenditures will be met out of the actul revenues. The expenditure for the development of the telephones and iron works, together with the sums placed under extraordinary war expenditures, which have hitherto been met by loans, will be defrayed out of the ordinary revenue. No new loans will be issued for the time being, with the exception of the Formosan Industrial bonds.

"It proposes to increase the annual amount paid into the sinking fund to about $25,000,000 at the least. This will indirectly also favorably influence the general financial position in the empire.

"The railway accounts will be entirely separated from the general accounts, so that the two may not be mixed up together. With regard to the railway, also, no loans will be floated, the expenditure for necessary improvements and developments being met out of the railway revenue with the aid of curtailments of the general expenditure.

"The original financial scheme sanctioned by the Diet, which involved very heavy expenditure for the navy, etc., running over six years, has been extended into a ten years' program commencing in the next fiscal year, and the expenditure thus postponed reaches $100,000,000."

British Affairs

Even in Great Britain an alarm of war was started last week, with no great success, by the *National Review*, which published a long article, editorially endorsed, and which asserted that Germany had determined to make a sudden attack on Great Britain. It went so far as to publish the substance of a communication which Germany would send to the Powers explaining her attack. We quote:

"It is known that those who have their hands on national secrets that a German diplomatic circular to the Powers is already drafted, announcing that Germany has delivered her attack upon England unexpectedly and in time of peace because a responsible officer at the British Admiralty had intimated to all and sundry on innumerable occasions that England would deliver such an attack upon the German navy, and supporting the statement by the evidence of diplomatists and parties whose word cannot be hastily rejected."

This would appear to be too fantastic to be believed, as the excuse given is not plausible. The idea was that Germany must, if at all, attack Great Britain before she has constructed her new ships of war! While the British Government has abandoned the proposal to borrow half a billion dollars to hasten the construction of a fleet of monster battleships, the naval expenditures for the coming year will be greatly increased.——Lord Tweedmouth, the Lord President of the Council, has resigned on account of continued ill health, which has affected his mind. He was made First Lord of the Admiralty when the Liberals came into power in 1905. Early in this year a great sensation was created by the discovery that he had been corresponding with the Emperor of Germany on naval matters, and had talked about it. As a result, he resigned from the charge of the Admiralty to take the very dignified but unimportant post of President of the Council, with the reduction of salary from $22,500 to $10,000 a year. The progressing nervous disease is now given as a probable explanation of his indiscretion.——There was a flood of two-cent letters from England by the steamer "Lusitania," the first to take mail at the reduced rate. There were 95,000 letters at the new rate, against 46,700 sent by the "Lucania" the week before; but this means a loss of $435 in revenue.——Further evidence of the depression in British commerce and finance is given by the revenue returns from April 1 to September 30. The receipts for that period were $17,925,000 less than during the corresponding time last year. All items except two show a decline. It is figured that the year will result in a deficit of nearly $25,000,000.——Experiments in wireless telephony conducted for the Brit-

ish Admiralty by Dr. Lee De Forest have been quite successful, and communication has been carried on betweeen the Admiralty and the Channel fleeet. There has been some trouble from interference of wireless telegraphy, but the tests made with figures have been very satisfactory.

Foreign Items

French interest is still absorbed with the Wright aeroplane. Henri Farman's last attempt to beat Wilbur Wright's record for the prize of $1,000 offered by the Aero Club for the best record in September failed of success. After covering twenty-one and a quarter miles in thirty-five minutes an accident compelled him to stop, thus leaving Wright's thirty mile record unbroken. Lazare Weiler, who offered the prize of $100,000 to bring Wright to Paris, is satisfied that he will meet the conditions, and after an agreement with Wright has ordered the construction of fifty aeroplanes. There is a contract attached to the prize of $100,000 under which the syndicate has the sole right to construct the aeroplanes for France and the colonies. The conditions for the prize are that the American make two flights of fifty kilometers each in a moderate wind, the machine to carry two persons, or an equivalent weight, and sufficient gasoline for a flight of 200 kilometers. Immense crowds have gone to see Wilbur Wright's flights, and there has been so much disappointment when he did not inform the public if he did not intend to fly that hereafter announcement will be made.——An epidemic of bubonic plague is reported from Robat in Morocco.——There are daily reports of the decrease in the Russian cholera epidemic, but the new cases last week ran as high as two hundred a day, with half as many deaths. The cases are said to be lighter with the cooler weather. Great complaint has arisen as to the inability of the hospitals to care for the sick, as a result of which they have been discharged as soon as able to move, and have become sources of further infection, as it is proved that the comma bacillus of cholera remains in the discharges for two weeks after the patient seems recovered.——The Czarina has suffered a nervous breakdown arising from anxiety over her husband and children, and her health has not been improved by a long yachting cruise along the coast of Finland. The physicians desire her to spend the winter in the South, but she refuses to do so unless the Czar and the children accompany her, which is impracticable.——While the threatened strike in the Russian universities has been averted by an appeal from the faculty that they do not endanger their newly acquired liberties, the faculty and the Minister of Education have thought it best to close the St. Petersburg University to avoid conflicts between the liberal and the reactionary students. The matter is to be brought before the Duma, and an effort made to drive out the unpopular Minister of Education.——The unprecedented floods about Hyderabad in India have caused the death of 10,000 persons.——President Castro, who is reported very sick, has refused to receive from the German Minister at Caracas the second note on the troubles with the Netherlands. He declares that in the absence of the Minister of the Netherlands the German Minister is entitled only to watch over Holland's interests within Venezuela, and cannot act as an intermediary on diplomatic questions which require the sending of a special envoy. Holland has sent a second war vessel into the neighboring waters.——After long wandering the Dalai Lama, head of the Buddhist faith, who left Tibet on the British invasion four years ago, has reached Peking with a large retinue of his priests and servants and 800 camels and 400 ponies. The Chinese authorities had begged him to return to Lhassa, but he refused. Unwelcome as he was, he was received with the greatest honors and lodged in the Yellow Palace. The stories of the disgraceful orgies in which his retinue have indulged in their slow journey have disgusted the people.——The cholera has killed 30,000 natives in Hankau and a score of foreigners. Five hundred deaths from bubonic plague are reported from a city sixty miles northeast from Tientsin.——The treaty Powers have agreed to exclude morphine and injection needles from China, as these were taking the place of opium.

The Australian Welcome to the Fleet

BY W. R. CHARLTON

EDITOR OF "THE SYDNEY MAIL."

"I HOPE you are all enjoying yourselves," I said to a young American naval lieutenant. "Wal," he replied, screwing his half-smoked cigar atilt and smiling sweetly—"wal, I can't say we're cross about it." He was of French parentage and came from outside Washington. Our American guests have *not* been cross. Nor have we. It is doubtful whether Americans as a nation will ever fully comprehend the intense joyousness with which Australia the Sun"—to grasp the full meaning of an Australian whole-hearted welcome, and in the second place any American narrator is likely to be bewildered by the glint, sparkle and superficial passion of the hour.

One must be armed with a divining rod to locate and estimate the great hidden tides of national sentiment. There was more than surface enthusiasm, flag-waving, banner-flaunting, and post-prandial fireworks during "American

THE FLEET IN SYDNEY HARBOR.

Sydney is the capital of New South Wales. The fleet arrived on August 20th. Sydney claims that its harbor is the most beautiful in the world.

welcomed Rear-Admiral Sperry's fleet of sixteen battleships. In the first place, the American nation does not sufficiently know the Australians—the "Children of Week" in Sydney and Melbourne. Sydney, the capital of the mother-state of New South Wales, had the advantage of the first welcome in the Commonwealth.

Nor was the welcome that the Queen City gave the uprising of only the 600,000 citizens—the hand that was stretched out was the hand of all the peoples of the Commonwealth claiming, as one man, a hearty grip. And the grip was given and friendship was pledged. It was completely in keeping with the expectations, and hopes of Australia. It seems only a few days ago that Mr. Alfred Deakin, the gifted Prime Minister of the Commonwealth, was addressing a public meeting in Sydney when he was handed a "flimsy" bearing the words, "American fleet will visit Sydney and Melbourne." Mr. Deakin is an orator, a scholar, an emotional man. In fervid words and trembling with ecstatic passion he broke the news to his audience. It is not wise to go into details of the scene—the cheering, the applause, the "three times three" and "One for the President"—to give even a restrained description would look —too American! The public enthusiasm was boundless. And now the great event is over. Weighing expectations against the realization, Australia has but one sentiment to express. And it is this: "American Week supplies a dazzling chapter to the history of the Commonwealth." And more than merely dazzling—a hopeful, altogether satisfying chapter. In perhaps inelegant but expressive words, the events left a sweet taste in the mouth. America's naval ambassadors of peace and concord touring paradoxically on monsters of chaos and destruction, breathing soft phrases of international amity over the sleek, long tubes of 12-inch guns, performed their mission well. And the response of the Australians would almost suggest that they saw in the visit a tacit alliance between the Republic and the Commonwealth. Thus the fine frenzy rolled, and Australia is quite certain that the time will come when his-

THE FLEET ENTERING SYDNEY HEADS.

The cliff on the left is North Head. South Head, which is almost equally rugged and high, does not come within the compass of the view. The strip of water between the heads is only 1¼ miles wide. The passage of the great battleships thru this magnificent ocean gate was viewed by half a million people.

torians and novelists will invest with the richest romance the year that the United States of North America and the stripling Commonwealth joined hands within hearing of the booming rollers of the Pacific.

Mr. Deakin, altho for political reasons not well loved in Sydney, became a hero. His was the idea which had developed into this triumphant demonstration of good will. I have it from him as part of the unwritten history of the event that before Australia was alive to the possibility of the visit, he wrote to Mr. Whitelaw Reid and to Mr. Bryce urging them to support his request to the President. Be that as it may, the results have been amazing. Even Australians, who by reason of their public offices or journalistic experience thought they could always sound the depths of public feeling, were far out in their calculations. "God Save the King," "Rule, Britannia" and the rest of it, but I can safely say that not even George, Duke of York, now Prince of Wales, astride his mild-eyed chestnut or reclining luxuriously with his Princess in a cushioned carriage, was accorded a warmer welcome than was given the gallant officers and "Jackies" who own Old Glory for their flag. They found, we may hope, ideal hosts; for them it may be said, they were ideal guests. There is no need to enumerate the garden parties, balls, banquets and other festivals. At their best they reveal human nature in neutral tints. It is different when we turn to the multitude, to read from its faces the only story that is worth telling. It is a bright story of joyousness, sweet in its simplicity. For, let the New York political sheets and the London press say what they will, the Australian people gave a welcome unmixt with politics. It came straight from the heart. It is a crime against our hospitality to read

AN HISTORIC MEETING.
Rear-Admiral Sperry greeted by Vice-Admiral Poore, commanding the British squadron in Australasian seas. This event took place at Auckland.

Austral-American-Oriental politics between the lines of our illuminated addresses, or to suggest that there is a significant taint of taxed Boston tea in our

"STEP RIGHT ABOARD."
"Jackie" and a fair Australienne.

Australian minds. Not that we are blind to the political situation. But for the purposes of our welcome to the fleet we threw politics where the Boston tea went —into the sea.

The unexampled warmth of the welcome we gave our guests came from inherent and profound admiration of the American people. This was based on our recognition of the ability of the citizens of the Republic to do big things. It appeals to the competitive sporting spirit of Australians when they see their kinsmen over sea licking creation in all things, from Niagara to Burbank pippins. Our welcome did not mean that we were weary of the "yoke" of Great Britain and were anxious to ingratiate ourselves with the United States. The "yoke" which Britain imposes is a light one; were we in the confessional we would have to admit that we are wofully unfilial in our miserly contribution toward the upkeep of the navy which protects us. Certainly the entire squadron which the Admiralty grants us would not make a meal for the "Connecticut," the "Louisiana" or any other single battleship of the Sperry fleet.

But that signifies little or nothing. The British fleets are with us, and protect us, and preserve us as a people, altho they may be 12,000 miles away. If it ever should happen that the Pacific becomes the principal theater of internationalism, and that some other nation than Great Britain is to be the dominant influence, we want—until we are ready ourselves—that nation to be the United States of America. There is no mistake about that. But we are not speculating on it now, politically. It is delightful to us to say—whether it be delusion, half-

THE MASCOT.
The bears on the American battleships gave great entertainment to the Australian people. Several ships were presented with kangaroos, but of these only one survives.

truth or the truth-absolute—that the Americans are our kinsmen, blood of our blood, bone of our bone, and one with us in our ideals of the brotherhood of man; and—as with us—with dizzy hights to scale before those ideals are consummated.

We want now to meet Americans on the common ground of exchange and intercourse. Americans don't know

much about Australia. We allow that. We think they ought to know more, but we have the modesty to realize that the noise we have so far made in the world has not greatly imprest New York. We recognize that the onus of action rests on us. The President has helped us magnificently in our ambition. We are aware that to Americans our commonwealth of six states must seem as some faraway, undeveloped country, rambled over by kangaroos and hanging precariously over the edge of space. There

AL FRESCO LUNCH FOR THE "JACKIES."
Given to them on the foreshore of Sydney Harbor.

was a time when not much was thought of thirteen struggling States in North America. Now that nearly 90,000,000 American people, scattered over forty-six States, are kicking up more dust than any other white race on earth, they can surely afford to regard with sympathy and interest the upward struggle of four and a half million Australians.

But, hark ye, New York, we make no

appeal on a sentimental basis. Modern internationalism talks in dollars, not in platitudes. It talks in merchants' offices, not from a dais radiant with entwined flags and cooled by ferns and sub-tropical palms. It says that Australia has something to sell, and America has money with which to buy, and vice versa. The fleet has given to us a memory of a wonderful naval pageant, of well-bred, courtly officers, and sturdy young sailors. What better than that it should serve as an introduction to a commercial relation-

ship of advantage to both America and Australia? We have occasionally been perturbed by the probable fiction of an American-Germanic understanding involving the transfer of the Philippines to the European Power, but we cling to a belief that America and Australia have much in common in the Pacific, and that it needs only better knowledge of the destined greatness of the commonwealth

to cement a friendship such as the world has never known. We are watching the progress of the Panama Canal with as much interest as the commercial men of New York. You point out that you have so many billions of dollars at stake. My New York kinsman, we have the building of a nation at stake, and Panama is going to help us. Australians may be children of the sun, but they are not lotus-eaters, sitting on their golden beaches, waiting for visiting fleets to give them an excuse for national picnics. For 4,500,000 people, we have the biggest appetite for trade that the world's returns can show. I did not intend to quote figures, but I feel moved to slip in the fact that, altho Australia imports each year goods to the value of $223,000,000, only the odd $23,000,000 represent American manufactures or other productions. Is there no room for expansion there? Or is it your idea that Australia is peopled principally with "niggers"? No; the wretched aboriginal, with his nullah, his boomerang and his firestick is a curiosity that many Australian children have never seen and never will see. His bones are in the sands of the shore or in the sinuous hold of the far-extending roots of the bush trees.

Does Mr. Chauncey S. Peabody, of New York, languidly say: "Australia! Ah, yes; began with convicts, I believe." Yes, it is always an unpleasant reminder to us that we started in 1788 with two shiploads of convicts, as a result of the American colonies declining to take any more of the riff-raff of English jails. So the republic and the commonwealth toe the same mark there. And in any event, the convict system was so brief, and the influx of clean blood so great during the gold booms that we hope we are no worse off today than the countries that still receive hordes of criminals because they do not enjoy the glorious isolation of our far-flung commonwealth. That is one benefit of the 12,000 miles' gap between us and the congested centers of Europe. We have room to swing our arms. We have wide outlooks and vast spaces, where God comes near to us. We are, I truly believe, the happiest and the most generally educated (I do not say the best educated) people on earth. We also believe we have the ideal country for the family of medium means and of middle class habits. This is a land in which one can breathe freely. I have now before me two interesting letters. One is from Corinda Station (ranch), Queensland. This one cattle-run has an area of 1,803 square miles. The second is from a station where one can ride straight ahead for 130 miles without leaving one man's property. The average breadth is about 50 miles. Such facts may certainly suggest to American readers that closer settlement might be a good thing, but what I want to aptly illustrate is that the Australians, like the Americans, are inclined to do things on a big scale. They are not marked out for a narrow destiny. Altho the pet of Fate, in a country that has known none of the horrors of war, the Australian is the alert stamp of man who achieves something. Nor is he an exact reproduction of John Bull temperamentally. That cold, suspicious trait in the Englishman which prevents him from trusting any visitor to his little island until he has, by long experience of him, proved him worthy, has no place in the char-

SYDNEY TOWN HALL AT NIGHT.

acter of the Australian. It were better that this should be written by other than any Australian—notably by one of our recent guests—but it is true. The Englishman distrusts until he proves; the Australian takes a newcomer on trust, absolutely and with whole heart, from the jump, and gives him all the warmth of a generous nature until—or should we say unless?—he discovers that his trust has been misplaced. It is not that John Bull is so surly as his hostile critics are wont to declare. He is on a crowded high road in the heart of the hurly-burly, where saints and sinners mingle and cannot be picked out by their garb. The Australian, on the contrary, has all the freshness and the trust of youth. Perhaps that will explain the wonderful welcome that Australia gave the Atlantic—or is it now Pacific?—fleet. It was the greatest national picnic that Australia has known. It was the establishing of a new relationship without there being a suspicion of disloyalty to friendships already existing. It is probable that the trend of events in the future will show it to be of even greater significance than we of this generation suspect. Or there may be some sudden and dramatic swerve in the world's action that will relegate it to the category of minor picturesque events. Australia has large ambitions. Her hope is that Fate will smile kindly on the joined flags of the commonwealth and the great republic, and that time will prove that the friendship of the two countries is essential to the well-being of the world. Hail Columbia! Advance Australia!

SYDNEY, NEW SOUTH WALES.

The March to Yorktown

October 19, 1781

BY CHESTER FIRKINS

OVER the Hudson, southward ho!
Where do the northern armies go?
British of Clinton watch and wait,
Safe by their ships, at the harbor gate,
Wait for the battle that never comes;
Southward clatter the "rebel" drums.
Straight and swift as a great arm's blow,
Washington rides with Rochambeau.

Greene has sped, with his matchless men,
Winning the Carolinas again;
Lord Cornwallis at Yorktown lies,
(Girt by the sea, 'neath summer skies,)
Yorktown, where, like a hand of fate,
Lafayette guards the landward gate.
Camps of the South, they cry to know
Whither the northern armies go.

Down thru Trenton, where, one wild night,
River and foe he won in fight,
Washington rides—but why? but where?—
Tracing the line of the Delaware.
Philadelphia! Now, at last,
Flutters the tidings far and fast;
Over the land they know, they know
Whither the northern armies go!

Rattle of arms in the old town streets,
Blithe fife whistles and gay drum beats,
Music of doom, oh, Royal George!
These are the fellows of Valley Forge!
War-worn homespun and wound-scarred brow,
Halt they never for plaudits now;
(More than flowers fair ladies throw),
Onward, onward the armies go.

British of Yorktown wake too late;
Washington knocks at the landward gate;
Guns of the northmost Hudson speak
Now on the shores of the Chesapeake.
Out from the wreck of his crumbling walls
One brave sortie the Briton calls;
Backward he reels—a beaten foe—
Onward the northern armies go.

Over the land the glad news flies,
Over the earth a wild surprise;
Out of the North (oh, magic-shod,
March who fight by the will of God!)
Length of the land, an army hurled,
Strikes with a blow that thrills the world!
On, where the souls of glory go,
Washington rides with Rochambeau.

NEW YORK CITY.

Our Rural Slums

BY HERVEY WHITE

AUTHOR OF "DIFFERENCES," "QUICKSAND," ETC.

IT is well known among those who work or live in the poor districts of our great cities that the term "slum" is a very distasteful one and much resented by the inhabitants of the region to which it is applied. Indeed, many sympathetic settlement workers will never allow the word to pass their lips. It is slang. It is sensational. It is a reproach. There is a suggestion not only of poverty and squalor about the word, but also of vice and even crime. Whereas, our ordinary, so-called slum is acknowledged by those who have studied it to be quite as ambitious, and even surpassing in virtuousness many more favored quarters where wealth and luxury are displayed.

And yet the word has a significance. Otherwise it would not exist. And since it does exist, it is our modern method not to wince at it, but to take it up and herald it rather, as we shout all our disgraces from the housetops. It is advisedly, then, that I set the word in my title. And it is without apology to my friends who live in the condemned districts. "We are slums? Let us inquire into the reason. What is a slum? May it not be made a term of honor?"

As poverty, in its various aspects, has for many years been the chief subject of my observation, it was with deep interest and concern that I inquired into life and conditions during a short sojourn in the mountains of the Carolinas and a hasty tour thru Tennessee and the much benoveled Smokies. I was told, after I had decided to establish myself in our nearby and tiny group of the Catskills, that I would find back in the mountains much the same type of mountaineer as the Southern "cracker," only, of course, confined to smaller districts; and my finger was placed on the black blotch of illiteracy of the educational map of New York State, and I was supposed to experience the characteristic American shudder that determines us a republican and a free people when we behold that man who cannot read or write.

Now, the shudders I have experienced at what we read, and what we write, having nothing to do with the subject in hand, it is with a great effort of self-control that I refrain from leaping on to my hobby, and with couched pen and indignation in my breast, bearing mortal combat and confusion to the enemy. Let it suffice that I do refrain, however, and, walking at sober pace with the blotched educational map in my hand, let it be merely stated that I did settle in the Catskills, I did acquaint myself thoroly with my neighbors in question, and, finally, I taught school for fifteen months in the little red schoolhouses on the corners, thereby clinching the conclusions I had reached by driving into the very framework of their childhood.

As it had been my previous fortune to spend some years of work among the people of the poor districts of Chicago, it was but natural with this life in the mountains, that comparisons would keep coming to me, and it was not long before I found myself saying that, if those were slums, why these are slums also. That it is not crowded tenements and bad air that create the slum type. It is not ignorance, which is, I think, a result rather than a cause. Indeed, I might go so far as to guess that poverty itself is not a cause, but an accompaniment. Why is it that some elements of society are on the downward trend? Why is it that others are on the upward? Why do peoples migrate west, south, east? Is it possible for us to get at fundamental reasons?

It is, however, our modern socialistic mode to say that poverty causes the slums; and, for the present, let us be anything rather than be out of fashion. Poverty is the cause. It is accepted. A working hypothesis under one is such a comfort. Now we can sit down, rent a desk, and begin our magazine reform-writing well established.

Poverty being the cause of the slum condition, it is easy to find its results back in the mountains. The soil is sterile, yielding but a precarious livelihood. Houses must be small. Families must be large. Ventilation in winter is of the worst. Drainage, even in a mountain country, is but questionable. Food is scanty and ill prepared. Indigestion and

bad teeth are the consequent. The orchards yield hard cider for those men who must take to alcoholism as a relief. Overworked and overburdened wives take to scolding and hysteria. Parents scream to each other and to their children. The children can but answer with screaming. Slums—oh, yes, we have them in our mountains. We have them on the wide breadth of our prairies. The "renters," the day laborers in agriculture, may be slum bred as well as urban neighbors.

That curious little mechanism, the phonograph, has made the likeness of the two classes almost identical. The country songs and jokes are all turned slummy. It is grotesque, to put it but mildly, to hear that nasal metallic outrage from Fourteenth street accepted under the name of comic song—it is grotesque, it is uncanny with democracy, to hear it issuing from these mountainside dwellings; the slang, the jangle of the banjos, the blatant brawling of the latest "star" along the Bowery. The very babies catch up the refrain and sing in weazened phonographic voices. The children bring them to school with imagined dances. Or some child has been to the city on a visit and the cakewalk takes the place of folklore games.

But the children in the schools—there is my subject; the hopes I had of them in the beginning, the same sickening sense of failure in the end that I experienced in my years of city teaching. It is true, I did in time accomplish the law of obedience; enforced, be it said, with the ever-threatening tho sometimes hidden rod. It is true, also, that as months wore on I was rewarded with the spirit of enthusiasm and work—something unknown, I think, to every one of my pupils when I first entered. But it was at this point that my every effort failed when all should have been marching on to victory. For I was forced to admit in the end that the pupils were not capable of continued effort or the fervor that comes from healthy self advancement. Like their city slummy cousins, they had to have constant change, a new stimulus in some dramatic presentation. In other words, they had to be amused. It was the old cry here in the remoteness of the mountains, "Bread and circuses." There were slums, then, too, in Rome, you will remember. It is but the name and not the fact that changes.

My picture is lugubrious, pessimistic? The fault lies in my method of presentation, perhaps, rather than in the sum of my observation. Let us turn for a moment from the shadow and look at the same picture in the full sunshine, at noonday when all shadows minimize. It is well known, again, by those who are familiar with the poor districts, that there is no charity like that the poor show to the poor. All can tell of cases of a widow lending half of her last pail of coal to a suffering neighbor, where sharing what one has of necessities is the rule, instead of doling out from an undiminished superfluity. So we find the same law in our rural slums. The poorer people are, the more ready they are to share with others who are in need. It is not the well-to-do farmers from the valleys who give from their bank accounts to the needy. Their accepted excuse is, indeed, that their money is banked as soon as earned and they can not break into the interest. As if, with these valley church-going Christians, interest were treasure laid in Heaven; commanded by their Teacher instead of forbidden, so we twist and turn to argue for our greed.

An instance of this universal sharing was noticeable in the way my mountain children regarded their text books. It had only to be known that some boy had no book, that it was lost or torn, or that his father would not buy him one, when every book in the school was freely proffered. "He can use mine," or "He can sit with me," came from every quarter, no matter, even, if he soiled the book, or tore it. "It was made to use" was the careless, good-natured rejoinder. So it was with the paper, slates, and pencils. And it was the daily incident to see some pupil sharing pencils with two little boys who were known to be common thieves of pencils. "He stole all my pencils last week. Now he has traded them off or lost them. He has none to write with. Well, I have bought a new one. Let him take it. He does not know any better than to steal pencils. But, Sammy, mind you give me this one back."

Other faults and other failings were condoned. For example, there was one girl who had never known a father, but

who was never slighted by the others in work or play. Not but that the distinction was known and felt keenly by them all, for slums as much as any have their social caste. But, "it is not her fault," was the universal dictum. And, if, in a quarrel, the matter did sometimes burst forth, it was invariably made up afterward with tears and embraces and there was genuine humility for the hardness, and meek repentance and loyal pledges for the future.

With the poor, too, both of city and of country, we often meet with that perfect hospitality so rarely, if ever, found in bourgeois homes. It is: "Come in. Sit down. Draw up to the fire. John, move back so that our guest can sit closer. We are about to sup. Won't you take a place at the table? Mary, get a plate from the cupboard." A jug of cider is brought up from the cellar. It is all with a smile and a hospitable wave of the hand. "Stay over night with us. The storm outside is much too rough." This is treatment one still may meet with in the mountains.

As we sit, too, listening to the flood of talk and kindly interrogation, we may notice that the room is furnished in better taste than is met with in the favored farmhouses of the valley. It may partly be because the furniture is of the old fashion, which was in simpler, better lines than our modern factory vulgarities. But, we will also see that the things that are of necessity modern, the wall paper, the paint upon the wainscot, the print curtain that hangs to screen the cupboard, these are all in better taste than their rich neighbors. There is a harmony, a sense of relationship among them. They serve as an appropriate background for the household. An artist could not choose them better for a picture. Why is it that to read a little, and to write, to go to church, to own a little property one does not use, almost always implies to be a little vulgar? Is it a necessary step in social evolution? The stage of the new rich? Of the second generation of peasant immigrants? Should we still be hopeful and look to the hight of the development? Alas! we are in the toils again of speculation. Let us leave this sunshine picture of the poor and resuming our working hypothesis of poverty begetting slummery, climb into our chair once more before our desk and forge on with our magazine reform article.

I taught fifteen months in the rural schools of the Catskills. Nine of those months were spent in the school of which I have spoken. But the other six were in a school out toward the valley, comprising more the children of the well-to-do farmers, tho sprinkled as well with renters and day laborers.

Now, without exception, I found that the children of these civilized, church-going, economizing "usurers" were far in advance of the poorer denizens of the mountains. Their intellects were better, their methods were more organized, they could understand and appreciate the benefit of a year's task, working at it a little every day. They could love work, for its own sake, as well as for the promotion that it gave them. They were not constantly harrowed and drawn aside from their duties by petty quarrels about their games upon the playground. Their very games were superior from a standpoint of organization, tho they may not have been so picturesque, going in for baseball rather than for simpler old time folk games. The curse of the Fourteenth Street phonograph was not upon them. They had bright, cheery, well-washed faces. They were neatly dressed, in sweatshop clothes it is true, but sweatshop products still have sense of order. In the city their comparison would be found among the children of the well-to-do mechanics who live in some dreary endless suburb, tho where each one owns his little house and garden, or is trying to own it, or hoping so to do. Where the boys still have ambition for distinction and the girls pound hammer and tongs music from cheap pianos, and everything is properly prosaic and we sense the foundation walls of our republic; yes, of our society, of our civilization, forgetting in our superficial, artistic, petulant rating that foundations are necessarily less delicate than spires, turrets and the traceries of rose windows; than arch or column, capital or pediment.

It is difficult, is it not, to draw conclusions?

Even if one has a working hypothesis and a desk and a chair? It is difficult to remain seated in a chair.

I rise from mine in a hopeless conflict of rebellion.

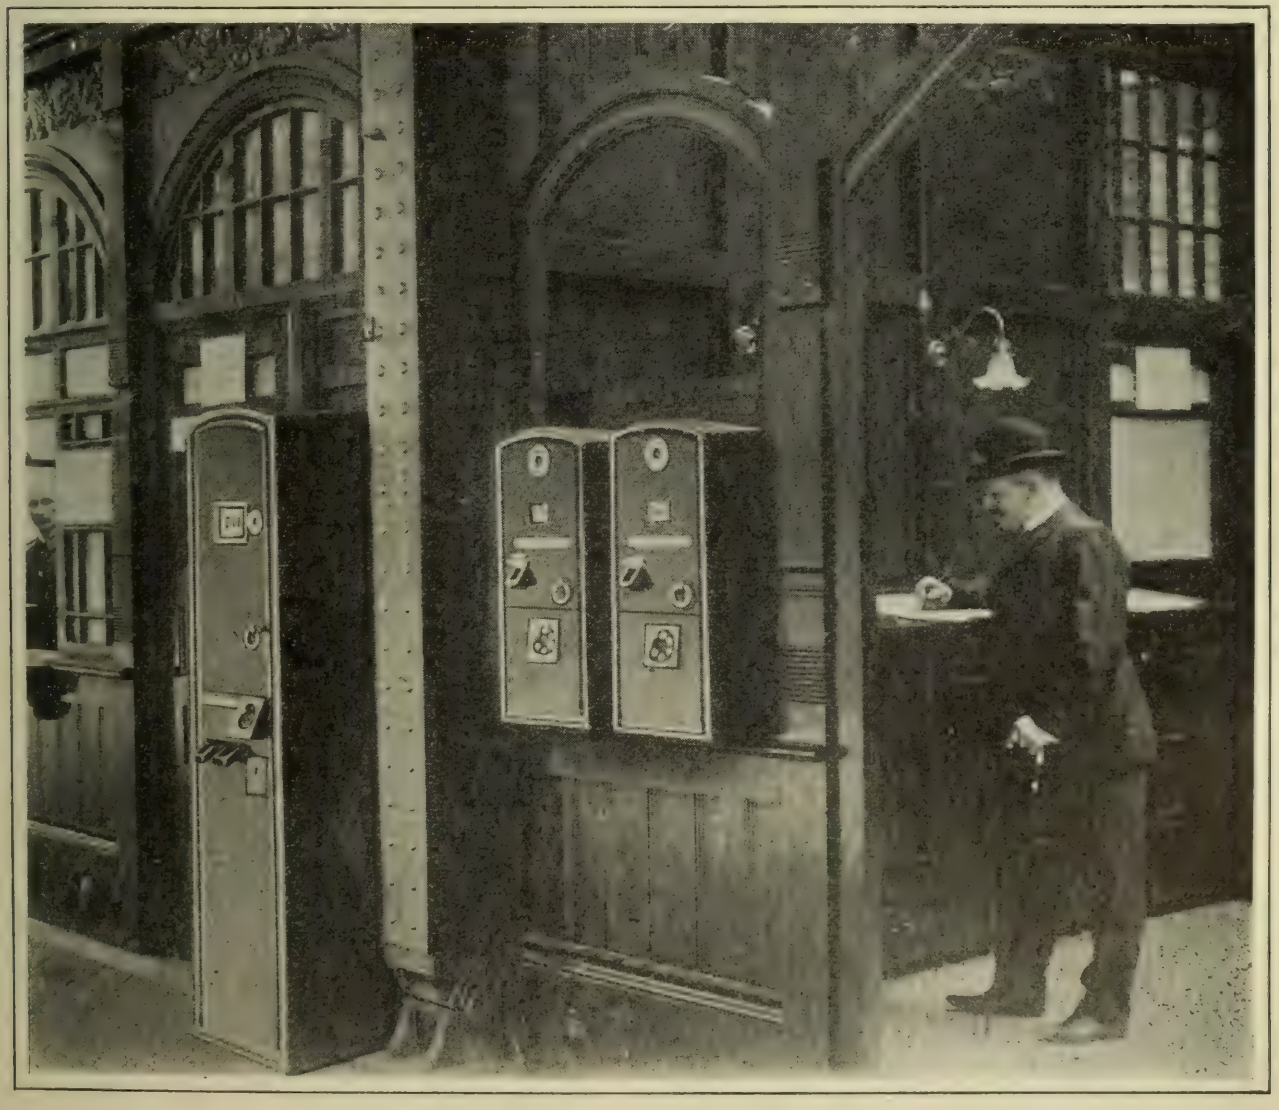
Novel Stamp Automatons

BY MAX A. R. BRÜNNER

MACHINES which sell stamps or tickets are by no means a novelty, but it is only recently that they have been introduced outside the country of their origin, Germany. In the latter country, as early as 1880, the first trials were made, encouraged by the Government; but, of course, the early designs were rather imperfect, and did not lead to a general introduction. With the future models several improvements were made, yet they required the co-operation of the buying public, who had to pull or push levers, etc.



THE FIRST STAMP AUTOMATON EVER USED.
Made in Germany twelve years ago, but erected in Paris.

The German engineer, Abel, was the first who built an apparatus which issued stamps alone thru the weight of the coin without any outside help. Eight years ago the first model of this type was built, followed by three others, of which the last, No. 4, is now being employed by practically every civilized nation. This machine, seen in the illustration, delivers one or more stamps immediately after a coin has been put into the slot. No ring or button is to be moved by the buyer. Thru an ingenious device counterfeit money is confiscated, while wrong but genuine coins are returned without disturbing the automaton. Behind a small window the last five coins are visible, which arrangement represents an effective money control. Another novelty is that an electric recorder indicates automatically when the stock of stamps or postal cards is exhausted. The indicator is generally placed in the nearest post office, from which at once a refilling may be accomplished. Probably the most important improvement is that the new automaton stores the stamps or tickets, not in piles arranged in vertical shafts, but in a long paper roll tightly wound up, from which one stamp after the other is torn off and sent down a chute. Thus the capacity is greatly increased, and 500 to 1,000 stamps or 8,000 tickets can be stored inside. As regards tickets, a great saving can be made by abolishing the usual ready cut tickets of cardboard.

After extensive trials the German postal authority closed a contract with Abel, the inventor, who has founded a company, thru which stamp automatons will be installed within the whole empire. After the foreign patents have been secured, nearly all other countries can introdue this time and labor saving German machine.

BERLIN, GERMANY.

TYPE OF 1905, WITH RINGS TO PULL.

Progress and Poverty in Japan

BY HENRY GEORGE, JR.

[Mr. George is the distinguished son of his distinguished father and has recently returned from Japan, where he acquired the information on which the following article is based.—EDITOR.]

SINCE returning from Japan I have many times been asked if the Emperor is the great man the things done in his name would appear to indicate.

The answer is that of the Emperor himself ordinary mortals are permitted directly to know very little. He is still, so far as mundane observation is concerned, a good deal of a celestial prince. Except on such occasions as the launching of a warship, the opening of a hospital, the reviewing of troops each 3d of November (his birthday), or the ceremonial audience to diplomatic representatives, His Imperial Highness keeps to the seclusion of his palace fortress in the moated heart of the capital city, which fortress, for the public, is as much a "forbidden interior" as was the ancient palace at the old capital, Kyoto, whence he issued nearly four decades ago to commence the Meiji era, or "reign of enlightenment."

But this is clear: That if the Emperor himself has not been an initiatory force, he has at least been a sanctioning one. Had he desired to return to the old order of unlimited monarchy, he could, in the beginning at least, have called to his standard a great mass of the plain people, those especially who tilled the soil, many of whom still devoutly regard him as the lineal descendant of that goddess who came out of the blue eastern sea whence rises the golden sun, and founded the island empire.

He has not only shown no inclination to do this, but he has held to the same personal counselors he chose just before and just after the revolution. Up to that time the throne was surrounded by the royal family and the higher nobility, who were known to the world as "the Friends of the Moon and the Guests of the Cloud." The young prince chose his personal counselors from among the young Japanese of the Samurai, or gentleman soldier class, who were believers in the new or foreign learning, and several of whom, like Ito, had had foreign travel and study. Four of these men still live. They are Marquis Ito, Marquis Yamagata, and Counts Matsukata and Inouye.

These men are popularly known as "the Elder Statesmen." They are not recognized as a body in the constitution, yet they are as real, as potent, as if they were actually a branch of it. They are a permanent cabinet of ministers to the sovereign. Parliamentary cabinets may rise and fall, but this higher Emperor's cabinet continues without interruption. It is a cabinet above a cabinet.

Of the Elder Statesmen, Ito is preeminent. He is undisputably the first statesman of Japan. He is father of the constitution, and has held several of the higher posts under the constitution during the formative period. such as the Premiership, Presidency of the Peers and Presidency of the Privy Council. He is now Resident Governor of Korea, and it may be certain that every advantage that can be obtained for Japan in that country will be acquired by this very able, astute, far-sighted, subtle, untiring statesman.

Yamagata is the father of the Japanese army. He originally studied in France, adopting the tactics with the uniform. Since then German ideas have had great influence, even to the "goose-step"—the lifting of the knees like a prancing horse when on parade. But the goose step has within the year been abolished, and with it much else that is peculiarly foreign, the Japanese working out ideas of their own. And that these ideas may, on the whole, be set down as advantgeous to Japanese conditions is proved by the great im-

provements this people have made in powders and weapons, and in the commissary and sanitary departments. They have in many marked respects beaten the foreigners in the use of their own instruments and methods of war.

Matsukata and Inouye have been the two leading figures in the finances of the empire. Besides holding the office of Finance Minister for twelve years, Matsukata was founder of the Bank of Japan, which institution is related to the Government as the Bank of England is to the English Government. Inouye has been Premier and Finance Minister, and has long been called "Guardian of the Treasury."

The power of these Elder Statesmen was greater in the beginning than it is now. Two other powers are rising from the bottom to dispute with it—that of money and that of the populace.

First as to money. By this I mean the concentration of wealth. In Japan today, as here with us, is seen the rise of the poor man to sudden great riches. Under the old *régime* the man who was merely rich was viewed with contempt by the military class. The banker was ranked lower than the farmer. But under the new order money has its aristocracy no less than blood and family, and I have seen titled patricians at the tables of rich commoners who but a generation ago would have cast off their sandals and bowed their heads to the mud on the roadside when the former passed.

As compared with our great private fortunes, those of Japan seem small, but then it must be remembered that the whole scale of things is different, the poor there being on a very much lower rung in the economic ladder than with us. And while the standard of living is rising in Japan even with the poor, the standard of riches is rising still faster and higher.

Count Okuma gave me two striking illustrations of this latter fact when I visited him at his beautiful villa residence at Waseda, one of the suburbs of Tokio. He instanced the Mitsui and the Iwasaki fortunes. For generations these families have been popularly regarded as the Astors and Vanderbilts of the island empire. Yet, when Count Okuma was for the first time Finance Minister, some thirty years ago, he had occasion to examine into the matter of private fortunes. He set the Mitsui and Iwasaki fortunes at two million yen each; that is to say, $1,000,000 of our money. The Count said that from the best information he has been able to obtain at this time these fortunes must approximate one hundred million yen, or $50,000,000. They have in thirty years increased fifty fold!

When I asked the nobleman what he thought were the factors of this growth he named four. One was "government favor," which took the form of tariff rates, bounties, subsidies and guarantees. Another was luck. He said that fortune had certainly favored Mitsui, Iwasaki and a number of others whom he could name. A third factor was ability. That these people had shown this he considered beyond dispute. Then he came to the fourth factor and greatest of them all. He called it "foresight," meaning the acquisition of public franchises and land speculation.

Mention the word "franchise" and you name a contentious word in the land of the rising sun. Not only does the Government own and operate the telegraphs and telephones, most of the steam railroads, and is buying all the other trunk lines on terms set forth in the private grants, but in Tokio, Osaka and Kobe fights are raging over the question of municipal or private ownership of electric tram, electric and gas lighting, and the supply of water. Mayor Ozaki, of Tokio, is a kind of Tom L. Johnson, and, like the latter, is trying to take the trolley system of the city into private hands under clear provisions in the franchise grants. But the corporations have succeeded in getting the matter snarled up in the courts, just as has been the case in Cleveland. The newspapers hotly engage in these fights, and, as a consequence, the public is shown the riches acquired by private possession.

Touching land speculation, even the casual observer can see it. For various reasons not necessary to go into here the cities of Japan have been growing very rapidly during the last two decades, at the expense of the country regions. Land values have been mounting accordingly. It is of common remark in Tokio, where the Iwasaki estate has bought up large sections in the neighborhood of the im-

perial palace and close to the great Government department buildings. Regions that a brief time ago were worth only a few yen (a yen is equivalent to fifty cents), or even a few sen (a sen is equal to half a cent), a tsubo (six feet square, the unit of area), are now worth five or ten and sometimes fifteen times as much today.

The fortunes built up in these several ways are having an increasing influence in politics, in promoting or retarding legislation, and in swaying courts. This is so well recognized that these rich men are called "the men behind the screen," meaning "the men who pull the wires."

The poor, on the other hand, are miserably poor. For instance, besides being not less than twenty-five years old, voters for members of Parliament must pay a direct property tax of not less than ten yen ($5) a year. Only 800,000 meet these conditions. That is, out of an adult male population of approximately 9,000,000, less than 9 per cent. are Parliamentary "franchise holders," as these voters are called there.

The late brilliant Lafcadio Hearn has in his "Interpretation" made the statement that "the number of poor people in Tokio unable to pay their annual residence tax is upward of 50,000; yet the amount of the tax is only about 20 sen" (10 cents of our money). I tried to verify this statement at the City Hall in Tokio, and talked with the mayor about it. He consulted two of his department heads, but could give no light, being mystified as to how Professor Hearn had arrived at such a conclusion.

Yet aside from proof by figures it is obvious to the foreign traveler that the poor of the cities and likewise of the rural regions are wretchedly poor, which the advancing standard of living with the spread of foreign civilization, the rise in rent and the increased price of clothing tend to intensify and reduce multitudes to, quoting Hearn, "forms of social misery never before known in the history of the race."

The most persistent disease in Japan is a poverty disease. It is the dread "beri-beri" of the Far East, or what in Japan is more generally called "kaki." Experiments in the navy, conducted by Baron Dr. Takaki, revealed the fact that kaki proceeds from too much carbohydrate and too little nitrogenous food. That is to say, thousands upon thousands are by poverty held down to a rice diet and do not get sufficient meat. Regulating the diet in the navy and army has practically eliminated this scourge there. But how can the poor of the nation generally choose any but the cheapest diet? Many esteem themselves fortunate who can get horse-flesh. I saw a number of shops in Tokio where both beef and horse-flesh were sold, and some where only the latter was to be had.

But if, with the advent of the multi-millionaire, the masses are eating the bread of poverty, the latter are having a great influence on public affairs. This has been shown signally in two instances recently. The first was at the time of the peace treaty with Russia. Not realizing the straitened financial condition of the Government, and with their eyes on the great war indemnity exacted by Germany of France in 1870, the masses of Japan exprest open dissatisfaction at the peace terms, which resulted in riotous outbreaks in many places. There was an overturn in the Cabinet, and because Marquis Ito, who was not in the Cabinet at the time, merely sanctioned what the others had done, his residence in Tokio was stoned, and a mob at Kobe, sweeping the military police aside, threw a rope around the neck of a bronze statue of the statesman standing in a public place, pulled it off its pedestal, and dragged it to the disreputable quarter of the city and left it, and no one has yet had the courage to try to put it back.

A more recent instance has arisen over the Pacific Coast racial troubles. This difficulty first took the form of exclusion of Japanese from the public schools in San Francisco. No matter what the ultimate explanation, this at once touched the Japanese on their most sensitive points—pride of nation and race. Those within governmental and commercial circles could and have restrained themselves, dreading friction with the United States for reasons which I will later recite. But the "man in the street," not having these restricting influences, has been sensitive to in-

sult and quick to cry out. Thru the cheap newspapers (a fraction of a cent a copy) his views have been presented with directness and vigor. They have demanded of the Government the reasons why a more aggressive, or at least more protective, policy has not been pursued toward America. So persistent and energetic has this demand been that on one occasion at least the Emperor (the Cabinet thinking it unwise to speak) has privately sent a request to Count Okuma, leader of the Progressive, or popular, party, to make a public statement, which, while not jarring to diplomatic relations, should set forth Japan's case with such clearness and force as to conciliate public opinion.

In brief, the great non-voting mass of Japan is waking up to an assertion of rights and privileges of which a few years ago little was even dreamt. The three chief agencies in this democratic movement are the cheap newspapers, the public schools and the army.

The newspapers were first modeled on the French idea, little news and much comment, and the comment of a personal kind. Even today many of the newspapers are printed on French presses, or on Japanese adaptations of French presses. But the American ideas of news and pictures are coming in, the latter being of three kinds—serious, comic and political cartoons. The papers are cheap to make, and there are many of them, insuring much competition. They speak straight out on public questions; indeed, with a candor and boldness that even to an American is astonishing, and this in face of rigorous libel laws that mean frequent fines and imprisonment. But the Japanese speech will out, and most papers have on their staffs a member who is known as the "Prison Editor." This individual earns his salary by going to prison when the too outspoken editorial policy of the publication brings imprisonment on the editorial head.

The public schools are co-extensive with the empire, and schooling, either there or in private institutions, is compulsory. The public schools are modeled on the American system, and by an American — Dr. David Murray. In Tokio and the larger cities English is a compulsory study, the only language outside of the native tongue that is. In these schools every boy is taught the rudiments of the new learning, and, despite all the copybook precepts about honoring the Emperor, the schoolbooks are instilling into the young minds the ideas of equality and democracy.

The girls, too, are going to these public schools, and this is an intellectual revolution in itself; for women under the old *régime* received little but domestice education, and were, as a consequence, the very bulwarks of conservatism, especially as to monarchy and religion. But the equality of girls with boys in the schools is planting the seed of democracy in the feminine mind.

As to religion, Buddhism is fading in the light of the new rationalism. This does not mean a corresponding spread of Christianity. Despite what our missionaries report, I could see no evidence of Christianity's ultimate triumph. If the missionary schools are more fully attended, it is chiefly because of the new learning they dispense. The course of spiritual thought is most likely to be back to a form of ancestor worship, which shall recognize a unity of nature, a universal Creator, and the good deeds of ancestors calling upon posterity for emulation.

Likewise the modern spelling book, geography and history are teaching the Japanese child that political institutions are not handed down from heaven, but are instituted among men, and the growth of the green shoots of equality will make rapid political changes in the realm of the Mikado, calling on turbulence and force if present political powers attempt repression.

The army in a country without a live spirit must always be an instrument of repression, but in Japan the soul of the people is awakened, and the army itself represents in large degree that awakening. For under the old *régime* all honor resided in the two swords of the Samurai or gentleman soldier class, just as in France before the Revolution it rested in the swords of the cavaliers. But just as the Revolution in the latter country put a musket in the hands of the common man and called upon him to fight for the preservation of his country

against her outside enemies, so compulsory enlistment has put a rifle in the hands of the commonest man in Japan, and he has in two wars been called upon to fight against the outside enemies of his native land. It has inspired in the bosom of this common man the old spirit of the Samurai—the code, the feeling, the calling of bushido; ancient Japanese chivalry and honor. And tho he feared physical pain and death as much as any man on earth, this newly kindled spirit in the common Japanese soldier and sailor was what brought forth the countless deeds of heroism, which most of the outside world foolishly ascribed to barbarous fanaticism.

The army of Japan is essentially a democratic institution, and it will move with the democratic movement. While there is in it something of the jingo spirit, this is offset by the general complaint of heavy taxes, which have come as a legacy of two wars, a fear of the mercantile class that it will disturb growing trade relations, and a realization of the financiers that another war means another foreign loan, and another foreign loan at present seems impossible, even with the Government steam railroads as collateral. The difficulty of a foreign loan would be augmented if the quarrel were with the United States, since that would mean a fight with a country having gigantic resources.

In such a conflict the English would almost certainly disappoint Japan, since the treaty between the two countries hangs on one word—"unprovoked." Japan must enter upon an "unprovoked" war, and since England herself must be judge of what constitutes an unprovoked war, she would doubtless elect not to participate, the ties of blood and trade making England a natural ally of the United States.

As to her fleet, Japan has added ships and has repaired her injured and captured vessels since the Russian war. But as a whole the fleet is small. Protecting her home harbors with mines and forts, the fleet might be sent to and capture the Philippines and the Hawaiian Islands, and, conducting a transport fleet, hold them for a time—until such time as her pocketbook gave out; for ships cannot be run, guns fired and men fed without money.

Japanese statesmen realize that and do not want war, no matter what the jingoes in or out of Japan say; while the Japanese people at large fear the imposition of fresh tax burdens.

As to Japanese territorial desires: they did extend to the Philippines, those islands being regarded as part of the Japanese archipelago; but the spirit of expansion has found an outlet westward, instead of southward. Emigration and trade are going into Korea and Manchuria, while the youth of both Korea and China are being received in thousands into the schools and workshops of Japan, and the task conceived by the land of the rising sun is not armed aggression against America or Europe, but the awakening of the yellow nations to the great cause of racial progress.

NEW YORK CITY.

HALL OF THE KNIGHTS, THE HAGUE, WHERE SECOND PEACE CONFERENCE WAS HELD.

The North Carolina Peace and Arbitration Congress

BY HAYNE DAVIS

[Mr. Hayne Davis is the author of the North Carolina peace program and founder of the Peace and Arbitration League. Tho elected its first president and requested to remain in this position by the directors, Mr. Davis felt it his duty to resign and to nominate Senator McCreary as his successor. President Roosevelt, in accepting the honorary presidency of the League, said to Mr. Davis: "I should be delighted to see Senator McCreary made president of the League if you do not feel you could continue in that office." As THE INDEPENDENT was the principal avenue thro which Mr. Davis has made his large and useful contributions to the literature of the Peace movement, we are glad to give to our readers this account of certain of the consequences that have come from Mr. Davis' activities, but without wishing it to be understood that we editorially endorse the North Carolina peace program. The editorial columns will state THE INDEPENDENT'S attitude on the issue.—EDITOR.]

THE North Carolina Peace and Arbitration Congress will take place at Greensboro, October 11th to 17th, during which time that progressive city will be celebrating its centennial.

The leading citizens of the city have associated themselves together as a centennial committee, purchased the great Jamestown Centennial Auditorium, removed it to Greensboro, and made all the other arrangements necessary to show due hospitality to the fifteen thousand or more dispersed North Carolinians who are expected to return to the Old North State from all parts of the United States, and thus make October, 1908, a North Carolina as well as a Greensboro centennial celebration.

Greensboro takes its name from General Nathanael Greene, of Revolutionary fame, and stands where Guildford Court House was located when North Carolina

was under the jurisdiction of George III. A notable battle was fought near Guildford Court House, and the centennial committee has arranged for a re-enactment of this battle, companies of North Carolina militia to represent the American forces, and United States troops to represent the British forces.

The soldiers who take part in and the people who witness this spectacle will attend, on the same day, a session of the peace congress, and hear addresses made by the most eminent authorities of America on armament and arbitration as correlative agencies for national security and for international peace and justice.

The North Carolina Peace Congress, as was recently said by Senator James B. McCreary, will be the first peace congress in America on whose platform the advocates of adequate armament and effective arbitration will be *welcomed* as mutually helpful and necessary co-workers in the cause of peace and justice. At this peace congress, for the first time in the history of the peace movement, the people will be privileged to hear, as advocates of peace, the men who stand ready upon the nation's call to go into the dangers of war, and none of the advocates of peace will show more zeal for or a more intelligent understanding of the things that pertain to peace than these same men of the armed forces.

In another particular the North Carolina Congress is the first of its kind. It is the first in a series of State peace congresses to be held in different parts of the country, between now and the Third Hague Conference, in order:

(1) To unite the people of America upon the progressive proposals approved by the Second Hague Conference.

(2) To concentrate thought upon those ideas that need to be popularized prior to the Third Hague Conference.

(3) To discover the true relation between arbitration and armament, so that national security will always exist, thru adequate armament, until a reliable system of arbitration furnishes an effective substitute.

As the North Carolina Congress is the opening gun in a national campaign to be carried on without cessation until the Third Hague Conference, and for the foregoing purposes, this congress is an event in the world's peace movement, not of local, but of national interest and importance.

At its meeting on Washington's Birthday this year, the North Carolina Peace Society adopted a compound program for peace, namely:

"Adequate armament and effective arbitration as correlative agencies for national security and for international peace and justice.

"Adequate armament necessitating an unquestionably superior power in our territory and in the waters adjacent to our possessions in the Atlantic and Pacific oceans.

"Effective arbitration, necessitating agreements between all nations to respect each other's territory and sovereignty therein, and to arbitrate all other questions."

As soon as the officers of the North Carolina Peace Society decided to present this program to the society, the leading business men of Wilmington, the headquarters of the society, came out in support of them and of this program. A special meeting of the Chamber of Commerce was called to consider the matter. The North Carolina Peace Congress was then being organized by officers of the peace society, under a resolution favoring such action, adopted by a unanimous vote of the North Carolina delegation in the United States Congress, at a meeting called for that purpose at the capital on January 7th, 1908.

The Wilmington Chamber of Commerce unanimously endorsed the peace program outlined above, authorized the president to appoint delegates to represent the chamber at the peace congress, and voted an appropriation in aid of the congress.

When President Roosevelt saw the newspaper account of the action taken by the North Carolina Peace Society and the Wilmington Chamber of Commerce, he expressed great pleasure and requested that the author of the program call upon him at the White House. In consequence of this request, a delegation of North Carolinians called upon the President and formally requested his assistance, both at the North Carolina Peace Congress and in all possible ways, for the effectuation of this program. The President enthusiastically approved the program in its entirety, and promised

publicly his hearty co-operation in support of it.

The President's promise, and also an accurate statement of the North Carolina program, were broadcasted thruout the country by the Associated Press, and were carried to the masses of the people by America's wideawake newspapers, on the morning of April 3d, 1908.

Since making this promise, President Roosevelt has accepted the honorary presidency of "The Peace and Arbitration League," a national society organized to advocate the North Carolina peace program. When this fact was published in the European newspapers, some of the leading papers, notably those of London, cabled for fuller reports. Thus the full text of the North Carolina peace program, of President Roosevelt's letter endorsing it and accepting the honorary presidency of the League for its effectuation, and Senator McCreary's estimate of the importance of these things, were published all over America and widely in Europe.

Meanwhile the work of organizing the North Carolina Peace Congress went on. The Raleigh Chamber of Commerce approved a resolution similar to that adopted at Wilmington. So did the boards of aldermen of Greensboro, Durham, Wilmington and Raleigh. The mayors of these cities and of Winston-Salem, Charlotte and Asheville, the only other large cities in the State, accepted membership on the municipal committee. All the North Carolina members of Congress had accepted membership on the legislative committee in January. The Lieut. Governor and the Speaker of the North Carolina House of Representatives did likewise after the adoption of the program outlined herein. Twenty of the most eminent educators of the State compose the educational committee, among whom may be mentioned the presidents of the State University, of the State Normal College, of the North Carolina College of Agriculture and Mechanic Arts, of Wake Forest College (Baptist), of Trinity College (Methodist), the Superintendent of Public Instruction, etc.

The same free spirit in rendering assistance has characterized the leading men in other walks of life, and when fully organized, the North Carolina congress will contain committees similar and equal to those constituted for the National Peace Congress, held at New York in 1907, to whose representative character the phenomenal success of that congress was largely due. The honorary presidents of the congress are:

George Dewey, Admiral United States Navy.

James E. Boyd, United States District Judge.

Jeter C. Pritchard, United States Circuit Judge.

F. M. Simmons, Member United States Senate.

Lee S. Overman, Member United States Senate.

Walter Clark, Chief Justice of North Carolina.

The president is Hon. Charles B. Aycock, formerly Governor of North Carolina. President Roosevelt tendered Governor Aycock a position on the American delegation to the recent Pan-American Conference.

The most eminent people in the arbitration and peace movement will make addresses. Each person will speak on that phase of the movement which he understands best. The various subjects assigned to or chosen by the speakers will include all the important phases of our present international problem. Therefore, the addresses taken altogether will constitute one harmonious whole.

Senator James B. McCreary will speak on "The Possibilities of the Pan-American Union." This union grew out of Senator McCreary's motion, made in Congress twenty years ago, authorizing the President of the United States to invite all American nations to a conference at Washington to consider ways and means of improving American commercial relations, and of inaugurating international arbitration in place of war as the best method of settling international disputes.

Speaking to the delegates sent to that conference by all the American nations, Senator McCreary said:

"All will be blest if the Conference, by wise provisions, leads up to the establishment of the great progressive principle of civilization —arbitration for the settlement of international disputes."

Dr. John Franklin Crowell, associate editor of the *Wall Street Journal*, and formerly the president of Trinity College

(North Carolina), will speak on "The Economic Salvation of the Nations."

Hon. Richmond P. Hobson, of Alabama, will speak on "Armament and Arbitration in Relation to State Rights."

Mrs. Lizzie George Henderson, of Mississippi, formerly president-general of the United Daughters of the Confederacy, has been especially commissioned to speak as the representative of that powerful organization of Southern women on "Peace from the Point of View of the Daughters of the Confederacy."

Among the other speakers are Mrs. Donald McLean, of New York, president-general of the Daughters of the American Revolution; President W. S. Poteat, of Wake Forest College; Senator Robert L. Taylor, Hon. John Sharp Williams, Senator Lee S. Overman.

Peace propaganda has two purposes: To affect public opinion and to influence the opinion and action of public officials in a position to promote effectually the ideas advocated by the peace societies. The Peace and Arbitration League is assisting the North Carolina Peace Congress financially and otherwise, and intends to initiate and assist similar congresses in other parts of the country at opportune times.

As soon as the proper public sentiment is created, the things necessary for our protection, progress and peace will be done. Hence the imperative duty, to ourselves and to our brethren of all countries, to aid wherever possible in this work, provided, of course, it is being undertaken along lines which seem to us both desirable and practical.

In his letter accepting the honorary presidency of the Peace and Arbitration League President Roosevelt says:

"I am in receipt of your letter of the 30th instant, enclosing notice of my election as first honorary president of the Peace League, and gladly accept; *for I most emphatically believe that the whole American people should subscribe to what you call your 'practical program for peace.'*"

In his address to the North Carolina delegation at Washington the President said, among other things:

"The North Carolina Peace Society is to be congratulated on its position, and should be supported by all good citizens in this effort for the general welfare; and great credit is due to the State of North Carolina for this action.

"The entire nation and the cause of peace and justice throughout the world benefit by this new departure in promoting the general peace movement.

"The approaching congress will certainly concentrate the thought of our people upon the fact that adequate armament necessitates an unquestionably superior naval power in the waters adjacent to our possessions, and that effective arbitration necessitates agreements between all the Powers to respect each other's territory and sovereignty in said territory and to arbitrate all other questions. The acceptance of these facts as axiomatic must speed the day when our country will be so armed as to minimize the chance of wars that are invited by national weakness; while the establishment of an effective system of international arbitration will greatly diminish the chances of conflict among nations of approximately equal strength. . . .

"I desire to thank you for this opportunity to support a genuine peace society in its efforts for international arbitration, for peace societies merely jeopardize the national welfare, and are profoundly hostile to American national life, if they obstruct the Government in providing ample military and naval power to meet conditions in the actual world of today."

The good things made possible by this action of President Roosevelt and of the other public men who have already joined with him on this platform cannot be accomplished until the people, in whose interest it is all undertaken, awake to the importance of rendering proper assistance and support. Who will come to the support of those who have taken this advanced stand, and by doing so aid in pushing the car of progress along these safe lines toward peace that is permanent, as permanent as human agencies can secure?

The readers of THE INDEPENDENT have been of such assistance to me in the services I have been able to render heretofore in promoting this good endeavor that I find a peculiar pleasure in being able to report to them this practical plan for mutual co-operation, among all those so disposed, in favor of the things that pertain to the peace that governments can give, the best peace the people can enjoy without that knowledge of God which alone can give the peace that passeth human understanding. Such peace is a divine, not a human possession. It coexists with the understanding of Truth, and while the knowledge remains with any one its peace cannot leave them or be taken from them.

Socialism Among Bees

BY GASTON BONNIER

[The author of the following article was born in Paris in 1853. In 1873 he entered the celebrated State Superior Normal School at the French capital, where, a few years later, he became an assistant professor. In 1887 he became professor of botany at the University of Paris. In 1889 he founded at Fontainebleau the special laboratory of vegetable biology, which is attached to the Sorbonne. Professor Bonnier is a member of the Institute of France, one of the greatest of living European botanists, and the son-in-law of the veteran French botanist, Professor Van Tieghem, of the Paris School of Natural History.—EDITOR.]

THERE is much talk nowadays about Collectivism, but our human institutions furnish no good example where this form of socialism can be well studied. Among the bees, however, we find an excellent opportunity to examine this curious organization in all its various ramifications. I propose, therefore, to invite the reader to observe with me the thoughts, acts and labors of these wonderful little creatures. Most of what I will say consists of experiments made with them, but my article will probably not be less interesting on this account.

Many bee-keepers hold that a great noise must be made if you are to get a swarm of bees to fix themselves on the branch of a tree. But this is all nonsense, for the hearing capacity of bees is very slightly developed. They perceive sounds only when produced at a very slight distance. Thus, I one day put a music box in the empty part of a beehive, but the busy little insects did not pay the slightest attention to the airs of "Rigoletto" or "Orphée," but kept right on with their work. I have even heard it said that a bee-keeper who served in the artillery during the war of 1870-71 noticed that when a French battery went into action near a group of beehives the bees were not at all disturbed by the heavy cannonading.

PROFESSOR BONNIER.

Another mistake about bees is conveyed by the term queen bee. This leads some people to imagine that the insects live under a monarchy. But this idea is dissipated when we remember that the queen bee exerts no authority in the hive, where she is only a mother and even a slave. Another error is that the wax from which the bees make their honeycombs comes from pollen. It is true that wax is yellow and so is pollen. But the similitude stops here, for Dumas and Milne-Edwards have proved that bees could make wax if they never touched any pollen. These and other current mistakes concerning bees are my excuse for trying to explain to your readers the real nature of one of these colonies, presenting the subject just as if my readers knew nothing about it, which may, in fact, be the case in some instances.

Well, a colony of bees is made up of a single mother, who, without rhyme or

reason, is called popularly the queen; of from 10,000 to 100,000 workers, who are sterile female bees, and of from 500 to 3,000 drones or male bees. The only occupation of the mother is the laying of eggs, and during a good season she manages to lay some days as many as 4,000! The workers do all the labors performed in the colony. The drones do next to nothing, tho they sometimes act as assistant hatchers, and one of them, but only one, becomes every four or five years the husband of a queen. It is evident, therefore, that woman plays a very important part in these bee communities.

Hard labor is another characteristic of apian society. Tho the life of a worker lasts but from forty-five to sixty days, she leads a most strenuous existence during that short period. She is on the go night and day, taking neither rest nor sleep, caring neither for the three eights nor for Sunday! From the cradle to the grave these workers toil for the common welfare. The newborn worker is at first too feeble to go out of the hive, but is immediately given a task at home. She acts as a dry nurse, and prepares the paste made by mixing honey, pollen and water, which she feeds with her mouth to the larvæ. Later, she is utilized in making wax, building new cells or repairing the old ones.

This cell making is an interesting process. The wax used is formed in glands situated in the abdomen of the bee. It comes forth in slabs which the bee holds between her legs, whence it is transferred to the mouth, where it is transformed into little pellets with which the cells are made. When a new set of cells is to be made, a body of workers group themselves together, and, little by little, form a sheet of wax inside the hive. Next, the bees form a chain by hanging on to one another by their legs, keeping at exact distances one from the other; and then they begin marking out the new cells with wonderful regularity. The sides of these hexagonal cells are of exactly the same size, and this precision is so great that Réaumur once proposed that it be adopted as a unit of measure in a system similar to the metric system.

In all this we see a notable example of labor in common and labor that is perfectly well organized, without one of the workers appearing to be superior to the others, tho they seem to be carrying out a general order given them. There is a strong touch of socialism in all this, it strikes me.

But to return to the new-born workers. They are more than two weeks old before they leave the hive for the first time, and even then they do not venture far away, and do not yet begin to gather honey. They simply fly about the entrance with their heads turned toward the hive, as if learning to recognize it from a distance, gradually moving further and further away. Thus, you often see numbers of these young bees circling round and round a hive, while the old workers fly back and forth thru the circle without paying any attention to them. When the young bee has got the picture of her own hive indelibly fixt in her head, knows its direction from every point, and feels sure of not coming back into the wrong hive, then she is considered to be in a state to work seriously.

The remarkable intelligence of bees in knowing their way back home is shown by a custom among the Indians. They discover a wild beehive in this fashion. They catch a bee which has lighted on a flower, and having carried it some little distance, let it go, carefully observing the direction which it takes. A little further on they repeat the same thing with another bee, when they are sure to find the hive at the point of the angle formed by the two courses taken by the bees; for it is well known that a bee always returns to its hive by the straightest line. Hence the phrase "a bee line."

But, as I have already said, the life of a worker is exceedingly wearing. She cannot keep it up for a very long time. When the bee has grown too old, which fact can be perceived by its splintered wings and the loss of its hairs, the gathering of honey has to be given up. But this does not mean that she is no longer a useful member of society, for she can still serve as a hatcher, which is the case up to the time of her death. And when the moment for dissolution comes, the poor worker leaves the hive for the last time to die outside, well knowing that unless she left of her own accord, she would simply be killed by the younger and stronger members of society, who

feel that those who can no longer labor must be got out of the way. In fact, this Spartan practice is carried so far that a worker who returns to the hive in a maimed condition or in any way unfitted for the common labor is immediately dispatched as a worthless member of society.

Let us now examine the life of bees outside of the hive and see what their different occupations are. In the first place, it is to be noted that on the very threshold of the hive is stationed a guard of workers whose special duty it is to watch over the entrance. Thus, every home-coming worker is stopt and smelt before being allowed to pass into the hive; for each hive has its peculiar odor, a subtile smell which the human olfactory cannot perceive, but which these workers easily catch. This fact can be proved by the following experiment: If you try to unite two hives in one and do not take the necessary precautionary measures to destroy these distinctive odors, your effort will meet with disaster. The workers immediately perceive that they do not all belong to the same hive, and a battle royal ensues, resulting in the death of many of the ordinary bees and the two queens besides. But if before putting the two hives together you pour into each one separately some attar of mint, for instance, so that the bees of the two hives have the some odor, then they imagine that they are of the same hive, and will henceforth work together harmoniously.

There is a touch of shrewdness in these guardians of the doorway which should be pointed out, it is so human. At the hight of the honey season they will let pass even a stranger bee provided she is well ladened with sweets, and henceforth the newcomer belongs to her adopted hive.

These guards also defend the hive against any foreign enemy. Thus, if a wasp appears at the door, they will boldly attack him and chase him away. If the intruder should be a large hornet, one or two of the guards hurry inside the hive and call for aid from a body on duty there for this very purpose, and, thus strengthened, the hornet is bundled off in a jiffy. If the hive is in the neighborhood of a new potato field, the bees may have to deal with that terrible enemy, the sphinx atropos, or skull sphinx, this name being given to this butterfly because of the skull-like ornaments on its body. This potato insect is much dreaded by the bees, for in a single raid on their hive it can carry off as much as sixty grams of honey; but as its body is covered with a coat of mail, the sting of the poor bees can produce no effect. So when this disaster befalls a hive, the bees call a council, and, as their stock of honey is rapidly disappearing, they finally decide, after a deliberation which sometimes extends over several days, to diminish the width of the entrance to the hive. So the body of workers is forthwith dispatched to fetch paste made from the gum of the buds of alder, poplar or pine trees, with which the door is so fenced round that, tho the bees and even a bumblebee may enter, this larger skull sphinx is effectually shut out.

Some people hold that these guards do no thinking, that they are governed simply by reflex action, and will attack anything that moves rapidly. But I have found by experiment that they distinguish perfectly well an enemy from an inert body. Thus, they will pay no attention to a dead leaf blown toward them by the wind nor to a dead wasp, whose wings I had spread out as if he were alive and then swayed before the entrance to the hive at the end of a wire.

But these guards at the entrance are not the only stay-at-home laborers who are doing good work and are kept busy. There is another body, who may be called the house cleaners. You see them, especially in the morning hours, hastening in and out of the hive carrying away all kinds of rubbish, such as dead bees, the bodies of deformed larvæ, etc. Their assigned duty is evidently to keep the hive tidy. Here, again, it is not irritability or reflex action which explains what we have seen. This I have proved by the following rather curious experiment. I tied with bits of string honeycomb in such a way as to fill the whole frame of the hive. In a few days I found that the bees had joined together all these separate pieces and formed of the cells one united comb. But strings are never seen in honeycombs. So the council decided that these extraneous strings must be done away with, and

immediately sent a squad of workers to carry out this order. But as bees cannot pierce even the chalice of a flower, they are of course incapable of cutting a string. However, they tug away at it, and, after gnawing and pulling at it for many hours and sometimes during several days, they manage to get a string loose. When it falls to the bottom of the hive, five or six workers push and pull it thru the door and lay it parallel to the edge of the board on which the hive is placed. They then place themselves at equal distances along the string, seize it and fly off with it all together, without there appearing to be any "boss" among them giving an order. A few feet from the hive they let it fall to the ground, all letting go of it at the same moment, again without any order seeming to be given. They then return to the hive to go thru the same operation with the remaining pieces of string. Simple reflex action cannot explain this. There must be collective reasoning.

Other interesting things can be seen at the door of a beehive. If the harvest of honey is large, you will perceive a long file of bees, one close behind the other, with their heads turned toward the entrance, and all looking as tho they had lost their wings. But the wings are there all right, only they are being moved with such rapidity that you do not see them. The fact is that these workers have transformed themselves for the nonce into ventilators! The file extends far into the hive, and is really pumping out the air by this movement of their wings, with the result that this continual draft evaporates the water in the nectar or sweet substance brought home by the bees, this water being 75 per cent. of the whole, whereas the honey which is to be put into the cells must contain but 25 per cent. of moisture. Consequently, the difference between these two degrees of moisture must be removed, and that by the only aperture in the whole hive, the low door where these tireless little insects are making this artificial draft. The whole is planned with such foresight that Georges de Layens has shown that the larger the amount of honey brought home, the larger the number of ventilating bees!

But it should be noted that intelligence in bees is never individual; it is always collective, which is not true, however, in the case of all insects. For instance, if a fly is put under a glass where are water and preserves, it will taste the latter and evidently eat it with relish, and then, becoming thirsty, will go and drink some of the water, and continue in this wise until the food is all eaten up. But not so with a bee. Put it under the same glass with some honey, pollen and water, and you will find that in almost every case the insect does not take the slightest notice of the food and dies in a futile attempt to escape from its prison. It is evident, therefore, that this isolated bee can do nothing by herself. She must be associated with the members of her society to display the wonderful intelligence of which I have already given several examples.

Nectar and pollen are not the only substances sought by the workers. Water is also a very important element in the economy of the hive. When the nectar brought in by the workers—it contains a large proportion of water—is not in quantities sufficient to supply the larvæ with this necessary liquid, then you will see the workers go forth to pump up water on the banks of the streams or from the leaves of aquatic plants. Sometimes thoughtful bee-keepers put corks in the ponds near the hives for the insects to light upon, to make it easier for them to get water. In this connection, we may again remark the remarkable decisions of the governing committee of a hive. It is not any bee who is sent for water, but a particularly designated one, who gets water and nothing else. Georges de Layens has further noted that the number of these water-seeking bees is invariably proportional to the daily harvest of nectar. The less of this moist nectar gathered, the more water is needed to dilute the food prepared for the larvæ, and consequently the number of bees sent forth for this purpose is larger.

Let us now glance for a moment at the way in which the outside work is organized. In the first place, some bees are sent out before sunrise to inspect the country round about the hive and to return with a report as to any new flower which has blown or any new field rich

in honey flowers. You can recognize these hunters or searchers by the peculiar noise of their wings and by the apparently aimless way in which they wander about. When their report is made, a swarm of workers is sent out in accordance with this report.

These outdoor workers seem to be especially guided by their feelers, and if a feeler is lost or hurt, this bee no longer takes part in harvesting. That they make this use of their feelers may be proved in this way: If you put a flower and a bee in front of a three-faced mirror, the latter will always go right to the real flower and not to any one of the reflections of it in the glasses.

It is astonishing how bees obey the order of the ruling committee. Thus, if you move a hive in the middle of the day, when most of the workers are away, they will return to the exact spot where the hive was and will not go to the hive, which may be but a few feet away. But a more remarkable example of their blind obedience is revealed by this experiment: If you put some jam in the corner of the garden, the bees will discover it and come there. If you take it away, they will continue to come there for some days, tho not the slightest trace of the sweet be there. They had been ordered to go there, and until the order has been countermanded, on the report of a searcher, they will continue to go there. Here is another experiment on this same line: In the pond in my garden are many water plants. During the driest part of summer, when, consequently, the honey harvest was at its lowest and the bees came in the greatest number to the pond, lighting on the plants and pumping water, I would put drops of syrup and even honey on the leaves. This I would do toward midday, so that the morning searchers could not discover it. The bees would settle on these leaves, pump up water, but would not touch the honey. They had been sent for water and not for honey, so they never dreamed of acting contrary to orders. You obtain the same results if you do the opposite thing. If you put some water near where the bees are gathering honey, they will not touch the liquid, tho there is a crying need at the hive for water for the larvæ. There is a change only when the searchers have discovered the water, reported the fact to the council, and the council has given the necessary order.

Here is an experiment which is still more characteristic of the collectivistic spirit of the hive. I have often placed pieces of sugar in a dark spot, accessible to bees but far from any flower or other sweet substance. After some time the searchers finally discover it, perceive that it is sweet, but also find that they cannot break it up or carry it away. It is too heavy for bees. I mark these bees with a colored powder. I perceive that they return to the hive, report and soon come back to the sugar with other workers. But the latter do not arrive direct from the hive. They come by way of the pond, where they have been engaged in pumping water, which they sprinkle on the sugar and then wait till a syrup is formed, pumping it up when it is sweet enough. From this moment on their journey is divided into three parts—from the hive to the pond, from the pond to the sugar, and then back direct to the hive.

The following experiment goes to prove yet more surely the existence of the reasoning faculty in the famous head council. I put some drops of syrup on some leaves one afternoon, but as the bees took no notice of it, I made a path of syrup from the nearest flower to the drops on the leaves. A bee followed the path and found the syrup. Taking it for nectar, she pumped it up. I seized the occasion to mark the insect with a colored powder mixed with talcum to render it adhesive. The bee returned to the hive and came back accompanied by other bees, which I also marked in the same manner. I soon noticed that it was always the same bees who came back. I now used honey instead of syrup. At first all went on as before. But after some time I was astonished to see a swarm of more than a thousand bees arrive in a state of fury, so that I was forced to get my mask and gloves in order to be able to continue to watch events. The enraged insects were flying in every direction. Some flew into the cellar. They seemed to be hunting for some one or some thing which they could not find. After keeping up this commotion for three-quarters of an hour they returned to the hive and all was calm

again. What had happened and what was the cause of all this trouble? I got the answer from another experiment made later on, when I closely watched the hive. Here it is. Bees easily distinguish between syrup and honey by the different smell. So when the colony saw its workers bringing home foreign honey they supposed that this honey came from an orphan hive or from a hive in a bad condition. The colony then decided to make war on this feebler hive, and this war signal, well known to bee-keepers, having been given, a swarm of workers rushed out to battle with the enemy. As I had not replaced the honey which the first bees took away, the newcomers did not find anything at the spots signaled, and so, after looking about in vain for the enemy, they returned quietly to their own hive.

I should add that these experiments, like all biological experiments, cannot always be repeated successfully at any time, for the decision which the colony may arrive at not only depends on the conditions of the experiment, but also on exterior and interior circumstances over which the experimenter has no control. At the hight of the honey season, when all the efforts of the colony are concentrated on the harvest, the results of an experiment will not be the same as if it took place during the dry season, or at the end of fall, when the bees have almost no honey to gather.

Let us now see what bees do with the material which they collect—water, pollen and nectar. The two first are food for the larvæ, while the nectar is for the cells. But these cells are not immediately sealed, for the nectar must undergo a process of evaporation, as we just saw, in order to lose its superfluous water. In order that this evaporation may be more easily accomplished, drops of nectar are placed over the whole interior surface of the cells, thus presenting a larger surface for the evaporation. When the nectar contains only 25 per cent. of water, then it is removed and put in a small number of cells, which are forthwith sealed up. But just before this is done each cell is stung and a drop of bee-poison thus deposited in it, which is an excellent antiseptic and prevents the fermentation of the honey. We see, therefore, that the bee discovered antisepsis long before Pasteur or Lister!

From the various things said in the foregoing paragraphs it is evident that the isolated bee is without individuality. It is only the colony as a whole which possesses any individuality. All the bees of a hive, all the workers, perform the same task, because they obey a collective order. But the hives themselves differ from one another. I might give many examples of this, but I will confine myself to one. It may happen in a bad season that you will notice that all the hives of an apiary are, with one single exception, inactive. At this one hive you will see the workers flying in and out, "as busy as a bee." The reason is that the searchers of this hive have been so keen sighted or so lucky as to discover, perhaps two or three miles away, a field of blooming colza, which the searchers of the other hives had overlooked.

We may liken a bee colony to a sort of mammal whose constituent elements are being constantly renewed, which preserves its general form and its own individuality. It resembles a human being with a slow-moving brain, for we have seen that the ruling committee requires considerable time before a decision is made and carried out. Again, the individual bee does not reproduce itself. What is reproduced is the individual formed by the whole colony, and this act is called swarming.

Swarming among bees is generally due to the hive becoming too small for the increased population, and it occurs as a rule at the end of spring, when it is too warm for so many bees to live under the same roof. The hive selects a new queen and the old one—not the new one, as has often been supposed—prepares to go forth to found a new hive with the surplus population. Before their departure special searchers are sent out to hunt everywhere in the neighborhood for some old chimney, some crack between blinds or a hospitable hollow trunk, where the new hive may be formed. It most often happens that no such shelter can be discovered. But they must go forth, nevertheless, for they are in reality driven from the old home. But those who stay behind are not too cruel and selfish, for each emigrant is provided with a good store

of honey from the common stock. In case no suitable spot has been found for the new hive, the bees swarm on a branch of a tree, and then move on from branch to branch, the number growing smaller and smaller till it quite melts away.

If this first swarming has not sufficiently relieved the hive, a second one may take place. You can easily know in advance if this has been determined upon by the council; for, if another swarm is to be formed, the young queens who are still in their cells are not killed, and, to know whether this is so or not, you must listen in the evening to what is going on within the hive. The young newly born mother utters a peculiar chant—tih-tih-tih; while the queens still shut up in their cells reply, konah-konah-konah. If you hear these sounds, you may be sure that a fresh swarm is about to quit the parent hive.

An objection might be raised to this idea of bees being associative. It might be said that a hive is not a society, but a family, since the bees of the same hive are sisters. But this objection can be easily refuted. Thus, we have seen above that during the hight of the honey season some bees mistake another hive for their own and are well received by the hive into which they have strayed. Again, the experiment of changing the queen of a colony has shown that this may be done several times. You may put in a hive of Italian bees a Carniolan queen, or vice versa; and yet the society formed in this way by bees of different origins will go on creating, working and planning just as well as it would if none of these changes had been made in it.

A beehive, therefore, is a perfect example of the equalitarian product of state socialism, where is neither love nor self-devotion, neither pity nor charity; where everything is sacrificed to society and its welfare thru ceaseless labor; where there is no government, no rulers; where there is discipline without subordination. It is the realization of ideal collectivism. Motorcars and balloons may some day, perhaps, bring about the universal association of men. But if humanity is to be kept on earth only by the sacrifice of all individuality, as among the bees, by the sacrifice of every joy and every virtue, I should not be surprised if, some fine morning, the fancy should seize man to swarm to another planet!

THE UNIVERSITY OF PARIS.

The Toilers, Dead

BY HARRY H. KEMP

LET us raise up a monument to these
Such as a monarch for his tomb decrees;
They did not perish in a patriot war
With glory leading onward like a star,
Nor for some cause, pre-eminent, alone,
Die, and their fame in human hearts enthrone.
No! But upon their bones our cities rise,
That, towering, take the morning from the skies;
Untold, unknown, innumerous brotherhood,
They have cemented empires with their blood;
They have gone down with roaring in their ears
To dedicate with death our out-flung piers,
And where great-breasted ships now sail the sand
They clove a path asunder thru the land
With a thousand flashing picks, while, as with fire,
Their bones were racked with aches and fevers dire;
They hewed the forests down and cleared the ground
Where now the wheels of industry resound;
Beneath the crashing tree ofttimes they fell,
And knew nor funeral train nor passing bell;
Deep in the dim, wide-washing seas they sleep,
Having sowed their bones that luxury might reap;
They knew the mad machine; the Moloch mill
Vociferous, has slain, and slays them still,
And where the hot blast lights the sky with flame
They perish day by day, unknown to fame.

Let us seek out the noblest spot on earth,
And—Eiffel-like in hight, of Pyramid girth—
Rear up, tremendous, to salute the sun,
Some witness to the perished million
Who went down unto death with none to cheer,
And with their lives bought all we prize as dear,
This wonder, and this glory, and this shame
Called "Civilization" when tongues name the name.
Let us build up a monument to these
Such as a monarch for his tomb decrees.

LAWRENCE, KANSAS.

Literature

A Lord of Lands

HERE is a book of real adventure,* not an ornamental narrative where the hero seeks excitement and danger for the diversion he gets out of it, but it is an adventure in living that should help to solve the problem of existence for the miserable million who live in the sinks of poverty in the great cities. The author is an Irishman with a burning peat spirit in him. He claims to be an uneducated man, who has trouble with his subjunctive mood and his verb "to be"; but if about ten thousand of the men and women who are writing in this country had his personal kinship with his new, earth-nourished, wind-freshened, sun-cleaned ideas, we could bear better than we do with their exasperating grammatical perfections.

Mr. Benson says that he was a switchman, with a wife and five children, and a salary of fifty dollars per month when he realized that something must be done. He takes up a fourth of his book explaining the conditions of his class in the great cities, not as a social economist deals with them, writing from the confirmed luxury of his study chair, but with the definite mind of a desperate man, and with the literal calculations of one who knew how many chances were in favor of his becoming, some time later on in life, at best, a semi-pauper. It is always a bold and startling miracle when the man in the treadmill of poverty steps out, shakes himself and calls upon his own mind to guide and defend him against the common fate of his kind. If enough of them awaken at the same time the miracle becomes a revolution, but if it is only one he becomes a martyr, or a leader, and in every instance he is a kind of squalid hero. The description Mr. Benson gives of the switchman's awakening and of his efforts to arouse his neighbors to a sense of the situation is more thrilling than an African jungle story, and it is not lacking in humor or pathos. The patient smile with which he interprets the stolid goodness of his German wife sheds a new light upon matrimonial relations.

He spends another fourth of the book telling how he and fifteen other families numbering eighty souls in all, bought a square mile of land in the Northwest from a railroad, how they built their village in the midst of it, moved out and faced the wilderness with their ignorance and need and courage. Nothing is more wonderful than the way he makes the commonest details of the expense of the adventure, down to the cost of the family cow, contribute to the homely interest of the narrative, just as long ago we were fascinated by the diligence and thrift of the famous "Swiss Family Robinson."

The remainder of the story relates how they suffered and succeeded. Nothing extraordinary is recorded, but it is the author's heroic way of bringing the natural and ordinary to pass that is inimitable and full of charm, as if by it he conferred a hope upon every poor man in the cities. His colonists endured homesickness and a locust plague before they were fairly started, but they endured. They practised those measures of economy and industry which made our ancestors the best pioneers in the world, and which we are accustomed to regard with something like contempt now in the Scandinavian immigrants who are settling upon the "wild land" and "worn out" land that we have abandoned. The author indicates rather than sets down the success of his undertaking. He shows how they avoided that error against the possessive case in all human nature which Socialists are inclined to ignore, by keeping each man the title to his own part of the land, how the crossing of strains in the human stock improves it, especially where one is Irish and the other German, and over all he casts the twinkling, contemplative eye of one who is both a humorist and a philosopher.

If any rich man with too many ignoble dollars to his credit wishes to do the country a real service let him buy a hundred thousand copies of this book and distribute them among the poor who have not yet despaired.

*A LORD OF LANDS. *By Ramsey Benson.* New York: Henry Holt & Co. $1.50.

Two Serious Works on Fiction

If there still exists any doubt as to whether the novel is being seriously taught and studied in schools and colleges, a moment's glance at these two volumes* would convince the most skeptical. Only a few years ago the introduction of modern novels into a college curriculum was regarded as a revolutionary idea, and was straightway denounced as "unacademic," but in this age of change nothing seems to change faster than the programs of education. Not only are modern novels—as, for example, Stevenson's "Treasure Island"—edited, with introduction and notes, but the multiplication of treatises on the history and art of fiction is so rapid that it is not easy even to record them all. Professor Horne's work is frankly designed for textbook use. "The necessity for some such undertaking," he says, "is obvious, if the critical study of fiction is to advance scientifically." Thus we encounter at the start what will seem to many teachers a positive objection to the use of this book. Fiction has added enormously to the happiness of humanity; but it is extremely doubtful if even the college student will obtain anything resembling happiness from the study of this rather portentous work. Those who think young people read far too many novels should welcome the appearance of this volume, and endeavor to increase its circulation, for we believe it will frighten rather than lead the flock. The method is formal and forbidding. The first part, after defining the elements of the novel, has successive chapters on "The Egyptian Tales," "The Greek Romances," "The Medieval Conglomerates," "The Modern Novel." The second part, dealing with the development of the modern novel, has chapters on "Plot," "Motive and Verisimilitude," "Character," "Emotion," "Background," "Style." The first half of the work is too mechanical; the "elements" of the novel are arranged under six heads, and then the novels of various nations and periods are tested by these six elements in order. The second portion is marred by the discussion of such subjects as "The Four Different Attitudes Toward Truth." Various readers will, of course, have various views as to Professor Horne's individual judgments; fiction is not a science, but an art, and the divergence of opinions is not only inevitable, but desirable. But the author's skill in definition may be more seriously doubted when, under the subheading, "The Novel of Incident," we find the first sentence reading: "This is the tale of the Accidental, the tale that is almost wholly lacking in sequence, in plot." Professor Horne has devoted an immense amount of hard, conscientious work to the preparation of this book, but no inspired teacher would ever think of using it, and we tremble for the fate of the pupils who might be forced to study it under any one else. There is an excellent and useful bibliography, and a very unsatisfactory index. The title of Professor Warren's book is incorrectly given on pages 12 and 17.

Mr. Hamilton's treatise is much better written than Professor Horne's, perhaps because it is not primarily designed as a textbook. It might almost be called a commentary on the works of Rudyard Kipling, for this author is constantly referred to as tho he were already an established classic, and his name takes up considerably more space in the index than is bestowed upon Dickens, Hawthorne or George Eliot. We have no intention, however, to quarrel with him upon this point, for an author surely has the right to seek his illustrations where he pleases. We merely record the fact for the delight of the army of Kipling worshipers. The pleasures of fiction are here again ruthlessly analyzed, by inquiry, definition, comment and quotation; the method is, to a less degree, open to the same objection which applies so strongly to Professor Horne's work. Still, there is plenty of real cerebration, and thoughtful novel readers may gain considerable information and some points of view that will be both new and valuable. Concreteness is gained by very frequent illustration and citation; the book improves as it advances; the treatment is not historical, but wholly analytical. It asks itself many difficult questions, and answers most of them very well. A great difficulty with

*The Technique of the Novel. *By Charles F. Horne*, Ph. D., Assistant Professor of English in the College of the City of New York. New York: Harper & Brothers. $1.50.

Materials and Methods of Fiction. *By Clayton Hamilton*. With an introduction by Brander Matthews. New York: The Baker & Taylor Co. $1.50.

all books of this kind is that the ideas set forth do not stick in the reader's mind; as a reviewer said of a recent book full of large propositions—he remembered that in reading the volume he agreed with everything in it, but could not now for the life of him remember what it was he agreed with. The more we read various treatises on fiction, the more deeply are we convinced that it will be a long time before Professor Raleigh's little book, "The English Novel," will be superseded. He said so much in so small a space and said it with real distinction.

Money and Money Makers

MILLIONAIRES have fallen upon evil days. A generation ago they were the idols of America. Mr. Bryce described how in those days a railway president, when he made a triumphal progress across the continent, was received by mayors, legislatures, governors, commercial bodies and church delegates with resolutions of eulogy and with banquets and processions. How are the mighty fallen! Today the masters of corporations, the men whose vaults are choked with securities and whose exploits fill the financial news columns, are fighting on the defensive. They are counted guilty until they prove their innocence. Blessings have turned to curses, praises to anathemas. All the world asks with Mr. Charles Edward Russell: "Where did you get it, gentlemen?"

With evident relish and convincing detail Mr. Russell proves where some of them got it.[1] He is not as dispassionate as a judge nor as dry as an economist, for on every page he shows the indignation of the prophet. Mr. Russell is a muck-raker proud of his profession. He would have preferred to be a poet and a critic, to study the rules of rhythm and to sing the beauties of Nature and of love. But he was drawn, against his desire, into exposing the machinations of the Beef Trust, and he has gone on knocking down false idols, exposing smug iniquity, stirring righteous wrath. A master muck-raker is an economist touched with emotion, and Mr. Russell is a master muck-raker.

His thesis is that "the first (millionaire under consideration) did not gain his palace by supplying any demand, nor the second by providing any mart, nor the third by producing any commodity, nor the fourth by transporting any goods or people. These palaces represent no service to society, no reward for any one thing bettered, no creation, no development, but only the means to seize and to retain the resources of the country."

Yet, says Mr. Van Dyke, in his finely wrought chapters,[2] and Mr. Wood, in his less substantial essay,[3] these men are only the bloated symptoms of our national disease, Money Hunger. We worship the Money God, and are sacrificing to it all the best things in life. We have carried the boasts of our prosperity, says the former author, to the confines of the earth, and astonish mankind with the sum totals of our harvests and our manufactures. And so absorbed are we in the contemplation of our material possessions that we are reckless of the price we are paying for them.

What shall we do then? Mr. Russell exposes sores; his business is not to prescribe remedies. But he concludes: "They got it from us by means of our own witless connivance, brethren. For do you not suppose that if we try we can take those filching fingers from our pockets?" While Mr. Van Dyke also does not offer prescriptions, he joins Mr. Wood in ascribing much moral evil to the protective tariff, and in lamenting that the door at our ports is wide open to the offscourings of Europe. Both authors look to a change of ideals among the people for a permanent refining of our commercial morality. So long as the compact majority worship the Money God they will condone successful evil. This is a timeworn message. Happily it falls no longer on ears entirely deaf. Since President Roosevelt turned the White House into a pulpit, and courts and commissions have exposed the rottenness in commercial high places, the envy of money success has declined. But a nobler ideal, if it is to endure, must solidify into customs and statutes.

[3] MONEY HUNGER. *By Henry A. Wise Wood.* New York: G. P. Putnam's Sons. $1.00.

Pélléas and Mélisande. By Maurice Maeterlinck. Translated by Erving Winslow. With introduction by Montrose J. Moses. New York: T. Y. Crowell & Co. $1.50.

When Maeterlinck's mysterious play was produced in New York, set to the equally mysterious music of Claude Debussy, the public was duly warned against it by the professional critics. They said the music was impossible, it was formless, monotonous, devoid of melody, and violated all the laws of harmony. Nevertheless the public crowded to hear it and enjoyed it, just as, a generation ago, they persisted in liking Wagner in opposition to the critics. How much of the attraction was due to the charming personality of Mary Garden, how much to the impressive stage pictures, how much to the composer and how much to the author need not be determined. The public is not analytical. All four factors were in harmony, and that was enough. The success of the music drama in this country is the reason for this edition, but it does not follow the

"THIS IS AN OLD ABANDONED FOUNTAIN"——
Illustration from Maeterlinck's "Pélléas and Mélisande" (Crowell).

Debussy libretto. The pictures of Miss Garden and of stage scenes will be of interest to many, altho on paper they look too prosaic and substantial for so unworldly a drama. The translation is still more prosaic and discordant; poorer even than the Alma Tadema version, and that was bad enough. Mr. Winslow dislikes Maeterlinck's repetitions, which is

permissible, but having that dislike why does he translate a play where that is the peculiar feature? This is the way he botches the most beautiful passage of all, the closing, where Arkël, playing the part of the ancient chorus, sums up the character and meaning of Mélisande:

"C'était un petit être si tranquille, si timide et si silencieux. C'était un pauvre petit être mysterieux, comme tout le monde. Elle est lá, comme si elle était la grande sœur de son enfant."

"She was a poor, helpless little one, a mystery, as every human being is. See how she lies there as tho she was only her infant's elder sister."

The Later Years of Catherine de Medici. By Edith Helen Sichel. New York: E. P. Dutton. $3.00.

Miss Edith Sichel has now completed her study of Catherine de Medici. The first part of her work, published some time ago, dealt with Catherine and the French Reformation—the woman struggling for power. The second part, now before us, brings the story down to the year of her death, 1589, and consists principally in a study of the art of balancing parties and social forces by which the princess of diplomats maintained her sway. Miss Sichel is a serious historian. While not claiming to have discovered new facts of importance or demanding admission to the gild of the "professed," she has worked in the documents and sought accuracy in details. Her presentation is intended, however, to be a living and personal conception of Catherine and her times. Had the subject of this series been a woman able to dominate by vigor of personality alone, the analysis of character would have been a simpler task, but the last of the Medicis has always been more or less of an enigma, and the motives behind her multifarious intrigues obscure. Our author arrives at the conclusion, however, that one great *motif* runs through all of Catherine's tortuous diplomacy and vagarious artifices, namely, fear of the powerful neighbor beyond the Pyrenees whose world empire and mighty navy kept the English guessing until 1588, the year of the Armada. The other actors in the drama of which Catherine played the leading rôle—Alva, Coligny, Charles IX and Henry III and the rest—are portrayed with a lightness of touch and firmness of delineation which command attention and admiration. Moreover, there is manifested a familiarity with first hand memoirs and papers which enjoins respect, even from the gildsman who swears by his Cambridge Modern and reads De Thou and Théodora Agrippa d'Aubigné for recreation on his summer vacation. Our author has done well the work she has set out to do; she is unusually free from heated partisanship, and is always on her guard against the political and religious delusions which "canonize selfishness, avarice and ambition." There are good illustrations and the volume is attractive in its typography and exterior make-up.

Wage-Earners' Budgets. By L. B. More. New York: Henry Holt & Co. $2.50.

Under the guidance of a committee of expert sociologists Miss More made an investigation thoroly scientific and trustworthy into the social and economic circumstancees of two hundred families in a working class district of New York. Her work was aided by the fact that she made connection with the homes thru a social settlement and was herself tactful and sympathetic, able to inspire confidence in her "subjects." Two years were taken for the examination, and the results justify the prolonged effort. Their accuracy is as unimpeachable as the painstaking care taken in their collection is rare. Amid the deluge of "estimates," "opinions" and loose generalizations that appear in print, this product of hard labor is as welcome as it is lonesome. In choosing the two hundred, pains were taken to make them representative of the wage-earners, skilled and unskilled, foreign and native, sweated and well paid that make up New York's human conglomerate. If the result errs at all it is on the side of optimism, because families so stupid or degraded that they could not answer the investigator's questions were dropt from the tables. The average family income was found to be $851.38, an amount higher than the "fair living wage" for an average family as estimated by any authority. The writer herself concludes that a family of five in New York requires at least $728 a year for full subsistence, making no al-

lowance for savings against a rainy day, and from $800 to $900 a year in order to make proper provision for accidents and old age. Therefore, if only the average be considered, we can cheerfully say that wage-earners in New York have climbed from poverty on to the comfort plane. But the average well-being is little consolation to the forty-three families (21.5 per cent.) who got less than $600 a year, and, consequently, even when they saved their self-respect by keeping clear of charity, "were underfed, poorly clad and usually wretchedly housed." The twenty families, 10 per cent. of the whole, who, on account of illness, death, or irregularity of work, could not get thru the year without charitable aid, form a residuum sufficiently appealing and appalling even in the prosperous years when the analysis was made. Since panic and depression have frozen many sources of employment this residuum has grown.

Literary Notes

....Every sport produces a literature of its own, and now we have an automobile diary. One half of Walter Pulitzer's *My Auto Book* is devoted to ruled space, where the day's run may be recorded, and the other half is given over to illuminating jests and pictures. (Outing Pub. Co., $1.00.)

....Dr. George Frederick Kunz, Tiffany's gem expert, has been occupied for some time with a book he has been preparing on the pearl. He has collected a mass of material on his subject under the title of *The Book of the Pearl,* which will be issued this month.

....Lovers of the artistic in things typographical will be interested in *The Ghost of Doctor Harris,* by Nathaniel Hawthorne, as issued by the Goerck Art Press, No. 925 Sixth avenue, New York. The text is a veritable rivulet in a meadow of margin. The ornamental initial in three colors dominated by its rubrication will delight the eye of the true bibliophile.

....Dr. William Elliot Griffis, author of "The Japanese Nation in Evolution" (Crowell), has received from the Emperor of Japan, thru the Japanese Ambassador at Washington, the decoration of the Order of the Rising Sun. This decoration is given only to distinguished foreigners who have aided in the modern civilization of Japan.

....In connection with the very recent gift of Constitution Island to the Government by Mrs. Russell Sage and Miss Anna B. Warner, it is interesting to note that Miss Warner has always maintained close touch with West Point and its affairs and the Academy there. Her comparatively recent story, *West Point Colors,* dealing with cadet life, will make pertinent reading now. (Revell.)

....Announcement has just been made of a very timely book in the *Genealogical Miniatures,* presently forthcoming. The "Ancestry of William Howard Taft" will inaugurate this series of little books to be edited by Mabel Thacher Rosemary Washburn and published by the Frank Allaben Genealogical Company, No. 3 West Forty-second street, New York. ....strated ($1.00).

....A very comprehensive survey of the development of drawings and art teaching appears in *Art Education in the Public Schools of the United States,* a symposium written by the foremost American teachers of the arts, and edited by James Parton Haney, B. S., M. D., director of Art and Manual Training, New York City Public Schools (Boroughs of Manhattan and the Bronx). The preparation of this volume was inspired by the Third International Congress for the Development of Drawing and Art Teaching, held at London August 3d to 8th this year. It is copiously illustrated and ought to appeal very generally to all art teachers. The edition is limited to 1,000 numbered copies. It is sold thru the *American Art Annual,* 546 Fifth avenue, New York. ($3.50.)

THE Munich *Jugend* has discovered five signs by which to detect the school to which a painter belongs: (1) If he paints the sky gray and the grass black, he belongs to the good old classical school; (2) if he paints the sky blue and the grass green, he is a realist; (3) if he paints the sky green and the grass blue, he is an impressionist; (4) if he paints the sky yellow and the grass purple, he is a colorist; (5) if he paints the sky black and the grass red, he shows possession of great decorative talent. —*Christian Register.*

THE Gargoil often makes its perch
On a cathedral or a church,
Where, 'mid ecclesiastic style,
He smiles an early-Gothic smile.
And while the parson, dignified,
Spouts at his weary flock inside,
The Gargoil, from his lofty seat,
Spouts at the people in the street,
And, like the parson, seems to say
To those beneath him, "Let us spray."
I like the Gargoil best; he plays
So cheerfully on rainy days,
While parsons (no one can deny)
Are awful dampers—when they're dry.
—*Oliver Herford in The Century.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

From College to Business

THEODORE ROOSEVELT went to college, and then to law, to which he added literature and politics. Theodore Roosevelt, Jr., graduates from college, and then goes to work, sorting wool in a carpet factory, as the first step to learning the carpet business. He begins at the bottom of the ladder, but, because he has education and ambition, he intends to rise as near the top as he can. So a railroad magnate sends his son from college to begin his lifework as brakeman and end as president. When some fifty years ago a daughter of Oakes Ames, member of Congress and builder of the Union Pacific Railroad, took some school friends to see her father's great shovel factory at Easton, Mass., her brother Oliver, later Governor of Massachusetts, took the company about the works from room to room, beginning with the crude iron and lumber, and at each he took the workman's place and did his work for a few moments; and after finishing the round he said: "Now you have seen me make a shovel." He, coming from Brown University, knew the business from the bottom, and was able to become one of the great captains of industry and by his own minute knowledge enlarge and develop his father's business.

In the old days a boy went to college that he might be a minister, or perhaps a lawyer or doctor or teacher. Now business is developed into a learned profession; more than half our college graduates go into business. That does not mean that we shall not have professional men enough, but that education is diffused, that it is no longer the perquisite of a few, but is open to the ambitious youth whatever his tastes.

Harvard University, New York University, and other institutions have opened departments of business, where the principles and higher methods of business are taught. That is well, is important, a movement in the right direction; but such education cannot teach how to conduct any one business. That can best be learned at the bench, or standing before the machine. It is the little niceties that make profit quite as much as the big principles. It is the exactness of saving in small things that makes the vast profits, just as it is the waste in small things by the consumers that helps the manufacturers. A great dealer in spices said: "It is the mustard left on the plate that we make our profit on."

The example set by the President in sending his eldest son to begin his lifework in overalls and jumper, in dirty manual work such as the most ignorant immigrant might engage in, with such men as his fellow workmen, seeking and getting no privilege in the shop, taking his small dollar-a-day wage, ten and a half hours a day at back-breaking work from seven o'clock in the morning, and with three-quarters of an hour for noon lunch—we say this example is a grand one. It illustrates the democratic principles on which our institutions rest. The President of the United States can send his children to the public school in Washington to recite on even terms with the children of his humblest attendants, and then to learn, after the best privileges of education, that labor is ignoble to no man, to learn the fellowship of homely toil with the humblest toilers. And this is taken not from necessity, but of free choice, because it is best. The Emperor of Germany cannot do this with his son. He must keep his dignity of

family, for to toil is low, fit for the humbler classes, for those common people that fill the soldiers' ranks and are food for powder. Edward, King of England and Emperor of India, must keep his son to make perfunctory addresses to deputations and open public buildings, for he must prepare to succeed his father. If Theodore, Jr., wants to succeed his father he must fight his way up like any other young fellow, and learn the fellowship of the masses; and that is better; democracy better than inherited office; better any honor open to any man, if he is equal to it.

There is a Spanish proverb that "it is easy to walk when one leads a horse by the bridle." That is true. It is easier—and there is quite as much merit in it, when one takes a disagreeable and humble work from choice and duty rather than from necessity. Young Roosevelt will probably stay but a brief time at the wool-sorting bench. Then he will, if he makes good at this, has persistence and faithfulness, go to the next room, and the next, as many another youth has risen, altho his training and promise give him special assurance. We trust that in twenty years he will be trained and competent to be a master and leader in business, and perhaps to lead in public affairs. But that depends on whether it is in him. At any rate, the President's eldest son is thus one with all the rest of us, and our talk about the "dignity of labor" has here the illustration of its truth, a good example for our "new rich," who ruin their sons with indulgence, and a good example to the rest of the world. President Roosevelt wants his children not to be idle fools, but to know the delights of strenuous work.

Two Cents to England

THEY are quick to find it out—the Welsh miner, the Irish servant girl—that from this day forth they can send a letter for two cents to the old folks at home. Last week it was five cents, and five cents was a burden. Now they can write as cheaply to England, Ireland, Scotland or Wales as to the next town or to Alaska or the Philippines. The change is one of those things that look small, but are really great. Already we had two cent postage with all Canada; now we have it across the Atlantic with Great Britain.

But the cheaper communication is not the principal advantage. What we most value is the expression of unity with the country and people of Great Britain. It brought us much closer together, as if we were one people, when we had common postal rates with Canada. It would bring us still closer with Canada if we had no customs barriers. Then we would feel almost as if we were one nation. This change seems to shorten by three-fifths the distance to London and Dublin. We are one in language and inheritance, and we ought to be one in feeling. It is a matter for great rejoicing that the hostility of so many of our people of Irish extraction shows signs of passing away. Mr. Redmond, the Irish leader now visiting this country, declares that within the past four years great progress has been made in relieving the conditions in Ireland. Twenty-two million dollars have been given from the Imperial Treasury to replace miserable hovels with decent homes, and fifty thousand such cottages, each with a plot of ground, are rented at a shilling a week. Similar provision is made for laborers in the cities, and before a generation all workers will be decently provided for. Now no landlord can resume his lease and evict a tenant without paying for improvements made. The tenants can buy their land, and one-third of them now own their land, with the aid of the British Government, which advances the money. The British Treasury is building schoolhouses and increasing the pay of teachers. Mr. Redmond says that not many years will surely see an Irish Parliament controlling local affairs; and when that comes the friction will end, and Irishmen will be loyal citizens, possest of full civil rights. For us that means that the only source of ill-will toward Great Britain is diminishing in power, and will soon pass away. We want the closest bond of sympathy with the great nation from whose two islands most of our people are descended, and with which we ought to feel the closest sympathy.

So much for our British cousins; but what for our French and German and Scandinavian and Italian and Russian

cousins? The sons and daughters of all these other nations are with us by the millions, and they have dear ones at home from whom they are shut off by a five-cent rule that puts them at a disadvantage with those who come from the British Isles. We want the closest possible brotherhood with them also. It costs no more to send a letter to Cherbourg or to Hamburg than it does to Liverpool. The steamers go direct and the passenger rates are the same. The European Governments cannot consent to give Great Britain an advantage which they will not take for their own people. For the cheaper rate is not only a matter of personal intercommunication of friendship, but also of business, and all Europe is rival for business with the United States, for we are the best customer of each of the nations. Business depends on cheap and easy communication. Put down the steamship rates, and immediately there is a flood of travel. The postage of business houses costs millions of dollars, and cheap postage helps business.

It must come. And then must come universal two cent (penny) postage for all the world. If we can send a letter for two cents to Manila, we can to Hong Kong. Let universal and uniform cheap postage be the promise of that unity of the federated nations which was once the dream, and is now the waking aim and expectation, of all lovers of humanity. With what exuberance Australia has welcomed the American fleet our readers can see in this issue. We are thus one with all the world if we could only show it. By such stages as this war will cease to be the study and shame of nations, and the masters of commerce and industry will take the throne, and the generals and admirals will take the lowest seat.

Chancellor Day on Senatorial Salaries

CHANCELLOR DAY is an extraordinary man and he puts forth extraordinary interviews. His last is in defense of a principal benefactor of Syracuse University and president of its board of trustees, Mr. Archbold, director of the Standard Oil Company, whose letters to Senator Foraker, exposed by Mr. Hearst, have been the event of the past few weeks. Mr. Archbold is doubtless a benevolent man who has few sins to repent of apart from his relation to the company of which he is director, and it is natural that such a man as Chancellor Day should defend the Standard Oil director and Senator Foraker as against the President of the United States, but we do protest against what he says of United States Senators' salaries.

He is thus quoted:

"The very salary paid a Senator proves that the country expects him to employ his spare time in some legitimate business."

That is, the nation pays Senator Foraker $7,500. The fee paid in four instalments in one year by the Standard Oil to Senator Foraker was $44,500. On the basis of salary suggested, then, by Chancellor Day, we gather that the Senator was justified in giving six-sevenths of his thought and devotion to the interests of the company which chiefly employed him, and one-seventh to the State which elected him and the nation which paid him. But this is hardly a fair statement, for in 1900 the Senators' salaries were only $5,000, about one-ninth of what he received from his more generous employer.

But we do not claim that the salaries paid Senators and Representatives were or are munificent. They are paid none too much. Nor would we forbid Senators, during recess of Congress, to earn honest money at their profession. When Henry Wilson was Vice-President THE INDEPENDENT paid him a hundred dollars each for his weekly articles, which made up his "Rise and Fall of the Slave Power in America." To be sure, his Vice-Presidential duties were not onerous and he got no lawyer's fees. But we do deny that Senator's salaries are so meager that they cannot comfortably support a man who does not look elsewhere for his living. Senators do not have to be millionaires or agents of rich corporations. When Charles Sumner, who had a modest property, and Henry Wilson, who had none, were Senators from Massachusetts, they did not have to live on fees and retainers, and were thought none the worse of for their modest living, and Henry Wilson was chosen

Vice-President of the United States with President Grant. These are bad days when the Senate is threatened with becoming a millionaires' club. But a millionaires' club it is not yet, for there are not a few Senators who are not ashamed to live, and live comfortably, on their salary, and, as Paul did, in their own hired house. Their wives cannot rival the wives of millionaires in costly entertainments, but they and their families can live decently and in honorable distinction on the pay their country gives them; and in committee work and on the Senate floor and with the country these Senators have quite as much honor as those that earn large fees and retainers.

The other defense which Chancellor Day makes of Senator Foraker's relations with the Standard Oil is to say to the President, "You are another."

> "He chose for a member of his Cabinet a man who held at that time a retaining fee from a great corporation, and whose history was connected with the defense of graft criminals. That man is now in Mr. Roosevelt's Cabinet."

He means Secretary Root. Mr. Root was a lawyer. As a lawyer and a private citizen he served various corporations. He gave up large, lucrative business to serve his country. As to his defending graft criminals we have no special knowledge, but we know that, under the code of ethics lately adopted and which he helped to compile, a lawyer has the right to aid a client whom he believes guilty to get all the rights and protection which the law allows, and no more.

The Archbold Letters

John L. McLaurin, of South Carolina, arguing in defense of his correspondence with John D. Archbold, remarks that the Standard Oil Company is "the most progressively administered and the most intelligently officered corporation that human intelligence has yet produced." Mr. McLaurin was a Senator of the United States when he wrote to the vice-president of that company: "I can beat Tillman if properly and generously supported. There is no time to lose, however." The letters which Mr. Hearst is giving to the public bear testimony as to the intelligence which the vice-president of the company has exhibited in fields entirely separate from the production and sale of oil.

These Archbold letters emphasize in the minds of the people an issue which they rightly regard as one of much importance. They are not, we think, deeply interested in the current political debate about the time when campaign contributions should be published. But the letters are short, can be read quickly, and are easily understood. Those which Mr. Hearst added to his list last Saturday are full of meaning.

As the average man reads this correspondence he sees this great corporation employing Senators, paying large sums for their legal services, loaning money to be used in buying newspapers, urging a legislator of great political influence to prevent the nomination of an obnoxious but upright official prosecutor, and seeking in the same way to promote the renomination of a judge whose decisions it had found satisfactory. He sees it asking the same influential person to kill pending bills which it dislikes, urging a friendly member of Congress to prevent if possible the delivery of a hostile speech by one of his distinguished colleagues, and paying to him $5,000 for some purpose related, apparently, to subsidy legislation. He also sees that it receives reports from the same friendly Congressman as to his conversations with the President, together with his inquiries as to its willingness to "invest" in a loan to a needy Senator. And he perceives that a judge of the Supreme Court of a great State, writing a few days before his elevation to the bench, asked the controlling officer of this corporation, apparently with confidence that he would comply, to use its influence for the defeat of an independent political movement in the county where this judge lived. All this is enough, but the average man infers that much more could be told.

What is the effect of it upon average men? To begin with, it commends to them the messages in which Mr. Roosevelt denounced this corporation and such uses of corporate wealth and power. It also commends the prosecutions undertaken by the Republican Administration. But it does not necessarily lead them to

vote the Republican ticket. It directs their attention to the need of some exercise of official authority that will prevent such abuses. If these average men be not hidebound partisans, but independent in their political ways, some will go to Bryan, preferring his proposed method of restricting combinations, and some will go to Taft, relying upon regulation by existing agencies and by prosecution, possibly upon such a license system as has been suggested by Mr. Roosevelt. There are some who, despairing of a solution of the problem by either of the two old parties, will give their votes to the Socialists. The Standard Oil Company is continually increasing the number of Socialist voters and workers.

Whatever may be the immediate political effect of the letters, they will certainly excite in many minds that have given little thought to the question an interest in a very difficult problem. In our judgment, Mr. Bryan's plan for Trusts is both inexpedient and impracticable, and Mr. Roosevelt's proposed license system is highly objectionable. It may be that the best remedy for the evils in question can be found in official supervision, accompanied by enforced publicity. The American people will find a remedy. They will not consent to the perpetuation of such corporate abuses as have been recently disclosed by investigation, by prosecution, and now by these Archbold letters. We must deprecate and condemn the stealing of a company's records or correspondence, and we regret that the letters were not made public in some legitimate way. Now that they are out, however, it is clear that the publication of them serves the interests of the people in exciting that general interest and thoro discussion which will promote the solution of a formidable problem in our domestic affairs.

The Night-Rider Folly

PERHAPS nothing less than tragic experience will halt a great section of the American farming population on the broad road to destruction which it has started out to travel.

There was some excuse for the Kentucky tobacco growers who organized the night-rider violence. The Tobacco Trust had begun in the most cold-blooded fashion to put in operation a policy which would have ruined every tobacco grower in the State. As a matter of fact it did ruin many before effective opposition was organized. It was the best farmers in every sense of the word who got together to fight the trust—the most thrifty, the most enterprising, the most social and capable of some personal sacrifice in the interest of co-operation for the common good. It was the selfish and penny-wise ones who refused to make common cause with their neighbors and allowed themselves to be made tools of the trust. Such men always provoke the anger of their betters and the wrath of such as believe in solidarity, but who blunder from their lack of foresight and self-control. Then begins the unfortunate resort to coercion and lawlessness, to compel the "scabs" to come into the "union." It does not appear that the cotton planters of the lower South have had any such provocation as the tobacco growers had, and their imitation of the night-rider methods of the Kentuckians is a deplorable blunder. If the example shall be still further and more widely imitated by other parts of the agricultural population of the country the consequences will be overwhelmingly disastrous to them and to the nation.

No very profound knowledge of human nature and of political economy is needful to understand what will inevitably happen if these methods are persisted in in Kentucky, Alabama, Mississippi or elsewhere. They involve an enormous destruction of property, a reign of terror in every neighborhood, and a succession of tragedies bringing lifelong grief to scores of families. Men of sense will not continue indefinitely to reside in such neighborhoods, and try to make their living under such conditions. Their lands will be for sale and there will be a buyer standing ready with the cash. That buyer will be not an individual, but a trust, and the outcome will be that within the lifetime of a generation the choicest tobacco lands, the choicest cotton plantations, and so on, will be owned and tilled not by self-respecting, prosperous independent farmers of the old stock,

but by tenants and hirelings, largely foreign born. The most interesting and hitherto thriving agricultural communities will be transformed in character, and the balance of power which the agricultural population has until now held in economic affairs and in politics will have been destroyed. A tremendous stride will have been taken toward crushing out the middle class, destroying the chief opportunity which the man of independent spirit now has to be his own employer and to manage his affairs in his own way, and so dividing the entire American people into two great opposing factions, the capitalistic employers and the wages class.

Meanwhile the moral stamina and the law-abiding spirit, which are essential to a people that hopes to solve the immensely difficult problems that modern industrial evolution has raised, will have been strained and impaired. Violence, whether falling short of revolution, or rushing madly into it, achieves nothing but destruction. It may sweep away obstructions and clear the ground for better things, but it leaves a barren waste upon which constructive effort must begin anew, and the new construction is almost sure to recreate privilege and abuse if the people have lost their power of self-restraint and their habit of attaining ends by lawful means.

We sincerely hope that we have exaggerated the danger, and that the farmer folk will listen to reason, and halt in their madness before they have paid the cost of folly to the last. Surely they should be capable of learning something from the mistakes of organized wage-earners in their century-long conflict with employers. The machinery-smashing period came to an end only when it had forced the unhappy blunderers to abject submission under starvation. Every sane labor leader now admits that the *régime* of strikes has accomplished nothing. There is no "way out" for the working man except the way of construction instead of destruction, and that way demands self-control, knowledge, persistent effort and vast patience under loss and wrong. The farmers will find that there is no other way out for them.

Whether it will be through the development of voluntary co-operation or whether it will be through much patient and law-abiding experimenting with governmental regulation that fair play and an equalizing of opportunity will be established in our economic life, we do not undertake to say. Perhaps it will be by methods that no one as yet clearly foresees. It certainly will not be accomplished through lawlessness and violence, and every hour and every dollar put into these mistaken attempts, instead of into a patient study of the problem and a whole-hearted effort to develop constructive plans, merely puts off the day of better things.

Popular Education in Tuberculosis

THE most noteworthy feature of the International Congress on Tuberculosis, that has been holding its sessions for the past two weeks, was the definite effort to make all of its work center on better popular knowledge of tuberculosis in order to make more universal the crusade against it. The keynote of the Congress was optimism to the last degree. The men thruout the world who know tuberculosis best are confident that not only can its present serious ravages be limited, but with proper care the disease can be eradicated. There is just one necessity for that consummation so devoutly to be wished—that is, that everybody must take appropriate and deliberate precautions with regard to the disease. Those who have it must, above all. be required to maintain these precautions. Those who have it not must appreciate certain hygienic rules which are the best possible safeguard against the development of the disease, and as certain persons are by constitution, and perhaps by inheritance, more liable to develop it, they must guard against it before it becomes an actually urgent danger.

As the best means to secure popular attention, what may be called the financial method of exploiting the significance of tuberculosis for a country and its people has in recent years come very strongly to the fore. We had the culmination of that mode of reasoning in the present congress, when Prof. Irving Fisher, of Yale, demonstrated by rather conservative figures that the actual annual cost of the deaths from tu-

berculosis in this country is over $1,000,000,000. That enormous sum is rather easily made up from the expenditures involved by the illness and death expenses of the nearly 140,000 people who die from tuberculosis in this country every year. Usually for three years preceding death a consumptive can earn very little. Doctors' bills, medicines, cost of living and enforced idleness, and loss of earnings amount to nearly $2,500 for these three years, and when to this is added the amount that might have been earned had the patient been in good health, Dr. Fisher's estimate of a billion of dollars, far from being exaggerated, is seen to be quite reasonable. Prof. Walter Wilcox, of Cornell University, discussed the economic loss to New York State in 1907 from tuberculosis and showed that, taking everything into account, the diminished earnings, the increased expense, the loss of net earnings between the actual date of death and the time when death would probably have occurred had the person not been attacked by tuberculosis, and finally the monetary loss to farmers and dairymen from bovine tuberculosis, the total cost of tuberculosis in this State in money every year cannot well be less than $65,000,000.

In the light of these statistics it is extremely interesting to see how the problem of obliterating consumption is faced by the world's authorities in the matter. Surgeon-General Von Unterberger, of St. Petersburg, declared that numerous autopsies show that every man over thirty years of age has old remains of a tuberculous infection. These observations demonstrate with what comparative ease the human organism can overcome the tubercle bacilla. The old German expression we are all of us a little tuberculous is now proved to be literally true, and yet nine-tenths of us resist the disease successfully, and, indeed, without being inconvenienced by it to any noteworthy degree. The most important element, then, for the prevention of the spread of tuberculosis is the strengthening of the human organism by dietetic and hygienic means. What these means are have been worked out very well in detail in the large sanatoria for the treatment of tuberculosis.

Dr. Lawrence R. Flick, of Philadelphia, pointed out very clearly what these means are in talking about the cure of early cases of the disease. The treatment of early tuberculosis, he said, is a retracing of the steps which lead to the development of the disease. The most prominent factor in reducing the resistive vitality of the human being against the tubercle bacillus is impure air. Under no circumstances must a tuberculous patient be allowed to rebreathe once breathed air. Pure air, no matter how cold, is *the* absolute necessity for the tuberculous patient. In spite of the prejudice in the matter, drafts can do no harm if he is properly clothed. If these principles are remembered, Dr. Flick insists emphatically that tuberculosis in the early stage can be treated at home in any climate. Recovery from tuberculosis has a very restricted meaning, and it is uncertain whether a patient who has once had active tuberculosis will ever be free from tubercle bacilli in such a way that lack of hygienic precautions will not subject him to all the previous dangers from the disease during its active stage.

This gives the hint for the prevention of tuberculosis in those who might suffer from it. Just as soon as the patient acquires the disease, living in the pure air will save him. Pure air before the invasion of the disease would have prevented its development. If the air will prevent the development of the disease, even with the tubercle bacilli already active in the tissues, there is no doubt about its power to keep them out. Certain persons are more liable to the disease than others. All those who are under weight and who have the long flat chest described by Hippocrates so long ago, besides those in whom there seems to be a family tendency, have a right to dread the development of the diesease under present conditions. Instead of allowing themselves to be frightened by it, all the need do, however, is learn to live in the air, as they will have to live if they develop the disease, and then they need have no fear about it. The tenor of the practical side of the Congress is all contained in this advice with regard to fresh air. We are living too confined lives, we are wearing insufficient clothes in the house to keep us

comfortable for the amount of fresh, cool air we should have, and instead of being warmed by rapid circulation of our blood we are allowing ourselves to too great a degree to be warmed by the circulation of hot water or steam through our living rooms. Back to the open is the slogan of the anti-tuberculous crusade.

Other discussions of the Congress only emphasized this. Heredity is conceded to play an extremely limited role in the affection. It is mainly infectious in origin, it may be disseminated by flies (as was shown by Prof. Andre, of the University of Lyons), but its main method of distribution is from person to person. Bovine tuberculosis is only an extremely small factor in the production of human tuberculosis, and perhaps is concerned only with lesions outside the lungs. It is easy to understand then that the care of advanced tuberculous patients who might be sources of infection for others is extremely important. The State has been mainly taking care of incipient cases so far, in order to restore them to the community, but it must also take cognizance of its larger duty to care for advanced cases in order to save the rest of the community. There is no need of any scare in the matter, however; all of us who get to be the age of thirty have tuberculosis in us almost without exception, and our vitality has been sufficient to preserve us from its advance. If we will only see to it that the general health of the community is maintained by the enforcement of certain great hygienic laws with regard to ventilation, then even a moderate care for those who already have the disease will bring about such a striking reduction in the number of cases actually existent as will soon make the dread disease a vanishing danger.

The Debs Demonstration

The immense demonstration given to Eugene V. Debs in this city last Sunday afternoon, culminating, as it did, his spectacular campaign across the continent in his "Red Special," proves, among other things, that Socialism from now on is to be an issue in American politics. When 10,000 zealous disciples pay from 15 to 50 cents to see and hear a candidate for office who will not be elected, and then wait for four hours to hear him speak, and finally, when he does speak, wave enough red bunting to make the Harvard stadium on football day green with envy, it is time to "bethink ourselves." The most significant thing about the audience was its youth, and the large proportion of women in it. Hardly a graybeard was visible. The historian and sociologist, if not the politician and editor, will appreciate the significance of this. Socialism, despite its manifest crudities and Utopian impracticabilities, is the only program before the world to-day claiming to offer a cure for poverty. If, as Professor John B. Clark suggests in the current *Atlantic,* it should effect a coalition between the "intellectuals" and the masses, its progress would be well nigh irresistible. As yet, in this country, it is mostly a proletarian movement. But it is already international in scope, revolutionary in action, and is growing by leaps and bounds. Socialism is an interpretation of history, a political party and a religion. No thinking man can much longer afford not to know exactly what it is and what it proposes to do.

A Suspicious Program

Elsewhere in this issue Mr. Hayne Davis describes the forthcoming North Carolina Arbitration and Peace Conference and the newly organized Peace and Arbitration League. Both organizations, together with the North Carolina Peace Society, are conceived by practically the same men and all three accept the program of "adequate armament" and "effective arbitration." President Roosevelt calls the North Carolina society "a genuine peace society," and has accepted the honorary presidency of the Peace and Arbitration League, of which Congressman Hobson is the chief executive officer. The other officers are more known for their war than their peace efforts. With the program of "effective arbitration" THE INDEPENDENT is in hearty accord. We have frequently urged that we cannot have "effective arbitration" until each nation agrees to respect the other's territory and sovereignty and arbitrate all other subjects. This would mean that the "vital interests" of territorial integrity and sovereignty would be removed from both the realm of war and arbitration, and manifestly no other things are

worth fighting about. President Roosevelt is the first head of a nation to declare that the adoption of these principles would make model international treaties, and the North Carolina Peace Society deserves the credit of suggesting them to him. But with the alternate program of "adequate armament" we are entirely at variance. Of course, theoretically, no one can object to "adequate armament," but by the word *adequate* we do not mean a gigantic navy, as does the Arbitration and Peace League. Indeed, the League would doubtless go so far as to urge "naval supremacy" if Mr. Hobson could have his way. Naval supremacy, if adopted as the military policy of each nation, would lead to the bankruptcy of all except the richest. The nations will manifestly not start on such a suicidal policy. They will prefer to risk war in the lap of plenty than to starve to death in security. But if naval supremacy is nonsensical do we not need a *larger* navy? Certainly not if we only care to fight when invaded. No nation could hope to succeed in permanently subjugating our territory even if we had no navy at all. The virtue of our people and our geographical position are a guarantee of our safety from all enemies without. Moreover, a small navy would prevent us from waging a war of aggression on a great military power, and it would be sufficient for us to keep the semi-civilized nations like Turkey and Venezuela up to their international obligations. It would almost seem as tho this movement for "adequate armament" and "effective arbitration" is a scheme to pull the wool over the eyes of the peace workers. By giving the pacifists a few crumbs of support in their dreams for an ultimate peace on earth, it is hoped that their opposition to our Government's insidious militaristic program may be weakened. All talk of insuring peace by increasing armaments is saddening, retrogressive and wicked. The way to disarm is to disarm.

The Three Plagues

There are three dangerous diseases now epidemic in a virulent form and likely to attack any country. They are cholera, bubonic plague and militarism. The last is the most injurious and least feared. That it is highly contagious is shown by the Australian case. The brief visit of the American fleet was sufficient to infect the Australians with the virus, and the disease has already broken out in the form of a popular demand for a local navy. The Government will appropriate $6,250,000, not to stamp out the disease, but to spread it. A flotilla of six torpedo-boat destroyers, nine submarines and two depot ships will be constructed as a starter. The country will be immediately deprived of the services of 1,200 men, picked for their ability and physical vigor, and nobody knows how many more will be required in the future. Why did not Australia quarantine against the American fleet instead of welcoming it with banners and bands? If The Hague, as is proposed, establishes a system of international quarantine for the world it should include all three diseases.

The Catholic Encyclopedia

We have the following note from the Robert Appleton Company, publishers of "The Catholic Encyclopedia":

In the last issue of your magazine there appeared a statement to the effect that certain articles published in "The Catholic Encyclopedia" were condemned by the Congregation of the Index.

This statement is absolutely untrue, and to show you that there is no basis for any such charge we call your attention to the enclosed statement of our managing editor, Dr. Condé B. Pallen, which states that the work is approved by the highest Catholic authorities and that it is brought out under the censorship of the ecclesiastical censors of the Archdiocese of New York.

Each volume of the work bears the *imprimatur* of Archbishop Farley.

In response to a cable message making inquiry in Rome as to the truth of the recent reports in the public press that an article or articles in the Encyclopedia had been condemned by the Roman authorities, Most Reverend John M. Farley, Archbishop of New York, under date of September 23, 1908, sent a cable from Rome, a copy of which is herewith enclosed.

Archbishop Farley's telegram is as follows:

"Press reports concerning Papal ban on 'Catholic Encyclopedia' absolutely false."

Dr. Pallen says:

The statement recently current in the press of the United States to the effect that an article or articles in "The Catholic Encyclopedia" have been condemned by the Roman authori-

ties is absolutely without warrant or basis. The widespread publicity of this statement has given much annoyance to the editors and the publishers of "The Catholic Encyclopedia," and I desire to state most emphatically that this rumor is absolutely without foundation.

There is no truth whatsoever in the statement that any article published in "The Catholic Encyclopedia" has been condemned in any way by the authorities at Rome. So far from this being true, "The Catholic Encyclopedia" has received the approbation of the Holy Father himself, of Cardinal Merry del Val, and of other high ecclesiastical authorities there. There is no truth whatsoever in the statement that any of the editors of the Encyclopedia have gone to Rome to endeavor to straighten out the position of the Encyclopedia in this question of Dr. Hanna.

We freely accept these denials; but they do not affect THE INDEPENDENT. We did not say, in our editorial of September 24th, that "certain articles published in 'The Catholic Encyclopedia' were condemned by the Congregation of the Index," nor anything like it. We said that the "Analecta" *"repudiates,* if not formally condemns," certain articles in the Encyclopedia. "Repudiation" and "strong condemnation" by the conservative editor of "Analecta" was all we asserted. If this proves untrue we shall gladly make correction. "Condemnation" is official, and of that we had no information. We have no conflict with Archbishop Farley or Dr. Pallen. *The Western Watchman,* one of our most intelligent Catholic journals, whose editor is just back from Rome, says that some articles in the Encyclopedia "have been censured and will have to be expurged in all future editions." We said no more than that.

Senator Foraker's Further Defense

Mr. Hearst publishes more letters, with more payments by the Standard Oil to Senator Foraker. Again Mr. Foraker defends himself. This is what he has to say

"My employment was confined to the affairs of the company in Ohio, including its reorganization after the decision of our Supreme Court dissolving the Trust, and then it was ended long before the company had become in any way the object of legislation by Congress or the subject of attacks of any kind in the courts or otherwise by the United States Government, and before any such legislation by Congress or any proceeding by the United States Government against the company was proposed or foreseen."

The payments made to Mr. Foraker for the above services were as follows, so far as yet reported: March 26th, 1900, $15,000; April 17th, 1900, $14,500; November 26th, 1900, $10,000; December 11th, 1900, $5,000; total, $44,500 in four payments within nine months. That the service as stated above was the nominal service paid for may be true, but the subsequent letters asking him to do unpaid political service is most plausible evidence that he was selected as counsel for his political influence, while his relation as counsel was not generally known; and that the subsequent appeals to him for political aid make it plausible that the large payments were supposed to have made him a grateful and powerful friend who could be depended upon to help in time of need.

Burning Churches and Schools

What is there worse in Russia than can be found in this country? On the Kentucky-Tennessee border, near Jellico, a crowd of drunken young men, armed, of course, waited till a church service was thru and insulted one of the young women of the congregation. When remonstrated with they began shooting, killed three men, two of them deacons of the church, and wounded another man and the pastor, as he stood in the door of the church and was begging them to stop shooting. They are said to be men of good families, and they may get caught and punished, but it is doubtful. Another more vicious, if not equally fatal case, is that in Southwestern Georgia, where masked night-riders had lots of fun last Sunday night. In a region of ten miles square they burned every negro church and schoolhouse, and left threats of further injury. One church and school are particularly mentioned as belonging to the most progressive negroes in that section. These institutions represent the modest and self-sacrificing efforts of these people to serve God and elevate themselves. These twenty buildings burned include their parish schools, established to supplement the failure of the State of Georgia to provide their children with a common school education. It is said in explanation of this raid that a white woman had been attacked by a negro; but that negro had been faithfully lynched. It is also said

that these negroes had sold some of their cotton, instead of holding it for an advance—a deadly offense. It is also said that in their churches and lodge rooms they form plans and plots of one sort and another. It may be fortunate that the negroes did not know that their churches and schoolhouses were to be attacked, for in that case they might have been present to defend them; and in that case a race war would have been reported, and soldiers sent to arrest the negroes, deprive them of their arms and send them to the chain gang, which has a few months more of grace, or disgrace, to run. Who the night-riders are is not known, of course, and never will be, but "the outrage is condemned by good citizens." We are told that "many negroes are fleeing." Strange!

British Longevity

The British statistics of mortality, just published, show what we all knew before, that more clergymen live to old age than the members of any other profession. What is the reason? In part, that they are a little older in entering their profession than in almost any other business, which cuts out, in the statistics, those that die before twenty-five. Next, they live a regular life, with no excesses; and they take a moderate amount of exercise, while mostly protected against exposure. Then something may be credited to the philosophy of religion, which tends to an equable frame of mind. Physicians have an excessive mortality, which may be accounted for in part by the nervous strain of anxiety and night work. Of liquor dealers and their employes have a high death rate; in the ages from twenty-five to forty-five more than double the average. The most hopeful facts reported are the decrease in death rate in occupations which involve dust or foul air. The attention given under legislation for protecting the lives and health of workmen in mines, shops and factories gives excellent results. The lessons are many and very plain.

We spoke last week warmly of the proposition supported by Governor Fort that New Jersey should establish a fine boulevard all along her Atlantic coast. The new subways, which eliminate ferries, make New Jersey most accessible to New York and a most desirable place for suburban residents. But there is one drawback along the coast line, and that is the famous Jersey mosquito. It is amazing that the State does not take measures to abate the nuisance by damming and diking the salt meadows. One of the next obligations of government, not there only, but elsewhere, is to abolish the pestiferous mosquito. The automobile, when it gets its mastery, will abolish the housefly, which breeds in stables; but the mosquito, of various species, breeds anywhere in stagnant water.

We confess to as great a difficulty in getting enthusiastic over the new demonstrations of the future life made to Sir Oliver Lodge thru a medium, Mrs. Hollandrones, as the late Mr. Myers has in communicating thru her. He is "conscious of strain and effort," and cannot succeed very well in using her as his medium. Indeed, he tells nothing further than this; but he informs Mr. Stead that he has made many discoveries which he will try to make known. We are patient but not hopeful, even with all willingness to believe. But all thus far is so trivial.

Mr. Hearst's speeches are raising him in public estimation as a slinger of pictorial English, so that we cease to believe that a hired man writes all his forthputtings. Take this sentence from his address in Denver last week:

> "Mr. Foraker can no more get off the Standard Oil fly paper than Mr. Haskell can, and the more either of them tries the deeper he sinks into the tanglefoot of corruption and contradiction."

Simplified spelling moves on. The New York Aldermen have unanimously given the name Queens*boro* Bridge to the new bridge that connects the *Borough* of Queens with Manhattan.

They are doing well in Texas. The grand jury in Mercer County have returned ten indictments against men alleged to have taken part in a lynching, and more are to follow.

Insurance

Housekeepers.

A clever intelligent American young woman, capable of filling position as working housekeeper, would like a position in a boarding house or small hotel; city or out of town. Business Woman, 328 [redacted]

A refined widow (35); business qualifications; excellent reference. Practical. 317 [redacted]

HOUSEKEEPER.—Respectable middle aged woman as housekeeper to business couple; good cook; careful in her work. E. L., 156 [redacted] Bronx.

MIDDLE aged woman as housekeeper; hotel, private family, institution; linen room. S. S., 107 [redacted]

POSITION as housekeeper in New York city wanted by middle aged lady; competent to handle servants, audit and pay bills and take entire charge of house if desired; several years' residence in New York; salary $15 week. Address [redacted], Quincy, Mass.

YOUNG woman to do housework; cook and laundress; reliable; references; city or country. [redacted] West 24th st.

YOUNG woman, housework; good plain cook and laundress; city or country; city reference. [redacted], [redacted] West 19th, rear.

COMPETENT woman, housework; city or country; reference. [redacted] East 28th; top floor.

HOUSEWORKER, middle aged, capable woman, small family; plain cooking; references. [redacted] West 38th.

HOUSEWORKER, small family of adults, apartment; good home preferred to high wages. Call two days. [redacted] Park av., second bell.

MIDDLE aged woman, housework or cook and laundress; city, country. [redacted] West 87th, two flights.

MIDDLE aged Englishwoman in small family for light housework. Mrs. [redacted] 3d av.

NEAT woman to do housework; good cook and laundress; city or country; best reference. [redacted] West 19th st., one flight.

RELIABLE woman, housework; good cook and laundress; home preferred to wages. [redacted] West 19th.

COMPETENT young woman as houseworker in small family; good plain cook and laundress; obliging; best references. [redacted] East 75th [redacted].

COMPETENT woman houseworker in American family; good cook, laundress; references; no mail. [redacted] East 116th st. (ring janitor's bell).

ELDERLY woman to do housework, small family; wages $10. Call two days. [redacted] East 74th.

WOMAN as houseworker or working housekeeper. N[redacted] East 106th st.

YOUNG woman as general houseworker; city reference; $5 weekly; no cards. [redacted] West 62d.

A middle aged woman for light housework; good home preferred to wages; can come well recommended. Mrs. [redacted] 9th av.

RELIABLE young woman, Protestant, as houseworker in private family (two or three) adults in apartment; no washing or ironing; excellent cook, waitress; understands marketing; can take full charge; wages $25 to $30; personal references; carfare. [redacted] East 42d. 'Phone, [redacted]—38th.

Tragedies in Advertisements

EVERY young man who marries regards his wife as a treasure. He wants to make her happy. He expects to take care of her, love her, comfort her, honor and keep her, in sickness and in health, and forsaking all others to keep himself only unto her, so long as they both shall live. He promises to do all these things, and in most cases, doubtless, the husband does many, if not most, of them. Men who have no thought of insincerity, however, fail to keep the real and true spirit of their vows when they neglect to provide for the welfare of their wives after their death. Their promise was for so long as they both shall live, and when the husband dies without having provided in any way during his life for the wife who survives him, he has by no means kept the full obligation of his vows. "Is your wife a good housekeeper?" That question may well come home to every husband, because upon the answer thereto may depend the existence of the wife in case she becomes a widow. It is by no means enough for a man to make his wife an allowance, even a liberal allowance, and then carelessly live up to his income and perhaps beyond. The good provider may easily be cut off. Can his widow continue to live in her own home or must she be driven out into a cold and very unsympathetic world to depend upon her own breadwinning capacity and perhaps become a housekeeper for some other family? The advertisements printed on this page are unfortunately not fanciful. They are veritable tragedies in the "ad" pages. Would your wife have to print a similar advertisement in case you died? That is the question for every husband to consider very seriously. Of course the husband who reads these words loves his wife and children, and wants to make *sure* that the home is made secure for them. Life insurance provides a method for doing just this. Have you ever thought about having your life insured and then put the matter off for a more convenient season? It would be very remarkable if you had not. The next time you are tempted to enjoy a luxury you can get on without, deny yourself and buy a life insurance policy. The want advertisements printed herewith ought to be a perpetual reminder of the absolute necessity for so doing.

FINANCIAL

Bankers' Association Opposes Deposit Guarantee

At its thirty-fourth annual convention, in Denver, last week, the American Bankers' Association emphatically condemned the Bryan and Haskell proposition for guaranteeing bank deposits. This association is composed of nearly 10,000 national banks, State banks, savings banks, trust companies and private banking houses, and these were represented at Denver by more than 3,000 delegates. The decision of such a body concerning a question strictly within the field of banking should have great weight with the general public. Action was first taken by the savings bank section, which may fairly be regarded as the most conservative part of the great organization. The resolutions adopted by the savings bank officers denounced any plan for making each savings bank responsible by taxation or assessment for the acts of other banks, or for connecting them with the national banking system, as economically unsound, confiscatory, inimical to the interests of all directly concerned, discouraging to individual initiative, and a specious form of paternalism and socialism. Then the clearing house section exprest similar opinions, and the trust company section condemned the project by a vote of 74 to 5.

Finally the convention, upon the report of its Federal Legislative Committee, adopted without dissenting voice the following resolution:

Resolved, That the American Bankers' Association is unalterably opposed to any arbitrary plan looking to the mutual guarantee of deposits, either by a State or the nation, for the following reasons:

1. It is a function outside of State or National Government.
2. It is unsound in principle.
3. It is impracticable and misleading.
4. It is revolutionary in character.
5. It is subversive of sound economics.
6. It will lower the standard of our present banking system.
7. It is productive of and encourages bad banking.
8. It unjustly weakens the strong and unfairly strengthens the weak banks.
9. It discredits honesty, ability, and conservatism.
10. A loss suffered by one bank jeopardizes all banks.
11. The public must eventually pay the tax.
12. It will cause and not avert panics.

The arguments against such a guarantee were forcibly presented not only in the committee's report, but also in the discussion and in several of the excellent addresses delivered before the convention, notably in the annual address of President Powers and in that of Alexander Gilbert (president of the New York Clearing House), upon "Vital Issues." Colonel Powers remarked that many good men, as he well knew, believed that such a guarantee was "just and right." But in the early stages of the free-silver heresy many good men also "believed that cause just." There was a great awakening, however, after the fallacy of sixteen to one had been thoroly exposed, "and so it will be with the guarantee of bank deposits." In a part of Mr. Gilbert's address the case against a guarantee was clearly and dispassionately stated. Among those who took part in the discussion in the trust company section was Clark Williams, New York's Superintendent of Banks, widely known as a very competent officer, who said that the banking interests of his State (representing 20 per cent. of the country's banking power) were unanimous in opposition to the project.

The convention was an interesting and successful one. George M. Reynolds, president of the Continental National Bank, of Chicago, was elected president, and the new vice-president is Lewis E. Pierson, president of the Irving National Exchange Bank, of New York, heretofore chairman of the executive council. Next year's meeting will be held in Chicago.

....The Grand Trunk Pacific has opened 600 miles of its new line in the Canadian Northwest, from Winnipeg to a point near Edmonton. It is announced that the Canadian Pacific will build a line to Dawson, in the Alaskan gold fields. This line will be about 1,500 miles long. At present the only route to the Yukon gold deposits is controlled by Americans. By a road lying wholly in Canadian territory Canada hopes to gain a large part of the trade which now seeks the American route.

The Independent

VOL. LXV NEW YORK, THURSDAY, OCTOBER 15, 1908 No. 3124

Survey of the World

The Political Campaign

During the past week the leading candidates have been speaking in the States of the Middle West, but in the last days of the campaign there is to be a concentration of forces in New York, with special effort also in Indiana and Ohio. A postal card canvass made by the New York *World* leads that newspaper to predict that Taft will carry the State of New York by about 15,000 and that at the same time the Democratic candidate for Governor, Mr. Chanler, will have a plurality of 193,000 over Governor Hughes. This canvass gives New Jersey to Taft by 30,000 and Connecticut by 17,000. Of the eight Republican State Senators who voted against Governor Hughes's bills for the suppression of race-track gambling, five have failed to secure renomination. Four of the Democratic Senators who opposed the bills have suffered in the same way. With this evidence of popular support for the Governor there are, however, indications of opposition, notably in the cities, which account for the predictions that are based on this postal card canvass.——In a public address at Baltimore, on the 5th, Alton B. Parker, Democratic candidate in 1904, asserted that the Republican committee received in that year a contribution of $100,000 from the Standard Oil Company and used the money. No reply to this charge has been made. It is well known that the campaign funds of both the great parties this year are small. A preliminary statement as to the Democratic fund shows a total of $220,000. The official figures are to be published this week. It is asserted that the Republican fund does not greatly exceel the sum mentioned above.——Ferdinand Strauss and Charles S. Davis, nominated for Presidential electors by the Democrats of Massachusetts, have declined to serve, saying that they are unable to support Mr. Bryan.——At the election in Georgia, last week, Joseph M. Brown, Democrat, had a plurality of 80,000 over Carter, the nominee of the Independence party. For the disfranchisement amendment the majority was about 50,000. ——Mr. Taft and Mr. Bryan met at the annual banquet of the Chicago Association of Commerce, on the 7th, and engaged in conversation about their labors in the campaign. In his brief speech to the one thousand assembled guests, Mr. Bryan said:

"I am glad to meet at this board one who has been honored by his party with leadership in a great campaign. I am glad to testify to my appreciation of his abilities and his virtues. If I am successful the victory will be the greater to have won from such, and if I am defeated the sorrow will be less to have been defeated by such."

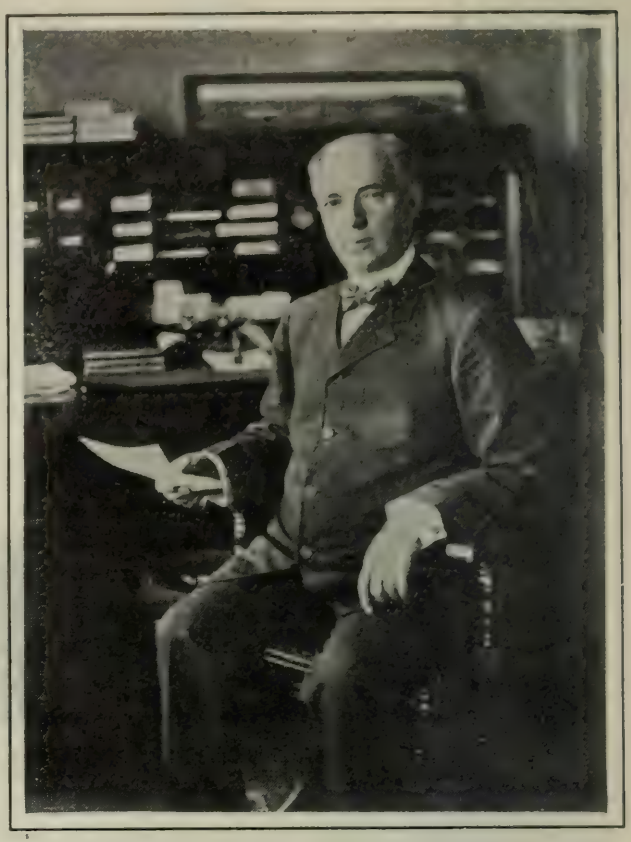
Mr. Taft said in reply, before beginning his address upon "The Law's Delays":

"I am exceedingly glad to meet my distinguished opponent and fellow-guest and to forget the rivalry and disputes of the campaign in this most inspiring hospitality. And I reciprocate in every way and to the full his kindly and courteous words of respect and good-will."

More Standard Oil Letters

In the course of his campaign speeches last week, Mr. Hearst read several additional letters which appear to have been taken from the Standard Oil Company's files. At San Francisco, on the 9th, he continued his attack upon ex-Senator McLaurin and Congressman Sibley. The latter, he said, had represented the company in the House:

"He has been both Democrat and Republican and he is willing to be either as his service re-



quires. He is a shining example of the corporation lackey in politics who will wear any political livery and answer any political bell. He was elected to Congress by the Standard Oil in opposition to a man named Emery, who had fought the Standard Oil. Emery, as far as I can discover, was an honest man who honestly tried to do his duty to his fellow citizens, but the Standard Oil overwhelmed him, beat him, broke him in heart and in pocket, elected Sibley to Congress in his stead, and nailed poor Emery's hide to their barn door as a warning to other honest men and patriots."

Mr. Hearst then read the following (dated September 6th, 1900), addrest to President Cassatt, of the Pennsylvania Railroad Company, and bearing the signature of John D. Archbold:

"DEAR MR. CASSATT—In Mr. Patton's absence, I venture to write you on a political question which seems to be of real importance and interest. In the Twenty-seventh Congressional District, L. Emery, Jr., the old-time agitator, is running for Congress against J. C. Sibley, of Franklin. Sibley has had, as you know, rather a variegated political career, but he is now again squarely in the Republican fold, and, I think, sound in every way. Emery's election would certainly be a great misfortune, and I venture to ask that you do everything possible in the matter in Mr. Sibley's favor, on the sure ground that all corporate and vested interests will have full consideration at his hands."

"What Mr. Sibley was to the Standard Oil Company in the House," said Mr. Hearst, "Mr. McLaurin apparently was in the Senate." He read the following, signed by McLaurin, marked "confidential," and dated at Bennettsville, S. C., September 30th, 1904:

"DEAR MR. ARCHBOLD—In the same mail by which your letter came was one that I wish to quote a few sentences from, apropos of your remarks about Mr. R. The writer of that letter was employed in a confidential way by Senator Hanna in matters of importance. He is a shrewd, close observer, not over-scrupulous, but a very intelligent man, whose public experience and acquaintance is wide. I knew him well in Washington, and when he saw my article in the *Sun* he wrote me a long letter, indulging in some unexpected criticisms of the President, to which I replied, combating his position. He said in part: 'Reading on Sunday Lawson's "Frenzied Finance" recalled to my mind a remark that I heard him [Roosevelt[make, that he hoped some day to be able to take a fall out of that Standard Oil gang, and if he succeeds himself, mark my words, he will try to make good his statement, as he believes it will appeal to the masses and keep him in the centre of the stage.' I thought it might be a friendly act to copy this and give it to you in strict confidence. From my isolated position, I cannot say whether it is worth the ink or not.

JOHN D. ARCHBOLD.

It will show, anyway, that I am not unmindful of your various kind actions toward me."

Mr. Roosevelt surely had taken, continued Mr. Hearst, "a twenty-nine-million-dollar fall out of the Standard Oil gang," and they were going to nail his hide to their barn door if they could. His argument was in support of the theory that they were seeking to use the Democratic party for this purpose. At Berkeley, Cal., on the 10th he read a series of four Archbold letters, all written in February, 1901. In the first (February 5th), addressed to Mr. McLaurin (then in the Senate), Mr. Archbold acknowledges receipt of "your most kind favor of yesterday," and adds:

"I have also a telegram from Mr. Grasty today, which I have answered and which answer I hope he will make known to you. Believe me that I appreciate the expressions of your letter more highly than I can well state, and hope when the time comes, if it ever does, for an opportunity to reciprocate, that we will not be 'found wanting.'"

The second (February 13th, to R. H. Edmunds, Baltimore); third (February 15th, to Congressman Sibley), and fourth (February 18th, to Senator McLaurin), were as follows, but the third, now dated February 15th, 1901, appears

to be identical with one read by Mr. Hearst at El Paso on the 3d inst., when the date attached to it was May 30, 1900:

"DEAR MR. EDMUNDS—I have your several very interesting favors. I return you Senator McLaurin's letter with the clippings. The whole affair at Washington has been most interesting. Have been sorry indeed to hear of the Senator's illness. Mr. Griscom undertook to have a talk with him Monday thru a mutual friend. Your own work in all this matter has been most admirable."

"DEAR MR. SIBLEY—I beg to enclose you herewith certificate of deposit to your favor of $5,000, sent you at the request of Mr. Griscom, the purpose of which you no doubt understood with him. Permit me to improve this opportunity also to express my high appreciation of your most courteous and efficient action in response to our request regarding the consideration of the subsidy matter with Mr. Griscom."

"MY DEAR SENATOR—Please accept thanks for your note of the 16th. I am, of course, much interested in the statement. Have no doubt Mr. Sibley saw you on Saturday, as I requested him to do."

Mr. Hearst's comments suggested an inference in his mind as to the final destination of the certificate of deposit for $5,000. "Mr. Archbold," said he, "assuredly was not found wanting. Assuredly Mr. Sibley 'saw' Senator McLaurin."——Mr. Sibley has addressed to the public a long statement, in which he says that for thirty years he has been more or less closely associated in business with Mr. Archbold and has written to him with the freedom and frankness due to a business associate and personal friend. His relations to the Standard Oil Company, he continues, have been well known, as well as his views on corporate problems. He asks Mr. Hearst to publish all of his letters to Mr. Archbold, saying that no one of them will reveal an unworthy motive or act. During his political career, he asserts, no man has charged him with having a dishonorable dollar in his possession.

Mr. Hearst Attacks Mr. Kern

In a long speech at Los Angeles, on the 5th, Mr. Hearst sharply attacked John W. Kern, the Democratic nominee for Vice-President, demanding that he should follow the example of Haskell and resign. Asserting that Mr. Kern's name had been placed on the ticket by Thomas Taggart, of Indiana (formerly chairman of the Democratic National Committee), he read the affidavits of newspaper reporters who attended the Denver convention to the effect that Mr. Kern had acknowledged to them that he owed "the great honor" to Mr. Taggart's influence. He then asserted that Mr. Kern, as city attorney of Indianapolis, had served Mr. Taggart with respect to street railways and that he had been and still was Mr. Taggart's counsel in the suits brought by the State of Indiana for the annulment of the charter of Mr. Taggart's French Lick Springs Hotel Company upon the charge that a gambling place was maintained by the company on its grounds. Mr. Hearst produced court records of this litigation, showing advertisements of the "Monte Carlo club rooms" and setting forth the capture of many roulette and faro tables in these rooms by the State authorities. Mr. Kern, he said, had defended Taggart not only in court, but also in the press. He also criticised Mr. Kern for holding an annual pass (recently lost by him and found by residents of Indiana) on the Big Four Railroad, remarking that this road was a part of the Vanderbilt system, which had been fined for paying rebates to the Sugar Trust, and which, having Mr. Depew in the Senate, would like to have another friend in the Vice-President's chair. It is explained that Mr. Kern has an annual pass because he is employed by the railroad company as an attorney.

Night-Riders and Lynchers

Following the example set by midnight marauders in Kentucky, night-riders are at work in the cotton-growing States of the South, apparently in the interest of higher prices for cotton, altho some of them have other purposes. At Leslie, Ark., on the 6th, they burned three dwelling houses owned by two planters who had been warned by letter that they must rent their land for the coming year at $4 an acre. "Fire," said the letter, "has the same power now that it had at the beginning of the world." In North Carolina and South Carolina, last week, many cotton-gin houses were placarded with warnings that cotton must not be ginned or bought until prices should be higher. In these States the members of the Farmers' Union are

holding meetings at which the night-riders are denounced and the authorities are urged to proceed against them. In Texas, the same organization offers a reward of $500 for every conviction of a night-rider, and the Governor has ordered the State Rangers to detect and capture such outlaws, if possible.——Troops have been sent to Hickman, Ky., where there is much excitement on account of recent murders by night-riders. On the 4th, fifty masked men attacked David Walker, a negro, who was said to have cursed a white woman. Walker sought to defend himself. Whereupon the night-riders set fire to his house and shot him and the members of his family (his wife and two young children) as they were driven out of the building by the flames.——At Glen Flora, Tex., on the 6th, a mob said to have been composed exclusively of negroes, took from jail and hanged Benjamin Price, a negro, who had been arrested for assault upon a young girl.——At attempt was made at Los Angeles, Cal., on the 5th, to lynch Edward Martin, a negro, while the latter was in court and about to be tried for assault upon a white woman. Having been rescued, he pleaded guilty and was at once sent to prison for life.——Abraham Raymer, said to have been the ring-leader in the race riots at Springfield, Ill., a few weeks ago, was acquitted by a jury there, on the 8th.——The jail at Spartanburg, S. C., was besieged on the 10th by a mob in pursuit of John Irby, a negro, held for assault upon a young white woman. The sheriff and three of the rioters were wounded by rifle shots. A rioter who shot the sheriff was arrested. Three companies of militia were at once sent to the place.

Philippine Islands

An agricultural bank, founded by the Government, with a capital of 1,000,000 pesos, was opened for business at Manila on the 9th. Señor Araneta, Secretary of Finance, is president, and the manager is F. A. Branagan, Insular Treasurer. This bank accepts only real estate or harvested crops as security for loans. It is expected that it will exert much influence for the promotion of agriculture.——The battleship fleet sailed for Japan on the 9th. During the severe typhoon of the 4th the ships suffered no injury. On shore much damage was done. The wind blew at the rate of 100 miles an hour. Owing to the prevalence of cholera, the program for the reception and entertainment of the visitors was greatly restricted. For some time past the average number of new cases of the disease in Manila daily has been ten. The health officers hope to suppress the epidemic before the return of the fleet in November. From January 1st to August 15th there were in the entire archipelago 12,316 cases and 7,830 deaths. Since August 15th the number of deaths each week has been about 500.

The Balkan Condition

The disturbance in the Balkans absorbs the attention of the world, involving, as it does, the permanence of the Turkish reforms and the peace of Europe. It is usually considered that the declaration of independence by Bulgaria does not involve such danger to peace as does the annexation of Bosnia and Herzegovina by Austria. It is true that Austria offers to restore to Turkey the full control of Novi-bazar as compensation, but if that could have been so accepted by Turkey, this would have been accomplished by negotiations. Even this Turkey might have felt obliged to submit to, but meanwhile other semi-detached provinces have revolted. Crete has declared her union with Greece, and Montenegro declares for independence, and Albania revolts, while Servia has been during the week on the verge of war with Austria. Her complaint is that the people of Bosnia and Herzegovina are Serbs and ought to be allowed to join with Servia. Indeed, it is not clear from the censored dispatches whether the hostility of the Bosnian people to annexation to Austria has not been general. Servia has called soldiers to arms, and Austria has sent soldiers to the frontier. Montenegro joins with Servia in this protest, and there is danger of bands of Servians and Montenegrins joining with the Bosnian malcontents to create a condition of guerrilla warfare against the Austrian occupation. The Servian legislative body has been called in session, and with great difficulty the wiser counsels have prevailed, and by a small majority any overt action has

been postponed, as it is certain that Servia is in no condition to meet Austria in war. She has on paper but 110,000 soldiers and no store of powder. Meanwhile the Bulgarian condition remains unchanged, and Turkey is waiting for the action of the Powers. Bulgaria has much to lose from her independence, apart from the danger of war. A quarter of Bulgarian exports go to Turkey, and are admitted duty-free or at a lower rate than is imposed on other countries. Once independent the duties would be raised. The Bulgarian Exarch at Constantinople would be sent to Bulgaria, and Bulgarians in Turkey would lose his protection. Further, the Austrian influence would be greatly increased, perhaps to the point of danger. The sentiment of other Balkan States on the seizure of Bosnia and Herzegovina by Austria is indicated by the action of Montenegro, whose Prince Nicholas is reported to have telegraphed King Peter of Servia that when the Servian army marches to the bank of the River Drina the Montenegrin army will advance against Herzegovina, in protest against Austria. In a manifesto he says:

"My heart weeps with the hearts of all Servia at the fate of Bosnia and Herzegovina.

"As today the terms of the Treaty of Berlin are infringed on one side by the annexation of Bosnia and Herzegovina, obligation on our part to observe Article 39 of this treaty fails. The treaty being forced upon us and our maritime rights being cruelly limited, Montenegro considers herself no longer bound by these fetters."

The feeling of Rumania is indicated by her Foreign Minister, who is quoted as saying:

"Servia's fate is already sealed by the Austrian annexation of Bosnia and Herzegovina. It is merely a question whether the Servians prefer to perish like heroes in war or like mice in a mouse trap."

The Montenegrin populace is all for war in support of Servia and the protection of those of Serb race in Bosnia and Herzegovina against the pretensions of Austria. At a great mass meeting at the capital, Cettinge, anti-Austrian speeches were made, and resolutions adopted calling on Servia to act with Montenegro in defense of the interests of Serbs.

Crete

It was to be expected that Crete would take advantage of the general disturbance to renew her attempt to secede completely from Turkey and annex herself to Greece, and this she has done, so far as the will and act of her people can achieve it, but in this case the consent of the Powers is necessary.

MAP SHOWING THE BALKAN DISTRICT

Until after the war between Turkey and Greece a dozen years ago Crete, which lies just south of Greece, had been under the Turkish rule, altho the population was overwhelmingly Greek. The Powers—Germany abstaining—required Turkey to withdraw her army, accept a yearly tribute, and allow the appointment of a Christian High Commissioner, son of the King of Greece, and this has been followed by peace and growth, except as an insurrection in favor of Greece two years ago required the intervention of the Powers. About that time the son of King George resigned in despair of securing annexation to Greece, but the King of Greece has been allowed to nominate his successor. The people have been eager for annexation, and, following a popular demonstration, the Government has officially proclaimed union with Greece. But this does not please the protecting Powers, which do not want to offend the new Turkish Government, and they refuse consent, and Great Britain has sent four battleships to the neighboring island of Lemnos to keep the peace and protect the Dardanelles. The Greek Government stands ready to accept Crete, but assured the Porte that it was not consulted in this movement, and will do nothing to interfere with friendly relations. Crete must wait for the action of the Powers.

A Conference of the Nations

Everything awaits the decision of the Powers concerned with the Treaty of Berlin, whether they shall meet in a conference to revise that treaty. The chief trouble is that Austria declares it will not submit to such a conference the decision to annex Bosnia and Herzegovina, as that is final. Much feeling has been aroused by the arrogant attitude of Austria, and it is accounted for by the fact that in his old age the Emperor has been obliged for a year or more to withdraw his active lead, and that the prospective heir and an ambitious and unscrupulous Prime Minister have taken the reins in their own hands. Austria makes no real apology for her sudden action. She simply declares that it was the intention of the Conference which created the Treaty of Berlin that Austria's occupation of the two Turkish provinces should be permanent, that she has so governed them as to secure tranquillity and development, and that annexation is now necessary. Correspondence is going on actively between the Chancelleries of Europe as to the Conference. The leading part is taken by Great Britain and Russia, in conferences between the Russian Minister of Foreign Affairs, Isvolski, and Mr. Asquith. Russia claims that she was the chief sufferer by the Treaty of Berlin, as she was shut out from the Dardanelles, and she has demanded that the Dardanelles be opened for the passage of her fleet. This the other Powers object to. Great Britain has nothing to demand of the coming Conference, as she does not care to ask that Cyprus and Egypt be declared hers finally, as she is satisfied with actual possession, while doubtless willing to accept full authority. France goes with Russia and Great Britain in this matter of a Conference. While Austria declares she will not submit the Bosnian question to a Conference, Germany vigorously declares that she had no previous knowledge of Austria's intentions; and while she does not particularly blame Austria and really supports her, she loudly protests her affection for Turkey. But that Germany has been behind Austria, her ally, in this matter is generally believed. The Turkish revolution, with its promise of a new Turkey, is not welcomed by those European Powers which have looked lustfully on Turkish territory. A new Turkey would strengthen its hold on its provinces in Europe, resolved to recover by liberal concessions what it has lost by oppression; thus guarding them against absorption by Russia and Austria. Hence the sudden haste with which Austria seized Bosnia and Herzegovina before the chance should be lost. A new Turkey will end German control of Turkish railroads, while Austria will not be allowed to press to Salonika and the Ægean, nor Russia to open the Dardanelles. The activity of Great Britain in sending a powerful fleet to Lemnos to observe the movement of conditions has had a very quieting effect. It is a warning to Greece not to put forth any aspirations for Crete until the conference shall meet; and it is a warning to Russia that Great Britain

will give no consent to the opening of the Dardanelles, as Lemnos is very close to the entrance to the Bosphorus. The conclusions of the Conference are somewhat indicated by the agreement to which Great Britain, France and Russia are likely to come, that no one of them shall ask any advantage at the expense of Turkey. Yet the accomplished acts of Austria and Bulgaria will have to be accepted, but it will be considered whether a pecuniary compensation may not be made to Turkey for the losses sustained in her right to tribute and nominal suzerainty. It is also suggested that Turkey may be placated by withdrawing the rights of exterritoriality now possest by these other nations, as they are very humiliating to Turkey, and the corresponding rights have been yielded to Japan. But this will require the assurance of permanent reforms, and it would be necessary for the Powers to assure the maintenance of the Turkish Parliament for several years before they would be willing to trust the Turkish courts.

The Young Turk Program

The political program of the Committee on Union and Progress, which represents the present control in Turkey, has been formulated, supporting the Midhat constitution of 1878, and its principal features are as follows:

"1. The Cabinet is to be responsible to the Chamber, and if Ministers fail to obtain majorities in the House they will be bound to resign their portfolios.

"2. The number of Senators shall not exceed one-third of the total number of Deputies. Article 62 of the Constitution, whereby all Senators are to be nominated by the Sultan, will be modified, and one-third of the Senators will be nominated by the Sultan and two-thirds chosen by popular election.

"3. Every Ottoman citizen over twenty years of age shall have a right to a vote irrespective of any property qualification.

"4. An article will be added to the Constitution recognizing the right to form political clubs, provided that their objects are of a constitutional nature.

"5. The necessary laws and decrees will be past to facilitate the application of the system of decentralization as set forth in Article 108 of the Constitution.

"6. The boundaries and administrative divisions of the provinces will be maintained unless the Chamber decides otherwise.

"7. Turkish will be the official language of the Empire and the medium of all official discussion and correspondence.

"8. The Chamber will be asked to vote an additional article of the Constitution sanctioning the proposal of private bills on the part of not fewer than ten Deputies.

"9. All Ottoman subjects possess the same rights and duties without distinction of race or religion. Military service is incumbent on non-Moslems as well as Moslems.

"10. Religious freedom is recognized, and the religious privileges granted to the various millets and communities will be maintained intact.

"11. The military and naval forces of the Empire will be disposed in accordance with its political and geographical position. A shorter term of military service will be introduced.

"12. Article 113 of the Constitution will be modified with the object of obtaining greater security for individual liberty.

"13. The relations of employers and workmen will be the subject of new legislation with a view to obviating strikes and labor disputes.

"14. The landless peasantry will be assisted to become proprietors—not, however, at the expense of present landowners.

"15. Improvements will be adopted in the system of the collection of the revenue.

"16. Education will be free.

"17. All schools will be subject to inspection by the Ministry of Education. Government schools will be established, which shall be open to all without distinction of religion or race. Turkish will be a compulsory subject in all primary schools.

"18 and 19. These deal with measures which are to be proposed for the encouragement of agriculture and commerce.

"20. Ottoman subjects possessing the necessary qualifications may be elected Deputies for any division of the Empire instead of being only eligible as representatives of the districts in which they reside."

Foreign Items

Mr. Wilbur Wright has again beaten the world's record in a flight in which he carried a passenger for an hour, 4 minutes and 26 seconds, and flying forty miles. On one day he made six short flights, carrying a passenger with him each time, one a lady.——The French bishops have issued instructions to their flocks in which they say:

"The State schools have persistently remained a danger to your children's faith. You should prevent them from attending them, whatever the possible consequences resulting from your conscientious act, as good Frenchmen and good Christians."

This has stirred the anti-clerical feeling, and there have been threats that priests who read the pastoral letter would be liable to punishment under the law which forbids utterances in church which are a "direct provocation to resist the execution of the laws."

The Republican Party's Appeal

BY WILLIAM HOWARD TAFT

CANDIDATE OF THE REPUBLICAN PARTY FOR PRESIDENT OF THE UNITED STATES.

THE INDEPENDENT asks me to write on the issues of the campaign. My time is so occupied that I must do it in great haste. To my mind, the issues of the campaign are not different from those which arise in every Presidential election, to wit, whether the work of the existing Administration shall be approved by continuing in power the same party, or shall be condemned by turning the administration of the country's affairs over to the Democratic party.

It can hardly be denied that the administration of the Republican party under Mr. McKinley and under Mr. Roosevelt has been a wonderful series of successes in meeting the new and unprecedented problems which have presented themselves in that period. The successful carrying on the Spanish War, the establishment of the Cuban Government, and its re-establishment just now promising entire success, the carrying on the Philippine War, the suppression of the rebellion and the establishment of tranquillity and of a government which is working great good in the Islands, the successful elaboration of the reclamation of arid lands in the West, the enactment of the pure food and meat inspection laws, the enlargement of the navy, the reorganization and great improvement of the army, the continuation of the coast defenses, the successful organization and rapid work toward completion of the Panama Canal, the establishment of the position of this nation as one of the most influential in the world, and the use of the influence thus gained to promote the peace of the world, as shown in the close of the Russian-Japanese War, the settlement of Central American wars, and the making closer the bonds between this country and the South American republics, are all definite things done under the administration of the Republican party which entitle it to the confidence of the people and their belief in its courage and efficiency as an agency in government to effect results.

After the disastrous operation of the Gorman-Wilson Tariff Bill, the Republican party became responsible for the passage of the Dingley Bill, and under that bill, whether it was the sole cause or not, the country was enabled to enjoy a prosperity and an expansion of wealth and material progress never before seen in the world.

It is said now, and truly said, that the tariff rates are generally in excess of what is required by the principle of protection, to wit, they exceed the difference in the cost of production of the same class of articles in this country and abroad. The Republican party is pledged, at a special session of Congress, to take up the tariff schedules and to modify them, so that they shall no longer be excessive; but it also pledges itself to maintain the protective system, upon which a great part of the manufacturing industries of this country and the whole business system rest.

In the course of the unprecedented prosperity and expansion evils crept into our community, consisting of the violation of the anti-trust law and the illegal creation of unlawful monopolies which were fostered by combining a large part of the plants engaged in the production of the article in question, and by the use of secret rebates and unlawful discriminations in the matter of transportation by the railroads, so as to render helpless the less powerful competitors of the illegal monopoly. More than this, in railroad circles it became clear that the power of issuing stocks and bonds of a par value far in excess of the real valuc of the property represented by such securities had been used by unscrupulous railroad managers to combine railroad properties and concentrate the control of them in the hands of one man or a few men. These evils, which forced themselves upon public notice most emphatically because of revelations the result of official investigation by State and national authority, were at once taken up by the Republican Administration under Mr. Roosevelt. A railroad rate law was

past giving greatly increased power to the Interstate Commerce Commission, and prosecutions under the anti-trust law were begun and prest with a vigor never before shown. The time was ripe, because the construction of the anti-trust law by the slow course of judicial decision had finally become sufficiently clear to make successful prosecutions possible. At the same time with the railroad rate bill were enacted the measures already referred to, the pure food law and the meat inspection law. All these encountered the strongest kind of opposition from the leading corporations, from the railroads and the corporations peculiarly affected by the other two laws. Two of the measures failed of passage in one Congress, tho recommended by the President, but in the next Congress they were past after a hard fight, by the full support of the Republican majorities.

Copyright, 1908, Underwood & Underwood, N. Y.

W. H. TAFT,
Speaking during his recent Western tour at Cedar Rapids, Iowa.

Mr. Roosevelt recommended the Federal restriction of the issue of stocks and bonds on interstate railways for the purpose of preventing future overissue; but this was not taken up at the last session of Congress, to which the recommendation was made. It is, however, a part of the pledge of the Republican platform

that such a measure will be past, and there is no reason to doubt that the Republican majorities, with this direction from the party in convention assembled, will comply with its behest.

The Republican platform also recommends legislation for the purpose of controlling corporations engaged in carrying on interstate commerce which are so large and powerful as to make it a temptation for them, unless restrained by law, to attempt illegal monopolies. The proposed plan is to subject the business of such corporations to the close supervision of the Federal authorities, so as to make their regulation and a keeping of them within the law possible. All these provisions of the Republican platform are in accord with the recommendations of Mr. Roosevelt and Congress, and are a proper and emphatic compliance with his policies.

The action of Mr. Roosevelt and the Republican party in this last Administration has called a halt in the evils and abuses which crept in during the enormous expansion of business during the last twelve years. The rate bill marked a moral revulsion and a purification of business methods in the matter of railway rebates and in the matter of complying with the anti-trust law which are notable in the economic and moral history of the country, and the most important steps now to be taken are those which shall make secure the progress made and clinch it, so that when prosperity is resumed the community shall not again be subjected to such evils and to the growth of enormous fortunes due to the perpetuation of such abuses.

The real issue of the campaign, therefore, is whether the Republican party, because of the record of the administrations of Mr. McKinley and of Mr. Roosevelt in the last twelve years, with this most remarkable array of arduous tasks performed, shall be given a vote of confidence and be entrusted with the further work needed, or whether the country shall be turned over to a party which, under its present leadership, has been doing everything by turns and nothing long. It was a party which proposed to relieve the disaster from which the country suffered during the four years of the operation of the Gorman-Wilson Tariff Bill, not by a new tariff bill, but by adopting a monetary standard of value which would in effect have scaled the debts of all debtors and of the nation as well by 50 per cent., and which would have sullied the honor of the nation as one which repudiated its obligations and enabled its citizens to do the same.

Again, in 1900, instead of recommending a change of tariff or suggesting any other of the remedies as paramount which it now proposes, it continued to insist on the adoption of free silver coinage, and attacked the policy of the Government in dealing with its problems which came from the Spanish War as imperialistic.

Again, in 1904, under a somewhat different leadership, but still claiming to be the same party, it made the paramount issue the executive usurpation of Mr. Roosevelt and attempted to avoid the fear that it might change the tariff by inviting attention, thru the letter of its candidate, to the fact that the Republican Senate would prevent any change in the tariff at all. Now that the Republican party has pledged itself to revise the tariff and reduce the excessive rates which have arisen by a change of conditions since 1896, the Democratic party seeks to make the tariff one of the issues of the campaign, after twelve years of what may be described as a substantial ignoring of the issue.

The Democratic party, thru its present leader, Mr. Bryan, now claims to be the real successor of Mr. Roosevelt in the purpose and policy to eliminate from our economic system illegal monopolies and railroad rebates, and unlawful discriminations and excessive rates. In other words, having introduced into the last three campaigns issues as of paramount importance of an entirely different character from the trust issue and the railroad issue, and after Mr. Roosevelt and the Republican party have taken long strides toward the remedy of the evils which gave rise to these issues, Mr. Bryan and the Democratic party step forward, and claim, with a courage which in a different cause might well command admiration, that they are the true exponents of the Roosevelt policies, and that they only can be trusted to carry them out, and this in the face of the fact that their remedies

as proposed in their platform are exactly the remedies which Mr. Roosevelt, in his message in 1904 and ever since, has consistently pointed out are not the remedies which ought to be pursued. The two remedies which they make prominent are the remedy of putting every article of merchandise made and controlled by a trust upon the free list, a remedy which would totally destroy the industries depending upon the manufacture of such an article, render the capital invested therein and the plant in which it is expended utterly worthless, and would destroy all the smaller competitors of the trust, and would greatly injure the prosperity of the country, and throw out of work millions of working men and working women.

The second remedy is the revision of the tariff—not on protection lines, but on the lines of a revenue tariff, or on free trade principles. This was attempted in a partial way in the Gorman-Wilson bill, and resulted most disastrously to the business interests of the country. It means the introducing of such a transition and change in the manufacturing business of this country as to close a very large part of the factories and productive enterprises, and even if theoretically, after the transition and change had been made, the rate of wages would be restored—an assumption I cannot admit — certainly, the transition and change would so halt the business of the country and involve such a paralysis while the change was being effected, that the losses and stagnation in business and the number of men thrown out of employment can hardly be exaggerated. More than this, the Democratic party has so long been engaged in devising sophistical theories upon which to attract votes, rather than in the preparation of practical statutes by which to effect results, that the public may well pause and hesitate to entrust to it any serious, sober work that requires for its accomplishment a strong sense of responsibility to the business interests of the country, in the prosperity of which the comfort and well-being of all classes, farmers, wage-earners and business men alike, are inseparably involved.

The issue in which laboring men are supposed to be particularly interested in this campaign is with respect to injunctions in industrial disputes. The Republican party proposes to meet the objection to the issuing of temporary restraining orders without notice in industrial disputes, which, tho only in rare instances, have put at an improper disadvantage men engaged in a lawful strike, by defining the best practice in the issuing of such injunctions in all cases by statute, and limiting the operation of the injunction without notice to a very short period, within which a hearing must be had or the injunction cease to have effect. The Democratic platform recommends no action with respect to notice at all, adopts an enigmatical plank on injunctions in industrial disputes that has practically no meaning, but does recommend the introduction of a jury in all indirect contempt proceedings. This would seriously weaken the power of the court, not alone in industrial disputes, but in all cases both of temporary orders and final judgments, and the Republican party is determined that the power of the courts shall be maintained.

The other issue most closely affecting labor is that of the protective tariff and the proposition to change the system from a protective tariff to a revenue tariff, and drive out business industries that are now really dependent upon protection for their maintenance. This, as already said, would so affect the business of the country, so reduce the number of enterprises that could be carried on in the transition proposed as to throw out of employment millions of workingmen. The question which the laboring man has to answer is, whether the advantage to him and his fellows of a change in the judicial procedure as to injunctions and contempt is so great as to outweigh the public injury arising from a weakening of the power of the courts and the disaster to the wage-earner and the business community which would follow the adoption of the other Democratic economic proposals.

I have omitted from this review the proposition of the Democratic party to give to the Philippines immediate independence, and to initiate a system of enforced guaranty of bank deposits. I have no space to elaborate either propo-

A REAR-PLATFORM SPEECH.
Mr. Taft at Indiana Harbor, Ind.

sition, except to say that the first is intended to, and if carried out will, defeat a plan of the Republican Administration to uplift an unfortunate people, to teach them the power of self-government, and to make greatly for the spread of Christian civilization in the Orient. The second is one of those sophistical financial propositions so dear to Mr. Bryan, plausible on its face, but utterly at variance with sound principle. It is supposed to prevent entirely any loss of deposits in all banks to the depositors, and thus to prevent panics. As a matter of fact, it will stimulate reckless and dishonest use of deposits in bank investments, it much reduces the motive for conservative and honest banking in a community, and it would not in the slightest degree prevent runs on banks during panics, for which it is supposed to be a panacea. It imposes upon the honest and conservative banker an obligation to answer for the default of his unscrupulous or inexperienced fellow, without any means on his part of supervising the work of the person whose honest and careful conduct he insures.

The country is just now slowly recovering from a financial depression and a panic which came to us in October and November of last year. It is different from all the other panics in our history, and there are many indications that all that is needed to bring back good conditions is the restoration of confidence on the part of the investing public. It is submitted that for twelve years Mr. Bryan has been upholding financial and economic theories which were calculated to frighten all sound, conservative business men. His free silver and free trade doctrines, with a touch of "greenbackism" in some of his proposals, his quickness to seize upon any remedy, however drastic and impossible, which would

please the crowd, and the utter instability of his views on any subject of a financial or economic character, would make his election to the Presidency a menace to prosperity. The necessary capital would be withheld and we should probably have a continuation of the present depression for the coming four years. It is Mr. Bryan's record in the last twelve years that makes this a necessary result of his election. Mr. Bryan says that the argument of the full dinner pail has been worked overtime. The argument of the full dinner pail is just as apt and just as relevant to the present situation as it has been in previous campaigns. As it is, two things can be affirmed of the Democratic party under the leadership of Mr. Bryan: First, that all who have anything to invest distrust him because of his unstable and unsound economic and financial views; and second, that they are justified in their lack of confidence. For that reason, those who wish a restoration of prosperity in the country should vote against the Democratic ticket.

These are the issues of the campain as I understand them. Mr. Bryan charges that the Republican party is controlled by the corporations thru campaign contributions. The record of the present Administration is a complete refutation of that charge. The adoption of statutes which met bitter corporate opposition is utterly inconsistent with it, and his assumption that the use of money in a campaign election can control elections is a charge of venality against the American electorate that has no foundation in fact.

Mr. Bryan says that there is no hope of a genuine revision of the tariff, because he says the Republican party is dependent for its campaign contributions upon the beneficiaries of the excessive rates under the tariff, and therefore that the only possible hope of a reduction in tariff schedules is from the Democratic party. I wish to deny this with the utmost emphasis. It is doubtless true that business men interested in a restoration of prosperity will some of them contribute to the Republican campaign funds. Campaign funds are necessary in order to pay the legitimate expenses of a campaign. Certainly the extent of the contributions from any source in this campaign is not enough to indicate such a pecuniary interest in the success of the Republican party as would exist if Mr. Bryan's charges were true. Speaking for myself, as the temporary leader of the party, and as the next President if the party is successful in November, I wish to affirm that no effort of mine will be spared to make the revision of the tariff under Republican auspices and within the conservative protective lines as thoro and as impartial between the consumer and the manufacturing interests as possible. I believe that there are many schedules that ought to be reduced. I believe that there are a few, and only a few, that ought to be raised, but on the whole the revision should be a revision downward and not a revision upward. I am convinced that the people of the country desire such a revision. I am convinced that their representatives coming back to Congress will be imbued with that sentiment, and that no successful obstruction can be placed in the way of such Congressional action.

To restate the issue of the campaign, it is whether the administrations of William McKinley and Theodore Roosevelt, in their wonderful record of meeting new problems and solving them by things done and statutes past, shall be endorsed by the people, and the progress made assured by proper legislation, or whether there shall be put in power a party the chief characteristic of which in the last twelve years has been that of hunting an issue and seeking a sophistical theory which would attract votes, with but little regard for its practical operation, and with but a small sense of responsibility to the business and labor interests of the country.

CINCINNATI, OHIO.

The Democratic Party's Appeal

BY WILLIAM JENNINGS BRYAN

CANDIDATE OF THE DEMOCRATIC PARTY FOR PRESIDENT OF THE UNITED STATES.

DEMOCRACY'S appeal to the country is based primarily upon the fact that the control of the Government has been gradually taken away from the voters and deposited in the hands of the representatives of the favor-seeking corporations. Several means have been employed to defeat the popular will. First, the secret contribution of large sums of money has given to predatory wealth control over the campaign managers and obligated the candidates in advance. Second, the present method of electing United States Senators has given these corporations an opportunity to secure the elevation of men to the Senate who represented special interests rather than the people generally. Third, the rules of the House have been so interpreted as to enable the Speaker to exercise a despotic control over legislation and prevent the consideration of remedial measures, even when those measures were favored by a majority of the members of Congress. The Democratic party proposes remedies for these evils. For the secret contributions it proposes publicity—and it insists that the publicity should be before the election. This proposition was endorsed by unanimous vote in the Democratic convention, and the Democratic National Committee has announced that it will apply the doctrine to the present campaign, and publish, before the election, all contributions of more than one hundred dollars. The Republican convention rejected a publicity plank, and the Republican candidate, while favoring publicity after the election, has made an argument against publicity before the election. His argument, however, is a confession that the Republican party is receiving contributions which it is afraid to make public before the election. To say that the contributions must be concealed for fear the motives of the givers will be misrepresented, or for fear a wrong impression will be formed of the obligations imposed upon the candidate, is a reflection upon the intelligence of the public.

The Democratic remedy for the second evil is the election of Senators by direct vote of the people. The Democratic convention endorsed this proposition unanimously; the Republican convention rejected the proposition, but the Republican candidate has, since the convention, exprest his personal inclination toward the popular election of Senators. "Personal inclination," however, is not sufficient. Congress must pass remedial measures before the President has an opportunity to sign them. The Republican platform does not pledge its members of Congress to publicity or to the popular election of Senators. The Democratic platform does pledge its candidates for Congress, and a Democratic victory will be a popular endorsment of these reforms, and with a Democratic President and House of Representatives to take the initiative, it is entirely probable that the Senate will yield to the public demand, whereas its opposition to these reforms would be strengthened by a Republican victory.

The Democratic remedy for the third evil is such a reform of the rules of the House as will make sure of the right of the majority to control legislation. The Republicans not only failed to denounce the present interpretation of the rules, but they nominated for Vice-President the man who stands next to Mr. Cannon in the interpretation and enforcement of the present rules.

The Democratic party makes an appeal to the country upon economic questions, as well as upon questions affecting the methods of government. The Republican party promises unequivocally to revise the tariff immediately. The word "unequivocally" is a confession that the party is under suspicion, and is intended to distinguish the new promise from the old promises which have not been kept. The word "immediately" is an admission that tariff revision has been too long delayed, and is a pathetic appeal for a little more time in which to do what could have been done and should have been done before. The word "revision" is

used in place of reduction, and may mean an increase in the average rate rather than a decrease. If the Republican party wins, there is every evidence that the revision, if one is made, would so disappoint the public as to lead to a four years' agitation for reduction, and this would lead to uncertainty and unsettled business, whereas the Democratic platform demands certain specific reductions, and business will soon adjust itself to these reductions. A Democratic victory, therefore, gives assurance of industrial peace and prosperity.

Our platform offers, first, the free list for articles which come into competition with the trusts; that is, the trust magnates must give up either the trust business or the tariff wall. Second, material reductions on the necessaries of life, especially on those articles which are sold abroad more cheaply than at home. Those manufacturers who can compete in the foreign markets do not need a 50 per cent. tariff to enable them to compete in the home markets. Third, such other gradual reductions as may be necessary to restore the tariff to a revenue basis. It will be noticed that these reductions will not be made all at once; no sudden transition is contemplated, but graduated progress toward a system under which the tariff laws will no longer be written by a few beneficiaries as a means of levying tribute upon the rest of the people.

The Republican leaders, unable to meet the arguments presented in favor of tariff reduction, are now threatening a panic, but their threats will not frighten people who are now passing thru a panic which came under a Republican administration—and the Republican candidate was a member of the administration—and under a tariff so high that even the Republicans promise "unequivo-

TWO DEMOCRATIC STANDARD-BEARERS.
Mr. Bryan and Judge Parker at Esopus, September 20th, 1908.

cally" to "revise" it "immediately." We have had three panics since 1860: The panic of 1873, which came under a Republican President and under a high tariff; the panic of 1893, which came just after a Republican administration and a year before the McKinley law was repealed; and the panic of 1907, which came under a Republican President and under a high tariff.

On the trust question, the Democratic party insists upon a legal definition of a trust, so that no business man will violate the law unknowingly, and upon the vigorous enforcement of the law, so that no one who violates it knowingly will escape punishment. The Republican plan is to create a trust and then have the Government exhaust itself in the pursuit of the trust. The Democratic party believes that it is better to prevent the creation of a monopoly, and proposes to make it impossible for a private monoply to exist. About 127 trusts were organized under Mr. McKinley's administration, and about 106 under Mr. Roosevelt's administration, while less than 50 were organized under previous administrations. Regulation is not sufficient. The monopolies have regulated the Government instead of being regulated by it. They have corrupted politics and even officials, and they have converted business into a lottery where a few draw capital prizes and the rest draw blanks.

The Democrats propose to draw a line beyond which a corporation cannot go in the control of the product in which it deals. According to the plan set forth in the Democratic platform, Federal supervision will be added to (not substituted for) State supervision whenever a corporation controls 25 per cent. of the total product, and it shall not be permitted to control more than 50 per cent. While it is growing from 25 to 50 per cent. it will be subjected to such restrictions as may be necessary, one of them being that it shall sell to all consumers in the United States at the same price, due allowance being made for the cost of transportation.

On the labor question, the Democratic party believes in the establishment of a Department of Labor, with a Cabinet officer at its head. The Republican party opposes this. The Democratic party believes that the labor organization should not be under the operation of the anti-trust law, but that such regulation as may be necessary shall be provided thru legislation made for human beings, the anti-trust law being intended for matter and merchandise. The Republican party is opposed to us on this question.

The Democratic party believes that an industrial dispute should not, in itself, be a ground for the issuance of an injunction; that an injunction ought not to be issued in an industrial dispute unless there are conditions which would justify an injunction, even if there were no industrial dispute. The Republicans oppose us on this proposition.

The Democratic party believes that a person accused of indirect contempt—accused of an act which was committed outside of the presence of the court and must be established by evidence—should have the right of trial by jury to ascertain his guilt or innocence. The Republican party is opposed to trial by jury in such cases, and the Republican candidate has assailed our plank as an assault upon the judiciary, forgetting that we simply endorse a measure which past the Senate twelve years ago, with but one Senator opposing it, and such Republican Senators as Senator Sherman, Senator Allison, Senator Hale, Senator Morrill, Senator Hawley, Senator Cullom and Senator Nelson either approving of the measure or remaining silent during its discussion.

The Democratic party is in favor of legislation which will protect depositors, preferring the guaranteed bank to the postal savings bank. If the banks will establish a guarantee fund and thus protect depositors, it will be better than to have the Government enter upon so large a work as the establishment of postal savings banks; and yet, if the bankers refuse to provide security for depositors, they must be prepared to meet the postal savings bank. At the coming election more than 90 per cent. of the voters will vote for more security, some voting with the Republicans for the postal savings bank, others voting with the Democrats for the guaranteed bank.

The Democratic party believes in an immediate declaration of the nation's purpose to give ultimate independence to the Filipinos. The Republican platform is silent in regard to the nation's purpose,

and Mr. Taft's statement that they are to have ultimate independence—but not in less than two generations—is not binding upon the Republican party and is not an authoritative announcement of the nation's policy. The reservation of coaling stations and harbors will give us all the commercial advantage that we could obtain from the retaining of the Philippine Islands, while the promise of ultimate independence, to be kept as soon as a stable government is established, will restore our nation to its place of leadership, and enable it to proclaim again the doctrines set forth in the Declaration of Independence.

The Democratic party favors economy in public expenditures and condemns the extravagance of the Republican party. Appropriations have been increasing more rapidly than population. The Republican leaders have been teaching that a tax is a blessing, and seem disposed to make the blessing as large as possible, while the beneficiaries of a high tariff favor large expenditures as an excuse for the retention of exorbitant tariff rates.

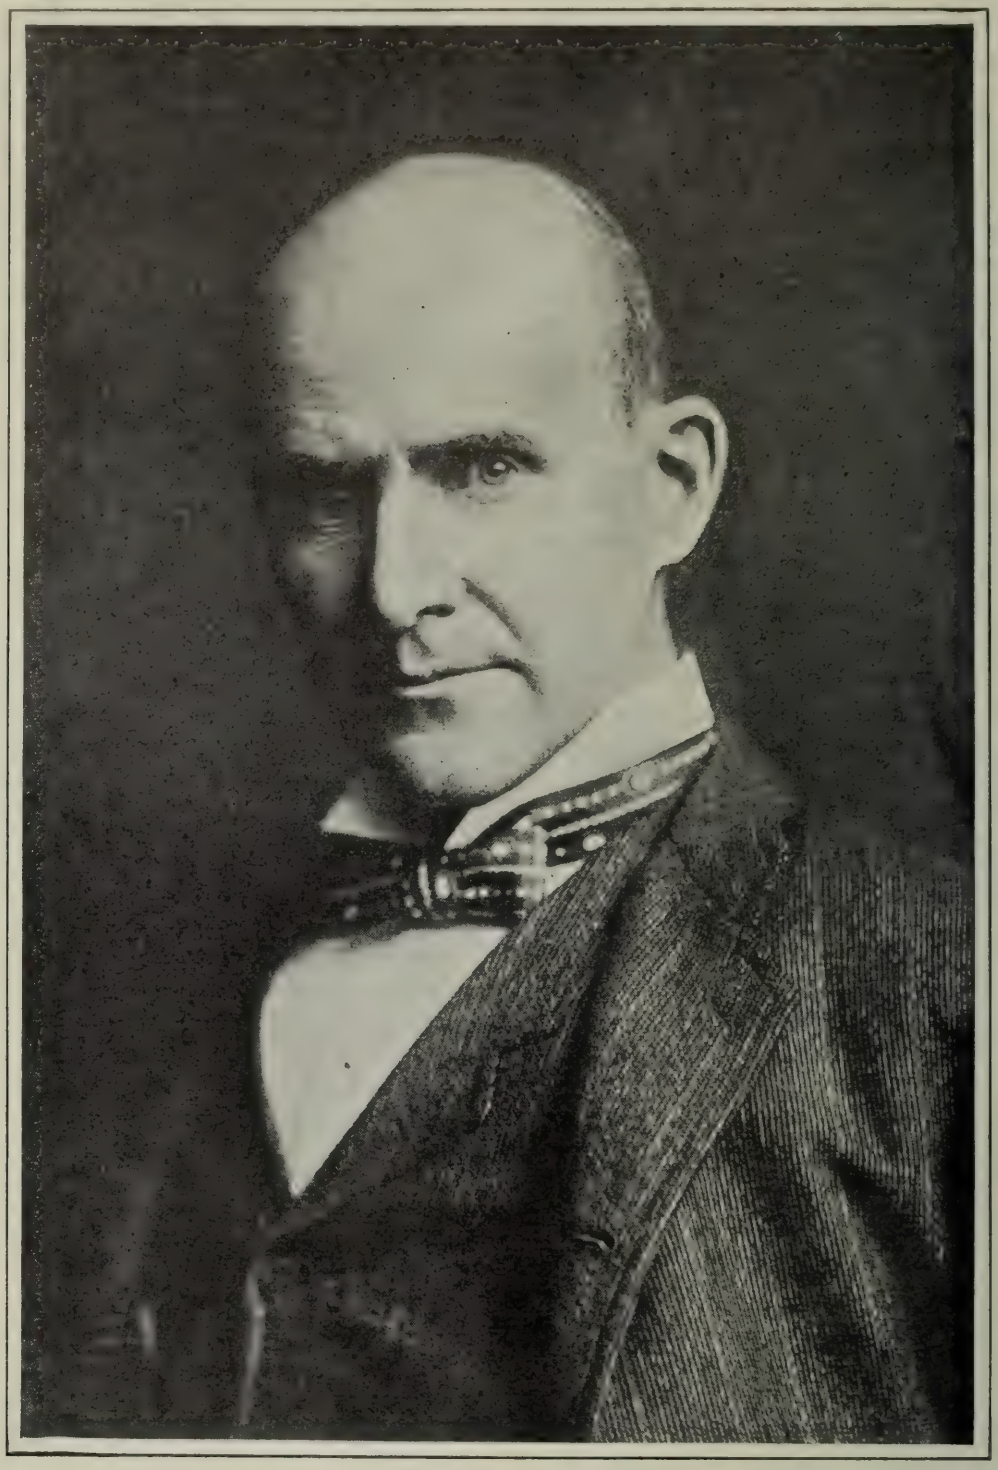
The Democratic party opposes the interference of the Executive in politics. The Presidency belongs to the whole country and ought not to be used by the President as a personal asset to secure the selection of the nominee of his party, or as a party asset, to be used by the President for the benefit of his party. Official reports, published at the Government's expense, inform the public of the work of the administration, and the people ought to be left free to sit in judgment upon public affairs and to select their officials without executive interference.

These are a few of the questions upon which Democracy makes an appeal to the country. We charge the Republican leaders with responsibility for present conditions, and we make a distinction between the Republican leaders and the Republican rank and file. The Republican leaders do not represent the voters of their own party, and can no longer claim the support of those voters. The investigations and revelations have aroused the nation's conscience, and to that conscience we appeal. We desire a restoration of the government to the hands of the people, that it may henceforth be controlled by the people in their own interests, in order that each citizen may be assured of an opportunity to secure a reward from society proportionate to the service which he renders to society.

LINCOLN, NEB.

The Socialist Party's Appeal

BY EUGENE V. DEBS



CANDIDATE OF THE SOCIALIST PARTY FOR PRESIDENT OF THE UNITED STATES.

AT a public meeting in New York City some months ago the present Presidential candidate of the Republican party was asked this question: What is a man to do who is out of work in a financial panic and is starving?"

This is an intensely human as well as a very practical question. It epitomizes the problem of the unemployed and places it in bold relief. It is not too much to say that the future welfare and progress of our country—aye, the fate of civilization itself—depends upon a correct solution of this problem. In view of the supreme importance of the question it might naturally be expected that the Republican party would offer some practical and well-defined method of dealing with it, and one might suppose that the party's standard-bearer would be in a position clearly to expound that method in making reply to his interrogator. But how pitifully inadequate was the answer! It is at least creditable to Mr. Taft's honesty that he frankly replied, "God knows!"

When Mr. Kern, the Vice-Presidential candidate of the Democratic party, was asked recently what his party proposed to do for the relief of the unemployed,

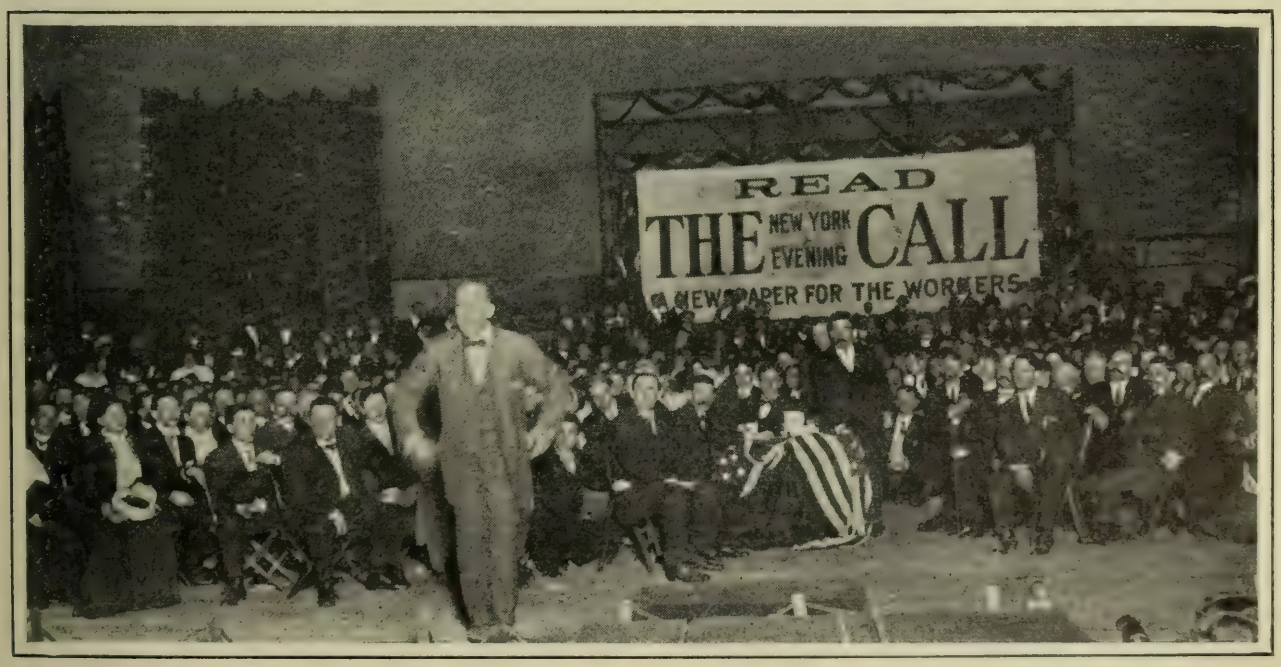
he is reported to have answered, "Nothing directly, nothing socialistic. We hope that carrying out the general ideas in admirably to illustrate the really essential difference between the Socialist party and its most formidable political rivals.

EUGENE V. DEBS, OF INDIANA.

Born in Terre Haute, Ind., in 1855, where he still lives. Organizer of the American Railway Union in 1893, and leader of the great Pullman strike in 1894. For an alleged violation of an injunction he was imprisoned for six months, and in 1895, while in jail, became a convert to Socialism. He has thrice led the party in a national election.

our platform will so restore confidence that industry will start up again. But that's about all. In fact, that's enough."

These answers are not cited for any partisan purpose, but because they serve The Socialist party does not refer this important problem to the Deity for solution. It recognizes the fact that it is of human creation and must be solved by human effort. It proposes to do some-



thing "directly," something "socialistic," for the relief of the unemployed. The Socialist party recognizes the serious nature of the unemployed problem and aims to solve it in the only way it can be solved, namely, by removing its cause. As means of temporary relief, applicable during the period of transition to a collective system of industry, the party proposes "immediate government relief for the unemployed workers by building schools, by reforesting of cut-over and waste lands, by reclamation of arid tracts and the building of canals, and by extending all other useful public works." Both from the standpoint of effectiveness and that of practicability this program may be offered without comment in lieu of Mr. Taft's "God knows!" and Mr. Kern's "hope" of restored confidence.

As a matter of fact, it is an entire impossibility for either the Republican or the Democratic party to offer any practicable solution for our industrial ills, because those ills are the inevitable and perfectly natural outgrowth of the wage system of industry, which system both parties are alike pledged to support and defend. That the economic policy of the Republican party is impotent to stay the periodic recurrence of industrial and financial crises is proved by the existing depression, and as the party's platform utterance in relation to labor pledges it to a continuance of what is denominated "the same wise policy," there is certainly no hope of relief from that quarter. With regard to the Democratic party, the country already has had sufficient experience with its methods of dealing with important economic problems to justify the suspicion that Mr. Kern's "hope" may prove somewhat elusive.

The Socialist party of the United States is part of a great international movement which far overshadows any other movement recorded in history. Its basic idea is the complete and permanent emancipation of labor all over the world. To quote from a recent article by George Allan England:

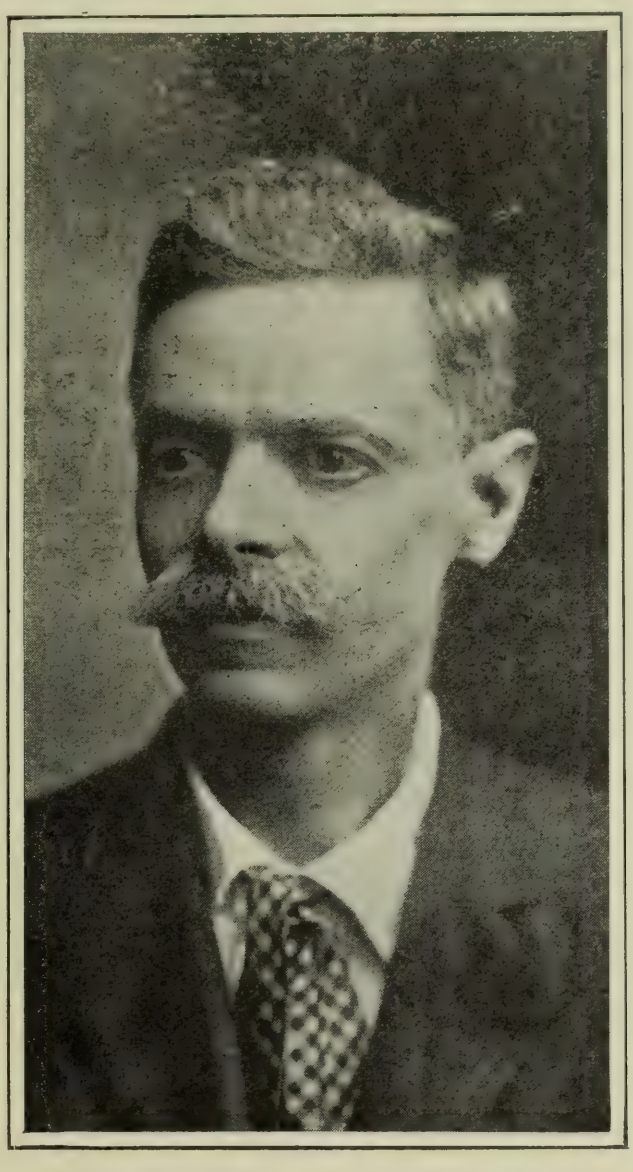
"First of all, the fact should be made quite clear that the Socialist party is far and away the largest political unit not only of today but of any time. To the uninformed who conceive of Socialists as a rather obscure and fantastic sect of Utopians—of 'dreamers'—the discovery must come as something of a shock that the world's Socialist vote now stands between 8,000,000 and 9,000,000, representing about 30,000,000 adult Socialists. This latter number includes, of course, women and disfranchised persons, who in the Socialist concept of government, in the 'state within a state' which Socialism is building up, enjoy equal rights with present voters. There is something peculiarly disconcerting to the present governments of, by, and for plutocracy in those 30,000,000 of 'dreamers,' all so active in propaganda, all so terribly in earnest—in that ever widening acceptance of the visionary axiom that 'without rights there shall be no duties; without duties no rights.'

"In the second place, it should be definitely

MR. DEBS SPEAKING AT THE HIPPODROME, NEW YORK CITY, OCTOBER 4TH, BEFORE AN AUDIENCE OF 8,000.

understood that the movement is already breaking into legislative bodies all over the civilized world, to an extent hardly realized by the casual critic. The United States is practically the only large country of modern type in which the party has no national representation—a state of affairs, be it said in passing, which will soon be remedied. . . . Prophecy is dangerous, but 1908 should for many reasons hold in store a great surprise for the old-party politicians. From now on there is 'a new Richmond in the field.'"

The Socialist party is the political expression of what is known as "the class struggle." This struggle is an economic fact as old as history itself, but it is only within the past generation that it has become a thoroly conscious and well-organized political fact. As long as this struggle was confined to its economic aspect the ruling classes had nothing to fear, as, being in control of all the means and agencies of government, they were always able to use their power effectively to suppress uprisings either of chattel slaves, feudal serfs, or free-born and politically equal capitalist wageworkers. But now that the struggle has definitely entered the political field it assumes for the present ruling class a new and sinister aspect. With the whole power of the state—the army, the navy, the courts, the police—in possession of the working class by virtue of its victory at the polls, the death knell of capitalist private property and wage slavery is sounded.



This does not mean, however, that the workers will wrest control of government from the capitalist class simply for the purpose of continuing the class struggle on a new plane, as has been the case in all previous political revolutions when one class has superseded another in the control of government. It does not mean that the workers and capitalists will merely change places, as many poorly informed persons undoubtedly still believe. It means the inauguration of an entirely new system of industry, in which the exploitation of man by man will have no place. It means the establishment of a new economic motive for production and distribution. Instead of profit being the ruling motive of industry, as at present, all production and distribution will be for use. As a consequence, the class struggle and economic class antgonisms as we now know them will entirely disappear. Did the Socialist party have no higher political ideal than the victory of one class over another it would not be worthy of a moment's support from any right-thinking individual. It would, indeed, be impossible for the party to gain any considerable strength or prestige. It is the great moral worth of its ideals that attracts adherents to the Socialist movement even from the ranks of the capitalist class, and holds them to their allegiance with an enthusiasm that suggests a close parallel with the early days of Christianity; and it is the mathematical certainty with which its conclusions are stated that enables the Socialist party to expand and advance with irresistible force to the goal it has in view, in spite of the appalling opposition it has had to encounter. It is this certainty, and the moral worth of its ideals, which moved Mommsen, the venerable German historian, to say that "this is the only great party which has a claim to political respect."

The capitalist was originally a socially useful individual, but the evolution of our industrial system has rendered him a parasite, an entirely useless functionary that must be eliminated if civilization is to endure. It is a leading thought in modern philosophy that in its process of development each institution tends to cancel itself. Born out of social necessity, its progress is determined by repulsions and attractions arising in society, which produce effects tending to negate its original function. Now, that is what has happened to the capitalist. He is no longer useful. He is merely a clog to social progress and must be abolished, just as the feudal lord and chattel slaveholder have been abolished.

The capitalist was originally a manager who worked hard at his business and received what economists call the "wages of superintendence." So long as he occupied that position the capitalist might be restrained and controlled in various ways, but he could not be got rid of. He performed real functions, and as society was not yet prepared to take those functions upon itself, it could not afford to discharge him. But now the capitalist proper has become absolutely useless. Finding it easier to combine with others of his class in a large undertaking, he has ab-

dicated his position of overseer and has put in a salaried manager to act for him. This salaried manager now performs the only social function of the capitalist, while the capitalist himself has become a mere rent or interest receiver. The rent or interest he receives is paid for the use of a monopoly which not he, but a vast multitude of people, created by their joint efforts.

This differentiation between manager and capitalist is a necessary part of the process of capitalistic evolution due to machine industry. As competition led to waste in production, so it also led to the cutting of profits among capitalists. To prevent this the concentration of capital was necessary, by which the large capitalist could undersell his small rivals in the marketing of goods produced by machinery and distributed by agencies initially too costly for any individual competitor to purchase or set on foot. For such massive capitals the contributions of several capitalists are necessary. Hence the joint stock company, the corporation, and finally the trust. Thru the medium of such agencies a person in the United States can own stock in an enterprise in Africa or South America which he has never visited and never intends to visit, and which, therefore, he cannot "superintend" in any way. He and the other stockholders put in a manager with injunctions to be economical. The manager's business is to earn the largest possible dividends for his employers. If he does not do so he is dismist. To secure high dividends the manager will lower wages. If that is resisted there will probably be either a strike or a lockout. Cheap labor will be imported by the manager, and if the workers resist by intimidation or organized boycotting the forces of the state will be used against them, and in the end they must submit. The old personal relation between the workers and the employer is gone. From the point of view of the corporation owners the workers are simply an extension of the machine of profit production. The workers are not regarded as having human attributes. Their labor is trafficked in as a commodity, like iron and steel, and the only interest the capitalist retains in production is his interest as an idle dividend receiver. Society can get along without the capitalist; it refuses longer to support him in idleness and luxury.

BEN HANFORD, OF NEW YORK,
The Socialist candidate for Vice-President, is a compositor by trade and has long been active in the trade union and Socialist movement. He was also the Vice-Presidential candidate four years ago.

The process of industrial evolution that has rendered the capitalist a useless functionary has at the same time evolved an organization, co-operative in character, whereby industry may be carried on without friction for the benefit of the whole people instead of for the profit of the individual capitalist. The conduct of industry will be entrusted to men who are technically familiar with its processes,

precisely as it is now entrusted to managers by the stockholders of a corporation; in short, the whole of industry will represent a giant corporation in which all citizens are stockholders, and the state will represent a board of directors acting for the whole people. Details of organization and performance may well be left to the experts to whose direction the matter will be given when the time comes. It is not the mission of the Socialist party to speculate concerning the manner in which the workers will conduct their affairs when they have come into possession of their inheritance which the ages have prepared for them. Standards of right and justice under the new *régime,* however, may well be indicated.

"Without rights there shall be no duties; without duties no rights." What will be the practical interpretation of this Socialist axiom? Obviously, social parasitism must cease; every man must be a producer, or perform some socially useful function, in order to procure title to any share in the product of the collective industry. The only citizenship held honorable will be economic citizenship, or comradeship in production and in the sharing of product.

The spectacle of strong men walking the streets idle and hungry, vainly begging for a chance to work for the pittance that will suffice to ward off starvation from themselves and their loved ones, will be no more. The cruelty of children of tender years being forced hungry to school in a great city like New York will disappear. No longer will there be a problem of the unemployed, and the capitalist will be elevated from his present condition of parasitism to that of a worker and producer of wealth. The class struggle must necessarily cease, for there will be no classes. Each individual will be his own economic master, and all will be servants of the collectivity. Human Brotherhood, as taught by Christ nineteen centuries ago, will for the first time begin to be realized.

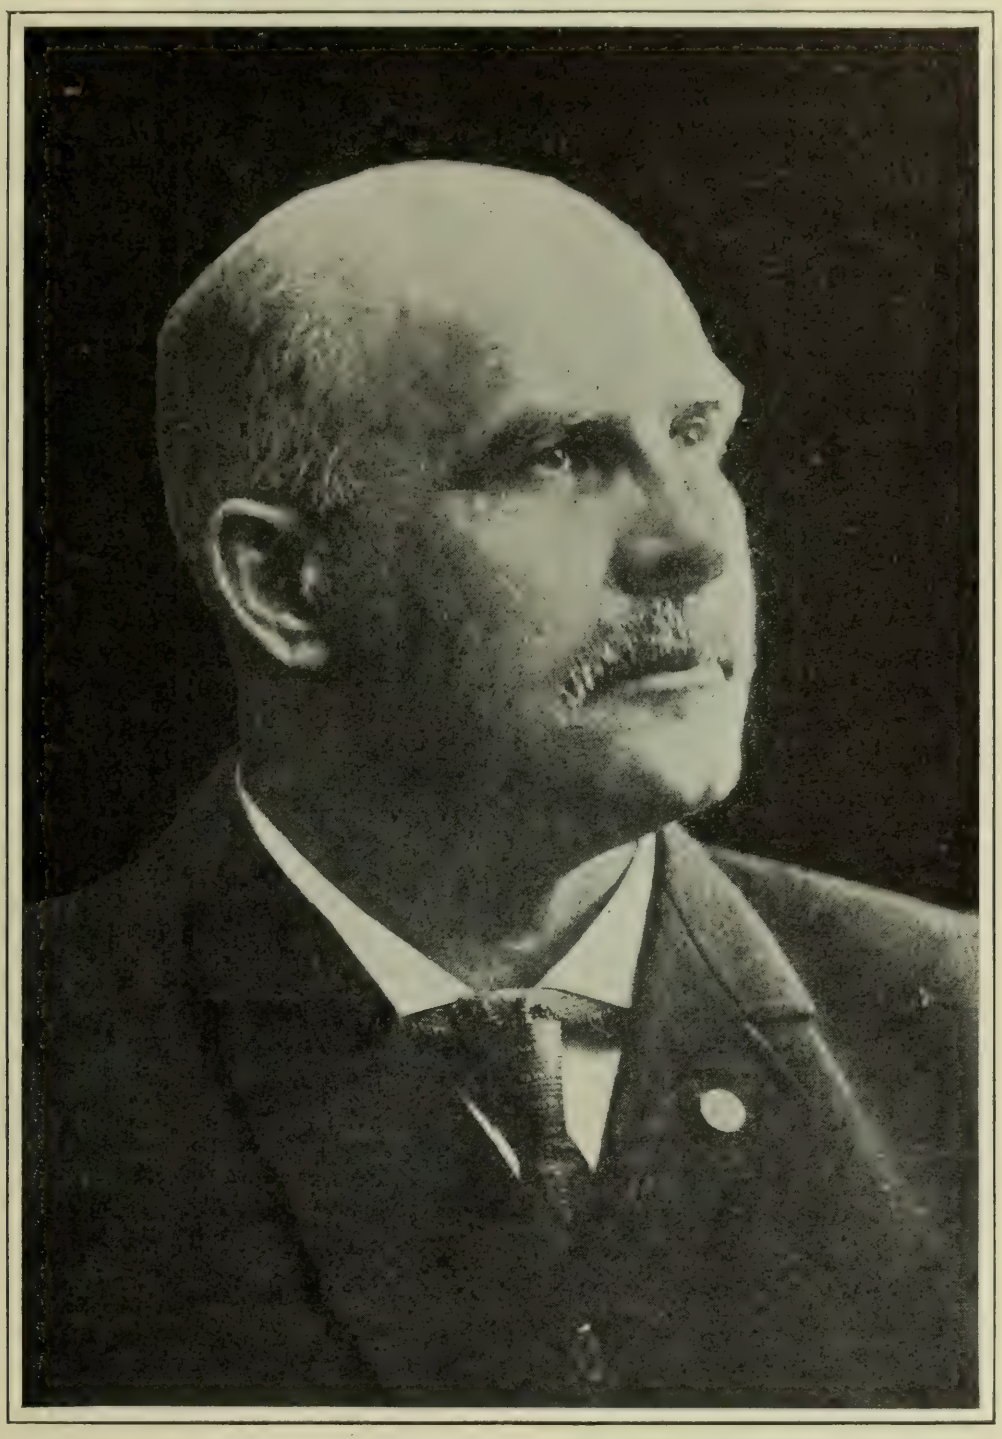
The struggle for working class emancipation, which finds its expression thru the Socialist party, must continue, and will increase in intensity until either the ruling class completely subjugates the working class, or until the working class entirely absorbs the capitalist class. There is no middle ground possible, and it is this fact that makes ludicrous those sporadic reform movements typified by the Populist and Independence parties.

But the subjugation of the working class is out of the question. Intelligence has gone too far for that; it is the capitalist class that is doomed. Hence the only possible outcome of the present struggle is victory for the working class and the absorption by that class of all other classes.

When the present Socialist party has accomplished its mission of uniting the workers of the world into a solid political phalanx the end of capitalist domination is at hand, and the era of industrial peace so long wished for by philanthropists and seers will dawn upon the world.

TERRE HAUTE, IND.

The Prohibition Party's Appeal

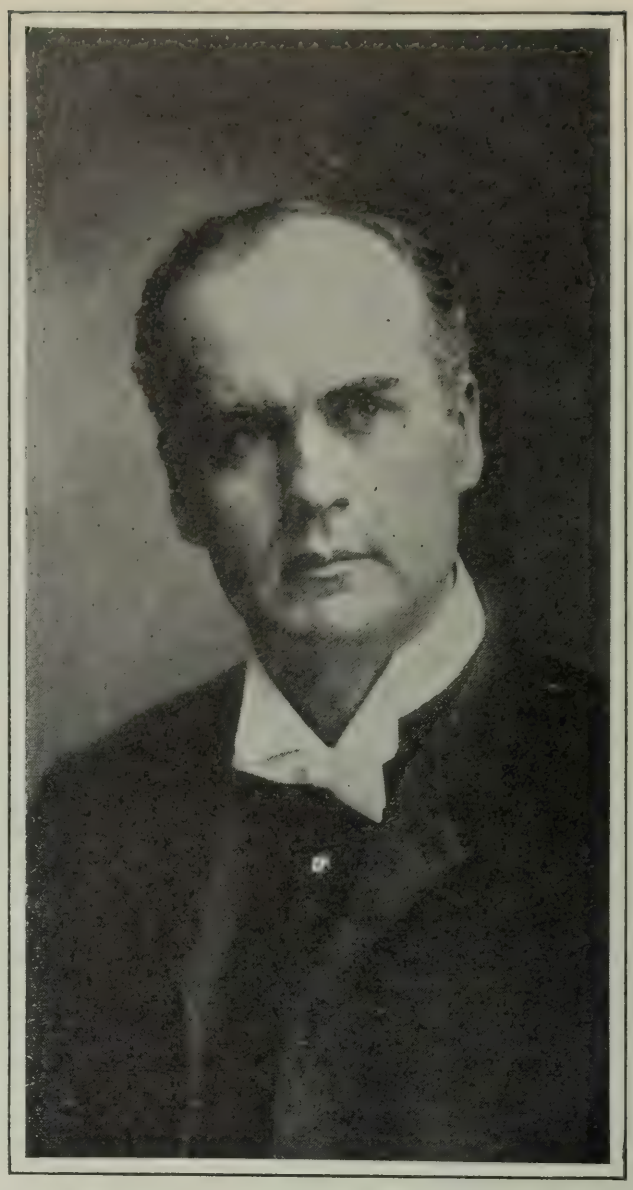


BY EUGENE H. CHAFIN

CANDIDATE OF THE PROHIBITION PARTY FOR PRESIDENT OF THE UNITED STATES.

ONE of the reasons why the people should vote the Prohibition ticket this year is that we represent the greatest economic question of any political party. More than a million people spent the whole of last year making, distributing and selling intoxicating liquors. The product of their labor did not add one dollar to the wealth of the Union. The people who labor and who use these intoxicating liquors deprive themselves of enough of the necessities of life to feed, clothe and shelter this million of people who are not producers of wealth. The people who labor for a living spent more than a thousand million

dollars last year for liquor. If we had absolute prohibition of the manufacture and sale of liquor in the United States, this amount of money would have gone into the homes of the laboring people and been expended for something useful. So that we have a proposition which would do more for the laboring people than any of the other political parties.



Another reason why our ticket should be successful is that we represent the only policy of government upon which a majority of the voters are agreed, and that is that the liquor traffic ought to die. A majority of all the Republicans, a majority of all the Democrats, and the majority of the people belonging to all the other political parties are prohibitionists. If these people who believe in the principle of prohibition and have so indi-

EUGENE WILDER CHAFIN, OF ILLINOIS.
Mr. Chafin was born at Troy, Wis., in 1852, and has long been known as a forceful speaker for Prohibition on Chautauqua platforms.

cated during the past few years would leave their old political parties and vote the Prohibition ticket on November 3d, I would carry the electoral vote by plurality in every State in the Union. This cannot be said of any other political party in the United States.

There has been no question so much discussed during the past four years as the liquor problem. More has been said upon it thru the press and otherwise than upon all other political questions combined, and the people have exprest themselves more emphatically in town, county and State elections upon this question than upon any other which has ever been presented to the people. We represent more thoroly than any other political party the Christian conscience, the intelligence, the morality and the business interests. We represent more that will be beneficial to the home and to the women and children who have not a right to vote than any other party. Not a line of American history will be changed if the Republicans or Democrats succeed at the coming election. If the Prohibition party wins we will write the brightest, longest, purest and most beneficent chapter that has ever been written by any government in the history of the world.

AARON S. WATKINS, OF OHIO,
The Prohibitionist candidate for Vice-President.

We ask no one to vote our ticket who does not believe in the prohition of the manufacture and sale of liquor by the national Government. There is no other solution of the liquor problem. This can only be done by a political party made up of men who are a unit upon that question.

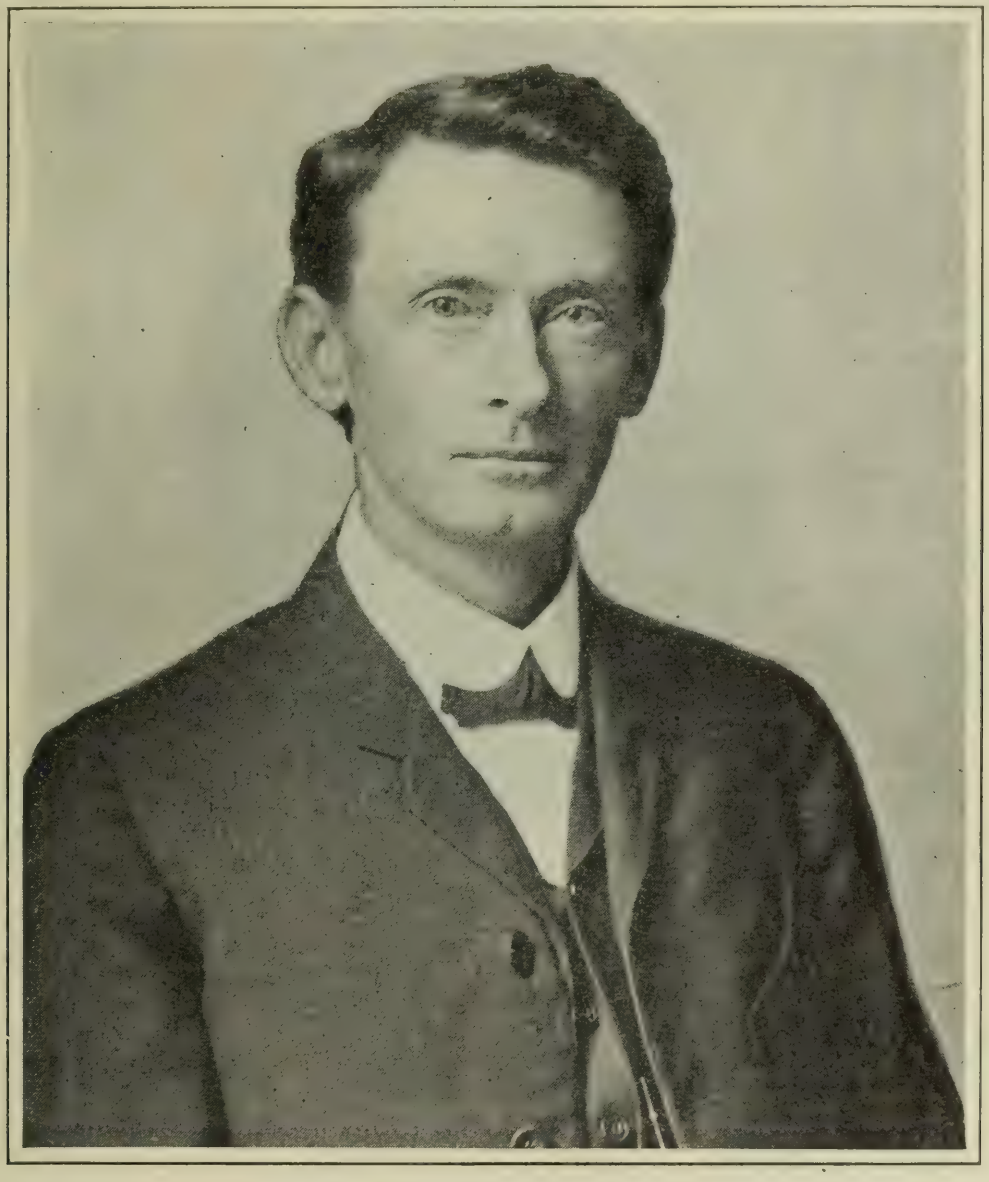
CHICAGO, ILL.

The People's Party's Appeal

BY THOMAS E. WATSON

CANDIDATE OF THE PEOPLE'S PARTY FOR PRESIDENT OF THE UNITED STATES.

(1) After several years of strenuous trust busting, our Republican President cannot "point with pride" to a single busted trust. The meat packers are more aggressive than ever; Standard Oil stocks are buoyant; and the net income of the Steel Trust is annually greater—twelve times greater—than the gross income of the Roman empire of Julius Cæsar. Why? Because the Republican President dares not attack the system which produces and feeds the trusts. If one should locate a filtering plant in the Gulf of Mexico to purify the waters of the Mississippi, he would not be trying to do a more futile thing than Mr.



Roosevelt has attempted. Until *the cause* of the evil is removed, it is a loss of time to deal with *the effects*. There isn't a trust in America that would not immediately dissolve were Congress to destroy the monopoly of the home market which is the parent of the trust.

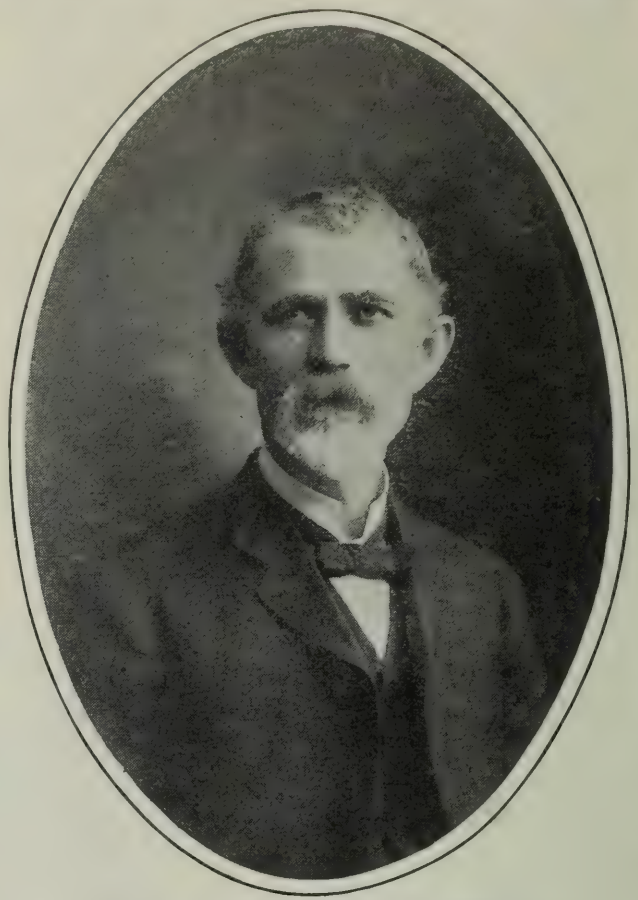
The *free list* is the Big Stick, and the only one, that will ever club the "malefactors of great wealth" into submission.

Judging the future by the past, and granting that the Republican party will always give us as strong and as honest a President as Mr. Roosevelt, we might as well realize the fact that the corrupting and tyrannical reign of the trusts will never be broken by a Republican administration.

(2) We have witnessed our strenuous Republican President grapple with the money question.

A vast amount of bogus currency had been put in circulation; bank credits of various kinds had been expanded out of all sane proportion to the nation's supply of real money; the banks had loaned out to speculators all but a trifling fraction of the money of depositors; the entire financial system had been so manipulated that it resembled a church resting on the tip of its steeple, the steeple representing real money and the church the bogus stuff that had been foisted upon the unsuspicious business world. It is evident that such a system must topple over at the first push. Confidence was all that

THOMAS E. WATSON, OF GEORGIA.



Mr. Watson was born in Columbia County, Ga., in 1856. He has served as Congressman and has run once for Vice-President and twice for President on the Populist ticket. He has written much on historical and political subjects.

kept it up. One fine day somebody discovered that he was unable to draw his own money out of the bank. New York had drawn to herself all the available cash of the country, and refused to pay any of it out. Men who had millions on deposit found their checks returned to them dishonored. The bankers of New York insolently defied the law, and by their astounding audacity in hoarding money which did not belong to them, *destroyed confidence*. Then, the panic. It was inevitable, and the bankers who trod the law under their feet in that way were bound to have known what would be the logical result of their cutting off from business the money which was necessary to its transaction.

What did *the country* need at that crisis? More money.

What did *the bankers* want? More bonds.

To whose prayer did the Republican President respond? Not a dollar was added to the country's supply of money; about a quarter of a billion of bonds were issued to the bankers.

SAMUEL W. WILLIAMS, OF INDIANA,
The Populist candidate for Vice-President.

If this was the manner in which the best of Republican Presidents treated the financial situation, we may safely assume that Wall Street's control of the nation's treasury will never be broken while the Republican party is in power.

(3) During Mr. Roosevelt's administration the Federal courts have continued that systematic extension of their jurisdiction which the fathers so much feared.

(a) To protect the vassal in his ownership of lands and chattels from the arbitrary seizure and appropriation by his lord, Magna Carta declared that the citizen should not be deprived of his property without due process of law.

By a monstrous perversion of Magna Carta, Federal judges set the vicious precedent of holding that statutes which lessened the profits of corporations were confiscatory of the property, within the meaning of Magna Carta.

If this is good law, then Congress has no power to lower tariff duties and thus diminish the profits of such concerns as the Steel Trust and the Paper Trust.

It is just as illegal to confiscate a part of the citizen's property as it is to confiscate the whole of it; and, therefore, if it is *unconstitutional* to enact a statute which deprives a corporation of all its profits, it necessarily follows that a statute which takes away any of its profits is null and void.

So far has this amazing perversion of the true intent and meaning of Magna Carta and the Constitution been carried, we find judges solemnly deciding that if a statute does not allow a corporation to earn net profits of 5 or 6 per cent. on its capital, *such statute is confiscatory.*

A law which makes it impossible for the citizen to earn a fair profit on his investment is *unjust,* and should be repealed, but to say that *the property is confiscated* because it cannot pay dividends is one of the absurdest contentions that was ever put forth by corporation lawyers and sustained by friendly courts.

(b) It is an adage that the sovereign cannot be sued by the subject save by his own consent. The original thirteen States supposed themselves to be sovereign. Claiming to be so, they stood together in the old Confederation and fought for independence. Admitted to

be so by Great Britain, they met in convention and agreed upon the Union.

When the Federal Supreme Court took jurisdiction over the State of Georgia, in the suit of Chisholm, all the States resented the usurpation, and the Eleventh Amendment was adopted to prevent similar infractions of State rights. Since the Civil War the Eleventh Amendment to the Constitution has been nullified, and any non-resident individual or corporation can drag any sovereign State into the Federal courts.

(c) When Oliver Ellsworth, of Massachusetts, framed the Judiciary Act of 1789, which established Federal courts, he provided that the question of the constitutionality of a State law should be raised in the State courts, and from the highest court of the State an appeal should lay to the Supreme Court of the United States. Never was it contemplated by the fathers that *district judges* of the Federal courts should have the right to take jurisdiction in cases of that kind.

Nowhere in the Constitution is the Federal judiciary given authority to set aside a law of Congress, and, by the Judiciary Act of 1789, the authority to set aside a State law is confined to the United States Supreme Court.

Yet not only are the States being constantly paralyzed in the exercise of their sovereign functions by the injunctions of the judges of the lower Federal courts, but laws passed by Congress and approved by the President are nullified by five lawyers—outvoting four—in the Supreme Court room!

Such an anomaly exists nowhere else on earth, and is unknown to the English system, after which ours is patterned.

In the eyes of Mr. Roosevelt all of this judicial usurpation appears to be unobjectionable. Federal judges, like Jones, of Alabama, who bossed the Governors and legislatures of States, impudently proclaim that the whole power of the Federal Government was ready to back up their unconstitutional pretensions.

If the best of Republican Presidents approves of this intolerable judicial encroachment, we are hopelessly committed to the proposition that five aged lawyers, appointed by the Executive, holding office for life, and priding themselves upon the fact that they are in no way responsible to the people, will continue to be, in the last analysis, the makers of our laws and the rulers of our destinies.

Here, then, are three points of the utmost importance *against* the Republicans.

Each of these three points can be made with equal force against the Democrats, for the last Democratic President that the country has had was even more of a Hamiltonian than Hamilton himself—consequently even less of a Jeffersonian than Mr. Roosevelt.

(4) The transportation question has likewise engaged the attention of our Republican President—with what results?

One of the chief offenders, in the matter of criminal rebates, was given an immunity bath by Mr. Roosevelt himself, and now takes $80,000 from the policyholders of the Equitable every year under the pleasant name of "salary."

One of the chief offenders, in the matter of stock jugglery and swindling—he of the Alton and the Union Pacific—steps about as jauntily as ever, and recently found cash enough to buy two more railroads, the Erie and the Central of Georgia.

One of the chief offenders in the matter of corrupting politicians and wrecking railroad corporations—he of the Metropolitan Traction deals—has given us another revelation of his power in his appearance before the grand jury in New York, where the State's prosecuting attorney, Mr. Jerome, acted thruout as the resourceful and entirely devoted lieutenant of the millionaire lawbreaker.

While on the stand Mr. Ryan stated—under oath, of course—that 95 per cent. of railroad capitalization is water.

Possibly it is unsafe to believe the eminent witness even in this, but there can be no doubt that the people are being taxt, in freight and passenger charges, to pay dividends on from six to eight billion dollars of watered stock.

Yet, as Mr. Roosevelt has gone on record as saying that he did not think the railroads are over-capitalized, and as the Republican party is not likely to give us a President who takes a different view,

there is no hope for relief as long as the G. O. P. rules the land. To argue that the Democratic party would do any better, we would first have to forget that Thomas F. Ryan carries the Virginia delegation to the National Democratic Convention in his private car, and that August Belmont is the dominant member of the Democratic National Executive Committee.

We should have to forget other things also, but these two are enough for the present.

As to Hearst and his League, that is a joke which costs him a good deal of money, no doubt, and which may or may not furnish him an equivalent in fun. The idea of Hearst and his editorial staff and other employees posing as "the Independence party" is comical, if not preposterous.

A copyrighted League, a one-man movement, a cut and dried platform, a Hearst-chosen ticket, a declaration against fusion by a League which always fuses, the denunciation of both the old parties by a man who acts first with the one and then with the other, can never grow into national proportions in this country, where the feeling of personal independence is so innate, and the demand for political consistency and integrity so imperative, and where a sense of humor abides. In former campaigns Mr. Hearst was followed by many ardent, honest radicals. After his deal with Murphy, which was followed by his deal with the Republicans, Mr. Hearst was "a lost leader" to honest, ardent reformers.

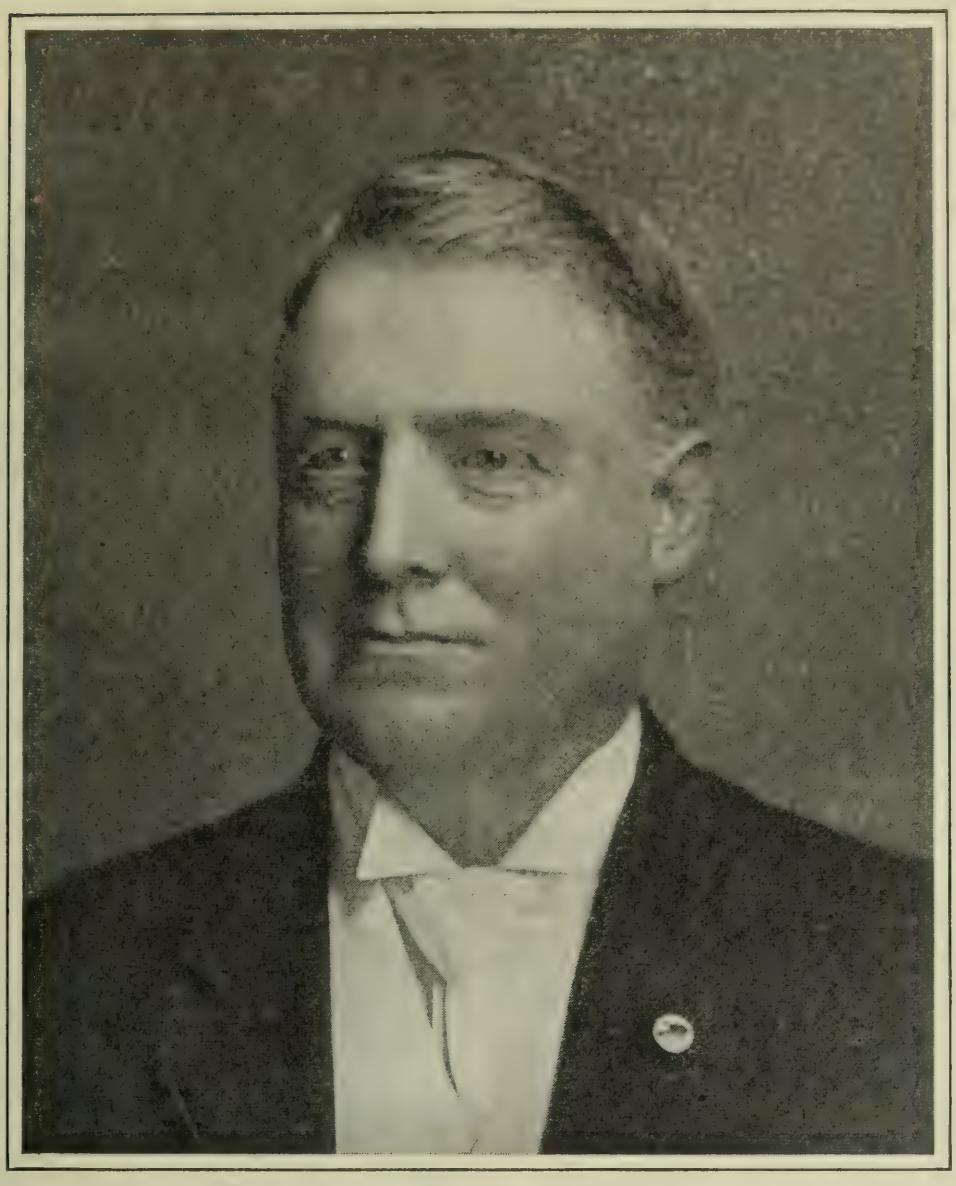
The Populist national ticket deserves support:

(1) Because it alone offers the true remedy for the Trust evil.

(2) Because it alone stands for the money system of the Constitution and the early Presidents.

(3) Because it alone seeks to deprive the judiciary of the powers it has usurped.

(4) Because it stands for the public ownership of public utilities, the abolition of banks of issue, the full protection of labor, and the great democratic principle of direct legislation by the people, with the right of voting out of office the public servant who has abused his trust.



(5) Because it would make land monopoly impossible, would open wide the doors of opportunity to all, would put an end to the frightful inequalities of wealth, would cause to disappear both the pauper and the multimillionaire, and would foster that great middle class which has ever been the mainstay of nations.

To vote either the Republican or the Democratic ticket is to support the condition of things which now exists, for both these old parties are controlled by the same interests—both the obedient servants of special privilege.

To vote for the Socialists is to support those who would give to the State that which the individual produces, thus destroying the incentive to individual effort. Besides, socialism seeks to destroy the private ownership of property, and that means a bloody revolution—for the simple reason that even the dreamers must know that private ownership is not going to submit to wholesale robbery without a fight.

Populism is the democracy of Greece applied to modern conditions; is the republicanism of the Populares of Rome introduced into America; is simply the rule of all the people for the benefit of all the people—nothing more and nothing else.

THOMSON, GA.

THOMAS L. HISGEN, OF MASSACHUSETTS.

Mr. Hisgen, the first Presidential candidate chosen by the new Independence party, with his brothers, built up a successful axle-grease business at Albany, N. Y., and West Springfield, Mass. Last year he was candidate for Governor of Massachusetts. He was born of German parentage in 1858 at Petersburg, Ind.

The Independence Party's Appeal

BY THOMAS L. HISGEN

CANDIDATE OF THE INDEPENDENCE PARTY FOR PRESIDENT OF THE UNITED STATES.

I HAVE withdrawn from the Democratic party and have allied myself with the Independence party because I am thoroly democratic and believe the older party is not.

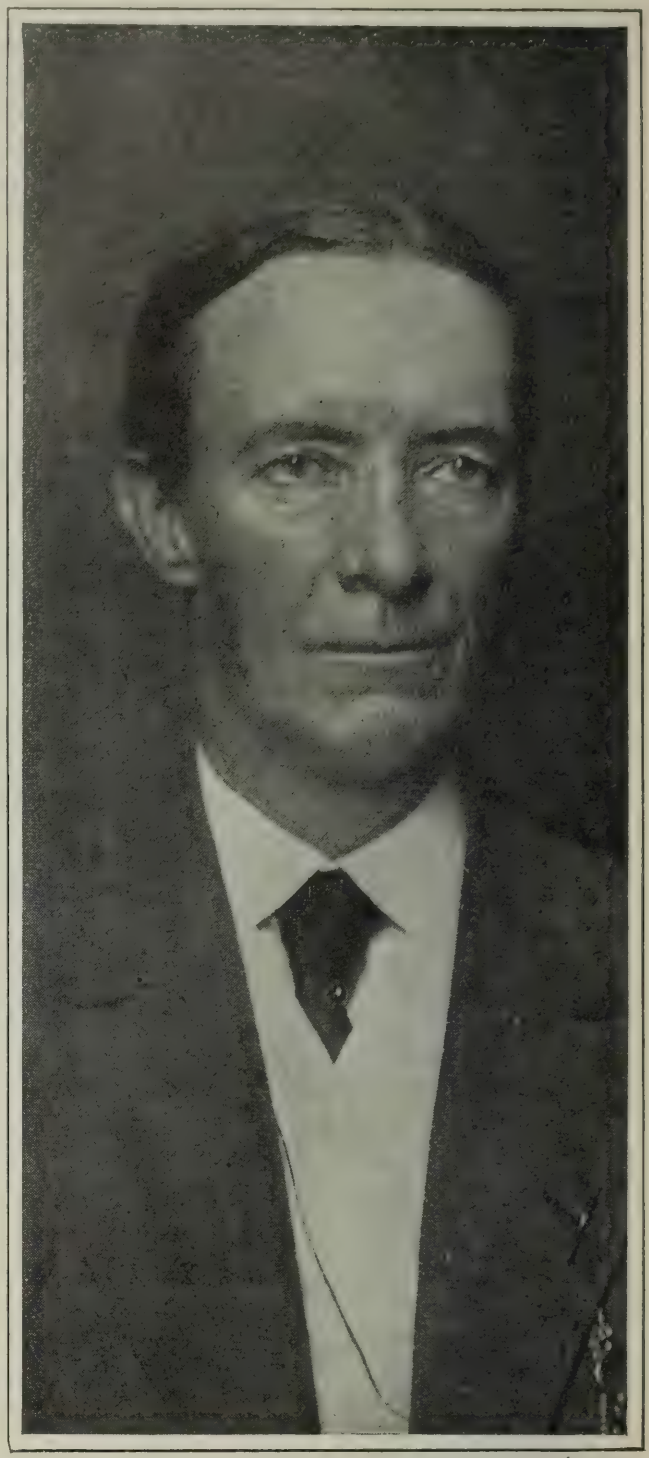
I never could, following the dictates of my conscience, become a member of the Republican party. The noble intentions of that party, so far as its leaders are concerned, died with Lincoln. It is a trite campaign saying of Democrats that the Great Emancipator, if he were to return to earth, would not know the great party he helped to found. But in my humble opinion Lincoln would not only fail to recognize in the Republican party the offspring of his aspirations, but he would condemn it as diametrically opposed to what he designed the party to be.

Lincoln believed in fair play and a square deal to all who live under the Stars and Stripes. The Republican party is a party of special interests. Its policies have allowed unjust taxation, an unfair banking system, and a criminal discrimination in freight rates by the railroads.

Gigantic trusts, which hold the necessities of life in their avaricious grasp, have thrived and fattened under Republican rule.

The so-called party of Lincoln has made the trusts. Now the politicians who control it receive their sustenance from the trusts.

So long as I believed the Democratic party was actually and honestly fighting for the interests of the great masses of the people, and was not the docile creature of such men as Roger Sullivan, of Illinois; Tom Taggart, of Indiana, and Charlie Murphy and Pat McCarren, of New York, I stuck to that party.



But there is every evidence that the "peerless leader," Mr. Bryan, has sold out his old-time convictions for the hope of office, and I'm thru with him and the ever-changing, wobbling, divided and disgraced party which he represents.

Mr. Bryan asks, "Shall the people rule?" and then proceeds to omit from his platform—and emphasizes the omission in his letter of acceptance—the very things that would permit the people to rule.

The platform of the Independence party proposes specific laws that would serve to bring back into the hands of the people the reins of government.

We are for the initiative and referendum—that allows the people to make their own laws. We are for the recall—that allows the people to put out of office unfaithful servants. We are for the election of Senators and judges by the people—that would be a blow to the trusts and corporations that would stagger them. We are for the extension of the parcels post—which would put an end to the robbery of the people by the express companies. We are for a central government bank—which would prevent a monopoly of the money of the country and take out of the hands of the bankers the power to create another panic like the one we have now.

The platform of the new party—the Independence party—founded by William Randolph Hearst and fearlessly backed by this great friend of the people, is the best Democratic document written since the Declaration of Independence.

JOHN TEMPLE GRAVES, OF GEORGIA,
Candidate of the Independence party for Vice-President. Lately editor of *The Georgian*, of Atlanta, and now editorially connected with the Hearst newspapers. He is well known as a writer and speaker.

SPRINGFIELD, MASS.

The Socialist Labor Party's Appeal

BY AUGUST GILLHAUS

CANDIDATE OF THE SOCIALIST LABOR PARTY FOR PRESIDENT OF THE UNITED STATES.

WHY should the voters support at the coming election the Presidential ticket of the Socialist Labor party, headed by myself, the proxy for M. R. Preston, now in the Nevada State Penitentiary, and whom the convention of the Socialist Labor party nominated for President?

The people of the original thirteen colonies might be "debating" to this day with the Crown and Parliament had not the first Continental Congress issued, on the 4th of July, 1776, a certain declaration, among the opening sentences of which occurs the statement: "We hold these truths to be self-evident," and so on. Likewise the Socialist Labor party holds in this generation that the period for "debating" with the nation's modern ruling class is at an end. The Socialist Labor party holds certain concrete truths—amplifications of the truths of 1776—to be self-evident today; and it announces them plump and plain. They are:

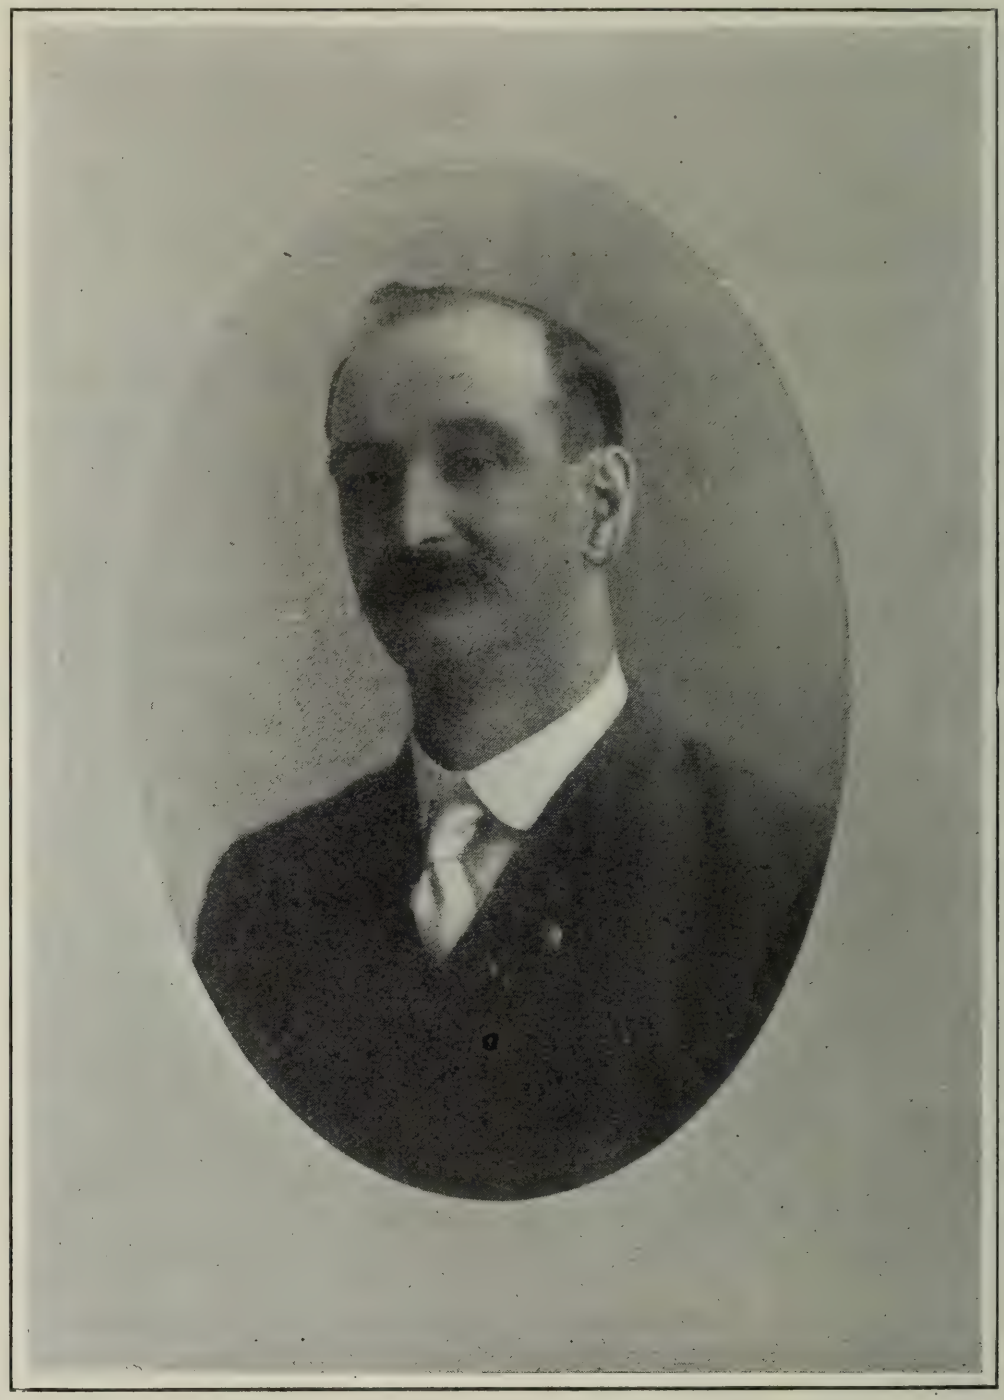
The earth has ever teemed with an abundance of wealth for man's comfort. That abundance has never yet been produced—is not produced even today. A time was when the abundance was not produced simply because it was unproducible by man. The mechanical means were wanting. That time is no more. The modern mechanism of production now renders abundance possible to all—together with all the human happiness, physical, mental and spiritual, that that implies. This notwithstanding all our existing institutions—social and political—preserve the characteristics and continue to be the reflexes of the identical material conditions of those unhappy backward days of the race when, abundance for all being impossible, it was inevitable that some should enjoy leisure and plenty, while most groaned under the weight of unrequited and unremitting toil, dependent for their existence, comforts and discomforts upon the whim, the "hit or miss" of the privileged few.

In the fact that abundance for all, once impossible, has now become possible lies an accomplished revolution in material possibilities.

In the further fact that that possibility is blocked by the antiquated and therefore now iniquitous political and social institutions of the modern ruling class, the capitalist class—the class-purblind beneficiary of the continued backward social state—in that further fact lies the necessity of the pending social revolution.

When material development has ripened to the point that it belies existing social and political institutions, and these belie it, then a social revolution is ripe. It is then more than ripe: it is inevitable, with the alternative of a social catastrophe.

Of all social revolutions the impending or socialist revolution is the first in which man can, and therefore must, consciously give a helping hand to the evolutionary process. The torch of science now clarifies the past, and thereby marshals us the way that we must go.



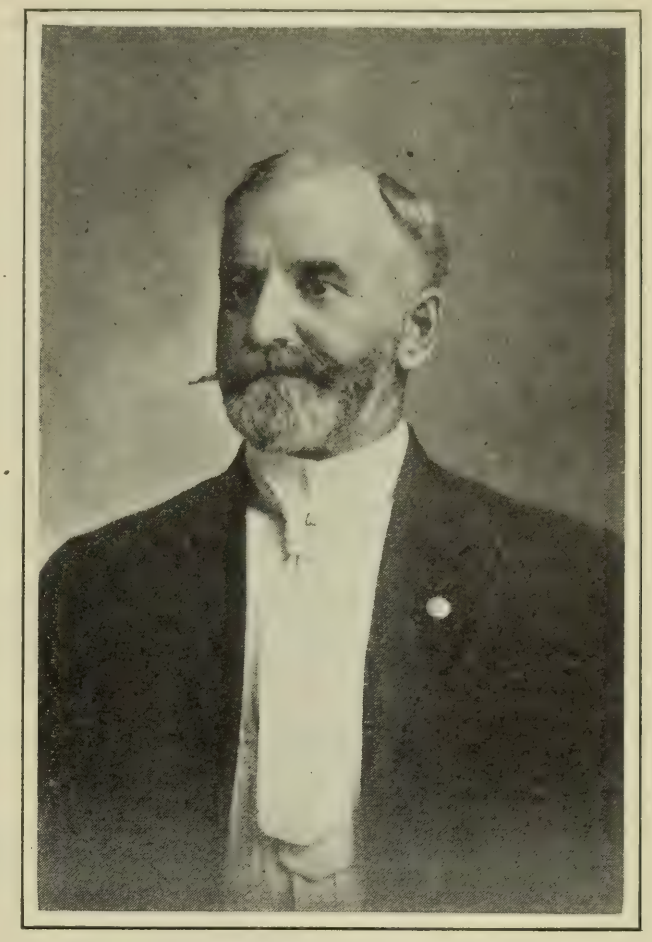
Knowledge establishes that the political state—the reflex of the old and unhappy economic possibilities—has outlived its mission, and that it must now be supplanted by the industrial state—the reflex of the modern and happy economic possibilities. Knowledge of a goal determines the means. To the man whose goal is Europe or Japan, a rowboat, such as would suffice to cross a creek with, will not boot. Nothing short of a seaworthy ship will stead. The goal—the socialist republic—is not a government run by Socialist instead of Democratic and Republican Congressmen and Presidents. The goal—as its oft given name the Republic of Labor, indicates—is a government administered by the representatives of organized labor—productive, distributive, service or intellectual labor—constructed upon the principle of the collective ownership of the natural and social opportunities, the land and the implements needed to operate the land with.

The Socialist goal predetermines:

First, the necessity of the political organization of labor whereby to preach the revolution and endeavor to carry it out with the civilized weapon of the ballot. Without the political organization the victory of socialism is indefinitely postponed.

Second, the necessity of the union—that is, the revolutionary economic organization of the working class, organized upon the integrally industrial plan, and thereby able to perform the revolutionary act, thru being able to perform the function of an "army of occupation." Without such economic organization, the day of Socialist victory, if at all possible, would be the day of its defeat.

With the burning issues thus raised and pushed forward by such a goal, and the means to reach it dictated by the goal itself, what is the posture of the political parties that summon the voters to their respective standards?



AUGUST GILLHAUS, OF NEW YORK.

As to the dominant political parties, they have drawn up their declarations obedi-

ent to the precept: "If you wish to conceal your meaning, drown it in words." But the drowned meaning betrays itself by the bubbles that escape to the surface. The injunction plank of both the Republican and the Democratic party sufficiently announces that an economic ruling class is to continue and continue equipped with the weapons of despotism forged in the Dark Ages of Richard II; an economic dependent class is to remain, dominated by "Gatling guns on paper," backed by Gatling guns of steel and iron; in short, the existing social and political institutions are to be perpetuated. What that means, the present distressful condition of the workers, thrown out of work by no act of theirs, sufficiently denotes; and the labor union, the rising unit and embryo of the Republic of Labor, is to be hamstrung and beaten down into impotence.

As to the Populist, Prohibitionist and Independence parties, they are even more utterly unresponsive to the revolutionary pulsations of the times. The present response of the Czar's *régime* to the cry of the Russian people for freedom is the egging of a mad dog upon the man the dog bit. In a way, such policy is an answer to the point. It is the announcement that as things are they should be—only more intensely so. Such, in substance, is the answer of the Republican and Democratic parties. The Populist, Prohibitionist and Independence parties answer by prescribing a hair of the mad dog to the man the dog bit.

As to the Socialist party, it needs no profundity to perceive that the socialism which it strives for as its goal is socialism as little as the Europe or Japan, expected by some visionary to be reached from our shores in a rowboat, would be actually Japan or Europe. Every utterance and act of the Socialist party proves it to hold the political organization all-sufficient. It ignores the necessity of the revolutionary union. As a consequence it gives no greater heed to the economic organization of labor than as to a sediment from which voters and funds may be drawn. No greater calamity could befall the land, and, therefore, socialism itself, than the political victory of socialism unaccompanied by the adequate economic organization, ready to "move in" and assume the reins of administration. As physical force anarchism would lead directly to a Paris Commune massacre,

DONALD L. MUNRO, OF VIRGINIA,
The Socialist Labor candidate for Vice-President.

so would a pure and simple socialist political victory plunge the country into national chaos. Mark Hanna's threat to shut down the industries of the land, made in 1896 when Bryan's victory seemed possible, would then be no idle threat. Not the Socialist Republic, but the "President Hog" of Macaulay's forecast, or the savage Cæsar of Ignatius Donnelly's "Cæsar's Column," would then leap out of the cauldron in which the present social forces are seething.

Alone on the political field does the Socialist Labor party, in line with international socialism, recognize the goal first unveiled by Karl Marx—the Republic of Labor, and adopt the adequate means—the revolutionary ballot, coupled with the revolutionary union. The party's stand on the political field attests the former; the party's nomination of Preston by its national convention attests the latter.

M. R. Preston is now in the State

Penitentiary of Nevada under a twenty-five years' sentence for murder. The alleged murder consists in his having shot and killed an employer, against whose establishment his union had declared a strike, and who assailed him with a gun as he was on picket duty. Only he who is engaged in a criminal act is stript of the civic right of self-defense. If Preston was guilty of murder in shooting dead one who threatened his life, then picketing is a criminal act. If picketing is a criminal act, then the union is impotent. Useful and necessary tho political action or the political organization of labor is, the economic organization is indispensable. The strike or boycott requires the picket. If the picket is criminal, then the union is impotent—a fortress without weapons, its walls a hollow mockery. A union that cannot strike or boycott is a meek scarecrow on which the capitalist buzzards may safely roost. No picket, no union; no union, no Socialist Republic.

Hancock, whose name stands out boldest among the signers of the Declaration of Independence, was at the time under indictment by the British Government for smuggling. The "crime" was to Hancock's credit. It symbolized the denial by the oncoming capitalist revolution of the canons of feudalism, which restricted commerce. So, likewise, does Preston's "crime" symbolize the denial by the oncoming socialist revolution of the canons of capitalism which demand a helpless working class, stript of even the right of self-defense. His nomination by the convention of the Socialist Labor party accentuates the point, and, by accentuating it, sums up the real issue of the day, together with all that thereby hangs.

For these reasons the Socialist Labor party calls upon the working class of the land, and all others with eyes to see, ears to hear and brains to discern, to rally at the polls with us—the only political party that is utopian neither in goal nor in means, and each vote for which is at once constructive and intelligently destructive.

NEW YORK.

Zionism of Today

BY ISRAEL ZANGWILL

[The following article is the condensation of an interview granted by Mr. Zangwill to a representative of THE INDEPENDENT. Mr. Zangwill has just arrived in this country to superintend the production of his new play.—EDITOR.]

SOME time ago that wing of the Zionists to which I belong sent out a commission to look about the earth in search of a territory in which Jews could, after twenty centuries of dispersion, find or make a home of their own.

At the time the commission was appointed our wing of the Zionists differed from other Zionists in that we did not believe that Palestine was the only place in the world where a Jewish nation might be planted. We thought that there might be other places and the commission to inquire was the result. This commission has just made a report, but the report has not yet been submitted to our council, and I cannot, therefore, give it out. I may say, however, that the report relates to a certain part of North Africa.

In the meantime Turkey has gained a constitution and changes are taking place there which may clear away difficulties that were hampering us in Palestine, where there are already several small colonies of Jews recently planted.

And there are thinly peopled parts of North America and South America, any of which might do for our proposed Land of Reunion.

Zionism, as some wise men say, is only a dream. But it is a dream that may be realized.

What we want is a country of our own to which we can call the opprest Jews of all nations, settle them on the land and let them live under their own government; not a king, probably a president, maybe

only a governor, ruling the land by their ballots.

Israel now lies scattered among the nations like a broken egg. It has no organization, no nerve center. There are rich and powerful Jews who accomplish things, but they accomplish them as English or German or French men—not as Jews. And what they do is not for the good of Jews, but for the good of England, Germany or France.

When Lord Rothschild bought the Suez Canal bonds for England it did great good to England, but none at all for the Jews as a people. Rich Jews give a little in charity to their own people—as, for instance, the Baron Hirsch fund—but there it ends. They lack solidarity.

If Christians could be converted to Christianity our lot would not be so hard, but there is no hope of that. Among the Christian nations, at the very best, as in England or America, they are only tolerated. In most lands they are frankly persecuted — Russia, for instance. In Germany no Jew can be an officer of the army. In France we recently saw the Dreyfus case. In England there is bare toleration. In America there are many exclusions—from some schools, universities, hotels, seaside resorts, and so forth. We suffer many humiliations and mortifications, and as matters of this sort are growing worse instead of better, the Jew must either settle down to twenty more centuries of exclusion and persecution, or else move to a country of his own, or else give up his religion and go in the melting-pot.

As matters now stand we probably, at first, would draw for the possible new Judea, most largely from Russia, where oppression is most active.

We would not expect to draw many from the two millions of Jews now in America. They have reached a place where they can expand and be free, and where the social exclusions touch only a few of them. It is such a relief to be free from active oppression that to many of the newcomers here it must seem as if they already had reached the Promised Land.

And yet to the new Judea, if it is established, there may come American recruits, because among the two millions here there are still a million who are strict observers of their religion—old-fashioned orthodox Jews.

And the Zionistic yearning for the re-establishment of our nation has its roots in our religion. We want a place that will be our own, where we can worship in our own fashion and follow out our own ideals.

Whether that is to be or where it is to be no one can yet say.

Yes, Zionism is a dream, but a dream that may be realized.

New York.

The New Turkey and Zionism

BY RICHARD GOTTHEIL

[Professor Gottheil has the chair of Semitic languages in Columbia University. His father was for many years the beloved pastor of the leading Jewish temple in this city. Professor Gottheil has for seven years been president of the American branch of Zionism, and is in the closest touch with the questions involved by his annual visits to Europe, Egypt and Palestine. Within the past few months he has had confidential interviews with leaders of the Young Turk party now in control in Turkey. Mr. Zangwill's article in this issue represents another wing of Zionism which has sought a home for a Jewish state elsewhere than in Palestine.—Editor.]

On the 8th of August last strange scenes were witnessed in Jerusalem. The revived Turkish constitution was officially proclaimed. In front of the Serail was a large concourse of people drawn from the many nationalities and religious bodies inhabiting the city, transported with joy at the ushering in of the new day. Prominent among them was a band of Sephardic Jews carrying a scroll of the Law in place of a banner. Many a year and a day have passed in the City of the King since "Jerusalem was a rejoicing and her peo-

ple a joy." For the nonce, Mohammedans, Christians and Jews forgot the rivalry of centuries and united in passionate sympathy for the new hope. And from the Jewish School of Artistic Design (Bezalel) fluttered the blue and white flag surmounted by a "Shield of David"—the flag of the Zionists.

A few days later, on the 11th of August, a similar demonstration took place in Jaffa. It was the turn of the Jewish colonists who now, after a long period of demoralizing conflict with a new and a strange life, made doubly difficult by a worst possible government, brought a free-will offering for their freedom from oppression.

But mafficking and speechmaking and the most fervent expression of intoxicated good will are good things enough to accompany a peaceful revolution. The durable fabric of statehood, however, must be built up of sterner stuff, and those of my people who have a thought for the constructive statesmanship of the future have asked themselves the simple question, What effect will the new *régime* in Turkey have upon the hopes and the aspirations of the Zionists? Are these hopes to be advanced or retarded?

It is but natural that the Jews, not only in the Turkish Empire, but the world over, should rejoice sincerely at the auspicious turn events have taken in the land of the Sultan. No Inquisition, no pogrom, no Black Death, no oppressive legislation is connected with their history in the countries of the Turks. When their forefathers fled from the heavy hand of the Church in Western Europe, they found asylum in Turkey; and tho they have suffered with the rest of the population from a government of misrule and of bakshish, it has not been due to their racial or religious affiliations. It is true that during the eighties of the nineteenth century restrictions were put upon Jewish immigration into Palestine, but such restrictions were the result of a certain legitimate fear that this immigration might mask a still further attempt of one or the other European great Powers to urge its unwelcome attentions upon the body of the Sick Man. Macedonia and Crete have proven that such fear was not without reason. In point of fact, after a few years, the regulations became a dead letter, and in recent times no hindrance whatever has kept the Jews from coming to the Holy Land or from settling there.

Among the Jews, none rejoice with fuller heart than do the Zionists. The cornerstone of Theodore Herzl's policy in his various dealings with the Sultan was a frank concession of the suzerain rights of the Padishah to the territories under his scepter, and the wish to make the accomplishment of Zionist ideals a source of material gain and of intellectual progress to the Turkish Empire. This was the keynote of his presentments to the Sultan and of his pronouncements at the Zionist congresses. The formula of a "publicly and legally assured home in Palestine" for the Jews was chosen with a view to certain eventualities which were expected in every chancellery of Europe, and for which every minister of foreign affairs was prepared. Happily, these eventualities have not matured, and there is genuine reason to hope that the animated moderation of the Young Turks will serve the permanent interests of the very heterogeneous elements that go to make up the Turkish Empire.

This moderation must certainly serve the best interests of the Zionists. Herzl's plan was, it is true, to restrain all positive work in Palestine until the legal and political basis had been secured for an onward move upon a large scale. It was the view of a statesman; but he erred in the good company of the most enlightened statesmen of Europe. The truer instincts of the Jewish people have demanded, especially since Herzl's death in 1904, the creation, in a gradual manner, of a Jewish Palestine. This end was to be attained by assisting in the upbuilding of the country, by fostering Jewish agricultural colonies, by founding Jewish schools, to the end that Jews as well as Jewish influence and Jewish investments should be attracted to the land. The great difficulty that any effort made in Palestine had to encounter was the want of a stable government and the intolerable exactions of the officials. These prevented the proper development of agriculture in the colonies, retarded the expansion of trade and delayed the

construction of proper harbors and railroads. In so far as the new order of things will remove this difficulty by inducing a rule of law and order, and a benevolent interest in the real welfare of the people, the work of the Zionists will be eased and furthered.

More than any other country, the Turkish Empire is a congerie of nationalities and of religious bodies with a semi-national constitution. Will the Young Turks succeed in welding a Turkish-feeling body politic out of these disparate elements? There are not wanting those who doubt the ability of the new powers to reach such an end. But with the object lesson of the bloodless revolution before our eyes, where so many prophets have been confounded by the events, I believe that the courageous patriotism of the leaders will be equal to their self-imposed task. But only upon one condition—that the program for which Prince Sebah-Eddin has fought so strenuously remain definitely fixt as the lodestar on the new firmament. This program demands the widest possible decentralization, and tho for a moment there was talk of a clash between the Ottoman Committee of Union and Progress and Sebah-Eddin's Ottoman League of Private Initiative, on this point at least there could be no conflict. The Constitution of Midhat Pasha, which has now been reproclaimed, expressly states (Section 108) that "provincial administration is based on the broadest form of decentralization. The general councils elected treat of the affairs of the province and control them." Upon this decentralization the Zionists pin their hope. The further course of events must depend upon the principle of representation to be laid down for these councils. Possibly, also, some new division of the country for administrative purposes and more in accord with the ethnic frontiers will be necessary, a demand which has already come from Macedonia. That this principle will be an equitable one I have no doubt, for the Young Turks are too well versed in modern politics to repeat the mistake made by Germany in its treatment of the Poles or of England in its dealings with the Irish. In fact, the Young Turks may teach Europe a second lesson no less momentous than the first, that a state is far better served when it allows the widest range to the national and racial aspirations of its coherent parts than when it seeks to stifle these aspirations and produces sores which fester for all time to come.

NEW YORK

In the Indian Summer Time

BY CLINTON SCOLLARD

GRACEFULLY they float and fall,
Shining shallops of the leaves;
Like a tender madrigal
Cries the wind about the eaves;
Stacked and stored are all the sheaves
'Gainst the days of rain and rime,
Yet where is the heart that grieves
In the Indian Summer time!

O'er the hills an amber haze;
Banded birds on southward wing;
Russet robes on meadow-ways
Once a-spangle with the spring;
Hark!—a softly silver string!—
'Tis the brook, its lyric chime!
Beauty glamours everything
In the Indian Summer time!

Life goes lapsing like a dream—
Happiness too sweet to last!
Let us glory in the gleam
Like a halo round us cast!
Facing winter's blight and blast—
Rigors of a rugged clime—
We have treasure in the past,
In the Indian Summer time!

CLINTON, N. Y.

Literature

Mrs. Ward's Latest Novel*

Mrs. Humphry Ward's new novel is a story of modern English society life and political problems. This is important to tell, for since the surprise of discovering that Lady Rose's Daughter was not a fictitious heroine, but a French lady of uncertain fame, her books have been received with a sort of sly curiosity, no one being sure he could guess what historical personage the leading character might represent. And the embarrassment of not being able to recognize a premier or poet whose biography and poetry are familiar because he wore a dress-coat and appeared in an early nineteenth century drawing-room story, has made Mrs. Ward's readers very wary.

The fact that she always lays the scenes of her stories in the same social atmosphere no matter what the period of time represented, explains their confusion, of course. History is merely a record of national events, not of the high society in which the men and women of history moved when they were not performing those deeds of which history takes account. And Mrs. Ward has always contented herself with assuring us that this or that man was the Prime Minister, meanwhile portraying him in his social rather than his national character. This is why the average reader did not recognize Sir William Lamb, Lady Hamilton, Romney and others who have figured in her recent novels. And there can be little question of the fact that two or three of the men portrayed in this new story are the unripened characters of future history, probably already recognized in England. Altho the scenes appear to be laid during the early years of Gladstone's administration, the types and conditions portrayed belong to the present hour. The author introduces us to socialists and suffragettes, and takes one of her women thru a surgical operation. And this last is a surprise. Naturally she could not avoid the socialists and suffragettes—nobody can—but the commonplace surgical feature might have been omitted. One may always tell now the period to which the heroine belongs by the place she goes to spend Lent. Formerly she went to rest and pray in a convent; later she has been going to a sanitarium, and now, if she grows pale or feels deprest she submits to a surgical operation. Other novelists have made a very frank use of this morbid, new, self-mutilating instinct, but altho Mrs. Ward was producing the palest, most attenuated, neurasthenic heroines to be found in fiction, she has always managed to pull them thru the tale, more dead than alive, it is true, but without the aid of the surgeon's knife.

There are other surprises for the reader. Diana Mallory is not, as usual, the fragile lady in the story. She is worn and weary before the testing is over, but she does not lose her health. She returns to England after having spent nearly all of her life abroad, and immediately after the death of her father. She is rich and sentimental about England. She takes an old house at Beechcote and falls in love with Oliver Marsham, a member of Parliament, a Radical, and a man upon whom ambition had a stronger hold than honor. And for once Mrs. Ward permits the woman to outshine the man in goodness. Heretofore it will be remembered that her emaciated heroines have left much to be desired for them morally. They are not only morbid, as a rule, but often unreliably virtuous — thin, radium-hearted women who glowed in too many directions. The subordinate character of Alicia Drake plays this part in the present story. And Marion Vincent, the woman socialist, who works among the poor in East London, and whom Mrs. Ward describes as "thin, small, handsome, but with a certain strained,

*The Testing of Diana Mallory. *By Mrs. Humphry Ward.* New York: Harper Bros. $1.50.

emaciated air, a lack of complexion and bloom," is the one who submits to the surgical operation.

Meanwhile Diana is having her generosity tested on every side—by her neighbors, by the curate, by a damaged cousin from the Barbadoes, and especially by Oliver Marsham. The very hour in which he becomes engaged to her he discovers that she is the daughter of Juliet Sparkling, a murderess condemned to death many years before. Her sentence is commuted, and she dies before Diana is old enough to remember her. There follows upon this a series of family scenes in high life, and Marsham is induced to accept Diana's release from the engagement. Later, when he is jilted by Alicia and about to die from injuries sustained at an election where he was defeated, Diana returns and nurses him back to life and happiness.

There is not a thrilling scene in the book, nor a single character of extraordinary fascination; but it is written with a fineness of perception, a delicacy of expression, that redeems it from the commonplace. Mrs. Ward's great distinction is not in the drawing of her characters, but it is in her power to portray England—not the whole of it, but the panoplied part, the atmosphere and wit and customs current in its high social circles. She fails repeatedly from the dramatic point of view in this story, avoiding all scenes requiring the animated portrayal and dismissing them merely with a descriptive sentence. She will not go to the polls with her hero, nor show him in Parliament, where he is a brilliant figure. And all this is because Mrs. Ward has no real emotional power of expression. Her work is invariably descriptive where she can make it so. She is not really a novelist, but an historian of society life, with some practice at acrid feminine conversation. Even her natural scenery is subdued. It is good, and as well painted as if it hung upon the walls of a studio. It is cultivated, like the language she employs to describe it. The one thing Mrs. Ward comes anywhere near interpreting is the spirit of imperialism in the British Empire. Whether she believes in it or not, it is the one thing which appears to fire her imagination,

The Standard Dictionary of Music

THE revision of Sir George Grove's monumental dictionary* has now encompassed the fourth of the five volumes promised by editor and publishers. This begins with an article on "Quadrille" and ends with one on "Marie Szymanowska," a Polish pianist, whose name is remembered today because Goethe was once infatuated with her, and therefore lavishly overpraised her playing. The volume is marked by many of the admirable qualities which have distinguished its predecessors—for the most part carefulness and comprehensiveness, or at least an honest attempt thereat—and in the main the editor has succeeded remarkably well in fulfilling the purpose of the work, which was to be, for the general public as well as for the musician and the music lover, an authoritative and trustworthy book of reference. It is more than that, of course, for the present volume alone contains four such noteworthy treatises as Grove's article on "Schubert," the best biography of that composer yet written in any language; Dr. Philipp Spitta's almost equally valuable "Schumann"; Mrs. Edmond Wodehouse's essay on "Song," and Sir C. Hubert H. Parry's "Symphony"—each bulking large enough to make a fair sized book by itself and each the work of a scholarly enthusiast.

Unfortunately this fourth volume also contains more than its share of blemishes and mistakes. It is even more lacking in balance than any of the preceding volumes, and lack of balance was always one of their chief faults. Merit and defect are both exemplified, for instance, in Mrs. Wodehouse's article on "Song." In this, instead of considering her subject from the purely technical point of view, the writer has provided an interesting and valuable history of song, treated in regard to country and not period—because "the song is that branch of music in which national peculiarities and idioms linger longest, and international affinities grow most slowly." She succeeds admirably in tracing the history of song in the various countries of Europe, but in the section devoted to "America" displays the average Briton's ignorance

*GROVE'S DICTIONARY OF MUSIC AND MUSICIANS. Edited by J. A. Fuller Maitland, M. A., F. S. A. Vol. IV. New York: The Macmillan Co. $5 net.

of things American, be they musical or otherwise. Thus, she repeats the old and outworn assertion that Colonial America had no music but the "rough psalmody" and crude hymn tunes of the New England Puritans—a fiction now abundantly refuted; most authoritatively by Mr. Oscar G. Sonneck, who has shown that the earliest American composers were Francis Hopkinson, of Philadelphia, and James Lyon, of New Jersey, and has produced a series of excellent historical monographs on the flourishing musical life that existed in the middle and southern colonies. There is no mention of Mr. Sonneck's books in the meager bibliography at the end of the section on America.

The article on Anton Seidl, one of the greatest conductors who ever lived, is altogether inadequate, and the slur on his splendidly successful missionary work for the Wagner operas, that "the great music drama (the 'Nibelungen Ring') was reproduced in a sadly mutilated condition," is both unfair and untrue. Tho a deal of space is wasted on English nobodies, Saint-Saëns receives scant justice, and the musical form in which that French master achieved his most brilliant success, the symphonic poem—the most important development of the last half century in orchestral music—is dismist with a contemptuous sneer of twenty-six lines. To be sure, the editor will have a chance to retrieve the blunder in the final volume under the heading "Tone Poem," but he gives no promise of doing so. Perhaps the saddest blemish of all is the angry thwacking of Richard Strauss by the editor himself. Mr. Fuller Maitland is a hard-shell critic of the old school with a predisposition to intellectual sclerosis, that hardening of the arteries of thought and feeling which prevents appreciation of any new glory in music flashed on the world since the critic past the age of thirty years and left youth with its sympathy and enthusiasm behind him. In a work of this kind and in view of this same editor's promise at the start rigorously to exclude critical quarreling, better than his savage arraignment of Strauss would have been a mere chronological statement of the composer's life and works. In the appendix of "Addenda et Corrigenda for Volume III" the date of MacDowell's death is given as "January 24th, 1907." It should be January 23d, 1908.

Quatrains of Christ. By George Creel. Prefaced by Julian Hawthorne. New York: Paul Elder & Co. $75 cents.

A determined effort is evidently being made to capture the Rubaiyat for morality. First we have Richard Le Gallienne's "Omar Repentant" and now a little book of evangelistical quatrains. The following will show its style:

LXV.

Let fools with much pretense of wisdom scout
The News, and wag their heads in owlish doubt
Of great Jehovah's all-embracing scheme
Because there is a door they stand without.

LXVI.

Content are we, the children of His hand,
To watch and wait, nor blatantly demand,
Assured that in His own good time He will
Unlock the door, and let us understand.

LXXI.

Chaos first reigned. Did star call unto star,
The seas select their beds, and from afar
The worlds assemble to assign their swings,
Or did a Master place them as they are?

LXXII.

And if 'twas God that entered brooding space,
And gave to everything a plan and place,
Was it a childish game He stooped to play,
And having played, then turned away his face?

CXIX.

And strange that sons of Thomas still abide
With us on earth, and still the truth deride,
Because they cannot grasp His nail-torn hands
And see the blood gush from His pierced side.

An Olympic Victor. By James B. Connolly. New York: Charles Scribner's Sons. $1.25.

The vein of truth and fact that runs thru this fascinating story of the Olympic Games at Athens in 1896 makes it doubly interesting to those who know. The description of the opening events and the winning of the triple leap by an American is made more engrossing when one is told that this victor was James B. Connolly himself, the author of the book. The Marathon race is narrated exactly as it occurred, with merely the addition of a little romance to the victor's name. The long grind over the historic course is well portrayed, and the excitement at the great finish in the

Stadium, a difficult event to do justice to, is described in a manner to impart to the reader a few of the thrills felt by the spectators on that great day. The use of somewhat classical English in the conversations, a rather dangerous feat, is well carried out, without offense to the reader. It is a well written and appealing story.

Paul the Mystic: A Study in Apostolic Experience. By James M. Campbell. New York: G. P. Putnam's Sons. $1.50.

A library which gives any attention to religious books will hardly fail to have a shelf or two of Lives or Studies of the Apostle Paul. There will be Conybeare and Howson, valuable still for its description of Eastern scenes and its classical references; Farrar, popular and eloquent; the works of Professor Ramsay, who has made archæology contribute to our knowledge of the Apostle; brief manuals by Stalker and Gilbert; possibly German works by Baur, Clemen and Weinel, together with many others, and also writings on the apostolic age, which deal largely with Paul. One who glances thru this literature will be ready to grant the truth of Dr. Campbell's contention that "In the Lives of Paul which have appeared—and their name is legion—scant justice has been done to the mystical element in his religious experience and in his teaching." However, on finishing Dr. Campbell's treatise, in which he seeks to supply this lack, the question rises whether he has himself done justice to *Paul the Mystic*. He has written a good deal that is true, and much that is important, but he has hardly come at the heart of his subject or portrayed with any clearness or satisfaction the mystical elements in Paul's religious faith. His statements often leave one with the impression that there is no exact content behind them. For example, he says that Paul as a mystic was "one who dwelt upon the inner side of spiritual things; one who pushed on where logic limped and lagged, seeking the sunlit hights of direct vision, conscious union, and direct communion." These terms are often used, but we doubt if "direct vision and conscious communion" mean anything that is describable, or intelligible, or of any moral use. Dr. Campbell gives no judgment on the worth of Paul's mysticism; he does not tell us whether it added to the strength of his character or detracted from it. He seems to take for granted that Paul's religious experience is a norm for all men, and that it is sufficient to show that Paul's mysticism was evangelical and practical. We would prefer on the theme a volume of the late George Matheson on "The Spiritual Development of Paul," which, tho highly imaginative as to Paul's spiritual history, is fitted with much the same religious passion that carried Paul off his feet and gave him utterance which it is very difficult to interpret.

Black Bruin: The Biography of a Bear. By Clarence Hawkes. Illustrated by Charles Copeland. Philadelphia: George W. Jacobs & Co. $1.50.

This book tells the life history of a certain black bear. In story form the life of the bear is sketched with a bold hand from infancy to maturity. He passes from the wild into domesticity. He becomes a household pet, full of mischief, but good-natured, withal, and passing from this again to the life of a dancing and trick bear, his wild and savage nature grows step by step under the influence of ill-treatment and cruelty until he kills his owner, who is also his tormentor, and returns to the wild. He is trapped and incorporated with a menagerie and traveling show, from which he finally escapes through the agency of a train wreck. The author has skilfully woven into his story much of the natural history of the bear, and he has produced a readable story, but yet *Black Bruin* is not typical, and the fact remains that his biography as set forth in the book is by no means as well done as was Ernest Seton Thompson's "The Biography of a Grizzly."

9009. By James Hopper and Fred. R. Bechdolt. New York: The McClure Co. $1.50.

Sociologists, welfare workers and all others who are interested in the uplift of the underworld may well read *9009*. Indignation is given as the inspiration from whence came this book, but whatever the moving cause it is vivid. It is tense. It is tragic. The problem of our prisons, the difficulty of reformation under our

penal system, honeycombed as it often is by abuses described with first-hand knowledge in the book, the consequent making of a human monster—all these are described and developed in description. The reader's attention is fastened upon the story so skillfully told, with John Collins (9009) continually in the center of the stage. We do not recall any recent study in criminology that surpasses the present one in forceful vitality of narration.

Literary Notes

....*Abraham Lincoln; A Tribute,* by George Bancroft, just published, is a contribution to the literature on the martyred President that is presently forthcoming. The book is cloth bound and contains a portrait of Lincoln. A. Wessels Co. 60 cents.

....Duffield & Co. are issuing Jane Austin's *Sense and Sensibility* in two volumes with colored illustrations as a part of their St. Martin's Illustrated Library of Standard Authors. The illustrations of *Sense and Sensibility* are by A. Wallis Mills. $2.50.

....Mrs. Adolphe Hoffmann has given "a mother's parting counsel to her son on the eve of his marriage," and has used this as subject matter for a little book which she now publishes thru the Vir Publishing Company, of Philadelphia, under the title *Before Marriage.* Her advice is good and very helpful. 35 cents.

....There have been so many admirable cook books issued that it would seem that the average housekeeper ought to be able to cook by the aid of some of them. *How to Cook Meat and Poultry,* by Olive Green, is one of the latest of cook books in the Home Maker Series. The receipts in this book have been tested by the author, and the housekeeper may be quite sure of good results if she follows the lucid and simple text in which they are set down. (Putnam's, $1.00)

....The Shade Tree Commission of the City of Newark, N. J., has entered upon a campaign of education among the children relative to the trees. In furtherance of this campaign the commission is issuing attractively printed and illustrated leaflets that are well calculated to awaken interest on the part of the school children in shade and other trees. These leaflets contain poetic quotations regarding trees, as well as well digested suggestions as to the kind of trees, shrubs, vines, etc., it is best to plant in a city like Newark. The approximate cost of various trees, shrubs and vines is also incorporated in the leaflets. The enemies of the trees are likewise named and illustrated so as to be easily recognizable, and suggestions are made looking toward their destruction. The leaflets have been prepared by Miss Agnes Vinton Luther, of the Arbor Day Committee of the Essex County Teachers' Guild.

....The little volume by Carl Whitmer, of Stephens College, Columbia, Mo., entitled *Concerning a National Spiritual Drama,* is as full of mysticism as any by Maeterlinck or Aubanel. Music is of necessity mystical and capable of many interpretations—like this book. A national spiritual drama seems to us an impossibility, for while "God made of one blood all nations on earth," those nations have different modes of thought and speech, and it would of necessity be a superman who could form a national spiritual drama. It would indeed have to be "a work embodying the spirit of the Spirit," and when such an one will be written is too far a cry forward for us to attempt to prophesy its fulfillment. While this little volume is evidently the work of a painstaking thinker, in harmonious composition, there seems to us but one sentence worthy of lasting remembrance, the closing apostrophe to "The soul forever and forever—longer than soil is brown and solid—longer than water ebbs and flows."

Pebbles

OUR idea of wealth is feeling financially able to contribute to a campaign fund.—*Atchison Globe.*

SHE—I suppose you will commit suicide if I refuse you?

He—Ah—that has been my custom.—*The Sketch.*

MARKS—Say, old man, did I ever tell you about the awful fright I got on my wedding day?

Parks—S-s-h-h! No man should speak that way about his wife!—*Clover.*

A LADY on one of the ocean liners who seemed very much afraid of icebergs asked the captain what would happen in case of a collision. The captain replied: "The iceberg would move right along, madam, just as if nothing had happened," and the old lady seemed greatly relieved.—*Success.*

A GOOD lady of indefinite education but ample purse went into a bookseller's to buy a gift for her husband. She hovered round and manifested the usual indecision, whereupon an assistant, to help her out of the difficulty, suggested a set of Shakespeare.

"Oh," replied the lady very promptly, "he read that when it first came out."—*Harper's Weekly.*

THE RETORT COURTEOUS.

A MERRY party being gathered in a city flat made such a racket that the occupant of a neighboring apartment sent his servant down with a polite message asking if it would be possible for the party to make less noise, since, as the servant announced, "Mr. Smith says that he cannot read."

"I am very sorry for Mr. Smith," replied the host. "Please present my compliments to your master, say that I am sorry he cannot read, and tell him I could when I was four years old!"—*The Ladies' Home Journal.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Candidates' Appeal

It has never before happened, we believe, that all of the presidential candidates in a national campaign have directly appealed to the public thru one and the same issue of a newspaper or magazine. The first-hand statements which Messrs. Taft and Bryan, Watson, Hisgen, Debs, Gillhaus and Chafin address to the American people this week thru the columns of The Independent, taken together, are a unique document, and the voter will find them a superior source from which to derive his impressions of these candidates and of the political questions upon which they differ.

The personality and the intellectual qualities of the writers stand forth strongly in these appeals. Mr. Taft, the judicious, fair-minded and conciliatory; Mr. Bryan, the analytical, clean-cut and positive, have never spoken or printed words more characteristic of their whole habit of thought and political attitude than are these arguments constructed under the overwhelming sense of responsibility which both men must feel. The irony of Watson, the faith of Hisgen, the single-mindedness of Chafin, the eloquence of Gillhaus and the tremendous earnestness of Debs, were never displayed to better advantage on any platform or printed page. Each man has bestowed the best that was in him to give.

Most men are partisans, and most of the readers of these appeals will find in the words of their respective standard-bearers reinforcement of conviction and confirmation of hope. But most men in twentieth century America are also open-minded, and such will read these varying statements with a keen intelligence for what they reveal of general drift, of irrepressible conflict, in our magnificent political life. Here are focused the ideas and the purposes of almost a hundred million souls. Here we may discern what we mean, and what, so far as we have the power, we intend to achieve.

The characteristic note of all these proclamations is reform, social reconstruction, vigorous grappling with tremendous problems. Not a line of them all echoes the lament of the instinctive conservative: "We are forgetting our traditions and drifting from the safe anchorages of an earlier time." Neither Republican nor Democrat asks public confidence on the ground that he stands for a system which could only be ruined or imperiled by being overhauled. Mr. Taft defends protection, but he promises tariff revision. He does not wish to curb corporate activity on a large scale, but he declares that it must and shall be made law-abiding. Mr. Bryan holds firmly the Democratic doctrine of State rights, but he is prepared to go far in expanding the functions of the central government.

Not more than ten years ago each one of these appeals would have been denounced by a conservative press as dangerously radical, and for a definite reason. Six of the seven candidates, without apology or reservation, accept and proclaim the political philosophy of paternalism. When one remembers the odium which clung to this term for nearly a century, it is an astonishing change that we have to acknowledge when we reflect that today Mr. Thomas E. Watson is the only candidate for high public office in America who fears the encroachment of government upon the sphere of individual activity, and Mr. Watson would save us from disaster by blending with the political economy of Mr. Henry George the greenback nationalism of the Hon. Peter Cooper!

Are we then drifting slowly but certainly into socialism? If paternalism is

socialism, there is no help for us, for paternalistic we are without a quiver of trepidation. Therefore we anticipate that even the remorseless indictment of modern industrial society and the uncompromising socialistic program which Mr. Debs presents will be read by not a few loyal supporters of Mr. Taft and Mr. Bryan without consternation or amazement. Whether the vote for Mr. Debs be smaller or larger than his faithful supporters predict, the important fact to recognize is that socialism is obtaining a respectful hearing, and that it is bringing into our American politics the fresh elements of new ideas and earnest convictions.

This multiplicity of parties of itself perhaps reveals a momentous change in our political habits. We do not feel sure that it is so, but we must admit the possibility that the marshaling of our voting population into two great parties is not to be an enduring phenomenon. In the republic of France the two-party system has completely gone by, it is breaking up in Great Britain, and it may go by in America. On some accounts such a development is desirable. Certainly, such interests and convictions as are represented by populism, prohibitionism and socialism should be represented also in legislative bodies. The minor parties know that no one of them can elect a President. It should be possible for them to elect members of State legislatures and of Congress. So much of success would but more completely establish an interesting American procedure. We carry into effect such policies as all parties are agreed upon. We make little headway thru governmental action in matters upon which the parties differ. Herein we discover a deep and wide conservatism, against which no radicalism can so far prevail as to overwhelm us with disaster.

The Everlasting Balkans

THE Balkans are *das ewige Weiblich* of diplomacy, always with us, the chronic sore of revolution, rebellion, insurrection and every sort of danger to the peace of nations. The occasion has been the oppression of Christians by Turks, and an equally evil feud between Bulgarian and Greek Christians, and their shocking dismemberment by the Treaty of Berlin.

In the present readjustment there are two main questions involved—one that of Bulgaria declaring her complete indedendence, and the other that of Austria declaring her annexation of Bosnia and Herzegovina. Either of these breaks up the Treaty of Berlin; but if treated as offenses there is a very serious difference between them. Bulgaria was no party to the Treaty of Berlin. She owes no fealty or obligation to it. She was only a sufferer by it. It was expected and hoped that the Balkan states might be united as one reasonably strong nation, but that mischievous treaty, under the guidance of Disraeli, split them up, weakened them, made them rival and quarrelsome little principalities, and left them a persistent source of trouble. The result has been the Servian war and the butcheries of Macedonia.

Bulgaria, we say, owes nothing to the Treaty of Berlin but disavowal and resistance. She was left to rule herself, which was well, but she was left in the humiliating position of the nominal tributary vassal of Turkey. Of course, she had the moral right to end that relation just as soon as she could get a good chance. Independence was her right, and it was the compulsion of the European Powers which prevented her enjoying it. The chance has come and she has legitimately taken it, treaty or no treaty.

The case is different with Austria. She has much more seriously flouted and broken the Berlin Treaty. She has asked no concert of the other Powers, but of her own will has annulled her own compact. In the case of Bulgaria it was the people exercising their inherent right of independence; in the case of Austria she seizes outside territory — Bosnia and Herzegovina—which she had borrowed from Turkey and was administering; and, with no reference to the will of the people of those countries, she annexes them as provinces added to her own empire. She says she has ruled them these nearly thirty years to their advantage, and now has the right to take them. That is a strange sort of ethics. Without Turkey's consent she took them to

administer in the first place, by a solemn treaty which she signed; against Turkey's consent she now takes them to possess. She does not even ask the previous assent of the Powers which first allowed her to take them. It is a simple grab game, under the good old rule,

"That they should take who have the power,
And they should keep who can."

Now, we do not pretend that the treaty Powers of San Stefano and Berlin were guilty in taking territory from Turkey and delivering their inhabitants from terrible oppression. That was all right—Turkey deserved it. But Turkey was then punished, and if the time had come when the merely nominal feudatory relation with Turkey should cease, then the Powers which took Bosnia and Herzegovina from Turkey and gave them in trust to Austria for government should have been consulted in the change.

There are excuses which can be made. It can be said that the Treaty of Berlin was obsolescent and had suffered more than one infraction. That is true, but they were in minor matters, and there had been no serious protest. And, further, these gradual infractions of the Treaty of Berlin had relation to Bulgaria, and were in her interest, and were not in the interest of Austria or Bosnia. Under the Treaty of Berlin Bulgaria was a vassal principality of Turkey, and had no right of representation such as belongs to a sovereign state. Accordingly, the Bulgarian representative at the Porte had no diplomatic character and could not correspond with the Ottoman Minister of Foreign Affairs, but was required to deal with a "Bureau of Privileged Provinces," under the Minister of the Interior. Against this indignity Bulgaria protested and refused so to hold communication, declaring that she was not a "privileged province," but an autonomous principality. After having in vain appealed to Europe, the Turkish Minister of Foreign Affairs was in 1882 compelled to yield and treat with Bulgaria as with foreign nations.

Ever since the Treaty of Berlin, and particularly since the accession of Ferdinand and the reconciliation with Russia, Bulgaria has little by little broken the ties of vassalship with the tacit consent of the Powers. The obligations imposed on Bulgaria by the Treaty of Berlin have not been respected by her nor has she paid her tribute. Since 1882 Bulgaria has concluded with Turkey postal and commercial agreements. The two have signed a treaty of offensive and defensive alliance, and in 1903 an agreement on disarmament. Thus, of late, the relation of vassalship has not existed at all. At the first Conference of The Hague Bulgaria was received only as subordinate to Turkey; at the Conference of 1907 she appeared as an independent nation, occupying in the official protocols her alphabetic position, just as did Turkey; and the other Powers not only recognized her delegate as a member, but allowed her a judge and assistant judge in the international tribunal.

All this shows that Bulgaria has for years been practically an autonomous state and tacitly recognized as independent. She has had the right to demand, despite anybody's treaty, her full independence. But such is not the case as to Bosnia and Herzegovina. They are not making a claim for themselves, but Austria is claiming them for herself. The act of Austria is a surprising breach of the Treaty of Berlin by one of the Powers which agreed to it, and that one which was its chief beneficiary, and this without the consent of the other Powers —unless Germany had, as is probable, given her previous permission. In that case Germany must share the blame with Austria.

And now Montenegro and Albania are denying the obligations of the Treaty of Berlin. That is their right. They were no parties to it. They can consult their own interests, and so can Servia. But let them be prudent as well as brave. They have no organized army, as Bulgaria has. They cannot fight Austria, separate or combined. Even with Bulgaria's help the combined force would be ground to submission between the armies of Turkey on the south and Austria-Hungary on the north, backed by Germany if needed. War would be fatal. It would be better to trust to diplomacy and time. These are cases in which nobody talks of arbitration.

Palestine and the Zionists

THE restoration of the Government of Turkey to its own people, hopefully to all its people, whether Moslems, Christians or Jews, makes Zionism worth considering; for under equal laws Jews can go to Palestine in whatever numbers they choose, can buy up the land, and then, by their bare numbers, rule it. This is possible under the restored Midhat Constitution, which allows local self-government to the provinces, as with our American States. For Palestine might be a province governed by its Jewish inhabitants, and yet under the Turkish National Government; much as in the days of the first and second temples, from Rehoboam to Jehoiachin, and from Ezra to Herod, Palestine was under a suzerain whose seat was within present Mohammedan dominions, in Egypt, Assyria, Babylonia or Persia. A prosperous Jewish state does not need to be independent. With religious equality Mohammedans, Christians and Jews could live loyal to one government in which they had a voice.

Up to the present time, what with the Porte's prohibition and the still worse governmental exactions, it has seemed impossible for Jews to hope to restore the Jewish state. But the conditions have suddenly and wonderfully changed. Even Mr. Zangwill, who had hoped only to build up such a state somewhere in wild Africa or America, speaks doubtfully in his article this week. He hopes that the changes taking place in Turkey "may clear away difficulties that were hampering us in Palestine." If promises are fulfilled we do not see why the two branches of Zionism may not unite and bend their energies to the speedy colonization of their historic land.

But it is true that only a comparatively small portion of American Jews has been interested in Zionism. It has been taken up mainly by some of the more literal observers of the rabbinic law, and some more idealistic liberal Jews. Most have said that America is good enough for them. Mr. Zangwill thinks differently. He says that "In England there is bare toleration," and that in America "there are many exclusions from some schools, universities, hotels, seaside resorts, etc.," and that Jews "suffer many humiliations and mortifications," and that "things are growing worse." He is over-sensitive. He would have the Jew "move to a country of his own," if he is not content either to suffer social exclusions or "go to the melting-pot."

Hardly. In a country where Jews suffer absolutely no political disability, where they can and do reach any position, the social question is not one worth considering. Jews can make their own social world, like other people, and there are ways in plenty to meet others socially if they want to, even tho certain clubs and resorts exclude them. Where they are not wanted they will not want to go. Men and women must choose their own company, and not feel hurt if kissing goes by favor. But this we object to, that Mr. Zangwill should say:

> "We want a place that will be our own, where we can worship in our own fashion and follow out our own ideals."

They can and do worship in their own fashion right here. Here is the Temple Emmanuel for those that like that sort, and here is the Sha'aray Tikvah on the East Side for the orthodox exiles from Rumania and Russia. If they want to they may rebuild Solomon's Temple on Morningside Hights and offer the daily morning and evening sacrifice, the Olath Tamidh. It can be done here just as well as in Jerusalem, or as it was done in Egypt during the dispersion.

But we do not understand that Mr. Zangwill, and much less Professor Gottheil, expects many American Jews to move to Palestine with a modern Ezra. Yet there is no reason why the enthusiasts should not return singing the old "Songs of Ascent":

> "Wo is me that I sojourned in Moscow,
> That I dwelt among the tents of Kishineff.
> Now our soul is escaped out of the snare of the fowler;
> The snare is broken and we are escaped.
> Our feet are standing
> Within thy gates, O Jerusalem;
> For there are set thrones of judgment,
> The thrones of the house of David.
> When the Lord turns again the captivity of Zion
> We are like unto them that dream;
> Now is our mouth filled with laughter
> And our tongue with singing.
> Then said they among the nations:
> 'The Lord hath done great things for them.'
> O Israel, hope in the Lord;
> For with the Lord there is mercy,
> And with him is plenteous redemption."

And if they go back and found a Jewish state, there are many Christians who will rejoice and believe that the ancient prophecies are fulfilled; and there will be many more whose sympathy will be tinged with regret that one branch of Judaism should be so suspicious of modernism, so anxious to perpetuate the formalities of an ancient ritual, that it fled the influences of the wide world and preferred to imprison itself in the wall of the old language restored, and to overweight itself with the whole pedlers' pack of old clothes ceremonial.

Indian Summer

THE tumble of the leaves is beautiful when it is under way, and so are the bared limbs beautiful. But the first stoppage of the wheels, the turning pale of the foliage, the wrench at the heart of Nature, we do not like to look at it—nor to feel it. It comes often of a night, and in the morning we see that the year has suddenly finished its work, and the shuttles are no longer flying. There are a few butternuts dropt on the sod, and when we look up we see a squirrel on a flat knot, with a nut in his paws. He stops gnawing at it to chatter defiance at us, and in his carelessness drops another nut out of his throat pouch. In the hollow of the tree he has begun to put away his winter's storage. Right in the center of the hickory tree there is a flush of sunset color, and the Judas trees are soft gold all over. Along the fences the Virginia creeper has flushes of scarlet, and the sumacs are dropping bits of fire on the sobering grass. The change from summer life and buoyant virility to quiescence is too much as when the machinery is shut down in big factories; when there is a financial pinch.

But there is no pinch here and now. Just see what Nature has done! The Northern Spys are crimsoning and the Grimes Pippins are golden, and the Baldwins are a sober red, while they all pull down the limbs with the weight of apples. The corn is cut, and all thru the valley it stands in long rows of stooks. Wagons rattle down the highways after loads of yellow ears. Nature has stopt because she has got enough done, enough to feed us and our animals. Now for a rest.

What a happy way she has of getting us ready for winter. First there comes a cool night, and toward morning we draw the blankets over us. It is not quite down to frost, but we wish ourselves in Florida. The wind promptly wheels into the south, and by noon we are in our shirtsleeves—thinking more pleasantly of Labrador. Nature laughs, and for a few days we wear our coats carefully. Then a turn of the screw, and in the morning there is just frost enough to whiten the barn roofs. In the garden the beans and squashes wiltingly respond, and the late roses hold their blossoms not very cheerfully. You covered your nasturtiums last night, for these flowers you must have until the last possible moment. What a wonderful flower that is for companionship. Our mothers made pickles of it, but we make friends. The sun comes out gay and warm, but the job is done. Things look black and sour. You may as well give it up. Get on your thick underclothes, for winter is just around the corner.

The apples are picked and stored, and your thoughts and your love are turned indoors. A bin of Northern Spys is finer than a bank account, and Jonathans in the cellar are as handsome as they were on the tree, a month ago. Baskets of grapes are on the storeroom shelves, and sweetcorn is trussed up on the wall beside big bunches of lettuce and parsley. Squashes are in the storeroom full of gold and promise, but the pile of pumpkins is as big as a trolley, out of doors, against the barn. Your cross-bred experiments with beans have given some novel results, and these you enjoy, while classifying and reviewing them.

The leaves are off the butternuts and the ash, and big hand-width leaves sail down from the tops of the tulip trees, and swing loose from the maples. There is no wind left. The day is so still you hear yourself breathe. Away off on the opposite hills you see the crows settling down to an autumn consultation. It gets very mellow before noon, and you think that October after all is fully as fine as June. There is not a loom operating anywhere, unless it be that of a dande-

lion down on the south side of the arbor-vitæ hedge, and this you do not hear. Every flower is frost-burnt and brown, only the alfalfa makes deep green spots around the landscape. Well, we have had our day, says the golden rod; and you sit down on a pile of leaves with a feeling that after all a man *is* king, for he alone has his day all the time. You roll over in the leaves and resolve never to be anything but a boy again. How sweet the beech leaves smell!

The birds are going south in flocks, and your pet catbird came around this morning to say good-bye. He got near your window, in the grapevine, and crooned to you a soft love song. He had not sung before since nesting time. If you will do your share, there is a deal of fellowship in the world. Here he is now, on a limb of the cherry tree, looking down and calling us. God bless you! Darling bird! Be back next May, and we will make life sweeter for each other another year. A flock of robins from the north dropt down on the mountain-ash tree early this morning, and are chattering in Esquimo; at least we understand them equally well. They are evidently pleased over their dinner.

Bare limbs are all that we have, except on a few apple twigs, but they are beautiful. You cannot know a tree by its foliage. Wait until its arms are bare and its athletic frame is unclothed. There is life and there is beauty; like fine boys going into the bath are these coffee trees, magnolias and elms. Each one has its own stalwartness, and we see little of disease. The leaves are in piles or spread as covering over the lawns. Let them alone, or do you use them to warm the stables. Only fools burn leaves. They are the year's crop of humus and incipient soil—nitrogen and potash for future gardens—wonderful in the weave, exquisite in the texture, the wealth of future generations.

One November blast brought a flurry of snow. The highways are sticky, and the edge of the wind is like a knife. The put-offs are husking their corn with mittens, and their apples are scattered over the ground; waste, waste and death. Softly the wind comes up this morning out of the southern valley. It came from the ocean, and around the Chesapeake, and it brought the fragrance of southern gardens. The bees start out of their hives in search of flowers or the sweet juices of leaves. The goldfinches venture scraps of songs, and hunt once more thru the thistles for overlooked seeds. The woodpecker hammers after grubs, and wild geese cronk it overhead. It is so soft and so warm it seems as if the year had thought better of it and turned backward. The pansies open their eyes, half covered with dry leaves, and we saw colts-foot and forget-me-not by the brook in the glen. One, two, three days of genial kindliness. The frosts have drawn back and the grass catches a flush of green, while the cattle lie down in the meadows like September. The boys whistle and toss the cornstalks merrily into the wagons, while the old folk sit sunning themselves on the porches. It is really a kind old mother, this mother Nature; it is Indian Summer.

Politics and Temperance in the Middle West

THE real contest in the present campaign centers in the Middle West. It is therefore a somewhat curious circumstance that in not fewer than six of these States the people's interest thus far springs principally from issues that are wholly local and have nothing at all to do directly with any national party organization. It is further a fact worthy of note that in all of these States—Ohio, Indiana, Illinois, Kentucky, Wisconsin and Kansas—the local question that is arousing deepest feeling is the issue of "temperance," in one or another of its various forms; and in at least one State —Indiana—this issue has crowded absolutely all others, local and national, into the background. It may fairly be queried whether the commonwealths north of the Ohio are not about to emulate the example of several of their Southern sisters and go over to prohibition.

There are mighty obstacles in the way, but, in the opinion of many, none which are really insuperable. Prohibition, however—except in Kansas—is not the present issue. One will go up and down one Middle Western State after another without hearing any more of prohibition,

in the proper sense, than he may hear of it in Massachusetts or New York. This temperance movement is reducible to two specific demands, neither of which is distinctively prohibitionist. The first is that, falling back upon Mr. Bryan's slogan, the people shall be permitted to rule absolutely in all matters, including the sale of intoxicants. The second is that the pernicious influence so long exercised in municipal and State politics by the great brewing and distilling interests shall be brought to a speedy and permanent end. The realization of these objects, which are no less civic than moral, may contribute to the ultimate triumph of prohibitionism; but that is not the thing primarily in the minds of the men now in the thick of the fight.

In Indiana, the State which is commonly regarded as sharing with New York the pivotal position in our national politics, developments have lately been peculiarly interesting. Nowhere in the United States has there been made, during the past eight or ten years, a more determined fight against the saloon and against the domination of the liquor interests in politics. Led by an ably managed and wonderfully aggressive organization, the Anti-Saloon League, the people of the State secured from their lawmakers advanced legislation under which, from May 1st, 1905, to June 1st, 1908, they succeeded in closing or preventing the establishment of a total of 1,687 saloons. It was found, however, in practice that the war against the saloon was hampered at every turn by the legal requirement that citizens should make remonstrances against saloons only by townships or city wards. Even under this system 25 of the State's 92 counties "went dry" thruout their entire extent. But in 44 other counties, while the majority of townships and wards—perhaps everything but a single ward—became "dry," the saloon, with its burden of pauperism and crime, could not be wholly eliminated. In one county, for example, the seat of a leading Methodist college, 113 voters packed in a single ward long held the sentiment of the county in defiance and maintained eight saloons in the teeth of all lawful opposition.

To put an end to this state of affairs the Anti-Saloon League and the temperance forces generally began a campaign for local option of a different sort, under which the unit of popular suffrage should be, not the ward or township, but the county itself. The demand was for a local option law similar to that enacted in Ohio last winter, and for the signing of which the liquor interests are at present waging bitter opposition to the reelection of Governor Harris. Wisconsin and Illinois are other States which were pointed to as furnishing illustrations of the working of such a system.

When the time came for the two principal parties in Indiana to frame their platforms and name their candidates for the current campaign, the Democrats declared for local option of the old sort, with the township and ward as units, while the Republicans declared likewise for local option, but with the county as the unit. The situation contained all the elements of a bitter fight, and the liquor interests, regardless of previous political affiliations, have exerted themselves to the utmost to ensure a Democratic triumph in the State.

Just when the situation had already become the despair of the politicians Governor Hanly hurled a bomb into the arena by calling a special session of the State Legislature, to transact certain urgent business, but more particularly to enact, in advance of the election, a county local option law. Amid a volley of ridicule and denunciation, open and avowed on the part of the Democrats, smothered but ill-concealed on the part of many of the Republican politicians, the Legislature assembled, September 18; and after a session of a week and a day —one of the most tense and spectacular in the history of the State—the Governor's program was carried thru by a narrow but safe margin, and a local option law, precisely such as the Republican State platform pledges, was put on the statute books. Of itself, the law does not abolish a single saloon. It provides simply that, upon the presentation of a petition signed by a number of qualified voters of any county, "equal to not less than 20 per cent. of the aggregate vote cast in said county for Secretary of State at the last general election," the people of that county shall have the right to vote

for or against the existence of saloons within the county's borders. Without in any way invalidating the old remonstrance system or converting an inch of "dry" territory into "wet," the law provides a means whereby for the first time the population of a county as a whole can pass upon the saloon question. That it is easily the most momentous piece of temperance legislation in the history of the State appears from the fact that, according to the most careful computations, the enactment of the statute will mean, in two years' time, the closing of 995 saloons and the expulsion of the saloon altogether from 44 counties, leaving but 23 counties "wet," and of these all but 11 are expected, within reasonable time, to follow the example of the majority. Goaded by the action of the Governor and Legislature, the opponents of county option may be expected to fight yet more desperately for the control of the Legislature which meets next January. Repeal or No Repeal will be the paramount issue during the rest of the campaign, and with the confusion added to confusion which this must mean, the man who will undertake to forecast Indiana results in November will be daring indeed.

Mr. Sibley's Letters

In his explanation to the public, ex-Congressman Joseph C. Sibley, of Pennsylvania, whose written reports and suggestions to Mr. John D. Archbold, of the Standard Oil Company, have been very widely read, remarks that "No letter of mine in Mr. Hearst's possession or in any other man's possession will reveal an unworthy motive or action." He has in mind, of course, all of the letters given to the public by Mr. Hearst, the authenticity of which he does not question. In one of these, dated at Washington, November 22, 1903, he said to Mr. Archbold:

"A United States Senator came to me today to make a loan of $1,000. I told him I did not have it, but would try and get it for him and would let him know in a day or two. *Do you want to make the investment?* He is one who will do anything in the world that is right for his friends, if ever needed. Please telegraph me yes or no. Events are crowding, and I am on the inside of them. And think I am playing no small hand, and want to know whether to go ahead."

While a stern moralist may see something objectionable in this and in certain other propositions made either by Mr. Sibley to Mr. Archbold or by Mr. Archbold to Mr. Sibley, we learn from the latter's address to the public that the letters were written at a time when the Congressman, as he says, "was fearful that the zeal of some untrained to commercial life was leading toward experiments in government which threatened disaster to American industries," and when he was wrestling with "great problems in commerce and transportation, reaching to the very centers of our industrial life as a nation." He saw tremendous catastrophes impending, and to prevent widespread ruin he was willing to negotiate such loans, handle $5,000 certificates of deposit, send Senator Bailey to the Standard Oil headquarters, and do various other things, all in that "manly, outspoken manner" which, he asserts, has always characterized his actions. We have his word for it that he is not only manly, but also "frank and courageous." Being that kind of a man, he should now show whether the $1,000 investment was made and what was done with the $5,000 certificate of deposit.

Mr. Patton

In two or three of the letters made public by Mr. Hearst there are references to "Mr. Patton." Writing in September, 1900, Mr. Archbold asked the late President Cassatt, of the Pennsylvania Railroad Company, to "do everything possible" for the election of Mr. Sibley and the defeat of his opponent, Lewis Emery, Jr., "on the sure ground that all corporate and vested interests will have consideration at his [Mr. Sibley's] hands." He addrest Mr. Cassatt "in the absence of Mr. Patton." Again, writing to Mr. Sibley, Mr. Archbold quoted from a letter just received from Mr. Patton, who said:

"My attention has already been called to the matter to which you refer, and it is hardly necessary for me to say that we are in full sympathy with your views as exprest in your letter. We have put some influence to work in the various counties thru which our line runs which I hope will bring about the result we both desire to obtain."

Evidently, it was Mr. Archbold's custom

to seek Mr. Patton rather than President Cassatt. Who was this Mr. Patton? An answer to this question may throw additional light upon the correspondence, or it may not. We presume that the letters refer to President Cassat's assistant, Mr. William A. Patton, who was subjected to severe criticism in May, 1906, at the time of the Interstate Commerce Commission's inquiry concerning the Pennsylvania Railroad Company's relation to coal properties along its lines. It was shown that certain officers or employees of the company had acquired valuable share interests in mines, by little or no expenditure of their own money, and it was alleged that these interests caused unjust discrimination in the company's treatment of coal shippers. Mr. Patton admitted that he had acquired more than 6,000 shares of stock, in a dozen coal companies, without paying any money for them. The par value of these shares was $307,000. His testimony was read with regret by those who remembered that he was an elder of a Presbyterian church, the superintendent of its Sunday school, and a prominent officer of the Young Men's Christian Association. Many believe that the disclosures made during that investigation shortened Mr. Cassatt's life.

Maine Gone democratic

It seems to have escaped attention that at the recent election Maine went democratic—not Democratic. By adopting the initiative and referendum the Pine Tree State of the Atlantic follows the Pine Tree State of the Pacific and now has acquired for herself the right to veto the acts of her representatives and enact legislation directly whenever the occasion requires. Altho Senator Hale raged, and Taft was known to have opposed at Oklahoma, and numerous Senate documents by Senator Lodge were distributed, the "cute" Yankees refused a vote of confidence in the old misrepresentative form of government, and registered their preferences for real democracy. They adopted the constitutional amendment by 51,991 to 23,712, giving it a majority of 20,480 more than the Republican majority for Governor. The initiative and referendum is now spreading over the United States. Besides Maine and Oregon, South Dakota, Illinois, Montana and Oklahoma have adopted the measure, while North Dakota and Missouri vote on it this year. The movement is the most important and promising "next step" in political reform.

To Mumble Textbooks

We commented last week on the denials made of condemnations at Rome of suspected Modernism in America. The intelligent Catholic journal, *The Western Watchman,* whose editor has just returned from one of his frequent visits to Rome and knows the facts as well as anybody, laughs at the denials:

"Circulars and a copy of a cablegram have been sent around to the Catholic press contradicting 'false rumors' and assuring them that nothing and nobody connected with the Encyclopedia has been condemned in Rome. This is misleading. There has been no formal condemnation; but there has been a condemnation in all save the formality; and if it is not taken as sufficient condemnation by the parties concerned it can and will be made very formal."

This is precisely what we said. As to the *New York Review,* the St. Louis editor is much more severe. He says:

"We fear Dunwoodie is curst with a surplus of frisky fat and unprofitable profanity, and a condemnation of its pranks is in no sense portentous. American scholarship must for a long time to come continue to occupy the benches and mumble the textbooks."

That is not a very lofty aspiration which Dr. Phelan sets before American Catholic scholars. He asks THE INDEPENDENT to consider one patent heresy of which these condemned writers were guilty, namely, that the Church was not in the first century or two fully conscious of her power to forgive sins. To say that the Church, as the witness of Jesus Christ to the world, was not aware of the witness she was to render, "is to make that witness contemptible. Will THE INDEPENDENT please stop and think?" Yes, we will; and what we think is that this is a deductive conclusion from an assumed dogma, when the proper method is to study the historical records and learn whether in fact the Church did actually recognize and exercise her power to forgive sins.

Nolo Episcopari

The Rev. Arthur S. Lloyd, D. D., declines the election as coadjutor bishop of Maryland, but he is used to declining bishoprics. The Rev. Alexander Mann, D. D., rector of Trinity Church, Boston, will, it is expected, decline to be Bishop of Washington, which will be the second declination for that see, which is an important one. But why should a man want to be bishop? Phillips Brooks sacrificed himself to be bishop, for he had a much more agreeable, and we should say useful, position as rector of Trinity Church. Yet, if one believes that the office of bishop gives peculiar faculties for the highest of all possible ecclesiastical functions, that of transmitting grace thru himself from the Holy Spirit, and so maintaining the succession of divine influences and favor to the Church, we cannot conceive that one would dare to refuse the unsought election to so sacred an office. When a man says, "*Nolo episcopari,*" we suspect him of being a Broad Churchman, altho the acceptance no more proves one to be a High Churchman than the acceptance of the office of Justice of the Supreme Court proves one a Republican.

A big shipbuilding English firm has been greatly troubled by strikes. Thereupon it presented the following proposition to its men:

"First, that strikes must cease or the works would be closed.

"Second, if the trades unions thought they could carry on the business themselves the firm was willing to sell out at a price to be fixed by assessors.

"Third, if the unions would not buy, the firm was willing to admit its workmen as partners on a profit sharing basis.

"Fourth, that a council be formed to settle all disputes, or refer them to accredited arbitrators."

That sounds like business, and thoroly fair. Let other disputes be settled on such a basis.

A curious question has been raised in Hawaii which deserves consideration. It being understood that Congress has full power over Hawaii, just as it has over Porto Rico, may not Congress make a special tariff law for Hawaii, as it has for Porto Rico and the Philippines, under which Honolulu should be created a free port? The proposal is that, Hawaii occupying an important position as a commercial center in the Pacific, between the nations of two continents, for which it is the distributing point, it is desirable that all nations be allowed to import goods for manufacture or reshipment without the burden and annoyance of customs duties. This step could be taken, we are told, without letting down the tariff bars on the mainland, while the increased business would more than make up to Hawaii the loss from the duties. Really it is worth careful thought, if Congress can take time to think of it.

We have some amusingly pleasant incidents in this campaign, which is not all giving the lie. The two candidates met together at the dinner of the Chicago Association of Commerce, and shook hands, and the big face of each broadened out into the smiliest of smiles. Meanwhile the shouts resounded, "What is the matter with Bill?" "Which Bill?" "Both Bills. They're all right." At the table they sat together, with only the president between them, and laughed at each other's jokes. At Lowell, Mass., the Republicans renominated Col. Butler Ames, and then the Democrats nominated him. Spite of Governor Haskell, it is the era of good feeling.

The utter failure of *The New York Herald* to stir up suspicion and war between the United States and Japan, by urging a treaty with China against Japan, gives a certain interest to the following from *The Japan Mail:*

"*The New York Herald* has transferred its campaign to the Chinese capital. Its correspondent, who was recently in Japan, is now engaged in interviewing leading men in the Chinese capital and endeavoring to create there the sentiment which it failed signally to produce in America. We do not know that in the history of journalism there has previously been any instance of quite so unreserved an attempt to impair the relations between friendly countries."

You knew that two "Bills" were running for President, but were you aware that there were also two "'Genes" and two "Toms"?

Insurance

Another Sale of the Provident Savings

THE control of the Provident Savings Life Assurance Society has again changed hands. The stock holdings of Mr. Floyd Day, the Kentucky capitalist who aided the syndicate headed by Arthur G. Langham to purchase the floating 1,047 shares from the New York banks and the John J. Coyle combination in Philadelphia, have been sold to Nash Rockwood, county judge of Saratoga County, and James L. Scott, vice-president of the Adirondack Trust Company in Saratoga. Following this sale William B. Ellison, only recently elected vice-president of the Provident, resigned, as did George C. Clarke, president of the Tefft-Weller Company, one of the directors. Published accounts of the latest sale credit Douglass W. Mabie, the present secretary, with the control of the company. Mr. Langham continues as president meanwhile. Considerable retrenchments will be made in the company's expense account, and a determined effort will now be made to resume the writing of new business, at least by the end of the current or the first of next year.

How to Figure It Out

HERE is an individual balance sheet from the *Western Underwriter* which is well calculated to be at least suggestive to every man having dependents. It is silently eloquent as to the position which he occupies toward his family in the matter of their protection. It is likewise a powerful argument in favor of life insurance:

1. My total annual family expense is	$.....
2. Deduct my personal share of same	.....
3. Balance—being annual income needed to support my family	.....
4. Estate required to yield needed income at 5 per cent. (20 times No. 3)	.....
5. Deduct net cash value of my estate today	.....
6. Balance—estate not yet created	.....
7. Deduct amount now covered by life insurance	.....
8. Additional life insurance needed	.....

THE Association of Life Insurance Presidents, of which ex-President Grover Cleveland was chairman and counsel, at a meeting held last week, effected changes in its plan of organization whereby the office held by Mr. Cleveland since 1906 was abolished. Robert Lynn Cox, formerly secretary, was appointed executive officer of the association.

IF you have purchased a home with a mortgage on it, would it not be an excellent plan to take out a term insurance policy to provide against the payment of this mortgage? These term policies are well calculated for just such purposes, and the cost of them is not large. The United States Life Insurance Company, for example, charges according to the following table:

10-YEAR TERM RATES FOR $1,000 INSURANCE.

Age.	Premium.
21	$10.56
25	10.94
30	11.60
35	12.64
40	14.40
45	17.62
50	23.45

THE report on the examination of the New York Life Insurance Company is a very satisfactory document, and the company may well be congratulated upon the showing made. When an examiner says that honesty, fairness and ability of management cannot be questioned there is some excuse for the officers and others connected with the company feeling a little superior.

THE *Journal of Fire* recently stated that the New York fire department now costs the city in round figures $10,000,000 per annum, which cost will be increased by nearly thirty-three per cent. when the proposed new high pressure system is installed. With the figures relating to New York City as a basis, the annual cost for fire protection as regards the whole country is estimated to be $200,000,000 a year, which closely approximates the fire loss of the country.

Financial

This Year's Crops

THE Government's October crop report, issued last week, when compared with the report for September, shows declines in the indicated yields of corn, spring wheat and oats, which may be measured as follows: Corn, 30,000,000 bushels; spring wheat, 7,000,000; oats, 35,000,000. This year's crop of corn, therefore, is not quite as large as last year's. But the entire wheat crop exceeds that of 1907 by 25,000,000 bushels. The present estimates for this year and the quantities harvested in 1907 are shown below:

	Estimated, 1908.	Harvested, 1907.
Corn	2,565,298,000	2,592,320,000
Winter wheat ...	425,940,000	409,442,000
Spring wheat ...	233,090,000	224,645,000
Total wheat	659,030,000	634,087,000
Oats	789,161,000	754,443,000
Rye	30,921,000	31,566,000
Barley	167,242,000	153,597,000
Flaxseed	25,069,000	24,713,000
Buckwheat	13,728,000	14,290,000
Hay (tons)	67,743,000	63,677,000

The condition of the potato crop has fallen from 73.7 to 68.7, which is considerably below the average for the last ten years (76.3); but tobacco's condition is above the ten years' average. Only a small quantity of wheat has been carried over from last year, and corn reserves have been very low. Europe's wheat crop is less than last year's, and the new wheat in France is deficient in quality.

Signs of Improvement

AMONG the indications of gradual but quite perceptible industrial recovery are the increase of pig iron output and the reduction of the number of idle freight cars. In September 1,418,998 tons of iron were produced. The upward movement since May is shown as follows: June, 1,088,634 tons; July, 1,217,897; August, 1,359,831; September, 1,418,998. During the two weeks ending on September 30th, 44,974 cars were taken from the idle list. This followed a reduction of 49,013 in the preceding two weeks. The number of idle cars has fallen to 125,678 from 280,000 in the first week of August, and more than 400,000 in May. September's exports of agricultural products (at good prices, as a rule) exceeded in value those of any previous September. Resumption of work at many lumber mills that were idle is reported. Railway earnings continue to increase. Much improvement in the manufacturing towns of Connecticut is noted. Practically all of the brass mills of the Naugatuck Valley have gone back to full time. Similar reports are published concerning other factories in that vicinity. While an increase of activity in many instances has been delayed by the approaching election, there has been improvement since the beginning of September.

....William H. Porter, president of the Chemical National Bank since May 11th, 1903, was elected, last week, president of the New York Clearing House Association, to succeed Alexander Gilbert (president of the Market and Fulton National Bank), who had held the office for the customary period of two years. Mr. Porter, who is forty-seven years old, began his banking career in 1878 as a clerk in the Fifth Avenue Bank. He became cashier of the Chase National in 1886, and was vice-president of that bank when, in 1898, he was elected vice-president of the Chemical National. The Clearing House Committee for the coming year will be composed of Dumont Clarke, president of the American Exchange National Bank (chairman); A. Barton Hepburn, president of the Chase National; Edward Townsend, president of the Importers' and Traders' National; Valentine P. Snyder, president of the National Bank of Commerce, and Gates W. McGarrah, president of the Mechanics' National. Samuel Woolverton, president of the Gallatin National, was elected secretary, succeeding Vice-President Albert H. Wiggin, of the Chase National. Manager William Sherer and Assistant Manager William J. Gilpin were re-elected. The exchanges of the Clearing House since its organization, fifty-five years ago, have amounted to $1,930,248,133,349.

VOL. LXV NEW YORK, THURSDAY, OCTOBER 22, 1908 No. 3125

Survey of the World

National Politics

No sensational event disturbed the orderly progress of the campaign last week, but much hard work was done by speakers. On the 15th Mr. Bryan finished a tour of three days, during which he made seventy-one speeches and was talking to audiences for twenty-two hours. He has been following the trail of Governor Hughes, whose addresses in the West appear to have had much weight. Mr. Bryan, answering the Governor's criticism of his Trust plan and other propositions, says that the Governor is not a reformer, or at least is not in sympathy with Western reforms. Pointing to the veto of the two-cent fare bill as an indication of the Governor's friendly attitude toward railroads, he reminds his audiences that the Vanderbilts, Mr. Morgan and Senator Depew contributed to the Governor's campaign fund. Defending his Trust plan, he asserts that the Governor has never shown any interest in the correction of Trust evils. And then he remarks that among the contributors to the Governor's fund were Mr. Carnegie, Mr. Schwab, Mr. Duke and Mr. Havemeyer.——Robert Underwood Johnson, of the *Century Magazine,* has reported remarks made to him by Mr. Bryan in May last concerning appointments in the civil service. Mr. Johnson was defending the merit system. Mr. Bryan said he believed the offices should be distributed among the political parties in proportion to their strength.——Replying to an inquiry from the editor of a Jewish newspaper, Mr. Bryan directs his attention to that part of the Democratic platform which relates to the protection of American citizens, and says:

"I construe that plank to mean that a duly authenticated passport issued by the Government of the United States to an American citizen shall be proof of the fact that he is an American citizen, and so entitled to the treatment due him as such, regardless of his race, creed or former nationality. I need hardly add that Russia is no exception, and that an American Jew ought to have as full protection as Americans of any other race or religion."

——After making speeches at labor centers in Ohio, Mr. Taft expressed the opinion that the labor vote this year would be divided in about the same way as in previous campaigns. He has been making a tour in the South, speaking in Kentucky, Tennessee, North Carolina and Virginia, where he was very cordially received. He urged that the Democratic tradition should be ignored and that the people should apply business principles to politics by voting for the Republican national candidates. This week he is to speak in New Jersey, Delaware, Maryland and West Virginia. Then he will go to Indiana. But his closing addresses will be made in New York. Both parties will spare no effort to secure New York. In the closing days there will also be much work in Ohio, Indiana, Illinois and Wisconsin.——Answering, on the 15th, a letter from T. J. Dolan, a prominent officer of the International Brotherhood of Steam Shovel and Dredge Men, who had commended Mr. Taft, Mr. Roosevelt said:

"The Administration can well afford to stand on its record of positive achievement for organized labor, and as regards the Isthmus of Panama, where we have had most to do with organized labor, that record is Taft's. You yourself know well what the United States Government had done as regards the workingman on the Isthmus. Thanks largely to Mr. Taft, the record of the Government at Panama is that of a model employer, both as regards wages and hours and as regards the housing and care of employees. I do not believe that laboring men of this country have ever had in office a stancher friend than Mr.

Taft. The attacks upon him by certain self-constituted political leaders of organized labor, if successful, would in the long run gravely damage the cause of organized labor, for these men are trying to persuade the people of this country that organized labor has interests apart from and hostile to the interests of the great mass of the American people, and such an attitude, if persisted in, would inevitably in the end result disastrously to organized labor itself. I believe they will fail in this effort to misguide their followers and do wrong to the American people, and it is above all things for the interest of organized labor that they should fail. If Mr. Taft were not elected the chief sufferers from the chaotic conditions that would follow would be the workingmen. All of our citizens would benefit by Mr. Taft's election, but the workingmen most of all."

——Governor Hughes has been making speeches in his own State, largely with reference to local issues. About two weeks ago he asked his opponent, Lieutenant-Governor Chanler, whether he would favor a repeal of the new laws against racetrack gambling, would restore such gambling, would favor an amendment to the Constitution allowing gambling; also, whether he would take away any of the powers of the new Public Service Commission. Mr. Chanler has been making speeches every day, and he has failed thus far to answer the questions, altho the Governor has repeated them daily.——In New York City the nominees of the Independence (or Hearst) party for Supreme Court judge and for Congress in three districts have declined their nominations. This is due in part to the party's refusal to support for re-election Surrogate Beckett, who has made a good record.——Mr. Hearst shows in his newspapers and speeches that the *American Federationist,* the labor organ edited and conducted by Samuel Gompers, President of the Federation, publishes advertisements inserted by eight of the Standard Oil Company's subsidiary corporations. Asserting that the journal's readers can have no personal interest in these advertisements, he asks why the companies pay for them and suggests inferences that recall his remarks about Governor Haskell and the Democratic organization.——Mr. Debs continues to draw large audiences for his addresses, and the Socialist nominees in New York City for Congress and the State Legislature are making a vigorous campaign. —— Reports from London, which appear to have been confirmed at Washington, say that Mr. Roosevelt, after his return from Africa, will deliver the Romanes lecture at Oxford, receiving there the honorary degree of D. C. L. (which the university conferred upon Emperor William), and that he will also make an address in Paris at the Sorbonne.

Secretary Taft Preferred the Bench

Two long letters, one written by President Roosevelt and the other by Secretary Taft, were given to the public last week in a magazine, which had obtained the consent of the writers, altho the letters had not been intended for publication. They relate to the Secretary's attitude toward an appointment to the Supreme Court and his possible nomination for the Presidency. Both were written in 1906. In the first (March 15th, 1906), Mr. Roosevelt begins as follows:

"DEAR WILL—I think I have been in error as to your feeling. You say that it is your decided preference to continue your present work. This I had not understood. On the contrary, I gathered that what you really wanted to do was to go on the bench, and that my urging was in the line of your inclination, but in a matter in which you were in doubt as to your duty. My dear Will, it is preeminently a matter in which no other man can take the responsibility for deciding for you what is right and best for you to do."

Nobody could have decided for him, Mr. Roosevelt continues, whether he should go to war or stay as Assistant Secretary of the Navy, whether he should accept the Vice-Presidency or try to continue as Governor. The vital factor in such a decision must be an equation of the man himself. He could not put himself in the Secretary's place, because he was not a lawyer, and would, under no circumstances, even if he had been trained for a lawyer, have any leaning toward the bench:

"So in your case I should as a matter of course accept the three years of service in the War Department, dealing with the Panama and Philippine questions, and then abide the event as to whether I became President or continued in public life in some less conspicuous position or went back to the practice of the law."

He appreciated the importance of the part to be played by the Supreme Court in the next twenty-five years:

"I do not at all like the social conditions at present. The dull, purblind folly of very rich men, their greed and arrogance, and the way in which they have unduly prospered by the help of the ablest lawyers, and too often through the weakness and shortsightedness of the judges, or by their unfortunate possession of meticulous minds; these facts and the corruption in business and politics have tended to produce a very unhealthy condition of excitement and irritation in the popular mind, which shows itself in part in the enormous increase in the socialistic propaganda. Nothing effective, because nothing at once honest and intelligent, is being done to combat the great amount of evil which, mixt with a little good, a little truth, is contained in the outpourings of . . . [public men and orators whose names are omitted by request]. Some of these are Socialists; some of them are merely lurid sensationalists, but they are all building up a revolutionary feeling which will, most probably, take the form of a political campaign. Then we may have to do, too late, or almost too late, what had to be done in the silver campaign, when, in one summer, we had to convince a great many good people that what they had been laboriously taught for several years previous was untrue."

Under such circumstances, said Mr. Roosevelt, the Secretary would be the best possible leader. In such a contest he could do very much if he were on the bench, and very much if he were in active political life outside, but, in his opinion, could do most as President. There were strong arguments against the Secretary's "taking this Justiceship" (which had been offered):

"In the first place, my belief is that of all the men that have appeared so far, you are the man who is most likely to receive the Republican nomination, and who is, I think, the best man to receive it. It is not a light thing to cast aside the chance of the Presidency, even though, of course, it is a chance, however good a one. It would be a very foolish thing for you to get it into your thoughts, so that your sweet and fine nature would be warped, and you would become bitter and sour, as Henry Clay became; and, thank Heaven, this is absolutely impossible. But it is well to remember that the shadow of the Presidency falls on no man twice, save in the most exceptional circumstances."

It was a hard choice to make, he said, in conclusion. "But, whichever you take, I know that you will render great and durable service to the nation for many years to come." The Secretary replied, on July 30th, 1906, writing at a summer resort in Canada. Reference to the subject had been made during the interval, however, in other letters. In the beginning he speaks of the President's offer to appoint him to the Supreme Court as the successor of Justice Brown. He had hesitated because of the condition of affairs in the War Department, including the Philippine and Panama Canal bureaus:

"With respect to Panama matters, I have no doubt that Mr. Root, to whom you proposed to transfer the supervision of the Canal Commission, would do the work better than I have done it, or could do it. Of course, we will still be the subject of attack for what has been done, and I could perhaps meet the attack better than any one because of my familiarity with what has been done, but that consideration would not be great enough to require me to sacrifice my ambition to go on the bench or to risk the chance for doing so."

He had been connected, he went on to say, with the administration of civil government in the Philippine Islands since February, 1900:

"Much of what has been done in working out the problem and carrying the burden thrust upon the United States, I am more or less responsible for. Rightly or wrongly, the people of the islands, and especially those who who have been most anxious to make our government a success there, have confidence in my earnest desire to help the Filipino people and my willingness to do everything I can to secure them prosperity, peace and a gradual extension of self-government. It is the necessity one is under in carrying on such public business of securing witnesses and establishing evidence in respect to each thing done that one is not a thief and has not a corrupt motive which makes administrative work under conditions of partisan politics so irksome to me. But, of course, it is part of the burden one assumes, and it is cowardly to run away from it when one is in it."

He knew that few, if any, even among his friends, would credit him "with anything but a desire, unconscious perhaps, to run for the Presidency." He must face this and bear this misconstruction of what he did:

"But I am confident you credit my reasons as I give them to you, and will believe me when I say that I would much prefer to go on the Supreme bench for life than to run for the Presidency, and that in twenty years of judicial service I could make myself more useful to the country than as President, even if my election should come about. Please do not misunderstand me to think that I am indispensable or that the world could not run on much the same if I were to disappear in the St. Lawrence River. But circumstances seem to me to have imposed something in the nature of a trust to me personally that I should not discharge by now succeeding Justice Brown. In the nature of things, the trust must end with this Administration, and one or two years is short to do much. Yet the

next session of Congress may result in much for the benefit of the Filipino, and it seems to me it is my duty to be in the fight."

Campaign Contributions

Herman Ridder, treasurer of the Democratic National Committee, published on the 15th a list of those individual contributions to the committee which amounted to $100 or more. Up to the 9th the committee had received $248,567.55, of which $115,355.22 had come from those giving less than $100. The total included $42,500 left over from the Denver convention fund, and the committee had expended $225,962.88. It needed, Mr. Ridder said, $100,000 more. Additions to the list which have been published since the 15th show that the fund has been increased by about $25,000. The largest contribution in the list is $5,000, credited to Charles J. Hughes, of Denver, an attorney for the local public service corporations, whom Judge Lindsey (of the Juvenile Court) has recently censured severely in a pamphlet. Next stands $4,046, contributed by Mr. Bryan as the profits of his newspaper. Chairman Norman E. Mack has given $3,000; Nathan Straus, of New York, $2,500; ex-Senator Clark, of Montana, $3,000; D. E. Bromley, of Pennsylvania, $1,500; M. C. Wetmore, $1,100. Among the other contributors are the following:

One thousand dollars: G. B. Tucker, Arkansas; T. M. Patterson, Colorado; M. B. Cary and A. McNeill, Connecticut; Roger C. Sullivan, M. F. Dunlap and J. P. Hopkins, Illinois; Thomas Taggart, Indiana; E. O. Wood, Michigan; E. F. Goltra and D. R. Francis, Missouri; J. K. McGuire, J. W. Cox, Perry Belmont, Samuel Untermeyer, Jacob Ruppert, De Lancey Nicoll, William F. Sheehan and Edward M. Shepard, New York; M. E. Ingalls, Ohio; R. L. Owen, Oklahoma; J. J. Hogan, Wisconsin; J. E. Osborn, Wyoming. Among those giving less are Richard Olney, $500; Governor Hoke Smith, $250; F. Burton Harrison, $500; Thomas J. Walsh, $500; W. J. Thompson, $200; William J. Conners, $100; Bourke Cockran, $500; Henry G. Davis (West Virginia), $250; Governor Glenn, $100; A. J. Daley (Alaska), $500.

Mr. Ridder's statement does not include, of course, the contributions to State, county and other local committees. It is reported that the Democratic State Committee of New York has received about $150,000, and that considerable sums have been given to local committees by persons desiring to avoid publicity. The Democratic Congressional Committee states that it has received about $20,000. In Nebraska, the Republican committee has published its full list, showing a total of about $11,000, the largest contribution being $250 from Governor Sheldon. But the total includes $3,500 from the national committee.

Governor Haskell Sues Mr. Hearst

Governor Charles N. Haskell, of Oklahoma, recently treasurer of the Democratic National Committee, has sued William R. Hearst for libel, asking damages in $600,000, half actual and half punitive, on account of Mr. Hearst's assertions in public speeches and in his newspapers concerning the complainant's alleged relation to the Standard Oil interests. The papers were served in a highly sensational manner. Mr. and Mrs. Hearst, returning from the Pacific Coast, arrived at Omaha a little before midnight on the 15th. A deputy sheriff demanded admission to their stateroom. This was refused by Mrs. Hearst. Whereupon the officer broke down the door, and Mrs. Hearst, frightened and partly disrobed, ran out into the car. Mr. Hearst was found in the bathroom, preparing to retire. He explained that Mrs. Hearst believed the door had been attacked by a drunken ruffian. He had informed Haskell, he said, that he would accept service anywhere, even by mail, and had offered to lend him the money needed for beginning suit. He pointed out that he was not required to answer until after election (November 16th) and he urged Haskell to bring the case to trial before election day. All that he had said about Haskell, he continued, he reiterated. Giving notice of his approaching passage thru Indiana and Ohio, he said he would accept service in those States in suits brought by Thomas Taggart and Senator Foraker, if they desired to prosecute. In the Haskell suit he is required to answer in Nebraska.

The Balkan Situation

A decided change in the conditions looking to a peaceful settlement of the Balkan difficulty has arisen from what is declared to be the unauthorized and premature publication of the proposals agreed upon by Great Britain, France and Russia to be offered to a Congress

of the Powers. They are as follows, in substance: 1. Articles 1 to 22 of the Treaty of Berlin, which relate to Bulgaria and Eastern Rumelia, shall be replaced by stipulation, recognizing the independence of Bulgaria as at present constituted and determining the financial obligations of Bulgaria toward Turkey. New clauses, probably, will settle also the question of the Oriental Railway. 2, 3. The Powers shall take note (*constater*) of the annexation by Austria-Hungary of Bosnia and Herzegovina

PRINCE FERDINAND OF BULGARIA.

and the return of the Sanjak of Novipazar to Turkey. 4. This replaces Article 23 of the Treaty of Berlin by clauses recognizing the annexation of Crete to Greece and determining the financial obligations of Greece, in respect to Crete, toward Turkey. It is understood that the four Powers under whose protection Crete has been—Russia, Great Britain, France and Italy—will settle the Cretan question in concert with Turkey before referring it to the conference. It is proposed also that the second part of Article 23 of the Berlin Treaty, which provides special regulations for the government of other parts of European Turkey, shall cease to have force when the Powers are assured that a satisfactory settlement has been effected. 5. Arrangements similar to the above shall apply to the Armenian provinces of Turkey. 6. This abrogates all the restrictions imposed upon Montenegran sovereignty by the treaty under the original Article 29, which it is proposed to sweep away. 7. This simply affirms the desirability of giving compensation to Servia and Montenegro, but without specifying the means. 8. It is desirable to revise the regulations governing Danube traffic so as to give larger rights to the States bordering on the river. The publication of this program has given great offense in Germany and also in Turkey. Germany does not so much seem to object to the terms, but is offended that England and Russia did not consult her in making it. But she now declares that she cannot accept it, nor any other which offends either Austria or Turkey, and that she will back up Austria to the utmost, even in war. Turkey seems greatly disappointed at the articles, and believes that compensation to Servia and Montenegro could only be at the expense of Turkey. But a note added to the eight articles suggested that the exterritorial rights of the Powers in Turkey, called the capitulations, would be given up when stable government was established, as also the foreign post offices, while the monetary payments to Turkey were in the way of compensation. Bulgaria also is offended and declares that she would rather fight than give any payment of money to Turkey. But three of the Powers have warned Bulgaria that if she goes to war she will not be allowed to get any territorial advantage from it, and that her independence will not be allowed if she does not make any financial compensation to Turkey. The result has been quieting, and yet the danger of war is not relieved, because of the bitter feeling in Bulgaria, Servia, Montenegro and even in Bosnia. The attempt of the Austrian Government to draft the men into the army has raised opposition and some fighting. Meanwhile, thru the Balkan States and Asiatic Turkey, there has been created a boycott against Austrian goods which greatly injures Austrian trade. Austria has protested to Turkey.

but the Turkish Government can do nothing to prevent it, even if it desires. There have been attacks on Austrian houses at various points. An unhappy feeling against Turkey has been aroused by the lynching in Constantinople by Kurds of a Greek prisoner who was seized from a police station. He had been charged with acting improperly to a Mohammedan woman, much like lynchings in this country; but the ring-leaders have been arrested and the police officials responsible for it will be dismissed. Bulgaria has announced that since independence the exemption of foreigners from the jurisdiction of local courts will cease; but the Powers will have a word to say on the matter.

The Treaty of Berlin

A knowledge of the provisions of the Treaty of Berlin in 1878, and of its subsequent modifications, is important for an understanding of the infractions it has now suffered. The articles now affected are the following: Article IX provided that the amount of tribute payable to Turkey from Bulgaria should be later settled, as well as the share of the Turkish debt to be assigned to Bulgaria. In fact, no tribute has ever been paid, and no portion of the debt assigned. By Article X all obligations of Turkey in relation to the Rushchuk-Varna Railway, and all obligations to Austria and the company are assumed by Bulgaria so far as they concern Bulgarian territory. Article XIII creates the province of Eastern Rumelia, to remain subject to the direct military and political authority of the Sultan, while retaining administrative autonomy. Articles XIV-XVII secure to the Sultan the right of defense, the maintenance of order by a domestic police, and by a militia whose officers shall be appointed by the Sultan; a Governor-General appointed by the Porte with the consent of the Powers for five years. Article XXI reads as follows:

"The rights and obligations of the Sublime Porte in whatever concerns the railroads of Eastern Rumelia will be maintained without change"

But by an agreement of the signatory Powers the next year the office of Governor-General of Eastern Rumelia was vested in the Prince of Bulgaria, but no change was made in the provision as to railways. Eastern Rumelia has paid some tribute due to Turkey, and some share of interest in the Turkish debt, but with extreme irregularity. Article XXV provides that "the provinces of Bosnia and Herzegovina shall be occupied and administered by Austria-Hungary," but Turkish administration was to continue in Novi-Bazar; but Austria reserved the right to garrison it and maintain military and commercial roads. Now we must consider a further secret agreement concluded immediately between Austria and Turkey, which has just been made public. The article as to Bosnia and Herzegovina was so unsatisfactory to the Turkish plenipotentiaries that they gave consent only on receiving the following agreement from Austria, which the Turkish Government was not to divulge:

"On the desire exprest by the Ottoman plenipotentiaries in the name of their Government, the Austro-Hungarian plenipotentiaries declare in the name of his Imperial Majesty that the rights of sovereignty of his Imperial Majesty the Sultan over the provinces of Bosnia and Herzegovina shall suffer no loss by the fact of the occupation, of which there is mention in the article relative to the said provinces in the treaty signed to-day; that the occupation will be considered as provisional, and that a requisite understanding as to the details of the occupation will be made immediately after the close of the Congress between the two Powers."

It appears then that not only has Austria broken the treaty in which she took part, but that she has also broken her secret agreement with Turkey.

British Affairs

While the negotiations between Earl Grey and the Russian Prime Minister Isvolsky have been the chief matters of interest in England, local matters have excited attention. Among these have been certain minor changes in the British Cabinet, and particularly outbreaks in the House of Commons. A Socialist member interrupted the business by loudly denouncing the House as murderers for not leaving everything else to consider the needs of laborers out of employment. When called to order he refused to be quiet, and finally had to be taken by the sergeants at arms and removed struggling and kicking from the room. A similar disturbance was raised by the suffragets in behalf of woman's suffrage. They had announced that they would placard the city in demand of

their rights and then invade Parliament. At midnight they broke forth suddenly in large numbers and placed their placards on public buildings despite the efforts of police to arrest them. A call was included for 50,000 women to rush the House of Commons, and an enormous crowd appeared, of suffragets and spectators, aided by a meeting of unemployed. Parliament House was protected by police from all sides. Those who attempted to force their way thru were pushed back, but one woman, by a ruse, who as stenographer had had rights of entrance into the building, past the doorkeeper, and while the House was discussing a bill to prevent boys smoking cigarets she rushed in front of the Speaker and cried out: "Leave off discussing children and talk about the women." Three officers carried her out resisting; but the next day she was released, as no law could be found covering her offense. A rule was then adopted forbidding women to enter, and henceforth they will be excluded even from behind the lattice where hitherto they have been allowed in the gallery.——As a result of the prohibition against the Catholics carrying the Host in procession at the Eucharistic Congress, Mr. Asquith was asked in the House of Commons if he would introduce legislation repealing such statutory enactments affecting Catholics as placed them in an inferior and disadvantageous position as compared with members of other religious bodies. He replied that the Government had no present intention of introducing such legislation. It would, however, fully consider any proposals for relieving Roman Catholics from legal disabilities which gave rise to practical grievances. John Redmond said that in consequence of the unsatisfactory nature of the ministerial assurance he would himself introduce a bill. ——It is now announced that after President Roosevelt concludes his African trip he will visit England and deliver the Romanes lecture at Oxford. The London *Times* adds that he will visit Paris and deliver an address at the Sorbonne; also that Mrs. Roosevelt will meet him on his return from the hunting trip at Khartûm.——Severe distress is reported in Great Britain from the lack of employment. Over 250,000 persons in London are receiving relief. The Salvation shelters are filled to overflowing. In Glasgow 3,000 families are being relieved and 6,000 cases await sifting. Dublin has 15,000 persons out of work and is spending $50,000 in new works to give them employment. Sheffield has voted $100,000 for the purpose of giving work to its unemployed. In the five towns of Sheffield, Newcastle, Nottingham, Leicester and Devonport at haphazard, the inmates of workhouses and the recipients of outdoor relief total more than 21,000 persons, chiefly unskilled labor. Everything indicates that the depression now brooding over the United Kingdom is of no ordinary type.——Women have at last persuaded the Council of the Royal College of Surgeons to pass a decree admitting them to the examinations of the Examining Board of England and also to examinations for fellowships in the Royal College of Surgeons.

Various Items

The excitement in Germany has been more over the balloon race than over the troubles in the Balkans. About twenty balloons of various nationalities joined in the race, the prize to be given to that balloon which made the longest distance, landing on the ground, and not in the water. The race was given to the British balloon "Banshee," which made 261 miles, landing in Schleswig-Holstein. Others made longer journeys, but landed in the water. The wind was baffling and circuitous, preventing long flights. But at last in the fog several balloons were driven into the North Sea and there wreckt, and the occupants suffered great danger and were rescued by the crews of steam vessels sent out to search for them. All were saved but one, the two occupants of which were lost.——Wilbur Wright is repeating his flights. On one occasion he ascended to the hight of 65 feet and then stopt the motor and the aeroplane glided easily to the earth and alighted smoothly after describing an oblique line 200 feet long. He is now teaching three men to run the aeroplane in accordance with his contract, and intimates that afterward he will try a flight 3,000 feet high. The Crown Prince of Germany has written him a congratulatory letter, and Mr. Wright has invited him to take a flight with him.

The Issue Beyond the Parties

BY DELOS F. WILCOX, Ph.D.

[Dr. Wilcox is now employed by the Public Service Commission of New York City as the expert and head of its Franchise Bureau. Before that he was secretary of the Detroit Municipal League. He has written much on the science of government and is the author of "The Study of City Government," "The American City," etc.—EDITOR.]

"When it is said, as it commonly is, that the fundamental division of powers in the modern State is into legislative, executive and judicial, the student of American institutions may fairly note an exception. The fundamental division of powers in the United States is between voters on the one hand and property owners on the other. The forces of democracy on one side, divided between the executive and the legislature, are set over against the forces of property on the other side, with the judiciary as arbiter between them."

These words are quoted from an article, published in THE INDEPENDENT of April 16th, 1908, entitled "The Constitutional Position of Property in America," by President Hadley, of Yale University. President Hadley says that the constitutional position of the corporation, as a property-holder, is much stronger in the United States than it is anywhere in Europe. Discussing the "fortuitous" consequences of the Dartmouth College decision and the Fourteenth Amendment, he says that "the two together have had the effect of placing the modern industrial corporation in an almost impregnable constitutional position."

It will be recalled that under the Dartmouth College decision a charter or franchise granted by the State to a private person or corporation is regarded as a contract, and not subject to repeal. Following this rule, the courts have held that special privileges secured for corporations by bribery or other corrupt means cannot be resumed by the State. As soon as the stock of the corporation has been distributed among "innocent purchasers," a franchise corruptly secured becomes as sacred as the humble home purchased by the laborer out of the savings from his toil. The position of the corporation as a property-owner is bolstered up by the Fourteenth Amendment, because, under this amendment, cases involving the enforcement of a State law or local regulation claimed to affect the property rights of any citizen may be thrown into the Federal courts and taken entirely out of the jurisdiction of the authorities responsible for its enactment. Under ordinary conditions a State or local administration, starting out to secure the adequate regulation of public service corporations, will go out of office long before litigation can be carried to a successful conclusion thru the Federal courts. A constituency is seldom patient enough to pay the expense and endure the delays of such litigation.

President Hadley is not a recognized "radical." We can only accept with astonishment his analysis of the facts. It would be idle to question so high an authority. We can but wonder whether J. Pierpont Morgan, as he received from President Hadley's hand the highest honorary degree within the gift of an American university at the Yale commencement this year, was aware of the momentous revelations which had been so recently made by the man before him.

As a result of the facts to which Hadley calls attention, and of the concentration of the control of large properties into comparatively few hands, the higher courts of the United States have come to be occupied almost exclusively with corporation business. Individuals having only a moderate amount of property seldom find it profitable to incur the expense of defending their rights in the higher courts. It is the great corporations and wealthy individuals, to whom a favorable decision means hundreds of thousands or millions of dollars, who are always able to avail themselves of the protection of property rights guaranteed by the Constitution of the United States and preserved thru the instrumentality of the judiciary. Without reference, therefore, to the kind of men who are appointed or elected as judges, and without reference to the way in which their appointment or election is brought about,

or the special temptations that beset them, the courts naturally come to be more and more that department of government set aside for the use and benefit of large property-holders, individual and corporate.

In writing the Declaration of Independence, Thomas Jefferson asserted that among the "inalienable rights" with which all men are endowed by their creator, are "life, liberty and the pursuit of happiness." The Declaration of Independence is not the law of the land.

Straightway after the Federal Constitution was adopted, the States insisted upon the addition of a series of amendments constituting a bill of rights against the Federal Government. In Article V of these amendments the National Government was forbidden to deprive any person of "life, liberty or property without due process of law." Seventy-five years later this limitation upon the power of the Federal Government was also imposed upon the States by the Fourteenth Amendment. Jefferson's democratic trinity—"life, liberty and the pursuit of happiness"—had been transformed, in the fundamental law of the land, into the aristocratic trinity—"life, liberty and property."

Property and the pursuit of happiness! Here is the crux of the problem of democracy, the old struggle of the many to hold or get freedom and of the few to get or hold power. At the heart of things there is no antagonism between the pursuit of happiness and the protection of property; it is only by the gradual and surreptitious change in the interpretation of words that the antithesis has been developed. Property, in its original sense, is what belongs to a man; it has come to include the special privileges a man has secured—the preferred stock he holds in the government. As long as the Constitution and the courts guarantee to every man the products of his effort, whether of brain or of muscle, there is no clash between the pursuit of happiness, as a fundamental right, and the protection of property. But when the Constitution and the courts come to interpret the protection of property as including the protection of privilege-thieves and the receivers of stolen goods in the possession of the products of other people's brain and muscle, there straightway arises the feeling that the protection of property is not altogether conducive to the pursuit of happiness, but under some circumstances may be the reverse.

When any one ventures to criticise the courts, he is denounced as a revolutionist. As a matter of fact, it is not Bryan or Roosevelt or Lincoln Steffens or Charles Edward Russell that is the revolutionist. These men talk; the Supreme Court of the United States acts. In the Dartmouth College decision there was "fortuitously" established a law under which, for three generations, the rights of property, in the true sense of that word, have been set at naught by the beneficiaries of special privilege. In adopting the Fourteenth Amendment, with its guaranty of the protection of life, liberty and property, the people did not know that they were throwing up a barrier to prevent the States from curbing the high-handed processes of corporate wealth. The Fourteenth Amendment was written in the name of freedom for the protection of a newly emancipated race at the close of one of the great struggles of history between personal rights and property rights. It is not the Bryans, the Roosevelts, the Steffenses and the Russells that have diverted this amendment from the purposes for which it was intended. With all the power and diligence of the courts to uphold the Constitution, as alleged, the negro is helpless and unprotected in spite of the specific declarations of the fundamental law; while the oligarchy of property, intrenched before the war in the Southern States and dominating and corrupting the politics of the nation for two generations, in the hour of defeat snatched from the victors a weapon by which it has intrenched itself anew in both North and South, and has established a servitude that includes, not only the black man on whose account the Civil War was fought, but also the white man who fought it. The Emancipation Proclamation and the Fifteenth or Negro Suffrage Amendment, like Jefferson's Declaration of Independence, are sentiment, not law. The Fourteenth Amendment, so far as it could be used for the maintenance of the power and privileges of the property aristocracy, has been made into law of the most effective kind.

Who are these judges who may not be criticised by the humble citizens from whom in theory all the powers of government, judicial as well as legislative and executive, emanate? In the first place they are lawyers, tho not always good ones. They have been appointed to office by fallible executives or nominated by fallible parties and elected by the "incompetent" masses who are said not to be intelligent enough to criticise them. Any one who has observed the processes of political power knows that the same political methods by which presidents, governors, legislators and aldermen are created will not always select judges who are above reproach, even tho the choice is limited to members of the legal profession. The truth is that all kinds of men occupy the bench, among them men who secured their positions thru all the different degrees of political chicanery practised in American politics. Judges appointed for life, having no fear of the power of the people or of the executive to rebuke them, are likely to interpret the law according to their own interests and sympathies, whatever they may be. As for the judges who are elected for definite terms, if they desire to remain upon the bench they have to consider the powers that make the nominations and finance the campaigns. To provide for themselves if they are defeated at the polls or if they retire from the bench voluntarily, they are tempted to look forward to possible retainers from the great property interests—retainers that can never be had unless during their judicial service they have proved to be staunch defenders of property. Judges, like other men, are more likely to deserve criticism in proportion as they are protected from it.

The peculiar characteristics of the legal profession were shrewdly observed by De Tocqueville three-quarters of a century ago: Said he:

"In a state of society in which the members of the legal profession are prevented from holding that rank in the political world which they enjoy in private life, we may rest assured that they will be the foremost agents of revolution. . . . But whenever an aristocracy consents to impart some of its privileges to these same individuals, the two classes coalesce very readily, and assume, as it were, the consistency of a single order of family interests. . . . In America there are no nobles or men of letters, and the people are apt to mistrust the wealthy; lawyers consequently form the highest political class and the most cultivated circle of society. They have, therefore, nothing to gain by innovation, which adds a conservative interest to their natural taste for public order. If I were asked where I place the American aristocracy, I should reply without hesitation that it is not composed of the rich, who are united together by no common tie, but that it occupies the judicial bench and the bar."

If this brilliant Frenchman were living now, he would discern the presence in America of an intangible aristocracy, composed of creatures created by the State itself. He would find also that lawyers are not fastidious in their choice among aristocracies, that the corporation aristocracy of America and the legal profession "coalesce very readily, and assume, as it were, the consistency of a single order of family interests."

Under our system of government by lawyers, we have established an exceedingly "stable" order in America. As President Hadley says:

"It is evident that large powers and privileges have been constitutionally delegated to private property in general and to corporate property in particular. . . . The general status of the property owner under the law cannot be changed by the action of the Legislature or by the Executive, or by the people of the State voting at the polls, or by all three put together." The "theory of American politics," seldom stated but "universally acted upon," has been this: "The voter was omnipotent—within a limited area. He could make what laws he pleased, as long as these laws did not trench upon property right. He could elect what officers he pleased, as long as these officers did not try to do certain duties confided by the Constitution to the property holders."

Evidently universal suffrage under such conditions is fairly "safe." Even the Filipinos, if such a constitution followed the flag, could be given their independence without further delay.

The interplay of property and power, privilege and politics, while "the heathen rage and the people imagine a vain thing," is amply illustrated every year in every section of the United States. Rhode Island, with its travesty on republican government, where 10 per cent. of the voters, inhabitants of the pocket boroughs controlled by Boss Brayton and Senator Aldrich, stand as an impregnable bulwark against the "caprice" of the majority, joins hands with California, where

Mr. Harriman's puppets dance when he pulls the strings. The prosecution of political crime in California is so nearly "unconstitutional" that Abraham Ruef, the distinguished San Francisco lawyer, is clamoring for the impeachment of Judge Dunne, who has recently been lending his judicial power, not to the "defense of property," as an honest judge should, but to the trial of eminent lawyers, captains of industry and politicians, who played the game according to the rules of the great property-owners. And there is poor old Pennsylvania, whose people have not the courage to abjure the worship of the Golden Calf, nor the confidence to break in pieces the cynical stone face of the dead hero of corporation government, or to drag from the seat of power the little boss who now plays that rôle.

The American people play at government. They shout and wave Old Glory and "do stunts" at the ballot box. When Congress meets or the State Legislature assembles, the farce of the whole business is revealed. It is revealed, not once in a dozen years, but every year; not in here and there a State, but in practically every State. What a pitiable travesty on "free" government was enacted at Albany last winter! A Governor advocating a program of reform for which the people would vote by an immense majority if they had a chance, not only unable to get these measures enacted by the envoys of the satraps, but unable to preserve himself and the "sovereign" people, whose mandate he holds, from public insults at the hands of these same envoys! Governor Hughes may serve another term; he may succeed in defeating and destroying some of the particular automatons of business-and-politics that now perform upon the stage. All honor to the Governor who, against such odds, with nothing but an unorganized mob behind him, may be able to scare the political highwaymen into surrendering a portion of the power they have embezzled! But why such odds? Why should Governor Hughes, representing the people of New York, or President Roosevelt, representing the people of the United States, or any other President or Governor or Mayor, have to fight *against great odds* when the people are on his side? What does this perennial exhibition mean? To be sure, it is reasonable to expect that great reforms cannot be secured without great and long-continued effort. It is fine to see a man with an idea battling to convince the majority. But when the majority are ready, why not move forward? The explanation is simple—the majority cannot start things and *make them go.* With the people convinced and the representatives not open to conviction, there is an *impasse.* The leader who stands for progress has no longer any use for argument. He must threaten, swing the Big Stick, throw political bombs, clamor for revolution, invade the provinces of the satraps and raise the standard of revolt—do anything that will cow the legislators, who also come from the people, but whose campaigns were financed by the privilege-holders.

The courts, by their decisions, amend constitutions on behalf of property. The legislatures prevent the people from amending them on behalf of the pursuit of happiness.

A political revolution is coming. Republican Oregon and Democratic Oklahoma lead the way. Out of the West a tide of non-partisan democracy is rising. The spirit of the people will have done with this ancient mockery of representative government that represents somebody else. Everywhere this issue is hammering, hammering, hammering away at the consciousness of the electors. When the meaning of the initiative dawns upon them, woe to the political party that says the courts may not be criticised and that "representative government," as we have seen it, is too sacred to be improved! Such a party, if there be one, will melt away as the Federalists did a hundred years ago.

The day of popular responsibility for government has already been deferred too long. All men who love their race should pray that the day of the people's power be hastened, not retarded. Until that time comes, the masses will continue to grow more restless and more nearly ready for desperate remedies.

The reactionary is the revolutionist. The judge and the statesman who refuse to adjust the law and the public policy of the nation to new conditions as they arise are the men who create anarchy; they are

the alarmists, whose fear of progress increases with the display of intelligence on the part of the people.

The next step forward in the program of political development is the democratization of the forms of government. All other issues pale into insignificance before this. Shall the people be able to exercise political initiative and crystallize their intelligence into progress? Or shall we continue to halt and stumble under a representative form that misrepresents, while the elected persons diligently cultivate popular apathy in the hope that the people may not interfere in the conduct of the public business? Shall we continue to submit to the tyranny of legislative bodies whose object is not to promote progress, but to hinder it?

As a source of public education, upon which free government must always rest, as a means of conservative progress, upon which the continued life of all nations depends, as a check upon paternalism and rich gifts calculated to lull to sleep the love of freedom, as the key that may be used to open the door to equal opportunity, the initiative is fundamentally more important than all other proposed reforms put together.

NEW YORK CITY.

London Making Holiday

BY JUSTIN McCARTHY

THE holiday season came this year with a very rush. The railway trains out of London were crowded to something like suffocation by the departure of all Londoners who could take holiday, some into the country, others into Scotland, Wales, and, in more limited proportion, Ireland, while the holiday seekers of more expansive purposes made their rapid way to the seaports, whence steamers bore them to the Continent. Then, on the other hand, there were continuous invasions of London by provincial visitors and visitors from various foreign lands.

The *entente* with France, concerning which we have been recently so rapturous in this country, was made manifest by the appearance of unnumbered French tourists, while, on the other hand, the rivalry of Germany was illustrated by the invasion of expeditions from the Fatherland, professing to enter Britain only in order to gratify their friendly curiosity about London's parks and pleasaunces, her British Museum and her National Gallery, and so forth, but in reality, no doubt—at least, so the London "yellow press" would tell us—with the object of studying England's weak points when the occasion may arise for the approach of the German warships to these shores and German war balloons to these skies.

I do not myself attach much importance to the alarms about German warships and war balloons, and I think it is quite possible that the yellow press of Germany may just about this time have been expressing similar alarms concerning the incursions of Britons into the dominions of the Kaiser. England certainly has lately been sending some very distinguished visitors to Germany. King Edward VII took the lead and held conferences with the Kaiser, while, as my American readers well know, the visit of Mr. Lloyd-George to the principal cities and towns of Germany was construed by many here and there as an event of mysterious and ominous portent. Meanwhile, those of the British population who were still left in their native country kept on holiday-making at home as earnestly as if they had never before had a holiday season at home. There were shows of all kinds, athletic contests of all kinds, national and international, the theaters were crowded, new plays were brought out, there were great reviews of the Territorial Army, as Mr. Haldane, the Secretary of State for War, has christened his new force, there were naval reviews, and the whole country seemed to revel in the excitement of the holiday season. In the ordinary course of things and in the commonplace acceptance of the term, the word "holiday" seems to

carry with it the idea of a term of peaceful, happy rest. But this recent holiday season in London seems to have been only a period of unresting and ever-increasing activity. London and the provinces will, however, probably settle down to inactivity and to monotonous quiet when the time comes for Parliament to reassemble and for the important business of the state to be carried on.

The reference to Mr. Lloyd-George and his recent visit to Germany reminds me that a name has recently become very familiar to English newspaper readers, the name of a man who promises to be a conspicuous figure in English political life. The name is that of Mr. Harold Spender, who was the companion of Mr. Lloyd-George in the mission to Germany. Many of the newspapers here and abroad described Harold Spender as Lloyd-George's secretary, but Mr. Spender was nothing of the kind. He is one of Lloyd-George's most intimate friends, and was chosen by Lloyd-George as his most welcome and sympathetic companion on the expedition. Harold Spender is by profession a journalist—that is to say, he is a writer of leading articles for newspapers, mainly on political subjects; has made for himself a distinguished place in the London press; is a man of great ability, of much travel, a keen observer, and a very enlightened advocate of advanced Liberal—or, rather, I should say, Radical—views in politics, of the rights of labor and the just claims of the lowly and the poor. He is a man of wide and varied culture, and is a novelist as well as a journalist. He ventured lately on the production of a political novel, and here in this country most authors know well that a political novel, whatever its merits, is not likely to enjoy a very large circulation. Mr. Spender's novel was named "The Arena"—in other words, the Houses of Parliament—and it is to my mind one of the few really good political novels since the days of Disraeli's literary fame. Mr. Spender is one of the very limited number of visitors to whom is accorded the privilege of entering what is known as the inner lobby of the House of Commons, the lobby which members of the House itself and certain official classes retain as their special enclosure. In "The Arena" we meet with several well-known political figures under, of course, fictitious names, and some of these portraits are brought out with photographic accuracy and yet with artistic effect. In one of the principal figures most of us elders here have no difficulty in recognizing William Ewart Gladstone. His impressiveness and earnestness of manner, his movements, his gestures, and the very tones of his voice are made to live again. Mr. Spender, however, seems of late to be giving himself up to a political and not a literary career. He has already been a candidate for a seat in the House of Commons, but at the time his candidature was not successful. Since then, however, he has been making for himself a distinct and a growing reputation in politics, and I feel well assured that when the opportunity next comes within his range he will be enabled to enter "The Arena" which he has described so well in his novel.

The political and the fashionable world alike have been much interested in the marriage of Mr. Winston Churchill, a very conspicuous member of the present Government. Mr. Churchill is, I need hardly say, a son of the late Lord Randolph Churchill, one of the most brilliant and original figures of his time in the political and parliamentary life of these countries. I was in frequent association with Lord Randolph Churchill during the active career of that fourth party which was founded by him in the House of Commons, and which declared itself to be entirely independent of the Liberal party, the Conservative party and the Irish National party. Lord Randolph and his comrades were not merely a fourth party, but also a party of four, for such was the number which composed this newly created phalanx in parliamentary warfare. Mr. Winston Churchill was but a mere youth in those now somewhat distant days, but he has since then been making himself more and more a conspicuous figure in English politics and parliamentary life, has become a Liberal, and is now, as all my American readers are well aware, a distinguished member of the Liberal cabinet. The London daily newspapers have had preliminary columns describing in advance the arrangements for the wedding and

giving long lists of the marriage presents offered to the engaged pair. Glancing down these long, long lists I could not help feeling bewildered by the record of the vast number of silver inkstands to be presented to the happy bridegroom. There were all manner of costly and picturesque and well-chosen offerings made to bridegroom and bride, but the number of silver inkstands exceeded almost beyond calculation in number any other order of gifts which could be included in one description. What Winston Churchill can do with his great collection of inkstands it is difficult to imagine. Wedding gifts are always understood to be possessions which the recipient must treasure for himself and cannot be expected to give away, even for charitable purposes, and the only plan that occurs to my mind by which the new owner might at once treasure the offerings and at the same time make them useful would be that he should prevail upon the members of the present Cabinet to hold their sittings in his new home and employ the silver inkstands for the use of themselves and their multitudinous clerks and other officials. I have not, however, ventured to offer this suggestion to the distinguished bridegroom or to any of his relatives and friends, and can only leave it to the future to decide how the shower of silver inkstands can be made most productive of good.

Meanwhile, the marriage has taken place under the most auspicious conditions. It became the occasion of a genuine popular demonstration, and all that part of London in which stands the church where the ceremony was performed was filled with an enthusiastic crowd, and it required some care on the part of the police force to keep the streets open for ordinary traffic. In truth, every one wishes well to Mr. Winston Churchill. He has had thus far a brilliant and varied career, having served as a military officer in many great campaigns before he had turned his attention to the business of politics. He began his parliamentary career as a Conservative, but his temperament and his intellect soon impelled him to adopt the more vigorous and progressive career of a Liberal statesman, and he is now one of the most rising and popular men in the Liberal ministry.

England has lately been stirred to something like convulsion by what at one time threatened to be a great religious

CARINAL VANNUTELLI,
Papal Delegate.

controversy. I am now, of course, dealing with one of the incidents belonging to the great Eucharistic Congress which has just been held in London. This religious congress—Catholic congress, in fact—was attended by a large number of cardinals and other prelates and dignitaries from every part of the world where the Church of Rome holds its place, and one of the events of this congress was to be a procession bearing the emblem of the Host thru some of the streets of London. There is still in England, and perhaps especially in many parts of London, a furious anti-Papal party—"anti-Papal" is indeed its own favorite title—and much apprehension was entertained that this sentiment might manifest itself in demonstrations of violence against those who made up the procession of the Host. I have good reason to believe that the police authorities in that quarter of London declared themselves to be thoroly capable of prevent-

ing any such disturbance, but there was a strong feeling, even among quite impartial observers, that altho the police might be able to prevent any serious riots, any riots like those which are associated with the name of Lord George Gordon, there would most assuredly be some furious displays of hostility made by the anti-Papal spectators of the lower class, which, if they did no greater harm, would tend to revive all the old-time antagonisms between the Catholic and the Protestant populations.

Many influential and entirely fair-minded Protestants appealed to the Government for its interference, in the interests of immediate order and of permanent good feeling. The result was that Mr. Asquith issued an order declaring that the procession of the Host could not be sanctioned by the Government. The Catholic authorities had to accept the injunction and the procession took place, but the emblem of the Host was not displayed. It was expressly stated on be-

WINSTON CHURCHILL.

half of the Government that this step was only taken in order to prevent any outburst of violence which might lead to serious disturbance of the peace, and would be especially untimely on the occasion of a solemn religious manifestation.

I presume that, under all the conditions, the Government took the best course open to them, and I am quite satisfied that among the leading members of the present ministry there is no hostile feeling whatever toward the creed and the members of the Church of Rome. But I cannot help thinking that it is a blot upon the reputation of a great civilized metropolis that the members of any faith should not be allowed to make a peaceful procession, displaying the principal emblem of that faith thru the public streets. We have processions of all sorts thru London streets, processions representing all manner of organizations, some of them regarded as socialistic and communistic, and I know not what else, with which the authorities very wisely never attempt to interfere, and I cannot think it anything but a deplorable fact that during a great Roman Catholic celebration a procession bearing the most sacred emblem of Catholicism should be prevented from passing thru any public thorofare, and that the procession itself should only be allowed to pass on condition that it did not carry with it that sacred emblem.

I believe that Mr. Herbert Gladstone was entirely opposed to the prohibition, and that many other members of the Cabinet shared his opinions, and that, in fact, the Prime Minister himself only acted as he did with the object of preventing a dangerous riot, and not because he agreed in any sense with the views of the anti-Papal extremists, who became furious at the proposed exhibition of the Catholic emblem. The Dublin *Freeman's Journal*, in a very moderate and reasonable article, points out that if the members of the procession "had only been Mohammedans, or Brahmins, or 'Jumpers,' or 'Dippers,' or 'Shakers,' they would have enjoyed complete liberty," but that, being only Catholics, they had no such claim to the protection of the law. I am glad to hear that the whole question is certain to be raised in the House of Lords and the House of Commons when Parliament meets for its winter session.

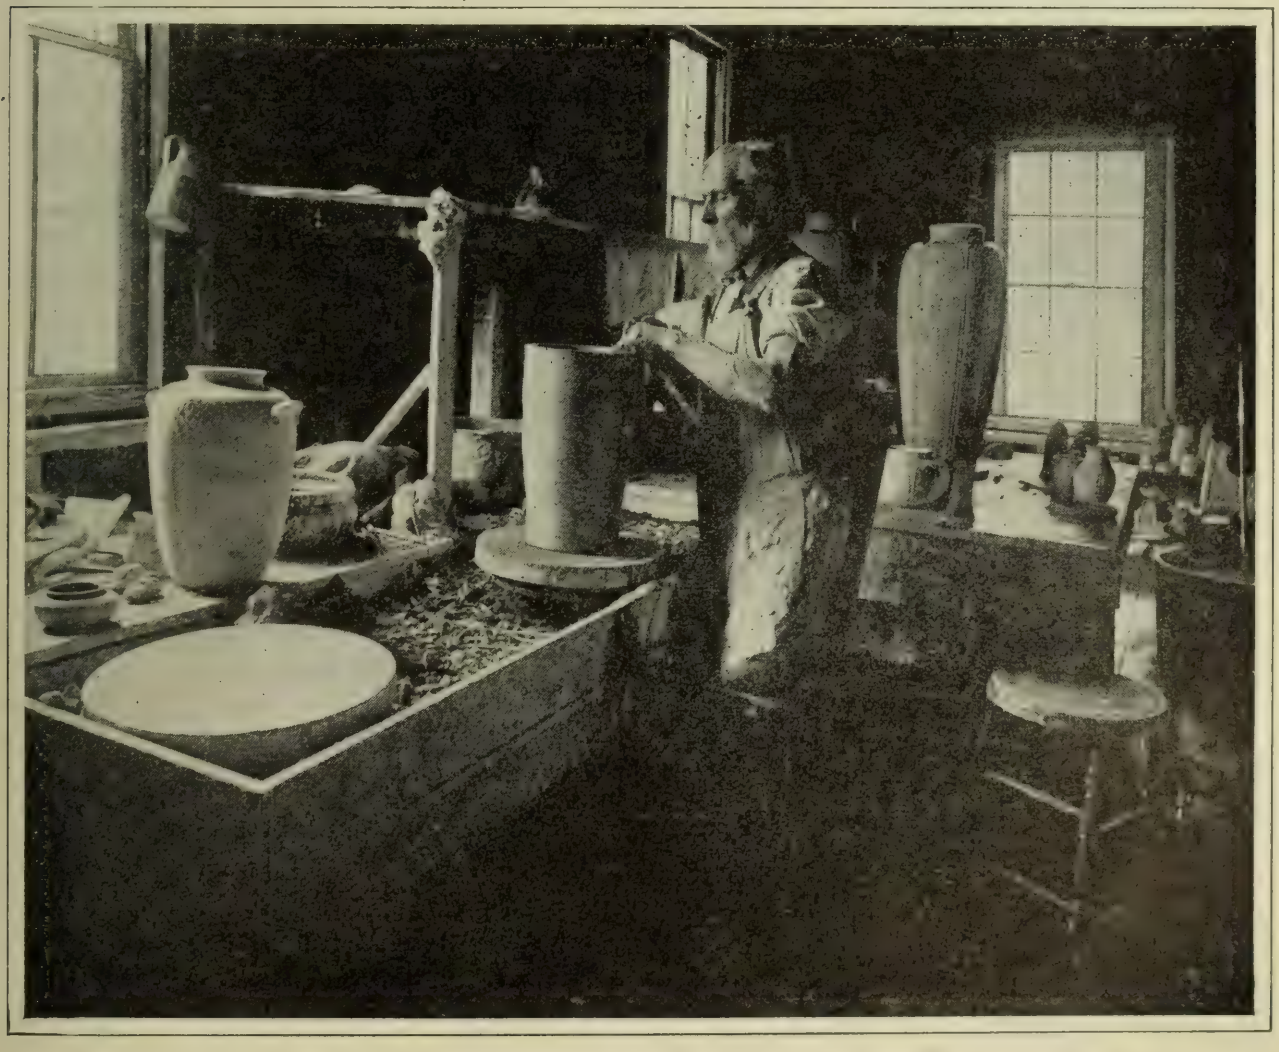
DECORATIVE PANEL AND MANTEL OF ROOKWOOD TILES.

Industrial Art in America

BY CLARA RUGE

THE great epoch of handicraft in Europe was from the fourteenth to the seventeenth century. America was not discovered until 1492, so that up to that time only the Indians could have exploited the natural resources of the country. The development of European immigrants into American citizens was contemporary with the development of machinery, and the products of the soil, aside from their agricultural uses, were principally employed for industrial purposes involving the use of machinery, in consequence of which there was no handicraft, or at least almost none.



In Europe there was a decline in the excellence of industrial art when machinery began to replace hand work, but after the middle of the last century there was an art revival. At first old styles were infused with new life, but afterward new styles sprang into being. In England, France, Germany, Austria and Holland a modern spirit began to influ-

ence the arts and crafts, and artists of repute, as in the age of the Renaissance, worked in that branch.

It was not until Americans had had frequent opportunity in Europe to observe what marked success had been achieved by other countries, much less favored than their own, that they began to perceive what treasures they had left undeveloped. Traveled Americans brought back inspiration from Europe, and many European artists also who came to this country exercised a beneficial influence on the development of industrial art.

The French or German artist who contributed to the world reputation of the firm by which he was employed by endowing its productions with artistic perfection and the stamp of originality established the reputation of the firm only. Not until after an American following had grown up in local art schools was there an end to this injustice. At the St. Louis Exposition for the first time did we see the name of the artist recognized by the firm for which the work was produced. This naming of the artist has since been occasionally observed also in the exhibitions of the Architectural League in New York, which, except for a few club exhibits, has hitherto offered the only opportunity in New York for showing individual art industrial productions. A new society was organized something over a year and a half ago, however, the object of which is to provide opportunity for individual artists to exhibit and sell industrial art objects. The National Arts Club, which institutes exhibitions and lectures and tries to bring patrons and artists together to their mutual advantage, has already been in existence for several years, and out of this National Arts Club has arisen the National Society of Craftsmen, which has rooms with the National Arts Club, where it maintains a standing exhibition and sells the objects exhibited.

Both societies held a joint exhibition

MAKING GRUEBY POTTERY.

in November and December last, which, altho it could not compare with European exhibits of this character, yet afforded a comprehensive view of industrial art in America such as we have not hitherto seen in New York. It is true that all branches were not represented. But a beginning was at least made.

The oldest art industry of America is the ceramic, the beginnings of which were without doubt stimulated by the works of the aboriginal Indians. This industry had not become widely extended until within the last few years, altho the red-brown Rookwood ware of Cincinnati enjoyed general recognition. It was Mrs. Maria Longworth Storer who first used the beautiful Cincinnati clay for artistic purposes, and the Rookwood ware was named after her estate.

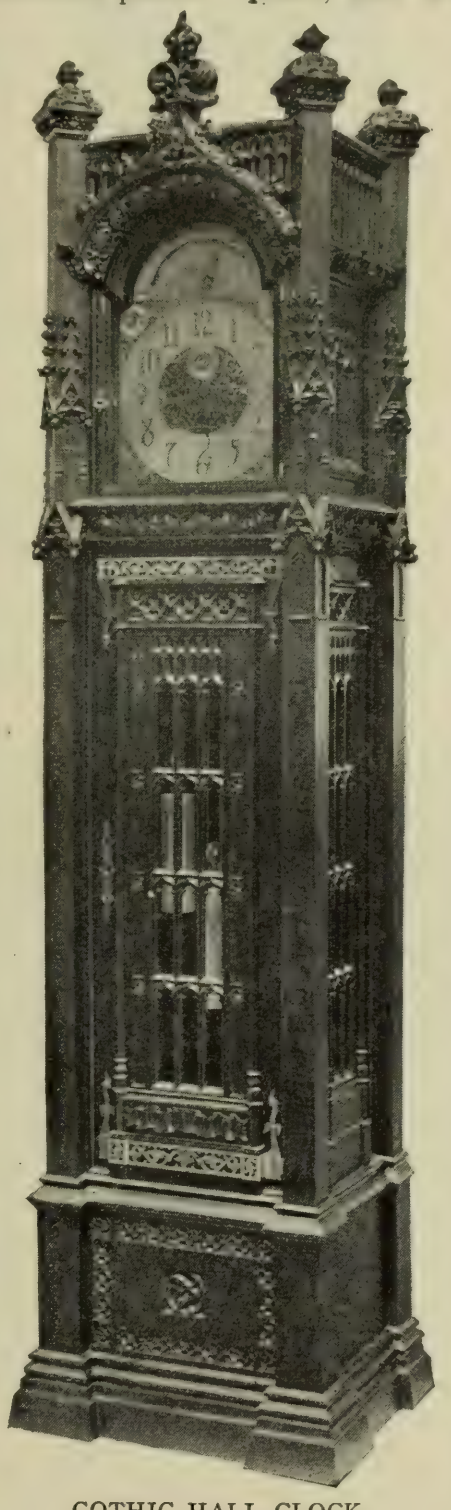
TECOWARE, CHICAGO—GATES POTTERIES.

The deep reddish pottery with glossy surface, decorated with flowers or heads of Indians, first created the fame of the Rookwood ware. The ware with figures in relief in the Indian manner came later. At the Columbian Exposition in Chicago the sea-green type was added, and beautiful examples of tiger-eye and goldstone effects, secured thru firing, were shown. The crystalline glazes observable in goldstone have since been developed in other forms by great European factories, but the fact remains that they originated with the Rookwood potteries.

The iris ware is the result of experiments to obtain beauty in light gray and pink tints. These and the first matglaze potteries, the credit for which largely belongs to Harriet E. Wilson and Marianna Mitchell, were features at Paris in 1900.

The latest Rookwood invention is the "Vellum" ware. It stands between high-glaze and matglaze, and presents both to the touch and to the eye the qualities of old parchment.

The architectural faïence is another Rookwood achievement. It is executed in matglazes with brilliant colors. Decorative modeling is employed a great deal. Mantels, fountains for hotels, and the tablets for the stations of the New York underground railroad are done in this faïence. The modern feeling begins to prevail in Rookwood ware, especially in the faïence. The signatures of the artists appear on the productions.



Among the best-known designers for these potteries are Carl Schmidt, Ed. Diers, E. T. Hurley, Hattie E. Willcox, Sallie Toohey, W. P. MacDonald, J. D. Wareham, Lenore Asbury, F. Rothenbusch, K. Shiriyamadani, Sara Tokey, and the excellent sculptor, C. J. Barnholm.

It is interesting to note that the American porcelain clay was originally applied to artistic purposes by women. Louisa McLaugheim, in Cincinnati, first obtained good results from it, and during

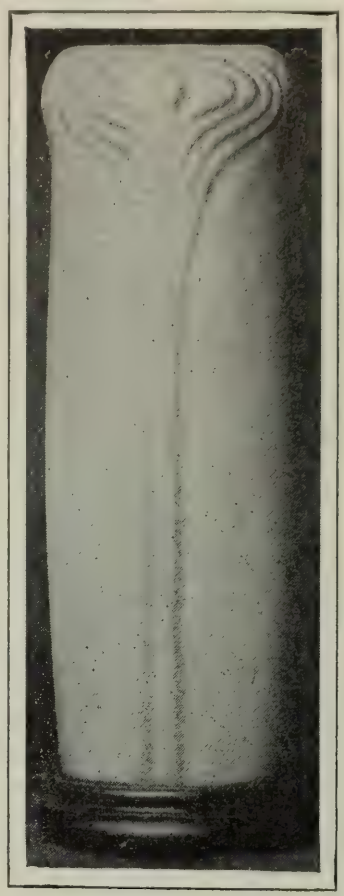
the last few years Adelaide Alsop-Robineau, in Syracuse, has won recognition with her porcelain ware, which secures a very striking effect with its wonderful play of color. Her work seems fitted to place the reputation of American porcelain on a level with that of Europe and China. The color variations are obtained by metalline mixtures.

Ceramics have developed so rapidly in the last decade that it would be impossible to enumerate all of the producers in this field. Among the best are the Grueby pottery and faïence works in Boston, with their products. The subdued tones in green, ivory, gray, blue and old rose excel in richness and depth any to be found in any other pot tery. The vases are all of one solid color. The texture has a rough look, but on touching it one finds that it is entirely smooth Light-colored vases ornamented in modern style have been lately introduced.

Charles Volkmar's beautifully toned vases, made at Metuchen, N. J., betray the temperamental artist. The Van Briggle potteries in Colorado Springs deserve mention. Highly artistic objects are produced there, the red earth of Colorado having furnished Van Briggle with raw material with which to carry out his ideas. He sought to revive the perfectly dull glaze of the old Chinese and to add new designs to it. In this he succeeded, and the forms he uses are taken from the human figure, from animal life, and especially from the wild flowers of Colorado. Metals are frequently applied to the completed vessels, and the precious stones found in Colorado are also used to highten the artistic effect.

GOTHIC HALL CLOCK.

The Teco ware of Chicago is due to the influence of the Art Institute of that place, and with its sea-green color and its forms, the motives for which are taken from the plants of the lake surrounding the workshops, it is very attractive. For faïence works the Moravian potteries and tile works of Pennsylvania are especially prominent. After designs of C. Mercer, ware of high artistic quality is produced by adapting Moorish motifs to modern purposes. Zanesville, Ohio, is a regular center for pottery ware, altho the Weller works there are the only ones which can lay any claim to artistic perfection.



A noteworthy institution is the Newcomb College for Women, in New Orleans, which is under the management of Professor Woodward. The pupils there produce pottery ware, which is sold directly from the institution. It displays strong coloring and is decorated with floral designs.

The wealth of woods in the West and South is now being utilized extensively in the furniture industry. Two styles have already been developed. The first is the Colonial style, after the Colonial style of architecture, and is mostly machine made. Second, the Mission style, which has been coming more and more into prominence. This style was originated in California by the old missionaries. In New York Joseph McHugh was the first to develop the Mission style. This furniture shows plainly

its method of construction, and machinery work is altogether avoided. Ash is the wood generally employed for Mission furniture. This style, the characteristics of which are simplicity and straight lines, is now frequently imitated in low-priced, machine-made furniture.

The redwood of California is very successfully used for furniture in San Francisco.

A new society has been organized in the Far West within the last few years, called the United Crafts and Arts of California, with the object of promoting an art industry developed from native products, which society is especially interested in the use of this excellent sequoia wood. The severity and massiveness of the Mission style, which appears in the redwood furniture made by the United Arts and Crafts of California, is sometimes softened by oblique lines, suggesting the old German peasant style. Outside of California there are various woods admirably adapted to the manufacture of furniture. Yellow pine, for example, grows abundantly in Georgia, Florida, Alabama, Mississippi, Louisiana and Arkansas, and, used in its natural yellow color or stained in different shades to the deepest ebony, is very effective in furniture, as was shown by a series of rooms at the St. Louis Exposition.

VAN BRIGGLE VASE.

It may be said by way of encouragement that furniture of artistic individuality is now beginning to be seen more and more frequently. Not long ago the Rose Valley shops, near Philadelphia, began to attract attention. In that place is a society occupied in producing furniture of a pure style, showing Gothic influence, and correct construction, with a preference for the use of white oak.

In New York Karl von Redingsvard makes furniture of oak and mahogany which is characterized by rich carved ornamentation of Gothic and Celtic design and also by figurative decoration. In the workrooms of the Craftsmen in Syracuse, N. Y., furniture of artistic charm is likewise produced under the direction of Gustave Stickley. This is modeled along the lines originated by William Morris, and by him introduced into England. At Byrdecliffe, N. Y., furniture, which is painted after the style of old German peasant furniture, is manufactured under the guidance of Mrs. Radcliffe Whitehead, the decorative subjects being taken from American flowers.

The most original furniture in America is undoubtedly that designed and produced by Charles Rohlfs, in Buffalo. Charles Rohlfs is a true artist, whose creative ability was first directed toward the stage, but for several years he has successfully turned his attention to art furniture. His productions are decorated in chaste, never obtrusive fashion, and the ornamentation is usually kept in low relief. The subjects are taken from nature.

An extensive branch of the furniture industry are the standing clocks, the home of which is more particularly Philadelphia and Cincinnati. Just as in the furniture manufacture so here the Mission and Colonial styles have been developed as the specifically American styles.

In metal work also this style is extensively used. In many of our cities are to be found arts and crafts shops where all sorts of large and small objects are fashioned from copper, silver, iron, brass and other metals set with precious stones and enamel. In smaller objects the influence of the Art Nouveau and the Secession styles is very noticeable. The manufacture of silver objects in New York is still almost exclusively under the ægis of large firms like Tiffany, Gorham, etc. In these establishments there are many facilities for the most varied execution and experimentation with all new processes. There, too, it is beginning to be the custom to give credit to

the individual artist for his work. Thus at Tiffany's Paulding Farnham and Albert Southwick now stand with Louis Tiffany in the foreground as designers of silver objects. In the silver work of the establishments named there is a decided preference for classical forms. Louis Tiffany, himself, personally, is not adverse to the modern, as is demonstrated by his productions in favrile glass which found instant favor with the public. The favrile glass owes its beautiful color effects to metalline mixtures. American glass, rich in color, has developed into a specialty and has resulted in glass painting after the old-time fashion of assembling pieces of glass. John La Farge makes many designs for it, and in the studios of J. & R. Lamb many interesting windows are designed and executed. There is also an extensive art industry in colored lamp shades of "Bent glass," made by the Bent Glass Novelty Company and others.

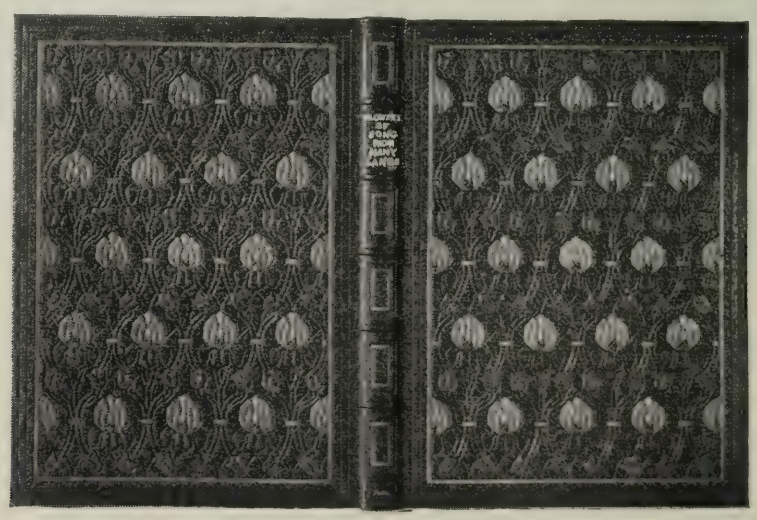
Some of the most beautiful lamp and fire shades are made in California by Charles Frederick Eaton, of Santa Barbara, who uses mussel shells found in the rivers of the West and in the Pacific Ocean. The beautiful Abalon mussel in soft grays is extensively used by him. He also utilizes the precious and semi-precious stones of this country as well as leather and the California woods for bookbindings, jewel caskets and all sorts of objects which are made in his studio and workshop.

A new industry in leather work is now being developed. In Chicago, where the Art Institute is a center for all industrial art, leather work has been taken up by Miss B. Benett, who is connected with the institute. Both the way of manipulating the leather and the designs themselves are new. Miss Benett uses tempera colors and applies motives from Indian art. The Swastica shop, the Kalo shop and others established by Miss Benett and other former pupils of the Art Institute have done much to exploit this leather work.

In New York some very beautiful leather work has been produced. Miss Emily Preston utilizes certain of the Levant moroccos as artistic bookbindings, the Ripley sisters also do this according to their own methods, giving the leather an antique look and decorating it with Gothic designs. Charlotte Busk makes sundry tasteful articles which recall Spanish leather work. In Boston, Agnes St. John and Mary C. Sears make

CHEST BY CHARLES ROHLFS,
Buffalo, N. Y.

bookbindings remarkable for their good taste and excellent execution. Otto Zahn, in Memphis, is perhaps without a rival as a bookbinder.



A branch of industrial art which has recently come to the front very rapidly is the making of jewelry. Excellent productions of individual artists are now being turned out. This is not to be wondered at considering that nearly all industrial art schools have established special classes in this department. A few years ago most of the shops carried only imported ornaments, but today native pearls, precious and semi-precious stones are made up for them by native artists. Many jewelers are also independent and unconnected with any firm. The exhibitions of the National Society of Craftsmen were joyfully greeted by them because they offered favorable opportunity for the display of their branch of art. The Arts and Crafts Society of Boston, which fosters industrial art there, has frequently shown a great many good jewelry pieces, but this society is so much less liberal than the National Society of Craftsmen in that it allows only members to exhibit, and the individual artist is limited as to space by the fact that the large firms are represented as exhibitors.

One, perhaps the most important of these art jewelers, whose works attracted merited attention at the St. Louis exposition, did not take part in other exhibitions. This was Max Peinlich. Most of these jewelers receive inspiration from the Art Nouveau, and from modern German as well as from Oriental models. Professor Haman, Jane Carson, Elizabeth Copeland, Josephine Hartwell Shaw, Mr. Rohenner, Virginia Sensenez, Mabel Wilcox Luther, Emily Graves, Grace Hazen, B. B. Tresher, Florence Richmond, Ethel Lloyd, Forest C. Mann, J. T. Hewes, Gustave Rogers, Ava M. Froelich, are a few of the noteworthy individual jewelers. Josephine Foard has originated a special style, having lived long among the Indians, and her work happily imitates that of the Navajo Moki and other Indian tribes.

Of the bronzes exhibited by the National Society of Craftsmen the exhibit of the Albrecht Dürer Club was a pleasant surprise. Henry Linder, the original sculptor, showed especially beautiful objects in this branch of art, frequently using the human form for decoration after the fashion prevailing in France and Germany. The work of John Munck also deserves mention.

Thus industrial art in all its branches is continually showing not only new ventures, but new successes. In America, as we all know, development goes by leaps and bounds. When Americans enter a new field their quick comprehension and their direct methods of work, untrammeled by tradition, help them to surprising achievements. Since the facilities for exhibition and sale are improving there is a glowing prospect for the future development of all forms of industrial art.

Sources and Prevention of Tuberculosis

BY JAMES J. WALSH, M.D., Ph.D., LL.D.

Dean and Professor of The History of Medicine and of Nervous Diseases at Fordham University School of Medicine.

PROBABLY the most interesting, certainly the most practical, question that came up before the International Congress on Tuberculosis, which concluded its sessions at the beginning of the present month in Washington, related to the sources of tuberculosis. There has been a decided division of opinion among the pathological authorities on this disease as to whether human tuberculosis was ever derived from animals or always came from human sources. Until the declaration by Professor Koch in the international congress held in London seven years ago, it was always considered that tuberculosis in animals played a large rôle in the causation of human tuberculosis, and stringent laws and regulations were drawn up to prevent human contamination from animal sources. Professor Koch denied that human tuberculosis was frequently derived from animals, and suggested that such a mode of transfer of the disease, far from being common, was quite unusual.

Needless to say, this expression of the distinguished German bacteriologist, to whom we owe the original discovery of the tubercle bacillus and so many other important observations in bacteriology, created a sensation. If human infection of tuberculosis from animals was rare, then a good deal of our effort for the prevention of the disease was being exerted in the wrong direction. Our laws for the prevention of animal tuberculosis, lest this should prove a mode of infection for man, were much more stringent and expensive than any that we had been able to formulate for the prevention of the spread of tuberculosis among human beings, and if Koch's contention were correct, then we were fooling ourselves with the thought that by gradually reducing the amount of tuberculosis in animals we would bring about a reduction of the dangers to which men are liable from the disease. Koch's assertion in the matter was at once denied by other pathologists, and only the respect due to his great work kept men from saying bitter things about the inadvisability of springing a sensation of this kind, calculated only to do harm under such circumstances.

The subject of the relation of human and animal tuberculosis has been very faithfully studied since then. A British Governnment and a German Government commission have each done a series of careful experiments in the matter. Besides, many private investigators working in the interest of science, yet thoroly conscious that any single step of real progress in so important a matter would give them deserved reputation and bring them honorable fame, have devoted themselves to it. The question might seem to the non-medical mind to be comparatively simple. It has proved extremely complex. After seven years of work on the part literally of hundreds of trained bacteriologists, with experiments and observations deliberately directed to the solution of the problem, we are but little nearer a definite conclusion than we were seven years ago, and the minds of authorities on the subject are as sharply divided one from another as they have been at any time since this important subject came up for discussion and reinvestigation. Probably nothing could well show the complexity of modern medical problems better than this.

At the suggestion of Professor Koch a special conference of the authorities of the different countries on tuberculosis was called just before the end of the recent international congress for the purpose of discussing informally the question of the connection of human and bovine tuberculosis. This discussion was opened by Professor Koch himself, who was followed by Professor Arloing, of Lyons, and Professor Calmette, of Lille, France, who represent the French school and the opposite pole of opinion on the subject, and by Prof. Sims Woodhead, of England, another authority opposed to Koch, and then by Prof. Theobald

Smith, our distinguished American investigator on the subject, who thinks the position taken by Professor Koch reasonable, tho much more study will have to be devoted to the subject before a definite decision can be reached. When I add that the conference was presided over by Prof. Herman Biggs, of New York, and that the discussion was shared by such men of note as Professor Fibiger, Professor Pearson, of Pennsylvania; Professor Ravenel, of Wisconsin; Professor Tendeloe, of Leyden, Holland; Professor Adami, of Montreal, it will be seen that all shades of opinion were represented, and that the conclusions, had any been reached, might have been considered final. Unfortunately, definite conclusions could not be reached.

The state of mind of those who were at the conference not necessarily committed to either side might very well be represented by the words of the chairman, Prof. Herman Biggs, at its conclusion. He said:

"It does not seem to me that we are very far apart. We have human and bovine tuberculosis, both of which are of great importance. There is no question but that the vast majority of cases of human tuberculosis are due to human bacilli. There is a small proportion which are due to either the human or the bovine bacillus. The only difference of opinion seems to be with regard to the question as to how large a percentage of that small residue is due to human infection or must be attributed to bovine infection."

That this statement is fair can be realized from the fact that Professor Koch has restated his position to be that bovine infection of human beings can occasionally occur, and he does not wish to be understood as deprecating the efforts that are being made against the suppression of bovine tuberculosis, if from no other standpoint than that of agricultural and general economic consideration. He does not think, however, that we are justified in putting that movement unduly in the foreground as against efforts for the suppression of tuberculosis in human beings.

The government commissions and private investigations of the last seven years have shown that certain cases of human tuberculosis are due to what is known as the bovine type of tubercle bacilli, evidently derived from cattle. These cases occur mainly in children, and the lesions are found practically always in association with the digestive tract. It is evident that the infection is due to food products, especially milk. Just after the age of two years, as pointed out by Professor Woodhead, the number of these infections that occur runs up very largely, evidently due to the fact that the children have been for some time at this age almost exclusively fed on cow's milk. Intestinal infection of tuberculosis used to be considered very rare. The question of its frequency is still in dispute, but there is no doubt at all that, as attention has been concentrated on this point in recent years, more and more cases of intestinal infection have been found, and the type of bacilli associated with these lesions is practically always the bovine or one differing so markedly from the human type of tubercle bacillus as to be quite suspicious.

There is no doubt left, then, that the tubercle bacilli furnishes an example of that comparatively rare occurrence, the transfer of a type of bacillus that produces disease in animals to man. Formerly this used to be assumed as of quite frequent occurrence, but the development of bacteriology has proved the contrary. There is a type of tubercle bacillus, for instance, that grows very luxuriantly in birds and produces characteristic lesions not unlike those of human tuberculosis, yet bacteriologists are agreed that the avian type of tubercle bacillus may be almost entirely disregarded as a source of danger to human beings. Of all our common diseases, only one (rabies) proves infectious for more than three species of animals, and only three diseases (anthrax, tetanus and foot-and-mouth disease) are communicable to two species. All the other infectious diseases are practically confined to one species, and even tho there may be the closest kind of intercourse between the species, disease will not be communicated from one to the other. This makes it very clear what a special problem is involved in this question of bovine and human tuberculosis, and how much more investigation may yet be needed to make our knowledge of the problem absolute.

As so definitely stated by Professor Koch, and agreed to by all authorities, eleven-twelfths of all our tuberculosis is due to infection from other human be-

ings, and it appears probable that all of our pulmonary tuberculosis thus originates. For a time it seemed as tho the control of animal tuberculosis and of food products would do much to reduce very largely our death rate from tuberculosis. This is now shown not to be the case, tho there is no doubt that restrictive measures with regard to cattle tuberculosis will lessen the number of cases of this disease that occur among children, in whom tuberculous affections outside of the lungs are much more common than they are in adults. The accomplishment of this eminently-to-be-desired result, which means so much for humanity, not only in decreasing the death rate from tuberculosis, but also in decreasing the number of deformed children in the world, so many of whom owe their deformity to tuberculous processes, not only justifies our present legal regulation of cattle tuberculosis, but would even demand still further measures of restriction in so important a matter. We have been spending immense sums in this great cause and should spend even more.

Since we are already doing so much to eradicate the lesser evils, and quite rightly, it is only proper to have emphasized for us, as Professor Koch does, how much we should be ready to do to prevent the communication of human tuberculosis. We are asking farmers to put themselves to many inconveniences and stand many material losses, partly, of course, for the benefit of the dairy industry in general, but mainly because of the risk of the possible spread of bovine tuberculosis in a limited number of cases to man. How much more, then, should we be ready to ask landlords, manufacturers and those who derive revenues from various organized industries, to do as much as the farmer is asked to do for a less serious danger. After all, the one thing that was made perfectly clear at this congress was that where people live in fresh air tuberculosis does not thrive. Even after it has gained a rather strong hold on the human system, living out in the air will usually lead to such a conquering of the disease as robs it of most of its terrors. If people lived in thoroly ventilated surroundings, the disease would develop ever so much less than it does and so there would be many less foci for its distribution.

It is because factories are not well ventilated, because workshops are allowed to continue to be overfilled, and that in congested districts, where there is not much chance for ventilation anyhow, because people are compelled to live in crowded quarters where the amount of air per individual is so limited that rebreathing of once breathed air is inevitable, that human tuberculosis continues to thrive. More than nine-tenths of all tuberculosis is pulmonary and is due to previous cases of pulmonary tuberculosis. The dairy industry is compelled to bear its burdens, but so should all the industrial and commercial conditions that favor that transmission of this "Great White Plague of the North." Here is the practical conclusion of this conference of world authorities on tuberculosis. We must not diminish but rather increase our precautions to prevent the spread of bovine tuberculosis to children thru food products, but we must take the next logical step and insist on just as stringent precautions to prevent the spread of tuberculosis from man to man, because without such legal regulation organizers of industry are sure to exploit the labor of human beings at the expense of their health and at such serious risk to the health of the community.

New York City.

An African Day's Hunt

BY CAPTAIN H. A. WILSON

[In view of the forthcoming Presidential hunting trip in Africa the following article by Captain Wilson, of the Connaught Rangers, now stationed in India, will be interesting to American readers. Captain Wilson has had many hunting experiences in Africa and is now bringing out a volume, entitled "Equatorial Africa."—EDITOR.]

THIS morning broke dull and misty. Not a gleam of sun pierced the rolling masses of mist that shrouded my camp on the lower slopes of Mount Kilimanjaro; a mist so dense that one cannot see more than fifty yards in any direction.

It is 6 a. m., and my boy has dragged me, sleepily but emphatically protesting, from the one satisfactory place to be in —namely, bed. And the reason he gives for this outrage is that "master has no meat," therefore he must go out and shoot some. Incidentally, my caravan has had no meat for some days, and I suspect Athmani is hankering for a chunk of juicy hartebeeste or zebra on which to glut himself.

However, whatever be at the back of Athmani's mind, I am now thoroly awake and out of bed, and all chance of a "Europe morning" has vanished. I hurriedly dress, and, slipping on a greatcoat, for it is horribly cold, proceed to reconnoiter the camp from my tent door. As I have already intimated, the view consists chiefly of mist, varied by a few draggled and unhappy-looking carriers engaged in what currently passes for their morning toilet.

I wonder dully how and what Athmani expects master to shoot in the fog, and reflect regretfully upon my interrupted slumbers. The question is, Is the fog going to lift or are we going to have a day of it?

Thus cogitating, I tell Athmani to make a fire in the local substitute for a stove—a pierced kerosene tin—and put it in the grass hut opposite, which constitutes my living room by day. This done, I tentatively suggest breakfast by way of putting in time until the fog lifts—if it ever means to lift.

Under the cheering influences of kedgeree, ham and eggs, and coffee, matters assume a less gloomy aspect, and by the time I have smoked the first post breakfast cigaret (best of all smokes), the fog is decidedly lifting, and it really seems as if Athmani stands a chance of gorging himself on "savory meats such as his soul loveth."

As I have been in this camp for a month, shooting pretty steadily, the game has become rather wild and has moved

m the immediate vicinity of the camp, my day's excursion will probably be ong one. I order my gunbearers to out the battery, which consists of a 3, a double .450 cordite and a twelve-e shotgun, for there are lots of quail, tridge and guinea fowl about. Hav- collected porters to carry in the meat ich I propose getting, I start.

make for a large, stony, bush-covered , where I have previously seen and ssed the only lesser kudu I've ever had luck to encounter. I still have hopes a second and more satisfactory meet-, so I seldom go out with a rifle with- taking this particular spot on my y, so far with signal unsuccess.

Alas! this morning I once again find friend from home, and I pass on my y despondent, heading up wind and ping a keen lookout for game.

By this time I have left the track and marching thru high grass, drenched h the heavy night dew, and I am nging wet up to the waist. However, hour of sun and that will be reme-d. What is much more annoying than wet are the clouds of mosquitoes, which our passage thru the rank verdure disturbs, and which settle down to their morning meal with extraordinary voracity and determination.

My zebra-tail fly-whisk is hard at work, but even so I am bleeding in a dozen places, and even my leathery-skinned black retainers seem to be worried.

Passing into a belt of fairly open, mimosa-studded country, I spot a herd of Coke's hartebeeste grazing near a group of Grant's gazelle.

Altho I am out mainly for meat today, heads are also an important consideration, and unless there is something specially choice here I am not going to alarm the surrounding country by shooting.

The day is still young, and should I fail to bag anything better, I can call on this herd later on in the day, on my way back to camp. My gunbearers are already down, crouching out of sight in the long grass, and I step behind a convenient tree and take stock of the unconscious animals thru my glasses.

Five minutes' survey convinces me that

REETCH LEOPARD.

there is no head out of the common here, so we resume our tramp, bearing a little to the right, so as not to alarm them unduly.

The instant we move the sentinel kongoni has spotted us, all heads go up and the whole herd stands motionless, watching us—then off they go at their clumsy canter, followed more leisurely by the Grant. For the next half hour nothing is seen, and then, from a little hilltop a herd of about fifteen oryx is observed, about a mile and a half up-wind of us, unfortunately in rather open country. Here at last is something worthy of our attentions.

WASAI WARRIORS IN WAR PAINT.

Off we go in a bee line toward them for a mile or so, using a handy watercourse to conceal our movements.

Then, at about half a mile away, I drop my porters and two gunbearers in the cover of the watercourse. I, with one gunbearer carrying the .303, start on the interesting part of the day's work. For, at any rate with non-dangerous game, it's the stalking, not the shot, that is the sport. Today the stalk is fairly simple—the wind is right and fairly steady, not gusty and changeable as the African breeze so often is; there are clumps of long grass and a fairly convenient line of bushes. At first we merely walk, our bodies bent, from bush to bush; then, as the bush grows thinner, it becomes a case of hands and knees, and we slowly creep forward until we are at the last available bush, hot and perspiring—and still three hundred yards away from our destined victims.

The oryx are perfectly unaware of our presence, and some of them are lying down, while the rest are leisurely browsing. They are in a patch of absolutely open country, the grass about a foot

high, but fortunately there are patches of longer grass and some small mounds, like large mole hills, of which I shall have to take advantage to get within shot. While getting breath I scan them thru my glasses, and notice one very nice-looking head, which excites my cupidity. I leave my gunbearer ensconced behind our bush, and, taking my rifle, I lie flat on my stomach and proceed to enact the part of a snake. Foot by foot I wriggle thru the short grass, making for a hummock about a hundred yards to my front, and after what seems hours of exhausting exercise without much definite progress, I find myself at my goal. Cautiously, very cautiously, I raise my head and reconnoiter. So far everything has gone well; my quarry haven't the faintest idea that they are the object of my attentions. Unfortunately, however, my selected victim has moved away from his former position and is rather too far off to give me a certain shot. I notice a clump of longish grass about seventy-five yards nearer, and now I am faced by a quandary—shall I try an uncertain shot from where I am or shall I risk a nearer approach? While I am debating the question my oryx settles it by lying down, making a shot from my present position an impossibility. I withdraw my head, and, turning onto my side, inhale deep gulps of air before renewing my crawl. Another seeming eternity—in reality, I suppose, ten minutes—and I'm behind the sheltering grass, sweating from every pore and without a breath in my body, but triumphant, for a hasty glance has assured me that the herd is undisturbed, about one hundred yards away. As I have got here safely, I don't think there is much risk in waiting till I've got my breath, for I'm far too unsteady to shoot, so I turn over on my back and gasp for fully five minutes. All the time I have an intense longing to shoot, for I feel convinced that the herd will have got the alarm, or will move off, or that something untoward will happen, and I am horribly afraid that all my labor will have been in vain.

"At least," I think, "I must look and assure myself that nothing has gone wrong," but I take myself firmly in hand and refuse to accept the tempter's suggestions, and so remains motionless. At the end of five minutes I can't stand the suspense any longer, and, turning over I take off my topi,* slip over the safety catch of my rifle, and peer thru the grass in front.

As I knew perfectly well at the back of my mind all the time I was fighting my excitement, they had not moved, but having once succumbed, I simply can't lie down again to another five minutes' wait, and so, tho I am not properly steady, I get ready to shoot.

But my selected beast is still lying down and I can't get a decent shot yet, so I take a general line on him along my rifle and give a long, loud whistle.

Instantly every beast in the herd is on his feet, looking 'round for the cause or meaning of the strange sound.

My big bull is standing broadside on a hundred yards away, giving me an ideal shot. I cover the point of his shoulder and press the trigger, and the report is closely followed by the welcome thud of the bullet. He gives a bound, dashes about twenty yards toward me, and stands stock still, evidently hard hit and again broadside on.

The rest of the herd are motionless, trying to locate the sound of the report. I draw a bead on my bull—this time on his neck—fire, and down he comes with a crash; the rest of the herd are off on the wings of the wind. I rush forward, reloading as I go, but there is no need of another shot—he is finished.

Up dashes my gunbearer, knife in hand, to "hallal" him, without which ceremony no good Mussulman will eat of his flesh. His throat is safely cut—at the base of the neck, to save the head skin—a shout brings my party out of cover, and in a couple of minutes they are hard at work beheading him and whipping off his skin, while I enjoy a cigaret under a neighboring tree. I am feeling quite pleased with myself, for my measuring tape tells me that his horns are 30½ inches, quite good for oryx callotis, and my best up to date. So far so good, but I want more meat, for I expect a big safari (caravan) into camp tonight, and tho oryx-tail soup and steaks want a lot of beating in the way of food, I feel that a leg of impala, which is com-

*Sun helmet.

mon hereabouts, would add variety to this evening's dinner. Accordingly, leaving five porters to bring the meat into camp, I stroll on with the remainder of my entourage, reflecting that I ought to have waited longer before taking my shot at the oryx, for, being rather unsteady, my first shot hit him too far back, missing the heart, and it had taken a second to kill him. Whereas, had my second been available for another oryx, my first having been fatal, I should have been relieved of the necessity of looking for more porter's meat.

BOHOR REED BUCK.

However, I haven't very much farther to look to complete my supply, for in the next half mile we run across a solitary bull wildebeeste peacefully unconscious of the proximity of his enemy, man.

As he is only one hundred and fifty yards off, I don't propose to try and get any nearer, for the wildebeeste is a tricky fellow to stalk. Therefore I step to the nearest tree to get a rest for my rifle, and, to avoid risks—for a wounded wildebeeste will carry a wonderful lot of lead—I take the .450 for this shot.

At this moment one of my men treads on a twig, which snaps with a terrible noise; the wildebeeste swings 'round and is facing us, his head up in the air, a picture of alarm. For a second he stands without a quiver, and in that second I let fly my right barrel at his hairy chest, and he comes crashing down, and in another second the knife is at his throat. My ever-present tape shows him to be 27½ inches, which is quite a respectable head.

As it is now 12 o'clock, the sun is pretty strong; so, having supplied my larder fully, I lie down in the shade of a spreading acacia, hard by a rippling stream of delicious, ice-cold water, which washes down the biscuit that forms my lunch, and after a cigaret, I'm sound asleep, dreaming of oryx with three-foot horns and other fascinating creatures of

the same type. At 2 o'clock my gun-bearer wakes me with the news that it is time we were starting homeward. We strike for camp, making a detour to a patch of woodland which I know of old to be a favorite haunt of impala, and, sure enough, we find a herd there and I bag a fair buck.

I have now finished with the rifle for the day unless something exceptional turns up, and as I stroll campward, scatter-gun in hand, thru country teeming with birds, I manage to collect a mixed bag of twelve and a half brace—partridge, guinea fowl and quail.

Back to camp to a bath and tea, having missed an ostrich and viewed a lot of zebra, Grantii and hartebeeste on the way, I find the expected safari has arrived, with no less than three Europeans, and—a stroke of luck—all of them bridge players, which means a rubber tonight.

As we sit in the still evening and watch the glory of the sunset, turning from the deepest crimson to ever-varying shades of salmon pink and yellow on the snow-crowned peak of that most glorious of mountains, Kilimanjaro, the talk turns naturally to sport, and rambles from elephant on the Nile and lions in Somaliland to the mighty boar of India and the Kadir Cup, the Ovis Poli and the markhor of Cashmere and Tibet, the snipejheels of the Punjab, to polo and Army Cup weeks at Lucknow, and to never-to-be-forgotten memories of glorious Goodwood and cup days at Ascot.

Then, as the stars slip out and the glorious African moon floods the silent world with her pale light, it grows cold and we move inside to sit down to a dinner, mainly the product of rifle and gun, and as good or better than many a London dinner, for my Goanese cook is an artist, and in honor of my guests he excels himself tonight. Bridge succeeds dinner, but after awhile cards are thrown aside, and we gather 'round the fire, and over the national drink of Scotland the tales of sport are renewed, and with four Europeans gathered together in the wilderness, it bids fair to become "a strong night," as a German friend of mine was wont to term it.

I have tried to put on paper—poorly enough, I fear—an average day of my life in Africa, that Africa whose indescribable fascination all who know the country and who care in the least for Nature, must have felt.

The hackneyed Arab saying that he who has drunk of the waters of the Nile must always return is indeed true.

What this strange fascination is I cannot tell—I know only that once a man has felt it he will never escape its grip; and steady as fate it will draw him back to the old scenes which he loves—it may be to lay his bones there in the van of the empire, one more member of the "Lost Legion."

Whatever his fate, whatever his ultimate future, if Africa has him in her grip one thing only is certain, leave her as often as he may—he returns.

DAGSHAL, PUNJAB, INDIA.

L'Amour Fait Peur

BY FLORENCE EARLE COATES

A COWARD is man, yet a hero,
  Whose will overmasters his fear
Till peril no longer appals him,
  And danger itself groweth dear.
Poised and strong, asking no intervention,
  He hazards the rock and the shoal;
One only thing halts his pretension—
  Love frightens the soul.

Self-disciplined, slowly but surely,
  Disaster accustomed to brave,
He makes a companion of sorrow,
  Nor falters at threat of the grave;
Nay, often would hold it at nearer
  Approach a beneficent goal—
But, ah! with the thought of one dearer,
  Love frightens the soul!

BALTIMORE, MD.

One or Two Plain Questions

BY REBECCA HARDING DAVIS

EVERY day the Weather Bureau gives us a report in the newspapers of the condition of the temperature all over the country, and also a forecast of the weather to come, the sunshine, storms, heat and cold which we may reasonably expect in a given time. This daily account and prophecy are founded, as everybody knows, on countless minute reports of weather conditions sent in daily to Washington from every quarter of the United States.

Now, why should we not try to make a similar guess at the future condition in morals and conduct of this country from the daily reports of our behavior now in the newspapers?

Reading any of them any day, we are struck, first, by the self-confidence, the impregnable assurance of the American. Whatever this generation may doubt, the one thing we never question is our own magnificent persistent advance in civilization. We expect to go on leading humanity up to perfection. We hear this note of exultation incessantly—in sermons, in the harangues of college boys, in the President's message, in the leading article in our morning paper. We are called on to consider the unparalleled scientific and material successes of this generation, and, stranger still, the change in the condition of the working classes. We are reminded that sixty years ago the negroes were slaves forbidden by law to learn how to read and write. Now every man, whatever his color, of the eighty million Americans, is free, with the chance before him to be as helpful to the world as is Booker Washington.

Sixty years ago, we are told, there was not a single club or league among workingmen in this country. Now their unions hold the balance of power in all elections.

These optimists, too, call on us to observe the enormous advance—not only in this country, but in all others—of right thinking and decent living.

One short century ago, for instance, the United States regularly paid a yearly tribute to Algeria to buy security for our ships from her pirates. Now the Algerians appear in the world's markets, as honest and polite dealers as any in the exchange of New York or Philadelphia. Half a century ago that most gallant and Christian gentleman, Coleridge Patteson, ventured into the South Seas to teach the cannibals how to live, only to have his brains promptly beaten out by them. Now it would not be wise for you to venture on the same coast without your dress suit and other requirements of fashionable society, so genial would be your welcome.

Our optimists, in urging their claims of this general advance and betterment of mankind, point, too, to such hopeful signs as the Hague Conference, and the leagues of scientific men, of humanitarians and of religious teachers, speaking every language and quickened by every faith, who are giving all of their strength to the uplifting of the poor and ignorant. They show us triumphantly the Catholic, the Presbyterian, the Episcopalian, the Buddhist and the Mohammedan working shoulder to shoulder to build hospitals, to drain fever swamps

and to destroy poisonous germs for the relief of the pagans, and they cry: "This is sunrise at last! This is the promised coming of the Christ!"

Women, too, are now incessantly sounding their separate pæans of triumph. Such of them as want to take part in the government of their country announce daily that the hour of their enfranchisement is at hand. It is true that Susan Anthony was just as certain about it and just as exultant fifty years ago.

But let us grant that all these hopeful predictions are true, that humanity and womanity are advancing upward as steadily and rapidly as these optimistic prophets assert, that Mr. Foraker was within his rights the other day when he claimed:

"It would be difficult to exaggerate the greatness of our country or the business of our people.

"But greater than the expanse of our domain, greater than the multiplication of our wealth, greater than any power that has come to us, greater than any glory we have achieved, greater than any of our physical accomplishments has been the improvement of our people intellectually, morally and in all that makes for good citizenship."

Still, is there not danger that in this very self-glorification, this mad shouting and waving of flags, we may let slip some solid good things bequeathed to us by our forefathers—customs and beliefs which have grown so familiar to us from long use that we forget their value?

Do you remember the great mistake in Savonarola's life? The thing he did which makes us question whether he was really a prophet sent by God or merely a political trickster? He preached repentance to the Florentine nobles and the populace until they were mad with remorse and anguish. They kindled a fire in the great square of the Signoria and brought to it the cards and dice and liquors which corrupted them. That was sane and wise enough. But they proceeded to heap on the flames not only their treasures of jewelry, but the pictures, the statues and the manuscripts in the city which were helps to higher thoughts and nobler living. In the fury of their zeal they believed that there was but one duty in life—to follow the new prophet. In one short hour the work of great thinkers and artists for centuries was swept out of the world, never to be brought back.

Now, sometimes it seems to me that in the fury of our modern reforms we are destroying good and helpful things which we never can bring back again.

For instance, the value of money in our lives never was so apparent as it is today. Comforts, luxuries, possibilities of which his grandfather never heard now crowd upon the young American, all to be purchased by the dollar. Naturally, the dollar is apt to become the god of his life. If he has it he swaggers; if he has not he is cowed and feels himself guilty and dishonored among his fellows. From his birth, his training is meant to fit him to earn it. He sets apart the multi-millionaires of the country as its patrician class. There is scarcely a newspaper which voices public opinion in the States in which their claims to march in front of the procession are not at least tacitly admitted. Foreigners, when they write of the country, name it The Land of the Dollar, and nobody is surprised or offended.

Now, our grandfathers, no matter what their social standing, held that to overrate money was to be vulgar. It was reckoned equally underbred to boast of it if you had it or to complain if you lacked it. The ruling class then were the educated, gentle-mannered folk whose birth and habits lifted them above a mad worship of the dollar.

Have we not lost something here which it would have been wise to keep?

Then, too, the well-bred man or woman preferred to keep in the background. The name, for example, of one of the most successful and prominent editors in this country never appeared in his paper until the day of his death. Now every fact of every notable person's life is blazoned in print for the benefit of the staring public, from the clothes of a bride to the disease of a candidate for the Presidency. Have we not lost something here, some decent, uplifting quality, which will not easily come to us again?

Our sudden conviction that money is the most valuable asset in our lives has brought about, too, a rapid change in our agricultural class. The old-time farmer, who stayed on his father's fields, married

early, gave a large family to the world, made it the object of his life to raise better crops and bigger pigs and calves than his neighbors, is gone. So is his wife, whose butter led the market, who filled the stalls in the county fair with her delicious bread and jams, and her silk quilts. They either did not marry, or, if they did, have but one child or none. The man lives in town now. Sometimes rich and successful. Sometimes he is a sharp-eyed, shabby fellow, living by his wits. The country girl "made a lucky match," we are told, "and is in the swim—wears silk teagowns and pearls to breakfast." Or she is an underpaid saleswoman in a department store, yellow and lean, or a soubrette in a downtown show, living on chance wages, or, sometimes—otherwise. There are no county fairs any more. The abandoned farms in New England and Virginia are being bought up by capitalists and turned into summer resorts or into fine bungalows for themselves. Our butter and farm products come to us now from huge creameries and farms worked by trained overseers and great bands of foreign laborers.

Perhaps the butter, on the whole, is sweeter, perhaps the crops pay better. But when the farmer gave up his narrow life on the old fields to go to trading he lost a fine savor out of his life, a kinship between him and the earth that had belonged to his father, a certain peace that came to him during the long, calm growth of the days and the silent mothering of the nights.

This universal overrating of money and incessant straining after it has cost him and his children something which money never can buy for them again.

I am afraid that I shall offend many of your readers if I suggest, too, that, with all the triumphs of my own sex in the last century, there are some good things that they once had which they seem in danger of losing forever. It is not money which the typical American woman wants just now so much as a career—public work and public recognition. There is no kind of occupation which formerly belonged exclusively to man, from electioneering to surgical operations, with which she has not grappled, struggling to make it her own, often successfully. She declares that she and the world are happier and nobler for these her triumphs. It may be so.

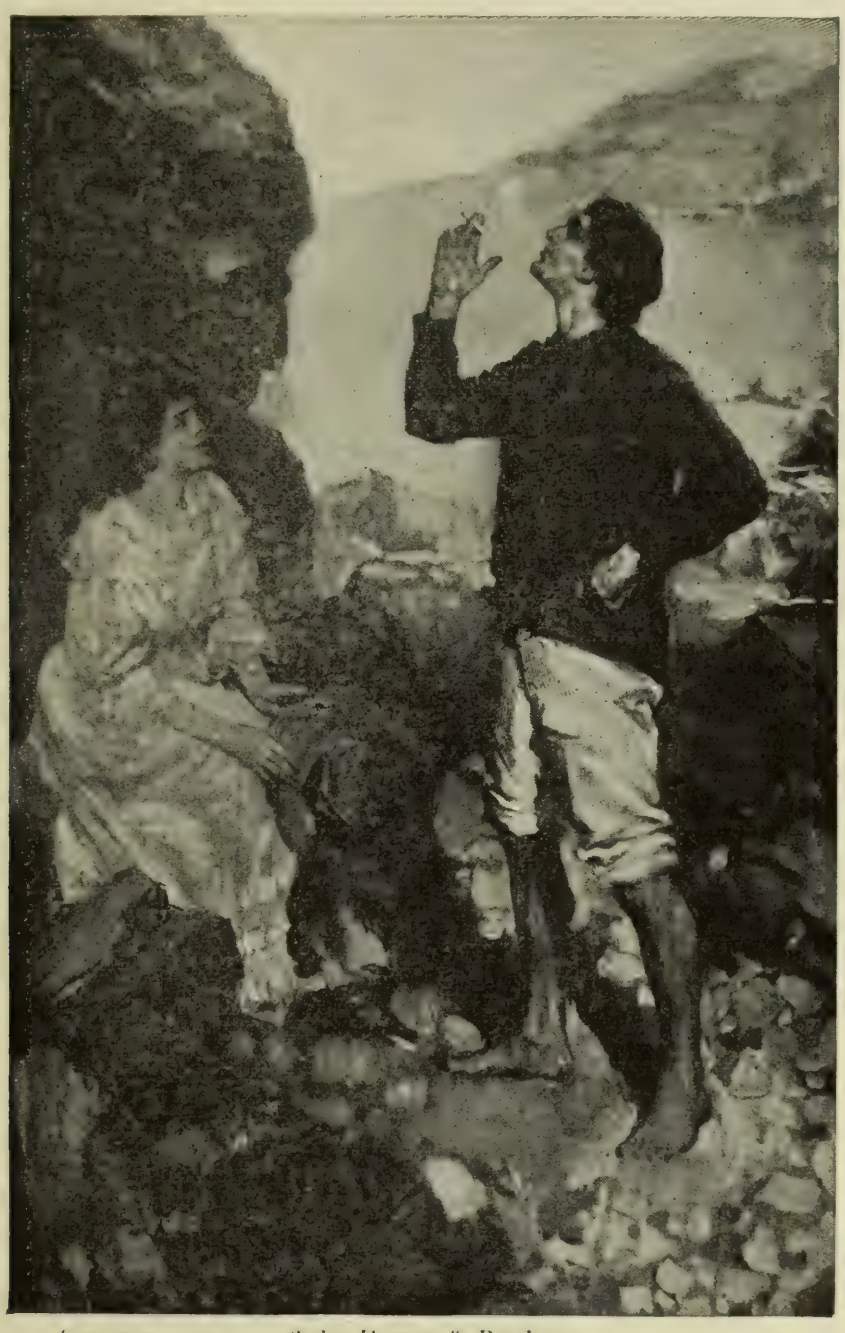
But in the meanwhile has she lost nothing which was worth the keeping for herself and us? She invariably strives, while she is dealing in stocks, or lecturing to her club, or leading a mob, to rid herself of the old sense of dependence, the appealing, womanish charm, the shy glance, the blush, the ready tears, the things which were silly and childish if you will, but which made her dear to her husband and sons, and by which they will remember her best when she is gone out of the world.

For more than a century some women have been struggling for the ballot. The fact is, they do not obtain it—not because of the cruel oppression of men—but because the great majority of their sex do not want it. I have nothing to say here of the question of suffrage itself, only to ask why, in the struggle for it, women must lose their sense of decorum and good manners? We are told that the best class of these claimants are in England. The screaming suffragettes arrested for rowdyism the other day, the respectable matrons who tore up the paving stones and hurled them at Mr. Asquith's house, surely have lost something for which the right to vote will hardly recompense them.

But American women, in their struggle to earn money and take part in public work, have lost more than good breeding. The loss to the States and to our lives is too grievous, the wound too deep and sore for me to palter over it with many words.

To find time for their public work they have given up, in countless cases, their homes, and now swarm, like business men, in hotels and boarding-houses.

Even these poor apologies for homes are—how often—childless? Here we can but keep silence.



The Florentine women, in their pious madness, threw into the fire pictures and books which never could be restored to the world. Is there any danger that we, in our suicidal zeal to be rich and busy in the work of the world, may leave the errand on which God sent us into life forever undone?

PHILADELPHIA, PA.

Literature

Mr. Hichens's New Novel

THERE was bad news at the time "The Call of the Blood" came out, to the effect that the author purposed writing a sequel to it. However, when "Barbary Sheep," a wicked idyll of the desert, appeared instead, we were relieved, thinking that Mr. Hichens had been cured of his Sicilian melomania. But now at last we have the threatened sequel. And having known Hermonie, the heroine of the first volume, we are not surprised to recognize her as the "Spirit in Prison" in this second volume. When a woman has what George Sand called her "'great facility' for illusions, a blind benevolence of judgment, a tenderness of heart that was inexhaustible—from which came hurry, mistakes innumerable, heroic devotion to objects that were worthless, much weakness, tremendous disappoint-

Copyright, 1907, 1908, by Harper & Brothers.
FROM HICHENS'S "A SPIRIT IN PRISON."

A SPIRIT IN PRISON. *By Robert Hichens.* New York: Harper Bros. $1.50.

ments"—one may expect her to land in real or imaginary confinement somewhere. Such a woman has morbid powers of incarceration within herself. And we are not inclined to agree with Mr. Hichens in the view that Hermonie's unhappiness came from the kindly deception of her friends, but from her own self-devouring, tormenting nature.

In order to understand the underlying significance of the new story the reader must recall some details of the old. Maurice Delaney, himself of Sicilian descent, marries Hermonie, a homely but attractive Englishwoman some years his senior. The honeymoon in their Sicilian home is scarcely over before Hermonie hurries away to Africa to nurse a sick friend, a bachelor Frenchman. No adequate reason is given of why Delaney does not accompany his quixotic bride upon this gentle mission. He remains upon the island, hears the "call of the blood" instead, and betrays a Sicilian peasant girl. For this crime he is slain by the father of his victim upon the very night when his wife returns, accompanied by her now convalescent patient. The closing pages reach the fine art mark of distress. The widow is *enceinte,* without a suspicion of her husband's infidelity, and resolved to devote herself to his memory.

The new story begins after a long lapse of time. Signora Delaney now lives in pleasant seclusion upon a small island near Naples with her daughter, Vere, who is sixteen years of age, and Gaspare, a devoted servant. Emile Artois, the bachelor friend of other days, lives in Naples and is become the very distinguished author of very bad books. Nothing happens in the course of the story that would stir a normal household out of its ordinary routine. The women are above reproach, the maiden being of an innocence that is more than virginal, it is so simple, and the bachelor friend conducts himself with almost unimaginable propriety. Mr. Hichens must have been put to it to conceive a sequel sufficiently distressing out of such a plateau of human virtues; but he has not only succeeded, he has written one of the most sensuously suggestive novels of the season, and by way of interludes, he has produced certain Neapolitan types which, if true to life, represent characters so devoid of conscience and decency that the young lover of Vere practically offers to strip and walk in the sun before the readers in a sort of youthful ecstasy at being what he is. The interest depends, not upon the incidents portrayed, but in the wonderfully drawn scenes of Neapolitan life thru which it moves, and in the temperament of the persons involved in the various situations. Hermonie's spirit's prison, according to the author, is the deception practiced by Artois and Gaspare in their effort to preserve for her the ideal of her husband by keeping the knowledge of his unfaithfulness from her. As a matter of fact, there has not been a more morbid woman portrayed in fiction since Mrs. Humphry Ward created "Eleanor" seven years ago. She is generous and jealous, and endowed with that kind of acquisitiveness which seeks misery. For this reason she discovers all of which she should have remained in ignorance, unearths the infidelity of her dead husband, locates his illegitimate son upon her very doorstep, conceives a jealousy of her daughter and her friend, a jealousy which she kneads into hatred, and finally creates a frightful scene by attempting suicide. The author thinks he makes the tale end cheerfully because she is rescued and pacified. But he is mistaken. She will find another grievance before the nerves of her family recover from the shock. The book is exceedingly well written and will do no one good to read it.

Gossip a Century Old

Holland House, in the last years of the eighteenth century and the first decades of the nineteenth, was one of the chief centers of hospitality for men and women of note in London. The genial host, Lord Holland, and his remarkable consort, who, with a somewhat shady past and without any great beauty or remarkable wealth, succeeded in becoming an undisputed leader of English society, entertained every man and almost every woman of note who lived in or visited London in the days of Pitt,

Grenville, Sydney Smith, Byron and Scott. The present volume* is in no sense a memoir of Lord Holland, nor a history of his family, such as is said to be in contemplation, if not already in preparation. Mr. Sanders has not had the advantage of access to any family papers, nŏr does he incorporate any new or original material in his chatty and entertaining pages. He has taken Holland House only as the string on which he has threaded his pearls, and his pearls are the gems which he has selected from the large range of biographies, memoirs and collections of letters of the various characters who made history during the days when "Prinny" was first Opposition leader, then Regent, and finally King George IV.

For a thoro appreciation of Mr. Sanders's book the reader needs a close and familiar acquaintance with English political and literary history of the period. Mr. Sanders takes for granted both a knowledge of and an interest in the complicated changes in the personnel of English governments, as well as an intimate knowledge of both foreign and domestic affairs from the outbreak of the French Revolution. This larger history forms, however, only the background of his sketches, and the sketches themselves may be enjoyed and appreciated by many whose knowledge of English history is much less exhaustive. Mr. Sanders's interest is not in questions of diplomacy or of political economy, but in the personal aspect of politics and society—the intrigues by which one man was driven out of public life and by which a woman managed to push her son or husband into the front rank. In fact, from beginning to end the book is chiefly gossip—good-natured gossip usually, and gossip full of bright and entertaining anecdotes and sayings, but never rising above the level of the best table talk.

The statesmen who are more fully mentioned include Lord Melbourne, Canning, Sheridan, Sir Philip Francis, Lord Minto, Earl Grey, Tierney and Whitbread, with Madame de Staël and the Princess Lieven among the political women. Lady Holland herself may also be reckoned among the politicians. "What shall we do," asked Canning in 1827, "with Lady Holland in the Cabinet?" And shortly afterward, when the Duke of Wellington succeeded Lord Goderich as Prime Minister, Lady Holland was said to be the only dissatisfied minister out of office. "She counted," wrote Joseph Jekyll to his sister-in-law, "upon sailing down with her long-tailed blacks and ancient crane-necked chariot to sit with Holland at the Secretary's office to administer the affairs of Europe and make Sydney Smith a bishop." An equally characterful sketch is given of Princess Lieven, the wife of the Russian Ambassador, who left so distinct a mark on English politics. "No cleverer female politician," writes Mr. Sanders, "ever made her drawing-room the maneuvering ground of international affairs than Madame Lieven, and none was more fitted by nature and training for the task." "She was fascinating and vivacious, rather than a beauty," he continues, "very thin, an accomplished pianist, illiterate except for one book, 'The Letters of Madame Sevigne,' and devoted to whist." As for her work in England, "the fact remains," asserts Mr. Sanders, "that Madame de Lieven acted as the eyes and ears of the Russian Embassy, and that the information she extracted from Lord Grey—his babbling she called it—and others was regularly communicated to the Imperial Court and the Chancellor Nesselrode."

It is the fashion just now to have a close and personal acquaintance with the period of English history which is covered by *The Holland House Circle.* Within the last ten years has appeared volume after volume of diaries, letters, biography and reminiscences referring to this epoch. Besides the more serious biographies, such as those of Pitt, Durham and Graham, the Queen's Letters and such books as Mr. Wilkins's "Mrs. Fitzherbert," we have the intimate "Letters to Ivy" and the gossip of the "inimitable Creevey." Probably the chief value of Mr. Sanders's book lies in the fact that he has skimmed the cream of all these books, and that he gives in short space that sense of intimacy with the men and women who were of importance

*The Holland House Circle. *By Lloyd Sanders.* New York: G. P. Putnam's Sons. Pp. xxv, 384, $3.50.

in English life during this period, an intimacy which no one who wishes to be considered well read can afford to be without.

The Amateur Motorist. By Max Pemberton. Chicago: A. C. McClurg & Co. $2.75.

This is not a novel, as one might suppose, in seeking for a second "Lightning Conductor." It is a book for amateur motorists, written by an amateur motorist, relating his experiences in the hope that others may profit thereby. The mechanical discussions are not too technical for comprehension, and the diagrams are elucidating. The 70 pages given to a description of the leading cars, with illustrations and prices, flavor somewhat of a catalog. The hints printed in black italics at the end of the book no one will take exception to. The following are samples: "Pass cattle dead slow," "Beware of fast driving over ruts," and "Never do stunts with your car." The book is a development of articles written for *The Sphere*, of which Mr. Max Pemberton is motoring editor.

The Small Country Place. By Samuel T. Maynard. Philadelphia: J. B. Lippincott. $1.50.

A Little Land and a Living. By Bolton Hall. New York: Arcadia Press. $1.00.

These two books resemble each other in one respect, that they are enormously crowded with facts. Mr. Hall's book, however, has one keynote, which becomes almost pathetic in its anxiety to persuade people to get out of the cities and secure country homes. Professor Maynard's book is far more quiet in its tone, and recounts the experience and knowledge of one of our best teachers of botany and horticulture. His book would be admirable if it were not in reality three or four books squeezed and contracted into one. His monthly calendar would of itself make a tidy volume—and would allow of some expansion. Then we could have another volume made admirably out of his market gardening, adding a fuller discussion of markets and market seeking. The discussion of small fruits and orcharding would fill another volume. The home grounds and their decoration might be taken in connection with remodeling old buildings and the general discussion of a suburban home, making still one more volume. As matters are, the book will fail of doing just what it ought to do. We like, however, everything that Professor Maynard says, beginning with the statement that "the ideal place to live is in the country, even tho one's business is in the city. He bases this on the assertions that in the country one is more independent of the conventionalisms of society, that he has elbow room and fresh air and quiet for recuperation. He thinks that any one may live in the country, getting time for gardening and orcharding, for keeping bees and poultry; and in this way raise his own fresh fruits and vegetables, milk, poultry, eggs, etc., besides selling a surplus; at the same time carrying on town business. The style of this book is clear and impressive. Bolton Hall's book lacks in systematic and personal apprehension of the question, but is full of stimulant. In fact, we feel a good deal excited over the tumult of facts given. We are tumbled from one wonderful success to another until we wonder how anybody ever does bankrupt himself in the country. Yet we know of three or four strawberry bankrupts; got poor raising strawberries. They had tremendous crops for two or three years, which made the market price very low, then drought and floods spoiled the crops for two more years, and these strawberry kings took off their crowns and were sold out. It needs a deal of common sense and good judgment out in the country, just as it does in the city. If we could empty the big congested towns, slums, palaces and all, and pour the contents all over the valleys and hills, the immediate effect would be no very great gain from an economic or social standpoint. The primal point just now is an improved system of education that will teach the youngsters good sense in using the land when they get it. Our boys and girls are stuffed with information that is not of the slightest value to a farmer or gardener. It is considered quite unimportant to instruct in beet growing and animal industry. All the same, one can get a powerful lot of information from Mr. Hall's book. He is quick to pick up good points, and he apreciates tiptop reports made by successful growers anywhere about the United States. The best advice, however, that can be given to any one going into the

country is to go very slow. He will have to find out nearly all facts and solve nearly all the problems just as if most of us never wrote a line to help them. He must get the Government bulletins, and not follow them too readily. He must plant a quarter of an acre before he plants fifty acres or even ten. He will have to learn all about his own soil, and, above all, he must learn to give a cold shoulder to peddlers of commercial fertilizers. Undoubtedly the countryward drift is here to stay, and it will grow in power quite as fast as it should. We can welcome the work of Professor Maynard and of Bolton Hall, and much more of the same sort.

The Problem of Age, Growth and Death. By Charles S. Minot. New York: G. P. Putnam's Sons. $2.50.

This recent number in the "Science Series" is based on lectures at the Lowell Institute, March, 1907. The chapter headings indicate the ground covered in these lectures: "The Condition of Old Age"; "Cytomorphosis: The Cellular Changes of Age"; "The Rate of Growth"; "Differentiation and Rejuvenation"; "Regeneration and Death"; "The Four Laws of Age." In this field Professor Minot speaks as a master, the greater portion of his scientific activity having been directly occupied with the investigation of the problems of growth and senescence. The present work is to be regarded as an account of the author's matured conclusions regarding these problems in a form to be readily understood by the reader not specially trained in biology. What the book specifically does is to present arguments and concrete evidence in support of four "laws" of age, and a corollary from them. These are stated as follows:

"First, rejuvenation depends on the increase of the nuclei. Second, senescence depends on the increase of the protoplasm and on the differentiation of the cells. Third, the rate of growth depends on the degree of senescence. Fourth, senescence is at its maximum in the very young stages, and the rate of senescence diminishes with age. As the corollary from these, we have this—natural death is the consequence of cellular differentiation."

The evidence offered in support of these "laws" is abundant and in many respects convincing. In spite of Professor Minot's able argumentation, however, one cannot escape the conviction (a) that in the case of the two first of these laws there is no real demonstration that the relations between phenomena exprest are *propter hoc* rather than *post hoc* relations, and (b) that the third and fourth "laws" are a mere verbal splitting of the same biological fact, namely, that the rate of growth and of senescence diminishes with age. Some useful appendices containing *inter alia* valuable and hitherto unpublished raw data on growth, together with a full index, close an interesting and suggestive volume.

The Alps in Nature and History. By W. A. B. Coolidge, M. A. New York: E. P. Dutton & Co. $2.50.

Mountain climbing is a sport that appeals peculiarly to any man who has even a trace of love for nature and outdoor life. The conquest of the great peaks of the European Alps has attracted for half a century the traveler from all parts of the world. The present volume gives an account of the early ascents and the first successful attempts in our own time to scale peaks that long defied conquest. The most dramatic ascent was that of the Matterhorn, by Whymper, in 1865. This difficult peak was one of the last of the high summits to be scaled, and on the return trip four of the party of seven lost their lives. The book contains some very valuable and interesting statistics about the mountains and passes, and is illustrated by excellent photographs and maps.

American Shrines in England. By Alfred T Story. New York: The Macmillan Co $2.00.

Mr. Story has no doubt worked very hard. At any rate, he has dug up a great deal of information of no very great value, and for that reason probably the harder to find. He tells us about the original habitats and certain memories and memorials connected with the families of the Washingtons, the Franklins, the Standishes, the Yales, the Harvards, the Penns and some later American men of letters. It is a rather carefully done guide book, but the facts recorded are of singularly little interest. For those who like this sort of thing the book is unquestionably valuable,, and it is probably just

as well to have somebody do it. The book itself is nicely gotten up and illustrated.

Literary Notes

....Robert Williams Wood, whose clever bits of verse under the title of "How to Tell the Birds from the Flowers" caught the popular fancy last year, has now written and illustrated some *Animal Analogues* in a similar vein. (Paul Elder. 50 cents.)

..The Century Co. has included three of Emerson's essays in its *Thumb-Nail Series.* These are "Power," "Success" and "Greatness." Richard Watson Gilder has written a pleasing introduction thereto under the caption "Our Inheritance in Emerson." ($1.00.)

....An exceedingly attractive *Children's Calendar* for 1909 is being issued through St. Bartholomew's Press, maintained in connection with Saint Bartholomew's Church, Madison avenue and Forty-second street, New York. The calendar has biblical quotations for every day in the year. It is ornamented with thirteen Tissot pictures and has attractive and very appropriate marginalia. The calendar is designed and published by Eveleen Harrison and Dorothy Graves. 50 cents.

....The National Arts Club announces its third annual exhibition of the books of the year at its clubhouse in Gramercy Park, from November 11th to 27th. These exhibitions attract the leading publishers and mass the best holiday books in one convenient place, thus affording an unrivaled opportunity for examination and comparison on the part of book-buyers who may visit the clubhouse for such purposes. The exhibition held last year was a conspicuous success.

....The season of the year is at hand when clubs, societies and other organizations foregather at dinners more or less formal and indulge in after-dinner speaking. One of the prime requisites for after-dinner speaking is to have something to speak about. In this age it is only required that there shall be a need and lo! some one is straightway found to supply this need. In *Toasts and Maxims* we have something in the way of pegs upon which to hang speeches. The book is helpful, but perhaps the best thing that can be said about it is that some of the humor in it is quite new. (Fenno & Co. Cloth, 75 cents; leather, $1.50.)

....The preliminary fall announcement of Duffield & Co. has just been issued, and it makes a very attractive showing. Messrs. Duffield & Co. have acquired from Harper & Brothers and the John Lane Company all rights in Elinor Glyn's books, and have now become the exclusive publishers in America of this author's productions. They issued this month the works of Jane Austin in ten volumes, each illustrated with ten reproductions after water colors by A. W. Mills. Another interesting publication in their list is a collection of tales by Edgar Allan Poe. This collection includes *Murders in the Rue Morgue, The Black Cat* and other famous Poe tales. A modern reprint of Poor Richard's Almanac has been given a place on their list. An important undertaking by Duffield & Co. is the publication of *The Old Spelling Shakespeare,* in forty volumes, of which the following plays are now ready: "Loues Labor's Lost," "The Taming of a Shrew," "Twelfe Night," "Two Gentlemen of Verona" and "A Midsommer Night's Dream." Additions have also lately been made to their "Art and Letters Library," as well as to "The New Medieval Library," published by them. Duffield & Co. are issuing some very attractive calendars.

Pebbles

THE following advertisement recently appeared: "Being aware that it is indelicate to advertise for a husband, I refrain from doing so; but if any gentleman should be inclined to advertise for a wife, I will answer the advertisement without delay. I am young, am domesticated, and considered ladylike. Apply," etc.—*Philippines Gossip.*

A LITTLE boy wanted to give his mother a birthday present, and he did not know what to give her, so at last he decided to give her a Bible. After he had bought it he did not know what to put on the front page, so, after looking thru some of the books in the library, he decided to put the following on: "To dear mother, with the author's compliments."

HE had proposed, but she had given him the frigid mitt—seemingly; but five minutes later they were busy swapping kisses.

"But if you really and truly loved me, why did you turn me down at first?" queried the puzzled young man.

"Oh, that was just a whim of mine," she replied. "I wanted to see how you would act."

"But suppose I had rushed off without giving you a chance to explain?" he said.

"Impossible," she answered. "I had the door locked."—*Chicago News.*

THE Sweet Singer of the Adams, Ga., *Enterprise* rhymes the news of the settlement as follows:

"Your scribe now takes his pen in hand
To write the latest news,
Tho things have happened lately
Which to tell I do refuse.

"A man was hurt here Wednesday night,
When fast the freight train came;
His leg is off—I think the right—
But I've forgot his name.

"A store burned down on Tuesday last
With all that was therein.
(Let us not burn when life is past,
But shun the way of sin.)

"This life, it is not very long—
You know it mighty well.
I think to close will not be wrong,
Since there's no more to tell."

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Issues and Leaders in the Campaign

FROM time to time we have discussed the platforms of the political parties, considered the utterances of their candidates, and exprest our opinions as to the prominent questions of the campaign. Election Day is now near at hand, and we shall make a brief summary, our point of view being that of the voter not bound by party ties, who seeks to exert his influence and cast his ballot to the best advantage for the public good.

The foremost issue is the promotion of justice, in the broadest sense of the word, whether it be with respect to the regulation of corporate wealth and of the great transportation companies in the public interest, the treatment of labor organizations under the law, a revision of the tariff, our currency system, new methods of taxation, our dealings with colonial dependencies, the conservation of natural resources, or anything else that public opinion compels parties to consider. What are called the Roosevelt policies have required an assault upon injustice, dishonesty and violation of law, especially in the conduct of great industrial corporations and railroad companies. The Republican party and its candidates are emphatically committed to the support of these policies. In their treatment of the same problems, Mr. Bryan and his party would use more radical methods, assuming that such methods would be practicable. So far as railroads are concerned, there is no serious and fundamental disagreement in the methods proposed by the two parties and their candidates. We cannot here point out such differences as have been shown. But Mr. Bryan himself a few months ago publicly advocated government ownership of the roads. If he still prefers such ownership as the only solution of the problems presented, he no longer says anything about it. This policy he was induced, it is understood, to lay aside because of sharp opposition in the Southern States, to which he looks for a large majority of his electoral votes and where it was seen that government ownership would probably prevent a separation of races in passenger cars. His advocacy of such ownership indicated that he had no confidence in official regulation under private ownership, and it tends to repel voters who prefer and rely upon such regulation, the efficacy of which can be tested with the help of the additional legislation and machinery which Mr. Taft would ask Congress to give.

So far as the great incorporated industrial combinations are concerned, however, there is a vital difference in the two methods. The Republicans would have intimate official supervision and publicity to prevent the evils which are frequently associated with such combinations. This, we think, is in the right direction and might be effective. They are also inclined to support a license plan which, in our opinion, is objectionable. Their policy in this respect, however, is not defined. They would supervise to prevent evil, would prosecute those who do evil, and would seek by safe experiment the ultimate solution of a very difficult problem. They would not "exterminate" or "destroy" the great corporations. These two words have in the past indicated Mr. Bryan's hostile attitude toward them. At present he and his party stand for a Federal license sys-

tem, to be used by each corporation whose product is one-quarter of the quantity consumed, while they would forbid any corporation to control one-half of the product. This would be impracticable, as Governor Hughes showed clearly in his speech at Youngstown. If it were practicable, it would be inexpedient to give the executive branch of the National Government such power over all the important manufacturing and trading concerns of the country. It is characteristic of Mr. Bryan that he has declined to explain how the plan could be carried out.

We have said heretofore that the Republican platform utterance concerning the use of injunctions in labor disputes was an empty one. On the other hand, the Democratic utterance calls for changes that would seriously impair the power of the courts. Mr. Roosevelt and his party have made quite a respectable record in labor legislation. Mr. Taft is in agreement with Mr. Roosevelt on this subject. He defends emphatically the labor decisions he made while on the bench. We cannot see that they were hostile to the cause of organized labor. A prominent officer of the Federation says that Mr. Taft has done more than any of his predecessors in the War Department to enforce laws in favor of labor. No one who knows the man and is familiar with his career believes that he would be unjust to a labor organization. But he would not suggest or approve legislation giving to such an organization privileges not enjoyed by the general public.

We have not been able to commend that part of the Republican platform which relates to the tariff. Many of the present duties are too high. The addition of "a reasonable profit" to the difference in labor costs is a novel proposition, probably designed to prepare the way for a retention of duties that are now excessive. On the other hand, the Democratic platform's proposed reduction of rates to a revenue basis would be a transition too sharp for the welfare of American industries, and the proposed free-listing of all articles entering into competition with Trust-controlled products would be disastrous to the domestic competitors of the Trusts. Undoubtedly there should be reductions upon imports competing with American products that are sold abroad at prices lower than those exacted at home.

Each of the two leading candidates promises (if elected) to call a special session for tariff revision. Let us see what could be done. There will be a Republican majority in the Senate for at least two years and probably for a longer time. If Mr. Bryan should be elected, with a Democratic House, the Senate would not pass a Democratic tariff bill, and there would be no revision. But the industrial interests of the country would suffer by reason of prolonged tariff quarrels and agitation in Congress. Recovery from panic depression is greatly to be desired; it would be deferred by such conditions. On the other hand, the election of Mr. Taft with a Republican House would insure revision, but revision not of an ideal kind. It is quite possible that the efforts of earnest critics—with whom now stand many of the protected manufacturers themselves—would cause a reasonable reduction of excessive rates, and we should expect a new tariff that would be better than the old one.

We have touched upon only a few of those practical legislative questions which are most prominent in the campaign. Both of the great parties favor the establishment of postal savings banks, and such banks the country ought to have. A guarantee of bank deposits (proposed by the Democrats, the discredited Haskell having been the foremost advocate of the project in the Denver convention) would encourage and protect reckless banking. It would be unjust to carefully managed banks and to the communities in which they are situated. In standing for the direct election of Senators, the Democrats are promoting an important reform.

But it is not alone by a consideration of the attitude of the parties toward pending questions that the independent voter decides upon his course. He takes into account the character and the records of the candidates. He reviews the recent history of the parties, and especially that of the one which has had power and responsibility for several years past. Indeed, while these must be associated with campaign platforms and

utterances, they have greater weight in enabling him to reach a conclusion. Looking over the list of Presidential candidates and of parties, he asks which one of these men and which one of the organizations will, if successful at the polls, best serve the public interest by enforcing justice, insisting upon honesty and maintaining the nation's honor.

The Republican party has a record of achievement. We have in mind now the last few years. President Roosevelt has won extraordinary popularity by advocating and enforcing policies which a great majority of the people approve. His party's candidate has been associated with him, was his choice and is committed to the support of these policies. Mr. Bryan led the opposition to the Republican party twelve years ago as the advocate of a currency policy of national dishonor. That cannot be forgotten, altho any reference to it is now persistently avoided by his party, its platform and himself. The Republican party's legislative and general political record is not without flaw, but the party is a better agency for solving the pressing problems of the time and for upholding the national honor than the Democratic party in power could be. It is better fitted for a safe and sound management of public affairs than Mr. Bryan's party, and such management (not without some errors) by those whom it places in office can be expected with confidence.

Mr. Taft is a man whose quality has been tested. He has enjoyed exceptional experience and training in public life. In every place he has been successful. To his proved administrative ability are added the judicial temperament and a thoro knowledge of the law. Mr. Bryan has of necessity been a man of promises rather than of performance. If his judgment for the selection of trusted counsellors and subordinates is fairly indicated by his choice of Governor Haskell, it would be a poor guide for the appointment of Cabinet ministers, judges, and the numerous other officers whom a President must nominate. It was whispered at the Denver convention that Governor Haskell would be made Secretary of the Treasury if Mr. Bryan should be elected.

Mr. Taft is to be measured by what he has done and said and stood for since he entered public life. So also should Mr. Bryan be measured, even if he now desires to conceal or ignore his war against the currency standard of civilized nations in 1896 and 1900. If Mr. Bryan insists that he is consistent in his advocacy of the rights of the poor and the wronged, he should explain why he has never said a word for the disfranchised negroes of the South. In that he stands with his party, the greater part of whose strength at the polls lies in the States where the wronged negroes live. The managers of his campaign now claim but six Northern States.

In the platforms of the two great parties there is a mixture of good and bad; the Republican platform, in our opinion, is a shade the better. There is much that is good in the platforms of the small parties. When the Presidential candidates are measured and judged, Mr. Taft is to be preferred. The Republican party, with Mr. Taft leading, better deserves the support of thoughtful and earnest independent voters than the Democratic party under the leadership of Mr. Bryan

A New Religious Era

It is time that the Churches should awake to the fact that the most important meeting in the history of the American Church will open in Philadelphia in December next. It marks an epoch: it opens a new era.

On December 2d the Protestant Churches of this country, hitherto separated, dissevered, often rivals, sometimes hostile, will for the first time in these centuries be practically united into one body. Nearly all, by their national bodies, have agreed to it, and have chosen their delegates, who will then organize the first session of the Federal Council of the Churches of Christ in America. Three years ago a conference of representatives of the Churches was held in New York to devise a plan of federation and refer it for consideration to the several denominations. That plan has been adopted by them. The few that have not yet come in doubtless will. The plan becomes operative that first week in December. The denominations have

chosen their delegates, each one represented, and in proportion to their numbers. From that day of meeting there will be one Protestant Church of Christ in the United States, separated into denominations, it is true, but vitally one, meeting in a Council without legislative or judicial authority, but carrying a tremendous weight of influence and power. Thus united these Churches can and should control the sentiment of the country, for they represent the bulk of its population.

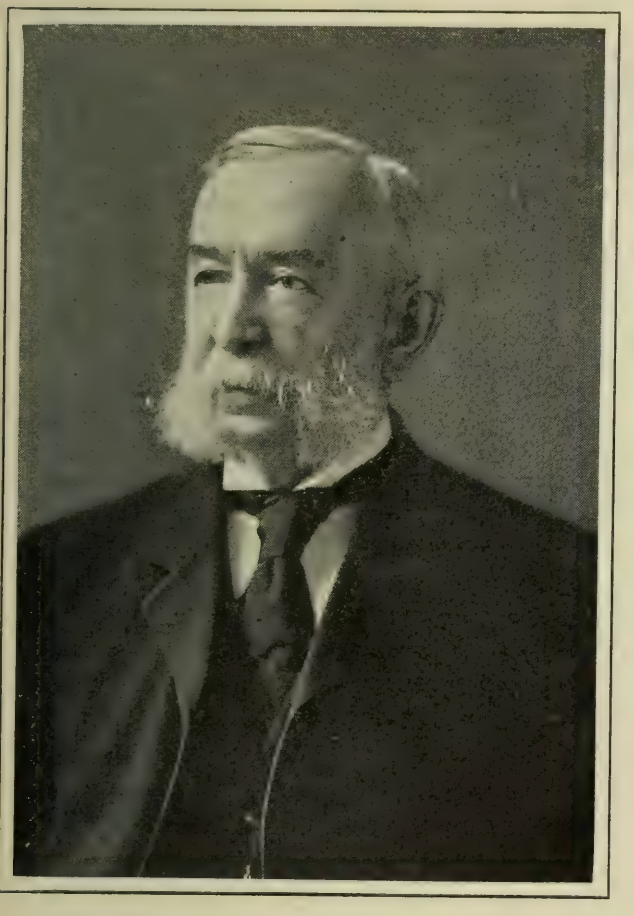
Now, what good will this federating do? Will their meeting once in four years be anything more than a platform for pious platitudes and self-adulation?

This much cannot fail to be accomplished: there will be the exhibition of the unity of the Christian Church. This is much, very much; it is enough of itself to make the quadrennial meeting worth while. What Christ prayed for we are achieving. We do love one another. We are one Church, and we will have it seen and known. It has never been so in all these years. We have been splitting, and splitting, magnifying our miserable trivial differences, when it was our business to stand side by side, different regiments in one army, magnifying our great Christian fellowship of service. From December 2d the so-called denominations will declare themselves one army, and will plan their one campaign under one common banner. That is greatly worth while. That marks an epoch.

But the display of unity is not enough to satisfy the four hundred accredited delegates of these thirty denominations. They will want the Federal Council to do something more. It ought to guide and lead the activities of the Churches. Already a dozen or more committees have been appointed who will bring suggestions and advice after careful study. All will bear on united effort. Bishop Hendrix, of the Southern Methodist Church, will present such a report on Organization, which will indicate how such work can be done. Another committee will bring suggestions on the ways of cooperation in Home Missions, and another in Foreign Missions, while others will consider Religious Education, Temperance, the Labor Problem, the Immigrant Problem, etc. The purpose is to line the Churches up for a united advance in the interest of earnest evangelism and civic righteousness.

There are two great religious forces in this country, the one the Protestant Churches, and the other the Catholic Church. Of these the former is the larger, and we may say the more aggressive the world over. But the two are less mutually hostile than they were. Protestants forget to protest; Catholics know that they are not the total Christian Church. The two agree more than they differ. They will come closer together. Already they tolerate each other; by-and-by they will recognize and affiliate in good work, as now Presbyterians and Methodists do. Even now they work together in temperance and other good causes. The Bishops' Law in New Jersey is the temperance law the brewers and saloons are trying to repeal, and it is named from the union for it of the Catholic and Episcopal bishops. Even federation may yet come, for we are all Christians.

The people of Philadelphia will do their part to give a glad welcome. As the meeting will be an event in Church history, so attendance will be an event in the life of any one who is privileged to be present.



Daniel Coit Gilman

Our two great educators of this generation, men who have broken out new paths, not content with the old, have been Charles W. Eliot and Daniel Coit Gilman. Eliot's great work has been the creation of the elective system for the undergraduate. Its acceptance has spread like a forest fire, but whether it will leave fertility or ravage behind it is yet to be learned. Gilman's work was to create a new university system for the United States. It has come to stay. Both of these men were products of our scientific age and were teachers of science. But they were men broader than chemistry and physical geography, and made the world of knowledge their common field.

Dr. Gilman's main achievement was the creation of Johns Hopkins University. His unusually wide scholarship—for his college studies and his one year of

postgraduate work at Yale had left him with no special choice of scholarly pursuit—his experience of administration as librarian at Yale and secretary of the Sheffield Scientific School, his visit abroad to study the methods of European universities, and his three years' experience in the opening of the University of California, had abundantly fitted him, even at the age of forty-four, to choose wisely and independently what was needed to create a revolutionizing institution.

The trustees had the wisdom to give

THE LATE DR. GILMAN.

him a free hand. The bequest of Johns Hopkins seemed fairly large for his purposes, but allowed no costly buildings, such as it was generally supposed are the chief need of a university. His plan was very simple—to find first great teachers and then students for such men to teach. The five men who were first the university were Gildersleeve, the Latin and Greek scholar; Brooks, the biologist; Rowland, the physicist; Remsen, the chemist, and Sylvester, the mathematician. Every one of them Dr. Gilman chose; and tho most of them young men, they have become authorities known the world over. It was a marvelous gift of insight that chose them and others who followed, and made no mistakes. He chose men not simply of acquisitive power, but men of initiative, who could inspire and add to scholarship.

Then next he had to find students to go to Baltimore, a place quite unknown as a Mecca of learning. The method chosen was brilliantly simple. It was announced that Johns Hopkins would give twenty scholarships of five hundred dollars each to twenty college graduates chosen on examination, and that candidates for a degree of doctor of philosophy should have as thoro and severe a course of training as would be required at a German university. That brought the men. There were the choicest teachers and the choicest students. They flocked to Baltimore, and if the buildings were cheap the men and the laboratories were of the best, and there was a spirit of scholarship never before seen. Those chosen fellows, and those other students, are the professors today in our colleges all over the country and in every department. They learnt their methods and got their enthusiasm under President Gilman.

But he was not their teacher. His was the wise master mind of it all. He was shrewd, but gracious and kindly, full of all tact. He ruled his faculty with gentle firmness. He was the ideal president.

So he remained until the university was well established, until all our great universities had enlarged their own postgraduate courses much after his pattern, and then, after a quarter of a century, he left its charge to Professor Remsen and entered on the new task of organizing the Carnegie Institution, of which he was made president, an institution which is doing more for original research in this country than any other. That also is his monument.

Of other honors and duties that came to this broad man we cannot speak at any length. He was president for years of the American Oriental Society, altho not an Orientalist, but his wisdom was wanted. He was a member of the Venezuelan Commission, and was called to other public duties. He was a master of men, and yet was never overbearing. He was pre-eminently an efficient, progressive, gracious, Christian gentleman

and scholar, and all American scholarship bears his mark and will ever feel his influence.

Certain Delicate Questions

PROFESSOR HUXLEY once braved the wrath that by most men is more dreaded than the wrath ecclesiastical, which the scientific group to which Professor Huxley belonged rather enjoyed provoking. Women, Professor Huxley said, are not only less rational, but also less moral than men. Having been well brought up by their mothers, and assiduously looked after by their better halves, most men hold the unenlightened opinion that women in general are better than men, altho their ideas may be peculiar. We are not going to be so foolish as to render a verdict on so delicate a question. We mention the reckless philosopher's remark only because it is annoyingly brought to mind by the controversy now raging over the prevailing modes in women's hats.

The hat, feminine or masculine, is not necessarily a moral issue. We doubt if even St. Paul thought it was, under all circumstances. It is plain, however, that the hat can be carried too far. And whatever is carried too far is in some degree immoral. Very deferentially we inquire of the ladies whether they do not think that two hats occupying car space designed for five persons are not extensively uncivil and intensively immoral?

We shall not press the question, preferring to pass on to other conundrums. Morality is a more or less vague conception, at the best, and it is better to be specific and concrete when we discuss matters that are largely compounded of prejudices. A recent German writer, whose "will to live" failed him after he had published his book, contended that women, quite contrary to accepted opinion, are more selfish than men, and very nearly incapable of those large virtues which men call generosity and magnanimity. This chivalrous proposition also we recall only because the ladies seem possest of late to make us think of it. Woman's reputation for unselfishness, we suppose it will be admitted, rests mainly upon her conduct in the maternal capacity. She is capable of undergoing great hardships and making sacrifices in the interest of her brood. But what happens, we are moved to ask, when the son or daughter shows a disposition to disregard excessive maternal solicitude and demand? It is not exactly an unheard of thing, we believe, for a mother to become somewhat strenuous in her determination to choose the daughter's husband for her, or to discourage the son from taking a wife at all. These are incidents that have been serviceable to verse-makers and story writers these many generations. Now that our social life is all afloat, so to speak, on the flood of new movements for woman's emancipation and "uplifting," it may be worth while to enquire whether the maternal variety of "unselfishness" is playing a more extensive rôle.

We do not say that it is. We are only asking questions, and we see no harm in putting one that has often been addrest to us by perplext inquirers familiar with what is going on in woman's colleges and in the multitude of professional and business offices in which women are finding new opportunities of usefulness. This question is: Is it right, is it unselfish, is it large-minded for a woman so bitterly to oppose her daughter's desire to make a career for herself and become economically independent that the daughter is compelled to choose between dwarfing her own life or hurting and perhaps deeply offending the parent who has borne and cared for her? This question, like the former one, we decline to answer. We only offer the additional remark, the truth of which we can maintain, that a large proportion of the women students in American colleges at the present time on the eve of graduation feel themselves to be in precisely the dilemma here stated. And because many of them decide that they cannot go counter to the maternal wish, there is in American society a rapidly increasing group of young women intellectually, morally and socially adrift.

If it be said that the father usually is quite as much opposed as the mother to an independent career for the daughter, we reply that this assertion, to the best of our information and belief, is not true. It is not the men who today are blocking the way of women who would enter upon new opportunities and play a larger part

in human affairs. The men have welcomed women into industrial employments, into professional life, into literature and art. They realize that, as the struggle for existence becomes more intense, and the standards of living are raised, an increasingly large proportion of young women will prefer not to marry or will marry rather late in life. For such they have founded colleges and have offered opportunities, and one rarely hears in a company of gentlemen a remark indicating that useful employment and economic independence are unwomanly or not reputable; whereas at social "functions" this opinion can be gathered *ad libitum* from the feminine half of the assembly. And that there may be no doubt about it whatever, the ladies that manage such affairs contrive to make it known that, with rare exceptions, the employed and money-earning woman is not "eligible."

We are quite well aware that when these facts are "put up to them" the ladies of "society" reply that they make their selections with due reference to "breeding," "manners," "taste," "attractiveness," and so on. To these criteria we make no objection. Except as they are applied and adhered to, there can be no good society, certainly no society having the all-important requisite of charm. But at this point we offer our final conundrum: Is it truthful, is it unselfish, is it generous, is it gracious, to stand obstinately on the assumption that women who enter upon careers wider than that which conventional society offers are always and necessarily devoid of breeding, of manners, of taste, of attractiveness and all the rest? Confessing ourselves quite unable to fathom all the mysteries of the feminine mind, we are unable to see that it is.

A Possible Reformed Islam

Is a reformed Islam possible? That is just now a very important question. Lord Cromer, in his great book on Egypt, says it is not. Such is the usual opinion. But conditions in Turkey require us to consider the matter anew.

In a remarkably able and statesmanlike address before the meeting of the American Board in Brooklyn last week, Dr. George Washburn, for many years president of Robert College, in Constantinople, called attention to some views of the peaceful Turkish revolution not usually considered. This revolution has been engineered by leaders of the Young Turk party. They are not Christians; they are Turks. They are Moslems. They are patriots. They love Turkey and are deeply distrest by its humiliation and misfortunes. Their purpose is to create a strong Turkey, one that shall develop its power, and, so far as possible, recover its losses. Europe and America have hoped to see Turkey dismembered, one province after another detached and made free. That is precisely what the Young Turks do not wish. They want a united and a powerful empire; one that can fully hold its own with Russia, and Austria, and Great Britain. Turkey has lost in these late years control of all its African possessions, of nearly all its European provinces, and a large fragment of its Asiatic territory. The Young Turks would have this dismemberment cease, and where European nations are administering Turkish provinces, they would recover and rule them. We have all rejoiced to see Turkey weak; they will make it strong.

But these Young Turks are also Moslems, not Christians. They know full well that the weakness of Turkey is caused by the weakness and errors of Islam, and they would reform Islam. They are crying, "Liberty, Fraternity, Equality, Justice," but these have not been Moslem words. The institutions that these words represent have grown up in Christian lands. Islam, as we have seen it, must reform its ideas if it can adopt these words and their institutions. Is such a reform possible?

One thing in the history of Islam which gives hope is the fact that it has once, for a time, reformed itself. Under the Abassids, from the ninth to the fourteenth century, Islam first borrowed, thru learned Syrian Christians, all the literature and wisdom of Greece, and were the most cultivated, learned and progressive of all peoples. The Islam of Mohammed, which offered the Koran or the sword, the Islam which burnt the Library of Alexandria, was a very dif-

ferent Islam from that which created at Baghdad and Cordova the two greatest universities in the world. There were cultivated all the known sciences—mathematics, astronomy, chemistry, poetry, history, law, art. The very Arabic article in *al-gebra, al-chemy, al-embic,* reminds us of the time when Christian students went to Cordova for education, and when they brought to Paris and Oxford their Arabic translations, their knowledge of Aristotle, and the learning of Averroes and Avicenna.

That was a reform of Islam, not permanent, not spiritual, but gained from the old Greek learning, just as Christian scholarship took its renaissance later from the same source. Islam took nothing then from conquered Christianity. The Christianity it saw, with its images and pictures, was detestable to the purer Moslem monotheism.

But that renaissance of Islam was temporary. Cordova was lost to Spain, and the big Moslem university at Cairo is a pretense beside that of Baghdad. Islam has gone back to its bigots, its reactionaries, while Christianity has moved forward, of its own nature, to progress, learning and liberty. So Islam is discredited in the dishonor which has befallen the Moslem Turkish Empire.

Now, can it be reformed? Can the words, Liberty, Fraternity, Equality, Justice, be incorporated into its system? There are other hopeful facts besides the fact that it once did, centuries ago, allow reform.

And, specially, the fact that there is not one great world religion that has not allowed reform. Our Protestantism is much reformed from that of the days when Calvin burnt Servetus and the Puritans hanged witches. It has learnt much of liberty and equality. The Catholicism we see is vastly reformed from that of Dante and Chaucer, or what now prevails in Spain and Peru; and the pressure of Modernism is an effort sure to be finally successful, to accomplish a further reform. The great Pagan religions, Brahminism and Buddhism, are now in the very throes of reform. It is to the spirit of the times, to modern Christian civilization, especially to the teaching of Christian missionaries by their side preaching the doctrine of one great Father and the brotherhood of man, that we owe the appearance of a multitude of reformed sects, which have thrown off the superstitions and vulgarities and cruelties of old beliefs and practices, and come as near as they can in substance to Christianity, while retaining the old names.

And now Islam is feeling the same influence, which till lately it could not feel in the seats of its power, because the Christianity it saw was not worthy of imitation. Said an Arab sheikh to the visiting Chief Rabbi of London, who had asked him in a spirit of banter why he did not accept Christianity: "All I would have to do would be to get drunk and eat pork, and I don't want to do either." But now purer Christian teaching has invaded Turkey with its better schools. The ambitious young men have visited the cities of Europe and America, and have seen what Christian institutions mean. They have learnt from England and France and Germany and the United States, and they would graft these institutions on Islam. And why should they not? The one great doctrine of Islam is, "There is one God, and Mohammed is His prophet," and this is true, or true in a sense. Mohammed was a mighty reformer in religion, a prophet-preacher. All else can be true, or be modified by better light, the Koran interpreted or relaxed, even as we have learnt that the Bible represents a historical period whose institutions pass away, but whose principles are eternal. Something like that we may expect of the Koran.

And between reformed Islam and reformed Christianity there may be a fair conflict, and in the court of reason it will be decided which shall prevail. We have no doubt. We welcome the contest; but meanwhile we rejoice in every conquest of Christianity, and not least in those conquests which make the other world-religions more nearly Christian.

Mr. Taft on Race Discrimination

Mr. Taft is opposed by a minority of negroes because of the Brownsville matter. To be sure, he held up the orders of the Commander-in-Chief as long as he could, and then he explained and defended it, altho he could have taken a less summary course. But those negroes very likely did shoot up the town; at any

rate, the evidence then seemed strong and the provocation existed. Mr. Taft makes no excuse. He is content to declare that he believes in equal laws for all races and equal execution of them.

But his attitude toward other races is to be judged by what he has done, and he has done more against race discrimination than any other living man. But this is in the Philippines, and some people can look no further than their noses.

When Governor Taft arrived in the Philippines in June, 1900, he found but little cordial intercourse between Americans and Filipinos. The Americans were, generally speaking, prone to regard the native with contempt, and the Filipinos naturally resented such feeling and bitterly hated the Americans. This condition was not unnatural. The great majority of Americans at this time were or had been connected with the army and in constant warfare with the Filipinos. In addition, many of the others were of a class who would have little sympathy with the natives, and who believed that but little consideration should be shown to them. The situation was further aggravated by misunderstandings due to differences in language and customs. As a result, the Americans and Filipinos were gradually and surely drifting further and further apart. Mr. Taft immediately took active steps to eradicate this unforunate tendency, and to make the Filipino understand that our sole effort was to improve his condition and conduct the government to the best interest of the Filipino race.

It is difficult for the average American to understand the Filipino character. Imbued with the courtesy of the Latin race, he is extremely sensitive and prompt to feel the slightest incivility. Indeed, it requires the utmost tact and patience not to offend him unintentionally. In his dealings with the natives, Governor Taft, tho firm, was patient and courteous with all, and his unfailing tact and good humor quickly won him a host of friends among those who had previously shown enmity toward all Americans. In his efforts to accomplish this purpose, Governor Taft studiously cultivated the social side, by this means bringing the people into closer and more sympathetic relations with the Americans, and making the Filipinos feel genuinely welcome at Malacañan Palace, the residence of the Governor. At first, the semi-weekly receptions of the Governor were but little attended by the natives, but by degrees, feeling the irresistible influence of his personality, and coming to trust him the more he was known, Filipino society thronged Malacañan and mingled with the American residents. In this work he was greatly assisted by Mrs. Taft, whose frank, cordial manners and sincere interest in the welfare of the Filipinos did much to establish pleasant relations. Their example had its effect, and Filipinos and Americans entertained each other with the result of forming strong personal friendships between members of the two races. Never before was a Governor-General so popular or so trusted. The Filipinos showed their gratitude in many ways. In his trips around the islands, he was most enthusiastically received by the natives, and at every town he visited triumphal arches were erected and "banquetes" held in his honor.

When it became known that Governor Taft had been offered a position on the Supreme Bench by President Roosevelt, the Filipinos were filled with alarm lest he should accept. A great demonstration was held to urge him to remain as Governor, and thousands of Filipinos marched to Malacañan, carrying banners bearing various mottoes, such as: "Taft, the friend of the Filipinos," "Do not accept," etc., etc. Indeed, a number of Filipino enthusiasts placarded Manila with cards bearing the inscription "We want Taft," *"Queremos á Taft,"* in English, Spanish and Tagalog. This demonstration was all the more significant coming from a people who had been but a short time before engaged in active warfare against our troops.

A conversation with General Cailles, a prominent and hard-fighting Filipino general, a few days after he surrendered to the United States forces, shows the confidence felt in the honesty and sincerity of Governor Taft, even in the insurgent ranks. In talking about some proposed action by the Philippine Commission, Cailles asked: "Can I tell my soldiers that Señor Taft says so? If I can, it is all right, as they believe what Señor Taft says. In fact, next to mine,

his word has more effect among them than that of any of their leaders."

Since he left the islands as Governor his popularity has increased by his efforts to secure better trade relations between the Philippines and the United States. His visit to the islands last fall for the purpose of opening the insular legislature was marked with the greatest enthusiasm. The Filipinos demonstrated their affection in various ways. Their farewell expression of this good will consisted in unhitching the horses from the carriage that was taking him to the wharf, on his departure from the islands, and dragging it to its destination themselves.

These are only a few of the many examples that could be mentioned of the respect and love in which Governor Taft was held. In fact, his far-sighted policy, his courtesy and tact, and his untiring efforts to improve the condition of the Filipinos were the greatest factors in uniting and bringing about peace between the Americans and the natives.

And these were dark-skinned Filipinos, men whom Americans were denouncing as "niggers," but whom Mr. Taft invited to his social functions, and danced with their ladies. *O si sic omnes!*

Taft's Southern Tour

Judge Taft does not expect to carry Virginia or North Carolina; that is beyond the hope of rainbow-chasers. And yet Mr. Taft has included these States in his canvass, and has made public speeches there, not for immediate effect, but because he believes that those States, and equally other Southern States, ought not to bind themselves permanently to a body of political death. With no present selfish purpose, he would try to help them escape. We make no objection to these States being Democratic if their citizens really believe in Democratic principles, but they are Democratic not for that reason, but because the negroes are Republicans, and they will not vote with negroes, whether negroes are right or wrong. Mr. Taft has not exactly told them that this is childish; but it is. He is content to tell them that it is politically unwise to be unreasonably bound to one party. The Democracy of Jefferson and Jackson, with its States rights and its fear of centralization, is dead, and Mr. Bryan and the Democratic platform put more power in the central Government than Republicans can allow, and Mr. Bryan goes farther than his platform in this direction. There is nothing else more desirable politically than that the Southern States should cease to be solidly and stolidly sectional, and Mr. Taft does well to tell them so.

A Hearst Platform

Even if we cannot take Mr. Hearst very seriously as a statesman, we must admit that with his stolen letters he has made himself the most lively speaker of the campaign. And it is not his letters alone, for his picturesque and forcible language is beyond the art of Mr. Bryan. Take this example. He is excoriating "the Grand Old Demoralized Democratic Party," and he thinks they need a platform, and so he says:

"I have prepared one such as Fingy Conners might have written it—if he could write.

"Fingy says the people 'don't want no principle,' so this platform is suitably drawn for the Grand Old Defunct Democracy:

"Graft and Gambling.

"Loot and License.

"Immorality and Immunity.

"Hurrah for the racetrack and to Hades with the home.

"Give us a wide open town and a wide open till.

"Let the boys pilfer from their employers and spend it on the ponies.

"The people don't want no principle, and no education.

"There are too many churches and too many schools and not enough poolrooms. Let the people be industrious and saving and leave their savings where they are easy to get at.

"What the gambler don't take away from the people the grafters will.

"When you can't make money, take some.

"Open wide the safe door of opportunity.

"Give us the private combinations of the public safe and then 'leave us alone.'"

Catholic Encyclopedia

We have received the following second letter from the publishers of the Catholic Encyclopedia:

OCTOBER 13, 1908.

We are in receipt of your favor of the 12th with marked copy of your issue of October 8th containing our statement to the effect that the Congregation of the Index has not condemned an article or articles in The Catholic Encyclopedia.

At the end of your article, however, you again state that certain articles have been condemned by the *Analecta*. The statement that the *Analecta Ecclesiastica* "repudiates" a sen-

tence in Dr. Hanna's article on Absolution (and this is the only point at all involved) has no more value than the expression of an opinion of any other private journal. Moreover, this statement in the *Analecta* is that of a single writer who is expressing simply his own opinion, and is contained in a footnote to the body of his article. It has no more weight than the utterance of any individual. Another writer in the *Analecta* might state the exact contrary.

There has been no official repudiation or condemnation, formal or otherwise, of Dr. Hanna's article by the Roman authorities. Any asseveration to the contrary is absolutely untrue.

It is also equally untrue that any articles in the Encyclopedia "have been censured, and will have to be expurged in all future editions," the editor of the *Watchman* or any one else notwithstanding.

The entire report that there had been any formal or indirect condemnation or censure of any article in The Catholic Encyclopedia is based entirely upon the article in the *Analecta* and the only ground of the assertion of the editor of *The Western Watchman* is to be found therein. This cannot be stated too emphatically.

It may be added that the source of the entire story was the paragraph in *The Western Watchman* made several weeks prior to the publication of the story in the secular press.

We again, therefore, call upon you to give publicity to the above facts, namely, that there has been no official repudiation or condemnation of any kind of an article or articles in The Catholic Encyclopedia.

We can find no line in which we said that "certain articles have been condemned by the *Analecta*." We said nothing more than that an article had been "repudiated," but that we had no information of its being officially condemned. The correction should be sent to *The Western Watchman,* which we quoted as saying that some articles had been "censured and will have to be expurged in all future editions."

A Missionary Meeting

The American Board is the oldest, but not the largest, of our foreign missionary societies, for the Presbyterians, with their greater numbers and wealth, are not behind it in the extent of their work. The extraordinary interest just now in the regeneration of Turkey gives interest to the meeting of the American Board last week in Brooklyn, for Turkey as a mission field belongs wholly to the American Board, except as the Syrian mission was given over to the Presbyterians when forty years ago the New School Presbyterians withdrew from the American Board to unite their mission work with that of the Old School Presbyterians. The main note of the Brooklyn meeting was that the very success of the missions has crippled them, as they have grown too fast for their proper support; hence louder appeals than usual for money. An even more serious matter is the failure of candidates for the mission field, whether ordained men, physicians or unmarried women as teachers. The proclamation of religious liberty in Turkey opens a new opportunity and emphasizes the call for enlarged work. In 1910 the American Board will celebrate in Boston its one hundredth anniversary.

Careful Enunciation

One thing which an American visitor in Great Britain observes is the much less distinct enunciation of public speakers and of the educated public. This is noticeable particularly in the case of unaccented vowels and in the slurring or entire loss of the *r* in such words as *word, lord.* Even famous English phoneticians in their books declare the *r* to be lost. But one who listens critically to American public speakers observes that there is no such general slovenliness of utterance. We noticed the fact in the case of the many speakers on the platform of the American Board last week. The unaccented vowels in such words as *possible, manifold, American* were so distinctly enunciated that there would seem to be no need to give, as some dictionaries do, a separate notation for such vowels. Scarce a speaker failed to give clearly the proper full sound of *r* in such words as *board,* not burred or trilled, of course, but softly sliding over the tip of the tongue. One speaker only was peculiar—and he not a Southerner—for his inability to catch the true sound, but he tried to, tho he could do no better than to give *bo-ud* and *he-uh* for *hear.* It is school drill that teaches carefulness, and a nice enunciation of unaccented vowels and of soft *r's* marks the scholar.

The good news is received that Nicholas Tchaykovsky, the Russian patriot, will be released from prison as soon as $25,000 bail can be given. Despite the protests from leading citizens of England, France and the United States, the

Russian bureaucracy has kept Tchaykovsky in the St. Petersburg jail for nearly a year without formulating any charges against him or giving any reason for their action. Half the money is now being raised in England, leaving $12,500 to be raised in America. The many friends here of the aged patriot have named William Jay Schieffelin, of 170 William street, New York, to receive contributions to the fund. It is believed, because of his age and his already long confinement, Tchaykovsky would not survive another winter in prison. And Russia calls herself a Christian nation.

Of the 158 cities in the United States having a population of 30,000 or more the five which pay least per capita for the support of public schools are Charleston, S. C., which pays $1.71 per capita; Knoxville, Tenn., $2.08; Montgomery, Ala., $2.11; Memphis, Tenn., $2.15, and Norfolk, Va., $2.17. Those that pay the most are Oakland, Cal., $7.20; Butte, Mont., $7.20; Springfield, Mass., $7.25; Boston, Mass., $7.32; Denver, Col., $7.52; Salt Lake City, Utah, $7.59; Newton, Mass., $8.13; Spokane, Wash., $8.50; Pueblo, Cal., $8.76. The elements that enter into the appropriations seem to be both wealth and the sense of the value of education.

The act of Austria in breaking the Treaty of Berlin, to which she was a party, by seizing Bosnia and Herzegovina, and annulling the rights of Turkey, becomes doubly perfidious when we see the secret agreement signed at the same time by Austria and Turkey, under which it was definitely stipulated that the suzerain rights of Turkey were not to be lost. What is the use of treaties if they can be thus broken at a moment's warning, with no effort to amend the treaty, and with the claim simply that the act is for the benefit of the stronger nation? It would seem as if Austria thought that the Infidel had no rights a Christian was bound to respect.

A curious bit of etymology appears in *La Revue*, of Paris. The writer, Albert Danzat, is discussing new words that have appeared in the language; and among those from the English he is puzzled over *Allo*, the French call at the telephone. It is declared that when the Bell telephone was brought first from America about 1879 and tried on a private line, the call *Allons* was used, but the final nasal was not carried on the wire and was dropt, leaving *Allo*. A better derivation easily presents itself.

In *The Commoner* Mr. Bryan says:

"Senator Hopkins, of Illinois, is quoted as saying: 'There is no more reason that a man should be guaranteed the return of his funds placed in a national bank than a farmer should be guaranteed his crop.'

"Why, then, does the Government require of national banks a guarantee for the return of Government funds?"

That is the thinnest of replies. The Government takes a guarantee from the bank to which it entrusts its funds. Of course it does. But Mr. Bryan's proposition is that the guarantee shall be made by banks to which the depositor has not entrusted his money.

Senator Bailey, of Texas, is a man of ability, and has been the leader of his party in the Senate. But his relations with corporations have brought him many criticisms, to which he has retaliated in the most virulent tone. Now he is reported to be disgusted and to threaten to cease serving the nation and to devote himself to adding to his wealth. No higher honor can a man ask than to be the chosen representative of the people; to leave it to make money is to sink to a lower level.

They have had a lynching in Constantinople for "the usual cause"—the prisoner, taken from a police station, a Greek, had insulted a Mohammedan woman; and so the Kurd Moslems took him out and killed him. The difference is that the ringleaders have been arrested and the police officials who did not energetically defend the prisoner are to be cashiered. There is a degree of civilization in Turkey.

At several colleges the faculty have this season abolished hazing or declared it abolished. Amherst is one of them, and yet we read in the *Amherst Student* the appointment of a sophomore committee "for the purpose of drawing up special rules for freshmen." Impudence!

Insurance

A Widow's Investments

The investment of money is one of the world's great problems. Experts are frequently sorely puzzled as to how to invest their excess funds safely and in such a manner as that they shall at the same time earn proper interest returns. The loan department of a bank is a vital part of that institution. If, then, it is difficult for the business man, the expert, or even for a bank, properly and safely to invest personal or trust funds, how much more is the difficulty increased and multiplied when a widow, torn by recent bereavement and inexperienced in large financial operations, is confronted with the problem of investing her life insurance money so that she may live on the income of her estate. In many cases, perhaps it may even be said in most cases, even the best husband does not divulge the details of his business to his wife. She lives upon the allowance he makes her and knows nothing of the merchandising or other source from whence the allowance is derived. Her husband is her counselor and guide. She relies upon him in the larger affairs. As a rule, she knows nothing, or at the most but very little, of independent financeering. She very rarely, almost never, has a lump sum of $1,000, $5,000 or $10,000 in cash in hand. She would not know what to do with so much money. Death comes. The widow arises from her bereavement to find her companion gone. Her life must go on, no matter how sadly. She still has a place to fill in the world. She is immediately confronted with new problems and important responsibilities. Her husband's life insurance presently comes into her hands for investment, and without previous experience in handling hundreds or thousands of dollars, it is small wonder that the widow's estate is only too often wasted. The operations of the gold-brick man are not always confined to the duping of the masculine farmer or other provincial. The widow likewise falls a victim to him or to some one representing him. Gold mines awaiting development, oil lands, suburban lots, uncertain real estate investments, hosts of enterprises that would be rejected by the hard-headed business man are accepted joyfully by widows who are lambs in their understanding of investments. If the dead husband had only arranged his affairs so that his widow could receive a certain specified amount annually for life, as he might easily have done, much tragedy in the past could have been avoided. Life insurance money is a bad thing with which to speculate.

In his annual report, just issued, Insurance Commissioner George H. Adams, of New Hampshire, makes the following comment on the ever present conflagration hazard as it exists today. He also argues for better building construction, viz.:

"Closely following the San Francisco disaster, the recent Chelsea conflagration, in which property of the value of nearly $12,000,000 was destroyed, and an aggregate loss approximating $8,790,000, entailed upon fire insurance companies, serves to emphasize the importance and necessity for the accumulation and maintenance by the latter of surpluses sufficient to enable them, while maintaining their own solvency, to fully protect their policyholders not only from the ordinary fire losses which may reasonably be anticipated, but also from such as may be due to the unforeseen but ever present conflagration hazard as well.

"This later disaster, like its predecessors, calls loudly for more stringent regulations and requirements as to the construction of buildings in cities. It likewise affords to every fire insurance company a solemn warning of the danger of assuming an excessive aggregate liability on property exposed to the risk of destruction from a single conflagration."

At the instance of certain insurance companies the Insurance Commissioner of Alabama has served notice that there must be no "night riding" in that State. Alabama's official warning to the lawless, backed up by a determination that means business, cannot fail to have a salutary influence for good and for law and order.

Financial

Boston & Maine Merger

LAST week's annual meeting of the Boston & Maine Railroad Company shows conclusively that the merger of that company with the New York, New Haven & Hartford has practically been completed. The union, to prevent which there has been so much agitation and legislation in Massachusetts (together with prosecution by the national Department of Justice), has been brought about indirectly, mainly thru the agency of Mr. Billard, the coal merchant of Meriden, Conn., who, a few months ago, pulled out of his pocket about $14,000,000 and bought the 110,000 shares of Boston & Maine which the New Haven Company owned but had not been permitted to use. He has now elected himself and three other friends of the New Haven road to the board, and it appears to be admitted that the company is controlled by the interests which they represent. One of the three is the president of the bank with which the New Haven company does its banking business, and the brother of a New Haven director. The president of the New Haven road and Mr. Billard are members of this bank's board.

The national Government, in its pending suit, seeks to prevent not only a union of these two companies, but also the ownership or control of local trolley systems by the New Haven company. The latter company, however; continues to extend its trolley interests. It is now planning to acquire the trolley systems of Providence and Pawtucket, capitalized at $22,000,000, which it has for some time operated upon a percentage agreement.

We do not see how the Government can dissolve the union that has virtually been made by means of Mr. Billard. As for the trolleys, the New Haven Company appears to be confident that the result of the suit will be in its favor. We have seen no evidence that the company's control of trolley systems has been injurious to the public interest, but some evidence to the contrary. We cannot see that a union of the two steam railway systems is in violation of the Sherman act, under which the suit is brought. So far as these two points are concerned it is difficult to perceive what warrant there was for the Government's action.

* * *

....The Kansas Board of Agriculture estimates the value of that State's farm products this year to be $50,000,000 more than the value in 1907, the increase being due mainly to higher prices.

....George Wilson, who died a few days ago at the age of sixty-nine, had been secretary of the New York Chamber of Commerce for forty years, and in all that time had failed to attend only four of the monthly meetings.

....Recent official reports indicate that Canada's crops are as follows: Wheat, 115,651,000 bushels; oats, 267,600,000; barley, 50,723,000; rye, 1,889,000; buckwheat, 7,365,000; potatoes, 73,228,000; hay, 11,642,000 tons.

....Having been nominated for Congress by the Republicans of the Twenty-first District of New York, Hamilton Fish has resigned the office of Assistant Treasurer of the United States at New York City, to which he was appointed in 1903. Speaking of Mr. Fish's service in this important position, President Roosevelt said last week: "He has been one of the most efficient men who ever held office under the Government. The reforms which he has instituted were brought about in a modest, quiet way, and altho they have saved the Government much time and money, little has been heard of them." Such is the testimony also of the many financiers who have had business relations with the New York Sub-Treasury and have been familiar with the recent management of it. A Republican Representative was elected in the Twenty-first District two years ago. For several years Mr. Fish (a son of President Grant's Secretary of State) was a prominent member of the New York Legislature.

The Independent

VOL. LXV NEW YORK, THURSDAY, OCTOBER 29, 1908 No. 3126

Survey of the World

Closing Days of the Campaign

The campaign orators were very busy last week. Mr. Taft and Mr. Bryan were hurrying from one State to another, but both were on their way to New York, where, during the present week, much work is to be done. Every member of the Cabinet is to be in the field. While the leading candidates have been repeating their arguments concerning prominent issues and propositions, there is now a quite noticeable tendency to speak of the relation of these issues and of the election to the condition of business, and to emphasize that which appeals to organized labor. Mr. Bryan now openly charges that the Republicans with a large corruption fund are "preparing to purchase the election." He has also been talking about the panic, ascribing it in part to the tariff and so dealing with it as to permit the inference that the Republican party and the Republican Government were responsible for it. Whereupon his Republican critics have quoted what he said in a public address one year ago:

"I notice that one of the officers of a bank that closed its doors yesterday attributed it to the President. That is not the reason. Don't blame the sheriff, but blame the horse thief. Don't blame the officials who make and enforce the laws, but blame those who make the laws necessary. Blame the unscrupulous financiers who have exploited a whole nation."

One of the delegates to the Democratic national convention wrote in August to Count Tolstoi, asking for his opinion about Mr. Bryan's candidacy, and has received the following reply:

"I can sincerely say that I wish Mr. Bryan success in his candidature to the Presidency of the United States. From my standpoint, repudiating as it does all coercive government, I naturally cannot acquiesce with the position of President of a republic, but since such functions still exist it is obviously best that they should be occupied by individuals worthy of confidence. Mr. Bryan I greatly respect and sympathize with and know that the basis of his activity is kindred to mine in his sympathy with the interests of the working masses, his anti-militarism and his recognition of the fallacies produced by capitalism. I do not know, but hope that Mr. Bryan will stand for land reform according to the single tax system of Henry George, which I regard as being at the present time of the most insistent necessity and which every progressive reformer should place to the fore."

The Rev. Joseph Casey, chaplain of the First Infantry, U. S. A., is now in St. Louis, having recently returned from the Philippines. He reports that Archbishop Harty said to him privately in Manila that while he was convinced that Mr. Bryan was a very able and good man, still he prayed earnestly for the election of Mr. Taft, because the latter knew the needs of the islands "and would help us in every way possible," while Mr. Bryan, "if he should live up to the Democratic declaration, would merely produce chaos, unrest and most likely a terrible insurrection, as our ordinary Filipinos, while good religious people, are not ready yet to govern themselves and will not be for many years."——Senator La Follette, in his speeches for Mr. Taft, says he hopes Speaker Cannon will be defeated.——Chairman Hitchcock claims 314 electoral votes for Mr. Taft; Chairman Mack claims 301 for Mr. Bryan. Prominent journals of an independent type publish elaborate forecasts that give Mr. Taft about 280 votes, or 40 more than a majority.

Mr. Roosevelt on Boycotts

In a published letter of about 4,000 words, addrest to Senator Knox, on the 21st, Mr. Roosevelt asked Mr. Bryan to say whether he approved the assertion of Mr. Gompers that the Dem-

ocratic party and its candidates had promised to give him the "remedy" he had sought in Congress. Having quoted Mr. Gompers's published statement, he showed that Mr. Gompers referred to the Federation's bill introduced in Congress. This bill, Mr. Roosevelt continued, in one part provided that the right to carry on a lawful business in a lawful way should no longer be treated as a property right, to be protected by the equity courts, and in another part would legalize the blacklist and secondary or sympathetic boycott, "two of the most cruel forms of oppression devised by the wit of man for the infliction of suffering on his weaker fellows." The secondary boycott had been denounced by the Anthracite Strike Commission. He asked that Mr. Bryan should say frankly whether he confirmed Mr. Gompers's assertion concerning his approval of these propositions, which he (Mr. Roosevelt) denounced as wicked:

"I will do everything in my power for the wageworkers of the country *except to do what is wrong*. I will do wrong for no man; and with all the force in my power I solemnly warn the laboring men of this country that any public man who advocates doing wrong in their interest cannot be trusted by them; and this whether his promise to do wrong is given knowing that it is wrong or because of a levity and lack of consideration which make him willing to promise anything without counting the cost if thereby support at the moment is to be purchased."

But, he added, both Mr. Bryan and Mr. Gompers were seeking to delude their followers by their promise, for such a law would be pronounced unconstitutional by a unanimous Supreme Court, "unless indeed Mr. Bryan were able to pack this court with men appointed for the special purpose of declaring it constitutional." He did not believe the workingmen of America would "permit Mr. Gompers to deliver them like chattels to Mr. Bryan in exchange for a sham."——On the 25th there was published a letter of about 3,500 words, in which Mr. Roosevelt, replying to an inquiry from P. H. Grace, a member of the Brotherhood of Railway Trainmen, reviewed the history of Mr. Taft's relation to organized labor, both as a judge and as an executive officer, and also the labor record of the present Administration, which had already begun the work, he asserted, of doing for the wage earner what had been done for the farmer by the Department of Agriculture. Mr. Taft would continue this work. "If Mr. Taft is not elected," he said in conclusion, "a period of industrial chaos and business bad times will ensue, in which the workingmen will suffer far more than any other class."

More Standard Oil Letters

At a campaign meeting in New York City, on the 24th, Mr. Hearst read several additional letters alleged to have been written by John D. Archbold, vice-president of the Standard Oil Company. Two of them relate to the appointment of judges in Pennsylvania, and are addressed to Governor William A. Stone, at Harrisburg. The first is as follows:

"No. 26 Broadway, Sept. 5th, 1900.

"Hon. William A. Stone, Harrisburg, Pa.:

"My Dear Governor—Will you permit me to say that if it seems consistent for you to appoint Judge John Henderson, of Meadville, Pa., to the vacancy on the Supreme Bench caused by the death of Judge Green, it will be a matter of intense personal satisfaction to me. I am sure I need not occupy your time with any argument as to Judge Henderson's fitness, either as to character or legal qualification. With high regard,

"I am very truly yours,

"Jno. D. Archbold."

Mr. Hearst remarked that Judge Henderson was at the present time a judge of the Superior Court in Pennsylvania. In the second letter, dated December 5th, 1902, Mr. Archbold urged the appointment of Judge Morrison to the Supreme Court:

"My Dear Governor—I am sure you will pardon any seeming presumption on my part in writing you on a subject in which, both personally and on behalf of my company, I am greatly interested. It is to urge the appointment, if at all consistent, of Judge Morrison, of McKean, to the Supreme Court bench, vice Mitchell, deceased. Judge Morrison's character for ability and integrity needs no word at my hands, but aside from these great considerations, his familiarity with all that pertains to the great industries of oil and gas in the important relation they bear to the interests of the western part of the State, make him especially desirable as a member of the court from that section. Hoping that it may prove possible for you to favorably consider Judge

Morrison's appointment, I am, with very high regard, sincerely yours."

"I feel at liberty to inform the public," said Mr. Hearst, "that Judge Morrison is today a member of the Superior bench of Pennsylvania, and that he reached that high position either thru his 'ability and integrity' or thru his 'familiarity with gas and oil.'" The remaining letters and one telegram were addrest to John P. Elkin, then Attorney-General of Pennsylvania and now a Justice of the Supreme Court of that State. The first, dated September 28th, 1899, is as follows:

"Hon. John P. Elkin, Attorney-General, Harrisburg, Pa.:

"My Dear Mr. Elkin—Responding to your favor of September 25th, it gives me pleasure to inclose you herewith letter of introduction from Mr. William Rockefeller and Mr. J. W. Weaver to Mr. H. Mc.K. Twombly. We hope the letter will be of service."

Then there are two letters and a telegram concerning the transmission of $15,000. First in respect to dates is the following of February 5th, 1900:

"My Dear General—In accordance with the request in your telegram of today, I now beg to inclose you certificate of deposit to your favor for $10,000, kind acknowledgment of which will oblige yours very truly."

A few weeks later, on March 15th, 1900, Mr. Archbold sent to Attorney-General Elkin a telegram, saying "Telegram received. Will do as requested." The following letter of the same date, from Mr. Archbold to the Attorney-General, was read by Mr. Hearst:

"My Dear General—In accordance with your telegraphic request of to-day, I beg to inclose you certificate of deposit to your favor for $5,000, in fulfilment of our understanding."

In another letter, dated May 9th, 1901, and addrest to "the Hon. John P. Elkin, Attorney-General, Harrisburg," the desire was exprest that a pending bill should be "killed":

"My Dear General—I inclose copy of a measure pending, I am not sure whether in the House or Senate, being an act to amend an existing statute, as stated. For reasons which seem to us potent we would greatly like to have this proposed amendment killed. Won't you kindly tell me about it and advise me what you think the chances are?"

In his speech, Mr. Hearst asserted that "the Standard Oil Company had been largely instrumental in deciding every national election for the past twenty years." Mr. Cleveland, he said, had been supported by the company "thru such of its important representatives as the Paynes, William C. Whitney and Calvin S. Brice." After the Cleveland *régime* the company had affiliated with Mr. Hanna. When Mr. Hanna died, the company "regarded Mr. Roosevelt with considerable distrust and dismay," and, after prosecution and the imposition of a fine of $29,000,000, the company had gone "over into the Democratic party promptly, enthusiastically and unanimously," making Haskell chairman of the platform committee and treasurer of the campaign fund. The Independence party demanded the election of Senators and judges by the people. The letters he had given to the public concerning Senators and judges, he argued, showed that these officers ought to be chosen in that way:

"In the early eighties a rival oil refinery to the Standard Oil was blown up and destroyed by agents of the Standard Oil. The Matthews Oil Refinery secured a judgment of $270,000 against the Standard Oil Company and secured indictments against seven Standard Oil magnates and their tools. One indictment was against Rogers himself. Judge Haight, of this State, dismissed all the indictments but two, and fined the two criminals held only $250. Shortly after that Judge Haight was appointed by David Bennett Hill to the Court of Appeals. Now, in this campaign Judge Haight is placed upon both the Democratic and Republican tickets. I do not know whether so much consideration is shown Judge Haight by a Democratic Governor and by a Democratic party and also by the Republican party because of his 'legal qualifications' or because of his 'familiarity with gas and oil.' I do thank heaven that there is a new party to preserve for the people their freedom of choice."

Some days ago Mr. Hearst read a letter, dated October 31, 1904, in which John P. Elkin asked Mr. Archbold to exert the influence of Standard Oil interests for the regular Republican ticket in Lancaster County, Pa., and against an independent movement there.

Cleveland's Street Railways

At the referendum election in Cleveland, O., on the 22d, to decide whether the agreements made for the operation of the street railway system upon a basis of three-cent fares should be ratified by the people, the vote was in the

negative by a majority of 605 in a total of about 76,000. This defeat of Mayor Tom L. Johnson was unexpected, in view of his recent election by a majority of about 9,000. It is said to have been due in part to dissatisfaction with the railway service during the last five months (with fares at three cents), and to the influence of the old railway company's employees, who went on strike soon after the system was taken over by the municipal company, insisting that the promise of the old company to increase wages should be kept. It is asserted that it became necessary to curtail the service in order that the financial requirements of the settlement made some time ago might be met upon the basis of lower fares. The effect of the election upon the situation is not yet seen clearly. Mayor Johnson says that the railway property will be returned to the old company only in obedience to orders from the courts. He asks for a recount, and it is admitted that many errors were made in the places where voting machines were used.

The Reelfoot Lake Assassins

Much excitement has been caused in Tennessee and adjoining States by the murder of Captain Quentin Rankin, a prominent lawyer, of Trenton, and an attempt to murder Colonel R. Z. Taylor, his partner, by masked night-riders. For some time there have been quarrels about fishing rights at Reelfoot Lake, in the northwest corner of Tennessee. The two men had organized a company which bought the property and leased the fishing rights to a sportsmen's club. For a great many years the natives living in the vicinity had freely fished in the lake. When they were forbidden by the company and the courts to do this they sought revenge. A judge who made a decision hostile to them has narrowly escaped assassination and is constantly under guard. The two lawyers went to the lake on business connected with the controversy, and were in a hotel at a place called Walnut Log. Late at night, on the 20th, they were taken from this hotel by a band of twenty-five masked riders, bound to horses and borne away into the forest. When they reached a place by the side of a stream flowing into the lake, Rankin was hanged to a tree and his body was riddled with bullets. He had been a captain in the war with Spain. Taylor then broke away from his captors and plunged into the stream. Almost miraculously he escaped injury, partly by taking shelter behind a floating log and partly by feigning death. The riders shot at him many times, but he was favored by the darkness. In the morning he sought a place of safety, but was in the swamps thirty-six hours before he found any one whom he could trust. He is nearly seventy years old, a millionaire and a relative of Senator Taylor, whose daughter is his son's wife. Governor Patterson offered a reward of $10,000 (which was increased to $20,000 by the people of Trenton) and at once went to the lake, declaring that he would use all his power to detect and punish the guilty. He summoned five companies of militia and declared martial law for the district. At last reports more than 1,000 men (sheriffs' posses included) were hunting for the assassins. The Governor has been threatened and jeered at by the natives, and he is always accompanied by an armed guard. He proposes a conference of Governors to devise methods for stamping out "the growing evil" of night-riding. Several arrests were made at the end of last week, and it is reported that confessions have given information which will lead to the capture and conviction of all the assassins. It is said that they belong to a local oath-bound organization which has 800 members.

Philippine Islands

A typhoon on the 12th caused great loss of life and property in the provinces of Cagayan and Abra. Heavy rains flooded the rivers, and hundreds of dwelling houses were swept away. At Aparri 300 persons were drowned. At great risk and by heroic exertion one hundred who were in imminent danger were saved by Lieutenant Robert Clark, Lieutenant Treadway and Postmaster Foss. In Abra 269 were drowned. The damage to the tobacco crop is estimated to be several million pesos.——At Manila, the cholera epidemic has almost been suppressed. Only one new case was reported on the 24th, and only one had been found on the 23d.

The Mohonk Conference

The Lake Mohonk Conference met last week for three days, and an unusual number of visitors and experts were present to consider the needs of the Indians and of our dependencies. The platform adopted makes the following recommendations:

"I. Observing the confusion which comes from the complexity of the administration, particularly in Alaska, and the difficulty in securing prompt administration of justice, we ask Congress to consider whether some more united and responsible form of administration may not be devised; and particularly we ask that laws be enacted and executed which by imprisoning offenders shall prevent the sale of intoxicating liquors to the natives. We also ask that increased appropriations for the education of Alaskan youth be made.

"II. The additional appropriation needed to purchase small homesteads for the rest of the wronged, dispossessed and homeless Indians of California, Congress should make at this coming session, to complete the work of justice and mercy so well begun by the Government last year.

"III. The allotting their lands to Navajo Indians who have for years lived on the public domain, should be completed under Section 4 of the General Severalty act; and where the title to land and water, which due care of its wards by the Government as guardian would have secured to such Indians, has been lost to them and taken up by white men, we believe that the Government should by law provide other land and water rights for such dispossessed Navajos.

"IV. We warmly commend the policy of the Indian Bureau, which puts emphasis on the education of Indian youth near their own homes, and the closing of the non-reservation schools, or the modifying of the courses of study and methods of administration so as to admit white pupils and ultimately bring these institutions under the control of the States in which they are located. We also urge the enlargement of the system of day schools for the people.

"V. For Porto Rico we repeat the demand of justice that the rights of full citizenship be given to all its people. We further ask the immediate extension of the forestry service to Porto Rico, and the consideration of such aid or direction as may wisely be given for public projects of irrigation and for the sanitary service; also that consideration be given by Congress to the encouragement of the coffee industry.

"VI. For the Philippine Islands we repeat and emphasize the urgent request of the Philippine Commission and the Secretary of War that tariff relief be given to them such as has been given to Porto Rico. We protest that the refusal to do this is selfish and unjust.

"VII. Hawaii has trustfully sought the rule and protection of the United States. Her peculiar and most important commercial position requires of us special and earnest consideration. We ask of Congress particular study of those conditions which require exceptional legislation in her behalf, particularly in view of the disadvantages which the Coastwise Shipping act imposes on her in restricting passenger travel. In view, also, of the peculiar population of Hawaii, we desire that the attention of the Commission on Immigration be given to the special conditions which now limit European immigration.

"VIII. In view of the coming international congress at Shanghai to control the traffic in opium, we urge that Congress enact a drastic law which shall forbid the production, manufacture, importation, sale or distribution of opium in any of its forms in this country or in any of its dependencies except as to be used under strict medical direction."

The Balkan Danger

There seems as yet to be no assurance that there will be a conference of the Powers over the Turkish situation, altho M. Isvalsky, the Russian Foreign Minister, still seems hopeful. Even Turkey, which at first demanded the conference, seems less eager for it, and has been negotiating with Bulgaria for a settlement of the difficulty, which concerns chiefly the payment of indemnity for the loss of the Rumelian railway. At first Bulgaria said she would rather give blood than gold, but of late she is less determined, and may settle financially if a favorable loan can be made. This follows the threat of Russia that she would send an army into Bulgaria to prevent that country from taking any territorial advantage from her independence. The Bulgarian envoys have returned to Sofia, but negotiations continue. There has been great excitement in Servia and Montenegro over the detention in Austria of General Vukotitch, a special envoy of Montenegro to Servia; but Austria has offered an apology. There has been issued in Austria a regulation forbidding the transportation thru the Empire of all military stores for Servia, Montenegro, Bosnia or Herzegovina. This includes beasts of burden and even carrier pigeons. Austria has notified the Powers of her annexation of Bosnia and Herzegovina, but the French Government has replied that it cannot recognize this annexation until it has been ratified by the Powers that took part in the Berlin Treaty. Austria is still the stumbling-block, and she refuses to assume in behalf of Bosnia and Herzegovina any part of the Turkish debt. The annual payment of $600,000 for Eastern

Rumelia is not a real tribute, but is paid through the Ottoman Bank to holders of Turkish bonds, and it represents Eastern Rumelia's share of the Turkish debt when it was a part of the Ottoman Empire. But when Eastern Rumelia was added to Bulgaria the change, it is claimed, did not affect the obligation. A curious phase of the Eastern trouble appears in the request of Japan that she be informed if any proposal is made to allow Russia egress by the Dardanelles from the Black Sea in time of peace, but to close it in case of war. It is easy to see that were Japan and Russia again at war such a proposal would be a serious disadvantage to Japan. M. Isvalsky, the Russian Minister of Foreign Affairs, is in Berlin at last, after concluding his negotiations with Great Britain and France. On his success depends the hope of a conference of the Powers, but no conclusion is as yet reported. There is much feeling exprest in Berlin against Great Britain, it being charged that Great Britain has attempted at Constantinople o obstruct the negotiations for a settlement between Austria and Turkey. On the other hand, the Young Turks lay most of the misfortunes of the country to German intrigue and are very bitter against that country. In Bosnia and Herzegovina the people are likely to accept the inevitable annexation, altho it is not what the most of them wished. The Catholics are pleased, but the Slavs, who belong to the Greek Church, desired to be united with Servia and Montenegro. However, they hope that Austria will show wisdom and not attempt to Germanize the country. Indeed, the accession of two million Slavs will strengthen in the Empire the Slav element, which will be larger than the Magyar, and may not tend to political peace in an empire of such discordant elements and languages. One recalls the conflict between the Germans of Austria and the Hungarians over the subject of the use of German in the army, and the difficulty of maintaining the union between Austria and Hungary. The Servian Crown Prince has gone with a political deputation to St. Petersburg. He has lately been talking in a very warlike tone, and it may be that his visit is meant chiefly to satisfy the radical party in Servia in view of the necessary submission of Servia to the *fait accompli.* M. Isvalsky in an interview at Berlin said that Austria's action was a blow at vital Slav interests, and that the indignation of the Russian press was only natural. There is a good deal of anxiety as to the ability of the Young Turk party to retain control. They propose to remove the Sultan's bodyguard of six thousand Albanian soldiers and replace them by Anatolian soldiers. The old palace clique do their best to show that the new Government under Kiamil Pasha is weak, and it seems to be a fact that, with the return of many who had been exiled and also of other prisoners, the streets are less safe, and acts of violence are numerous.——While the nationalists, or constitutionalists, in Persia have thus far succeeded in holding Tabriz against the reactionaries, and have respected the foreign consulates and residences, they are greatly disturbed at the news that Russia has sent into Northern Persia a strong military force of Cossacks, as it is a violation of territorial integrity; and they declare in an address to the foreign representatives in Teheran that if steps are not taken to stop this incursion it may lead to a general revolution.

In Germany

On October 22d Kaiser William's fourth son, Prince August Wilhelm, married the Princess Alexandra, of Schleswig-Holstein. Each of them is twenty-one years old, the princess three months the younger. After the wedding at Potsdam, the Chief Lady of the Bedchamber made the usual distribution of pieces of the bride's silk garters. The German papers say that the bride is to have $5,000 as pin money, and the Prince is to have an establishment of his own. ——In opening the Prussian Diet the Kaiser indicated the purpose of the Government to introduce a bill for electoral reform. The measure will in some degree modify the three-class system of voting which has so long given the power into the hands of the wealthy class and has occasioned riots in Berlin.—— The news has leaked out thru the *Vorwaerts,* the Socialist paper, that in view of the necessity of raising taxes for military purposes, the Government proposes to tax artificial light, to the amount of 5 per cent., on payments to gas and electric light companies, with a tax of from

2 to 12 cents on every electric and gas burner. The publication has raised a storm of protest, and is denounced as reactionary and intolerable, and also as unpatriotic, as it will drive people to burn foreign petroleum. This has caused the committee to modify the bill.——At the festivities connected with the marriage of Prince August Wilhelm, the Kaiser took pains to show especial attention to Dr. Hill, the American Ambassador, as if to show that the reports of his objection to his appointment had no foundation. At the theater in the evening Ambassador Hill and American ladies and gentlemen were notable for the simple evening dress, with no decorations.——Count Zeppelin's new dirigible balloon made a remarkably successful ascent on Friday last from Lake Constance. It ascended to the hight of 1,000 feet, carrying ten passengers, and made an average speed of 29 miles an hour, with various evolutions. It is somewhat smaller than the one which was destroyed, and the motors are of 84 instead of 110 horsepower. In many of its parts wood is substituted for aluminum. The Parseval rigid military balloon burst when a mile in the air and fell rapidly for a while, and then more slowly, and landed gently in a tree.——Nathan Straus, of this city, has presented a pasteurization plant to the town of Eberswalde, near Berlin, which was installed on the Empress's birthday. This follows the demonstration of its value at Heidelberg and Sandhausen. In these towns the infant mortality has been reduced by one-third, and it is hoped that this will be the case in Eberswalde, where the Kaiser has his forestry school, and where the infant mortality has been very high.

Various Items

By a vote of 568 to 1 the French Chamber of Deputies has past a resolution ascribing the disaster of the explosion on the battleship "Jena" on March 12th, 1907, to the negligence of the Ministry of the Marine. As the result the Minister of Marine, M. Thomson, resigned, and has been replaced by M. Alfred Picard. M. Picard was French commissioner to the St. Louis Exposition, and on his return published much on American methods. Prime Minister Clemenceau asked if the censure of the Ministry of the Marine included the Government, and he was supported by a vote of 345 to 122.——France has accepted an offer from Germany to refer to The Hague the question between the two Governments over the arrest at Casablanca of deserters alleged to be under the protection of Germany.——Mulai Hafid is to be recognized as Sultan of Morocco on condition that he carries out the international obligations provided for by treaties and imposed on his deposed predecessor by the Algeciras Convention. France and Spain, which have the protection of Morocco, have agreed on the terms of recognition, and presented them to all the Powers which took part in the Algeciras Convention, including the United States.——The Russian authorities have made public the official statistics of the executions in Russia during 1907 on sentences imposed by the military district courts. They amount to 627, of which 84 were soldiers and 543 civilians. The numbers are considerably below the unofficial figures based on condemnations reported in the press.——British friends have raised by subscription and loan the $25,000 needed for bail demanded by the Russian authorities for the release of Tchaikowsky, who has been in prison eleven months.——The Czar has summoned Count Witte from Switzerland to undertake an important political and financial mission. There is a report that he will be called back to the Cabinet.——The Chinese reform association known as the Cheng Wen Society by its activity has again provoked the hostility of the Dowager Empress. The leaders mostly live out of the country, for the sake of safety, many of them in Singapore. The leaders lately sent a letter to the Empress asking her to resign all power to the young Emperor, to dismiss her Kitchen Cabinet and move the capital to Nanking, change the Manchurian name of the dynasty, and hasten the constitution. The Empress immediately ordered all meetings of the society suppressed and the leaders to be arrested.——The Chinese boycott against the Hamburg-American steamship line is spreading to Kobe in Japan and to Hongkong; but the Chinese Governor of Shantung province is trying to make peace with the German authorities in Shantung.

The New Turkish Parliament

BY THE REV. FRANKLIN E. HOSKINS, D.D.

THE Turkish Parliament, when it comes into existence about November 1st, 1908, will consist of a Senate and a Chamber of Deputies. The Senators with their President are to be nominated and appointed by the Sultan himself. Each Senator must be at least forty years of age. He must have qualities that commend him to the confidence of the Sultan and must have rendered services to the Government in some capacity or other. He must know the Turkish language and his appointment is for life. The number of Senators is limited by the arbitrary rule that keeps it below one-third of the number of Deputies. Under present conditions the Senate will contain less than eighty-three members. According to the Constitution the Senators are to have 10,000 piasters monthly ($444.44; sterling, £108 10 0).

The Chamber of Deputies will be comprised of members elected by the people in the ratio of one member for every fifty thousand males of the population, the Turkish system counting all those electors above the age of sixteen. The mode of election is in a confused state, because only one election occurred thirty-one years ago, and the Chamber never had an opportunity to revise or remedy the defects of the temporary rules governing that election. Each Deputy must be at least twenty-five years of age, must have a record clear of crime and all Government punishments, and must be a property-holder. If holding any other Government office he must at once resign on accepting election as a Deputy. The number of Deputies in 1877 was limited arbitrarily to 120, and they were chosen from the members of the administrative councils which had already been elected by the head men or sheikhs of the various village organizations. These sheikhs correspond largely to the smallest local political bosses, and gain adherents to their views or candidates by every means possible except the ballot box. It is almost a necessity that the members of the new chamber should be chosen once again in this crude and irregular way. At the time of past elections these sheikhs or head men have gathered in the local government centers, and for a longer or shorter period have indulged in all the secret chicaneries, combinations, briberies, sale and purchase of votes that disgrace and defeat all that is aimed at in manhood suffrage and an electoral system. It is to be hoped that the new *régime* will even this year issue regulations that will make the coming elections worthy of the changed conditions of the empire.

The same confusion and uncertainty will mark the relations of the two bodies of legislators, because thirty-one years ago their functions were poorly defined, and no opportunity was given to see how they would work together or to remedy suspected and known defects in the Constitution.

But just at present public attention will again be directed to the remarkable conglomeration of races and languages and religions assembled within the Ottoman Empire, exceeding in picturesqueness and perhaps difficulties all the other nations of Europe. The newspapers of the empire, while realizing these facts, express great confidence in the sudden amalgamation of these various elements thru the fusing power of the Constitution, which proclaims liberty and equality to all and unites them under the all-embracing term of "Ottomans." Time alone will show how far the new compound is a stable one in which Moslem and Christian and Jew, Arab and Turk and Arnaout and Circassian and Kurd and Serb, mingle in such conflicting and unequal proportions.

In the absence of anything like a complete census of the empire it will be interesting to quote from a reputable Arabic journal what the writer claims to be an accurate forecast of the lower house of the new Parliament, gathered from the most reliable and only available Government records. On the basis of one Deputy for every 50,000 of the male Ottomans over sixteen years of age, there

will be 250 members in the Chamber of Deputies, because the Government recognizes twelve and one-half millions of electors and divides them as follows:

Arabs (Bedouin)	5,000,000
Turks	2,850,000
Bulgarians and Greeks	1,050,000
Arnaouts	650,000
Bosnians and Serbs	700,000
Kurds	650,000
Greek Orthodox Christians	500,000
Armenians	450,000
Jews	350,000
Protestants	100,000
Circassians	100,000
Jenkana	100,000
	12,500,000

A Parliament chosen from such a constituency will be picturesque, poetic, possibly fiery, and, when in actual working order, unique among the parliaments of the world. There will be such a diversity of mother tongue, of religious sentiment, of ancestral tradition, of inherited racial characteristics, of cast and color of countenance, of personal habits, of garb and of weapons that will for decades save its proceedings from falling to the level of those more ordinary gatherings of legislators, where plainer men wrestle hand to hand with the hard, keen issues of modern civilized life. Future parliamentary historians will have a spicy collection of facts when they attempt to collate the early beginnings of parliamentary life in Russia and in Persia, and not least of all, in the Ottoman Empire.

BEIRUT, SYRIA.

Giuseppe Mazzini

BY GWILYM O. GRIFFITH

(Born 1805; began his career as a revolutionist 1830; fled from Rome on the downfall of the Republic 1850; died March 10, 1872.)

I. (GENOA, 1830.)

WHITHER, young Pilgrim with eye so bright—
Whither art bound, for skies are gray,
And storm-fiends lurk for the coming day,
And evil birds mutter in their flight?
Whither art bound? for Italy sleeps,
And the Shadow of Doom thru the gray mist creeps,
And no one sows and no one reaps,
Save Death and the tyrants; then, Pilgrim, say
Whither art bound, with eye so bright?
"An angel beckoned from yonder hight."

II. (SWITZERLAND, 1850.)

Whither, O Pilgrim with eye of flame,
And garments marred by fire and flood,
And face so white, and red with blood,
And weary feet so bruised and lame?
The scorners mock thee in the way:
"The maniac seeks with stars to play,
And chaseth them," the wise men say
(Lying at ease, as wise men should)
Then whither, Pilgrim, with eye of flame?
"The angel called me by my name."

III. (PISA, MARCH 14, 1872.)

Whither, O Pilgrim, so cold and still,
With silent lips and closed eyes,
Beneath the azure Tuscan skies?
The people bear thee up the hill,
None now to mock thee, but to weep,
And love thee in thy wakeless sleep,
And o'er thee their vain vigil keep—
Thee—Martyr of the Great Emprise.
Ah, *whither*, Pilgrim, so cold and still?
The angel smiled, upon the hill.

PRINCETON, N. J.

Doing vs. Owning

BY JAMES MACKAYE

Author of "The Economy of Happiness," Etc.

THERE is apparent at the present time a widespread opposition to the money power among the people of the western world, an opposition nowhere more pronounced than in the United States. There is also apparent thruout the same area a widespread interest in socialism; and between this common opposition to the money power and this common interest in socialism there is a very manifest connection. Indeed, almost any criticism of capitalistic institutions or activities is today likely to be labeled "socialistic," yet the people's understanding of the institution which is really oppressing them, and of the aim of socialism in dealing with it, seems about equally vague. To attempt to clear away the confusion on this subject is the object of the present article.

Socialism first diagnoses the trouble with the present order of things, and, second, proposes a remedy. The diagnosis stated in its simplicity is as follows:

Co-extensive with the capitalistic system under which we of the western world live there are two* legitimate modes of acquiring wealth: (1) By service. (2) By ownership. The reward for service is called wages or salary, and he who lives by service is called a wage-earner. The reward for ownership is called interest, dividends or rent, and he who lives by ownership is called a capitalist, the name being derived from the term capital, which means wealth used in the production of wealth. The compensation of the wage-earner is for service; the compensation of the capitalist is for proprietorship. The first earns his own reward; the second lets his capital earn it for him. The one does something for a living; the other owns something for a living.

Now, while it is true that the normal and legitimate modes of acquiring wealth under capitalism can thus be divided into two categories, it is not true that the individuals who acquire it can be so divided. While there is a class which lives by ownership alone and a much larger class which lives by service alone, there is a third class, larger than the first and smaller than the second, which lives partly by ownership and partly by service. When a man holds legal title to wealth-producing property he can require the wealth producer who employs that property as a means of production to "divide up" the product of his labor with him. Thus the existence of individual capitalists means that one class of society may, in whole or in part, live upon the labor of another class, title to so do being based, not on any physical or mental incapacity, but merely on a legal relationship to a certain kind of property.

It is quite generally supposed that socialistic criticism of capitalistic society is founded upon this division of the community into classes between which, and particularly between the smallest and largest of which, there is an antagonism of interest. But this is a mistake. Socialistic criticism goes deeper than such a distinction. It is a criticism, not of men or classes of men, but of institutions, and is founded upon the dual mode of acquiring wealth, of which this class division is one symptom.

If we agree to group interest, dividends and rent under the collective term "profit," and to call the institution by virtue of which ownership can be used as a means of acquiring wealth the "institution of profit," then socialism's opposition to capitalism may be very easily exprest. It is simply opposition to the institution of profit. Socialism opposes that institution on the same ground that it opposes the institutions of slavery, of serfdom or of aristocracy—because it is an institution which recognizes something other than service as being entitled to compensation. Socialism holds that among able-bodied and minded adults service alone is entitled to reward, and therefore that the institution of profit should be abolished. It puts its finger squarely upon

*Acquisition by inheritance or other form of gift is here ignored as not essential to an understanding of the subject.

profit seeking as the root of all economic evil—as the underlying cause of the manifold ills which afflict the industrial word, and it calls upon all reasonable and just men to recognize and oppose the cause rather than the consequence—the seat of the trouble and not merely the symptom, holding that all efforts directed against mere individuals or corporations will in the end prove futile, for the simple reason that we cannot abolish an effect without abolishing its cause.

Thus the common charge that socialism is the enemy of property is seen to be baseless. It is the institution of profit, not the institution of property, which it opposes. It is not opposed to property in any form. It is simply opposed to the individual proprietorship of that particular kind of property known as capital, because it is upon such proprietorship that the institution of profit rests.

So much for diagnosis. Now as to remedy. There is no use in proposing the abolition of an institution unless it is possible to substitute some alternative institution. We cannot say of any political practice either that it is intrinsically bad or intrinsically good. All we can say is that it is better or worse than some alternative. Hence if socialism would abolish the institution of profit it must be prepared to propose an alternative institution which is superior. And this it is amply able to do.

The simple, reasonable and well-known remedy of socialism is to abolish private, individualistic ownership of capital, and substitute for it public, collective ownership. If capital is to continue to exist among us some person or aggregate of persons must, either directly or indirectly, exercise that control of it which constitutes ownership. In the absence of a reign of universal philanthropy private ownership is impossible without profit. Therefore, unless we are prepared to endorse a system wherein one class of the population habitually lives upon the labor of another we must resort to public ownership.

Under public ownership industry is carried on for use and not for profit, just as the post office is today. All reward is for service, all commodities are sold at cost, and when the socialistic system has attained complete maturity private capitalists will be extinct. All able-bodied adults will share in the work of the world, employing brain or brawn to repay society the service society does them.

Such a remedy obviously conforms to the requirements of the diagnosis. It is a cure which strikes at the cause of the disease, and it is the only cure thus far proposed which does. In the great struggle which is now on between those who would preserve and those who would destroy the institution of profit, between those who would reward men for ownership and those who would not, the socialists are explicitly committed. They recognize that the working or doing class is indispensable, but that the capitalist or profit-taking class is not—that every one cannot live by ownership, tho every one can live by service. In short, they clearly perceive that the great struggle of our time is simply one of doing versus owning, and that if justice is to reign in the world those who own something for a living must everywhere give place to those who do something for a living.

North Raynham, Mass.

October

BY JULIA B. CADY

Glory of bush, glory of tree,
Glory of sunset sky!
Crimson and purple and gold I see
By the old stone walls banked high;
And the swallows dip and circle, and rise
Into the gold of the western skies!

Ripeness of vineyard, orchard and field,
Ripeness of all the earth!
This is the time of the harvest yield,
Of the husking-bee with its mirth;
And the swallows dip and circle, and rise
Into the gold of the western skies!

Alpine-on-Hudson, N. J.

MME. CECILE CHAMINADE.

Chaminade

BY WILLIAM HENRY HUMISTON

[Mme. Chaminade has just arrived in the United States for the first time and will make a concert tour of the country. As she is undoubtedly the greatest woman musical composer, we are glad to give our readers the following sketch of her from the pen of one of the musical critics of the *Evening Post*.—EDITOR.]

CAN a woman compose? Why not? Can a woman write an epic like the "Iliad" or a tragedy like "Hamlet"? So far she has not done so, tho there has lived a Sappho. Neither has she written a music drama like "Tristan und Isolde," nor a symphony like Beethoven's "Ninth." But he would be a rash man who would say she cannot. The single fact remains that she has not up to the present time produced such masterpieces.

Among the women who have composed, the one who has accomplished the most is undoubtedly Madame Cécile Chaminade—the modern St. Cecilia in fact as well as in name. Not as profound or erudite as some of her sisters, perhaps, but nevertheless uniting melodic graces with harmonic charm as few composers of either sex have done, she merits recognition as one of those whose best efforts are devoted to uplifting the standard of our noble art.

Madame Cécile Louise Stéphanie Chaminade-Carbonnel is the widow of a music publisher who died a year or two ago. She was born in Paris August 8, 1861, and (of course!) showed her talent at an early age. She soon attracted the attention of Bizet, who gave her much encouragement in her musical aspirations. So she began in earnest the study of the piano with Le Couppey; composition in all its branches with Augustin Savard, and studied ensemble playing

with Marsick, Delsarte and Godard, making her formal début as a pianist at the age of eighteen.

Her work in composition soon began to attract attention. Ambroise Thomas was so imprest by her work that he said of her: "*Ce n'est pas une femme qui compose—est un compositeur!*" This epigram has become famous and justly so, as it is the truth. There are, however, distinctly feminine traits about Chaminade's music, which are decidedly to its advantage. There is one word which sums it all up, a word which is far oftener on the lips of a Frenchman than an English-speaking person, and possibly means more in that language: "*La musique de Chaminade est—charmante!*" There is a feminine charm, if you will. about Chaminade's music that makes it individual—I know of no other woman's music which has just that quality, and, of course, no mere man *could* possess that identical quality to which I refer.

Speak sneeringly of it as "only salon music" if you will, what does that prove? Grieg's beautiful sonata for 'cello and piano was recently referred to by a leading critic as "dull"—but does that prove anything except the pedantry and obtuseness of the critic? There are people who prefer cabbages to flowers.

In some recent interviews Madame Chaminade has indicated her preferences among the great composers. This is an interesting sidelight on her musical personality. One is not surprised at such a distinctly feminine temperament admiring the virility of Schumann. In her judgment of living French composers Madame Chaminade shows a rare critical faculty. With the tendencies of the neo-French school to seek originality by means of the scale of whole tones and the chord of the augmented fifth (C, E, G sharp, for instance) she apparently has little sympathy.

Saint-Saéns, whose art is rooted in Bach, the master for all time, but who is modern, too, she places at the head. She has a high regard for Charpentier, whose "Louise" was such a success here last winter, and for Godard, who died a dozen years ago, with whom she studied. Of Debussy she said (to quote an interview in the New York *Sun*): "He depends very heavily on his orchestra for his effects, and his music is to my ear—well"—she hesitated, at a loss for a word, but presently she found one—"gray—a bit gray; don't you think so?"

This is distinctly of a different color scheme from her own music, which has color, even on the piano.

Like most composers, she does not agree with the public as to which are her best works. It is hardly possible that Handel considered his aria from "Xerxes," now so famous as "The Largo," his finest work, or that Schubert considered his "Serenade" his most profound work, and it is certain that MacDowell did not consider his "Witches' Dance" his most original work. So, when Madame Chaminade was informed that her "Scarf Dance" and "Serenade" were the most popular here, "she smiled indulgently," says the interviewer mentioned above. She was good enough to mention those that she does consider her best. Of those for piano the list includes: "Valse Romantique," the "Quatrième Valse," "Six Romances sans Paroles," "Les Préludes," "La Sonate," six "Etudes de Concert"; and for piano, violin and violoncello the "Deuxième Trio." Of her songs she mentions "L'Anneau d'Argent," "Fleur de Matin," "La Lune Paresseuse," "Viatique" and "Sans Amour." The "Scarf Dance," she said, was part of a ballet suite for orchestra, and should be heard with the other parts of the suite.

Madame Chaminade shows great wisdom in devoting herself to her own works on her present tour of this country. She is far more famous as a composer than as a performer, and tho she would doubtless give interesting interpretations of the works of other composers, she is an absolute authority, and the only one, on the works of Chaminade. Other pianists can play the other composers to us, but only Madame Chaminade herself can play them exactly as they should be played.

Like most great artists in all the arts, Madame Chaminade is a great lover of Nature. Her home near Paris, at Vésinet, which was the home of her childhood, is surrounded by shade trees and lawn. This, however, is not the real "unimproved" Nature. This she finds at her winter villa at Tamaris, in the South of France, where she can get away from the distractions of Paris and near to the

sea. For, said she, "I am most likely to be inspired when I am in the woods or by the sea, quite close to Nature."

She tells of her love for the dusk, à la Chopin, and in this connection, tells a marvelous tale, which evidently must be taken *"cum grano salis."*

She had referred to the mysticism, as she called it, of Schumann:

"Am I not a mystic myself? Perhaps. I have had strange experiences. But I have not allowed myself to go deeply into spiritism. It frightens me. Years ago, as I was passing through Bonn, I visited the house of Beethoven. I remained for a long time alone in the room where the master is said to have composed, and ran my fingers over the keys of his piano.

"Some time after, on my return to France, I was sitting at my own piano, alone, at nightfall, playing an andante of Beethoven's which I particularly admired. I love the dusk, and my servants have orders not to bring me lights when I am playing unless I ring for them. I was so completely carried away by the music that I had not noticed how dark it had grown.

"Suddenly, on glancing at the nearest window, I saw a flame hovering outside the pane. Thinking it might be the reflection of some light, I got up and looked out. But there was nothing far or near to account for the phenomenon. I tried to play again, and again the flame appeared, hovering about the window pane, but this time it was brighter. Thoroly frightened, I uttered a cry and ran out of the room. I am positive I saw the flame and did not merely imagine I saw it. Since then I have always thought the mysterious flame was—yes, the soul of Beethoven."

Besides the piano works, chamber music and songs which form the greater part of the list of her works, Madame Chaminade has written a "Lyric Symphony," for chorus and orchestra, several operatic works still unpublished and unperformed, among which is "La Sevillane," a comic opera in one act, and a ballet, "Callirhoë," from which the "Scarf Dance" is taken. It would be interesting, on this occasion of Chaminade's visit, to hear some of her orchestral compositions. That it would be a welcome relief from some of the long-winded and long-eared music of *some* of the "moderns" there can be no doubt!

New York City.

Bees

BY ALBERT R. LEDOUX, Ph.D.

IN Professor Bouvier's most interesting and instructive article on "Socialism Among Bees," in THE INDEPENDENT of October 8th, among a vast number of new and reauthenticated statements are one or two that are incorrect in fact, and hence have led the author into errors in conclusions:

"If you put a bee and some honey, pollen and water under a glass, the insect does not take the slightest notice of the food and dies in a futile effort to escape."

This is entirely the reverse of the experience of every bee-hunter. Convey a worker, seeking honey from a flower, to a glass or cup containing it, it almost instantly settles on the comb and gorges itself. Remove the cover, the bee flies straight for home, unloads and returns, again and again. Bees do not seem to go to special fields, "as ordered." They will be found on near-by flowers in the early morning, or on the sunny side of a hill; then gradually extend their range until afternoon. If you catch a bee before 9 a. m. you may be reasonably sure its hive is comparatively near. By 3 o'clock they may be miles from home. It is by the sense of smell that they are guided to the extra, unexpected store, not by the order of any "explorers" or "council." Go into a field where flowers have been killed by a sudden overnight frost. By 9 or 10 o'clock the bees are there, in the accustomed pasture; but no store rewards them today. Now burn some honeycomb on a heated stove and place some more on the rocks. *Up the wind* come the workers, circle about and light on the comb and fill themselves. Every bee-hunter knows this. Finally, when your pail is full of bees working on honeycomb, coming and going, close the lid and carry them off half a mile. *If on the line,* the bees you then release will return straight to the pail, after unloading at the hive. If off the line, they will first return to the original stand; then, not finding the pail, they will come to the new stand and again attack the comb.

The Messiahship of Christ

BY NATHANIEL SCHMIDT, A. M.

["The Prophet of Nazareth," Professor Schmidt's latest book, has created the widest discussion, and the following article deals with the problems raised by it. We have asked Mr. Crane, who was formerly Professor of New Testament History in Chicago Theological Seminary and now pastor of a Presbyterian church in Easton, Pa., to reply to it in the following article.—EDITOR.]

THERE are two important questions connected with the life of Jesus which today are seriously debated by scholars and, in course of time, must surely attract the attention of educated men in ever-widening circles. Did Jesus regard himself as the Messiah destined, while still alive or after death, to appear as the righteous king, the conqueror of the nations, the lord and judge of men, and the vice-gerent of God on earth, or as a prophet called to proclaim the coming of the Kingdom of Heaven and to set forth and exemplify the laws of that better order of society? And has the influence of his personality and teaching been exhausted in the life of historic Christianity, or is it likely to survive the cult and creed of the Christian Church as a spiritual force in the future progress of the human race?

If these questions could be settled by papal or apostolic authority, it would now be too late to discuss them. For Rome has spoken. In his recent "Syllabus," Pope Pius X has condemned as errors the following conclusions of modern scholarship:

"When Jesus exercised his ministry, he did not speak for the purpose of making himself known as the Messiah, nor were his miracles performed with a view to showing that he was;" "the doctrine as to Christ taught by John, Paul, and the councils of Nicæa, Chalcedon, and Ephesus, was not the doctrine taught by Christ, but was the doctrine concerning Jesus born of the Christian consciousness;" "Christ was not always conscious of his Messianic dignity;" and "it is permissible to concede that Christ as known to history was far superior to the Christ who is worshipped by faith."

To prevent further discussion of such and similar questions, the Encyclical recently publisht practically forbids all research in a scientific spirit, orders the dismissal of professors affected by modern thought, and prohibits clergy and laity alike to acquaint themselves with the facts and arguments presented by independent scholars. There can be no doubt as to the sincerity of the Pope's convictions or the earnestness of his desire to ward off what he can only look upon as real dangers to his Church. The lucid and comprehensive statement, in the "Syllabus," of modern theological positions, if it is his work, shows that he has made himself familiar with many important publications. It is to be regretted that he has not found it expedient to publish a more extended and thorogoing examination of the numerous exegetical, philological and historical questions upon which he touches. This would have added great weight to his opinion in the eyes of many of his fellow-students.

Conservative Protestants will attach more importance to the authority of certain Biblical statements upon this subject. It will seem to them decisive that the evangelists obviously believed Jesus to be the Messiah, that the Fourth Gospel places upon the lips of Jesus unmistakable claims to Christhood, and that the whole ministry of Paul as an apostle was based upon his firm conviction that the crucified Jesus thru his resurrection from the dead had been made manifest as the Christ.

There is not the slightest reason for

questioning the good faith of the evangelists or the genuineness of Paul's experience. The man who broke down the barrier between Jew and Gentile and wrote that *magna charta* of religious liberty, the Epistle to the Galatians, remains one of the most inspiring personalities in all history, even if he had little acquaintance with the real thought of Jesus, whom he never saw, as a child of his own age failed to discern the true interpretation of his strange psychic experience, and from his own premises, under the influence of this experience, developed a Christology utterly foreign to the mind of Jesus. The Fourth Gospel is the most wonderful literary production of early Christianity, and its author will forever stand forth as a man of deep insight, passion for the ideal, and spiritual independence, even tho it be recognized that his allegorizing method, the peculiar trend of his thought, and the purpose he had in view, rendered him incapable of giving an objective account of what Jesus said and did, and that such a transformation of the synoptic material as his work presents was possible only a century after the death of Jesus.

The first three Gospels are of priceless value to us, not only because they still reveal, when intelligently read, an earlier strand of tradition indicating at least the outlines of the real life and teaching of Jesus, but because they allow us to see how naturally, without conscious intention, from external pressure and tendencies operating within, narratives and sayings came to undergo numberless modifications, as they past from lip to lip, and from record to record, until they reflected the new estimate of the incomparable teacher demanded by the growth of the Church.

The question whether Jesus was the Messiah must be determined by the same methods with which the solution of other historical problems is sought. In my book entitled "The Prophet of Nazareth," of which a new and revised edition has now been publisht, I attempted to give to readers interested in the life of Jesus a comprehensive and critical view of the various aspects of this great historic problem. Hence I discust not only the supposed Messianic prophecies, but also the alleged Messianic types in the Hebrew Scriptures. It seemed expedient to point out the passing of typology and the interpretation of the facts that has taken its place. For this accomplished revolution in exegesis is itself typical of the similar change that Messianic prophecy is going thru. There is, indeed, no more evidence that any passage in the Hebrew Bible refers to Jesus of Nazareth, or even to the Messiah expected by some Jews in his time, than that the unfinished human sacrifice on Mount Moriah was intended, or understood by Jewish saints, as a type of the completed human sacrifice on Calvary. The very term "Messianic prophecy" should be banished from the field of Old Testament interpretation.

In the extant Jewish literature of the two centuries immediately preceding and the two centuries immediately following our era, the figure of the Messiah does appear, but quite as often it is not found, in the pictures of the coming reign of God. The material for tracing its growth and determining its character at the time of Jesus is discouragingly scanty. The passages in the Psalter of Solomon (ca. 60 B. C.) are important. Those in the apocalypses of Baruch and Ezra have suffered somewhat in transmission by Christian hands, and are too late (the reign of Domitian) to be used with confidence for the early part of the century. The date of the Parables of Enoch is uncertain.

In the Synoptic Gospels, Jesus is proclaimed as the Messiah by celestial voices, by demons, by Simon Peter at Cæsarea Philippi, by the crowds on Palm Sunday, and by the centurion. The evangelists were convinced that heaven and hell knew the secret of his Messiahship, but these miraculous disclosures cannot be regarded seriously by modern historians. Peter, no doubt, exprest his opinion that Jesus was the Messiah. But the acceptance by Jesus of this title is found in a manifestly late addition to Matthew's Gospel (xvi:17-19). In Mark viii:30, Peter's words are immediately followed by Jesus's charge to his disciples not to say to men that he was the Messiah, which also is recorded in Matthew xvi:20, after the interpolation. The whole *mise en scéne* of the Messianic entry into Jerusalem is as clearly drawn

from the prophecy of Zechariah as the flight to Egypt was translated into history from a misunderstood word in Hosea. As the great miracles said to have accompanied the death of Jesus (the eclipse, the earthquake, the rending of the veil in the temple, and the rising of the dead from their tombs) probably did not occur, there was no cause for the alleged exclamation by the centurion. What happened in the pontifical palace we do not know, no disciple of Jesus having been present; and it is, therefore, a matter of only secondary importance whether, in a later time, he was supposed to have virtually declined to answer the question of the high priest (Matthew, Luke), or to have affirmed his Messiahship (Mark).

It has been generally thought that Jesus avoided such titles as "the Messiah" or "the Son of David" in order not to raise false expectations or to give wrong impressions as to the kind of Messiah he was, but chose to designate himself exclusively as "the Son of Man" in order to indicate a more spiritual Messiahship by suggesting his incarnation as a man, his lowly and humble character, his ideal manhood, or his celestial humanity. But the only Aramaic term that Jesus can have used, *bar nasha,* simply designates the individual of the human species, means "man," "the man." It has no other significance in any Aramaic dialect, or in any passage in extant Aramaic literature. To the ears of Aramaic-speaking people it can have conveyed no other meaning. It is nowhere used as a Messianic title, and from its very nature could not be so employed. To have attempted to coin so general a term into a specific title would have been to invite constant misunderstanding. When Jesus said: "The Sabbath was made for man, and not man for the Sabbath, so that man (*bar nasha*) is lord even of the Sabbath" (Mark ii:27-28), his hearers naturally understood him to affirm that man, for whose sake the institution was made, was not to be its slave, but to have control of it. Furthermore, he must have realized that this radical construction would necessarily be put upon his words, and that no one would take his meaning to be "therefore the Messiah is lord of the Sabbath," a wholly illogical conclusion, as Grotius observed. The saying is so unmistakably genuine, and the true interpretation so obvious, that this passage alone is sufficient to prove that Jesus used the term *bar nasha* in the sense it invariably has in Aramaic literature.

But there are other instances of the same usage. Some persons having objected to the assurance given by Jesus to a sick man that his sins were forgiven, on the ground that no one but God could forgive sins, he maintained that man (*bar nasha*) had a right to forgive sins (Mark ii:10). Shocked by the vicious remark that his success as a healer was due to Beelzebub, he declared that any sin against man might be pardoned, but that blasphemy against the Holy Spirit, by whose power he was convinced that he had wrought his cures, could not be forgiven (Matthew xii:32). In both of these sayings the contrast is between man and God, and must have been so understood by his hearers. Jesus may have said: "The foxes have holes, and the birds of the air have nests, but man hath not where to lay his head" (Matthew viii:20). Two of my most thoughtful and sympathetic critics differ as to whether this would be natural as a proverb or an epigram coined on the spot. The reviewer in *The Spectator* thinks it would, the reviewer in THE INDEPENDENT questions it. In the second edition I have myself suggested as an alternative *bar nasha haden*, "this son of man." Contrasting himself with John, Jesus may have said: "A man comes eating and drinking, and they say, Behold, a gluttonous man and a wine-bibber!" (Matthew xi:19). But, in the new edition, I have pointed out that the saying can scarcely be original in its present form. There are passages where the parallel accounts show that "the Son of Man" has been substituted for "I," and others containing the phrase that are manifestly reflections of the evangelists. Scholars, dealing exclusively with the Greek text, have shown long ago the secondary character of the predictions of the death and resurrection of "the Son of Man" and the Synoptic apocalypse foretelling his return upon the clouds of heaven.

The strength of the philological argument does not depend on the number of sayings that by its aid can be shown to

be genuine, but on the evidence it furnishes that in sayings of undoubted genuineness Jesus used the term *bar nasha* in its ordinary generic sense of "man," and not as a Messianic title, or as a designation of himself. His command to his disciples not to say that he was the Messiah, his opposition to kingly rule and all lordship, his ideal of humble service excluding self-assertion and authority over men, receive their true significance when it is recognized that he never referred to himself as "the Son of Man," or claimed any Messianic title whatever. He did not lay down one moral law for himself and another for his disciples, nor one for this life and another for a future condition.

In proportion as the critical study of the records revealed a human character of marvelous beauty and strength and a teaching strikingly original, lofty and suggestive, the question forced itself upon my mind what place this great prophetic personality would be likely to hold in the future development of the human race. This led to the writing of the last chapters.

The reception accorded to this work has, in some respects, been most gratifying. Nothing could better illustrate the change that has come over the world since the days of Strauss and Renan than the respectful and appreciative attitude shown by conservatives as well as liberals toward a life of Jesus far more radical than theirs. There has, indeed, been no lack of even strongly worded dissent, but it has, for the most part, been couched in courteous language and accompanied by generous recognition of honesty, scholarly integrity, and reverence for truth. Theological hatred of the old sort seems to survive only in the darker sections of the Church. Absolute fairness cannot, of course, be expected. Some distinguished English divines sought to discredit the book by emphasizing my high regard for Bruno Bauer and Van Manen and allowing their readers to infer that I shared the views of these scholars on the Pauline question, which they knew was not the case. An eminent Scotch theologian informed his readers that I had once held all of Paul's epistles to be spurious. When his attention was called to this misrepresentation, he offered to mention the fact in some book review, if I wished to be "exonerated!" I have had to live without the "exoneration." A Western professor of theology charged me with plagiarism from the articles in the "Encyclopedia Biblica" on "Son of Man" and "Son of God." In this case I must plead guilty, and can only adduce in extenuation that I wrote those articles myself. Here and abroad critics have represented me as a follower of Lietzmann and Wellhausen in my interpretation of the phrase "Son of Man." I set forth my view fully in a paper presented to the Society for Biblical Literature and Exegesis in 1895 and published in the *Journal of Biblical Literature* early in 1896, several months before the appearance of Lietzmann's book. It was not until the following year that Wellhausen came to the defense of the new view. But these are all matters of small significance; while it seems to me important that men occupying widely divergent theological positions, in the Church and without, should have been willing to walk with me in unfamiliar paths to catch new glimpses of that marvelous life, "full of grace and truth."

On the other hand, I had hoped for more serious criticism of the kind that helps an author to discover his errors and to correct his perspective. It is a sad sign of the lack of vitality characteristic of "orthodoxy" at the present time that it has so little energy to defend its positions. It talks wearily of errors having been refuted long ago and is a bit vexed that they will not stay refuted, indulges in shoulder shrugs or sighs according to the prevailing mood, and runs away with the dangerous book to hide it from the children, but cannot arouse itself to a manly effort to marshal facts against facts, and to meet argument with argument. The only noteworthy criticism has come from men more or less affected by modern views. The authority of Professor Dalman has been quoted against my interpretation of the term "Son of Man." He agrees with other Aramaists that *bar nasha* was the phrase used by Jesus, that this term occurs in the various Aramaic dialects and in the Galilean from the earliest documents onward, that in all Aramaic literature it has no other sense than "man," "the man," and that it never

has a Messianic significance; but he conjectures, from its absence in certain brief inscriptions of early date, that it may not have come into common use in Galilee in the time of Jesus and may have been given a peculiar sense by him. There is no positive evidence to support this conjecture; the probability is strongly against it, as the phrase occurs in its ordinary sense a century later in the earliest specimens we have of Galilean Aramaic, and long before the Christian Era in the Judean dialect, and no weight is given to it by such specialists as Wellhausen, Nöldeke, Marti and Bevan.

Some scholars think that Jesus did not regard himself as actually the Messiah, but as destined to be clothed with this dignity in a future existence, and therefore could refer to the Messiah in the third person. They eagerly embrace the conjecture that there was a figure in Babylonian mythology designated as "the man." But no evidence of this has as yet been produced. On the other hand, "the man" and "the son of man" figured as cosmic magnitudes in Gnosticism, and also in the thought of India, which furnished its quota to that compound of Greek and Oriental speculation. An influence from this source should not, therefore, be characterized as improbable.

Friendly critics have exprest their fear that I have weakened my case by breaking with the scholastic tradition as to the priority of Mark and the Greek Logia book. In reality, this tradition itself is being constantly undermined by the growing tendencies to recognize an original Aramaic gospel, a narrative element in the Aramaic Logia of Matthew referred to by Papias, the priority of these Logia to Mark, the larger number of sayings in the First Gospel whose genuineness becomes manifest when translated into Aramaic, and the numerous later additions in this widely read and frequently copied work. But my main contention is scarcely affected at all by these literary questions.

A lack of acquaintance with Martineau has been regretted by a sympathetic reviewer as "the one serious gap in Professor Schmidt's scholarly equipment for his undertaking." I read Martineau's "Seat of Authority in Religion" soon after its publication. In the "Encyclopedia Biblica" I quoted it. Martineau's treatment of the term "son of man" always seemed to me very unsatisfactory. But his discussion of Jesus's attitude toward the Messiahship is deeply significant. In the second edition of my book (p. 100) I have referred to it. In a future revision I hope to add a chapter on "The Prophetic Consciousness of Jesus," as well as one on "The Christian Messiah" and another on "The Synoptic Question." Jesus did not express his sense of a prophetic calling in the same manner as the earlier prophets. But neither did John the Baptist. "Thus saith the Lord" was the formula of their mantic inspiration; John did not suggest that he was inspired, but said: "I tell you," "I say unto you," and Jesus followed his example.

A reviewer in *The International Journal of Ethics* shows, in an extended and searching criticism, that those opinions of mine which he deems erroneous, "revolutionary" and "iconoclastic" may be traced back to "the idea that Jesus was nothing more than man." I am inclined to think that he is right. If it were possible for me to conceive of Jesus as having been anything else than a human being, I should probably be disposed to accept as genuine precisely those alleged utterances of his that now seem to me most clearly spurious, and to look upon all others in the light of these. Athanasius would then, no doubt, appear to me as an "evolutionary," "stating in a new way and accepting for new reasons" the estimate of himself Jesus had attempted to convey, "so far as his disciples were able to receive." But that Jesus was a man, and nothing but a man, does not seem to me to be a debatable question. What kind of a man he was concerns me deeply; and to find that out has been the object of my researches.

If Jesus was not the Messiah that was to come, shall we look for another? Orthodox Jews are still doing this, while the reformed Jews have abandoned as an *ignis fatuus* this eschatological expectation that has cost Israel such untold sufferings. Christian Adventists expect the return of Jesus as the Messiah in very much the same sense, but the majority within the Church has quietly dropped this Messianic program, with its pageant

in the sky and real kingly reign on earth. If Jesus was not the Christ in the Pauline, Johannine and Athanasian sense, are we in need of such a being? There is something pathetic in the plea that it is necessary for "the masses," for large numbers of men who would otherwise not be brought under the influence of Jesus. Leave the children their Santa Claus! O ye of little faith, why do ye not trust in the truth? Why do ye not perceive that the children have outgrown their nursery tales, that "the masses" are turning away from the creed and cult of the Church, because there has dawned upon them the ideal of a community of men, not saved by sacramental magic or professions of faith, but by righteousness and love; not ruled by kings and lords, but ruling themselves and directing their common concerns as brothers and fellow-workers; not placing even voluntarily their conscience in any man's keeping, but seeking earnestly and in freedom for the truth and cultivating the power to know and to choose for themselves the right path?

If Jesus had prophetic vision of this ideal and lived himself in harmony with it, if he rose above the subtlest temptations to exercise lordship over men, if he refused to think of himself as their king and the arbiter of their destiny, if he cherished no hope for himself of future exaltation, either as Jewish Messiah or as universal spiritual sovereign, if he understood the law of the soul's real greatness and sought it in unselfish ministry to all, then a glory surrounds his personality such as no self-assertion could give it, and his message to the modern world becomes one of tremendous significance. Then he still marches in the van of human progress, and there is no jarring note in the music with which for ages to come he will stir the hearts of men. I have ventured to believe that such was the character of his manhood.

Cornell University, Ithaca, N. Y.

The Messiahship of Christ

BY THE REV. LOUIS B. CRANE

Author of "The Teaching of Jesus Concerning the Holy Spirit."

THERE need be no discussion of the first point which is raised in Professor Schmidt's paper. Such questions as the paper deals with are not to be settled by papal interdict. Scholarship must investigate the sources of our knowledge of Jesus. If those sources will not stand the merciless searchlight of sincere and painstaking investigation, then we must revise our New Testaments and redistribute the emphasis of Christianity. But the passion for truth is not the exclusive possession of the writers in the "Encyclopedia Biblica." It may even be suspected among the motives of the Holy Father himself. But it is a separate question when scholarship scientific and reverent has examined the facts, whether or not the Pope as pope is justified in condemning views which in his opinion work harm to the Church. The Church is a voluntary organization and it would seem that its head, who holds in submission all the members, has a right to rule it according to his judgment, whether he regards that judgment to be infallible or not.

In his evident impatience with the Holy See and with his critics in general, Professor Schmidt betrays a lack of confidence in his conclusions. The Church, according to his program, is destined to pass away in cult and creed. Its dying struggles should therefore arouse our pity while we patiently await the complete victory of the truth. It was long, to be sure, before Santa Claus (his own comparison) was discredited by now grown-up children. But truth finally triumphed and the myth was doomed.

Can we not wait for the tradition of the Messiah to pass in like manner? The whole fraternity of modern scholars is at one with our author in demanding that

Christianity vindicate its claims to acceptance on the ground of fact. The issue is not one of critical method. The real question is whether or not we are to admit all the facts before we pass judgment. The Gospel history contains statements of two classes of alleged occurrences—those that are upon the level of ordinary human attainment, and those that claim to be supernatural. To bar the latter without question and to accept the former only is not scientific. If our sources have on other grounds a right to be heard, the presence of the supernatural is not in itself a bar to credence. This is the real point at issue between the two classes of Biblical critics known respectively as radical and conservative. The former not only reject the evidence of the Gospel records in passages which contain the suspicious material—they will not hear evidence. This we hold is not fair, and Professor Schmidt, with all his learning and skill in dealing with the other class of occurrences, it seems to us, falls into this error. Indeed, he admits that the reviewer is right who traces his conclusions to the preconception that Jesus was no more than a man.

But surely the critical study of the Gospels demands a prior weighing of the supernatural element. Was Jesus the Messiah? is the question. We naturally ask, What Jesus? The Jesus of the Gospel records, or the Jesus as reconstructed by alteration and rearrangement of the Gospels? And if the latter be answered, let us see what figure Professor Schmidt's Jesus presents. We use here his book, "The Prophet of Nazareth," as well as the foregoing article. He first rejects the Fourth Gospel as of no value for the question. We do not stop to quarrel with him here. The Fourth Gospel is not needed. There is enough without it for our purpose. He then draws a line thru the Synoptic Gospels. On one side of this line is the true Jesus, he thinks, and on the other are all the accumulations of tradition which loving tho misguided disciples have added to the picture. And here we have a marvelous thing. How was it that men who loved Jesus and who were so profoundly influenced by him were unable to tell the truth? He was to them the Truth. From him they derived a horror of falsehood and insincerity. And yet they proceeded immediately upon his death to exhibit a carelessness about the truth which resulted in the course of a generation and a half in its utter defeat!

And so it comes about that what we celebrate at Christmas time is—nothing. There was no miraculous conception, nor any birth in Bethlehem. The visit of the Magi and the flight into Egypt are alike impossible. The miracles of Jesus are rejected *en bloc*. The transfiguration goes likewise. Jesus did not eat the Passover with his disciples and so, of course, could not have instituted the Lord's Supper. His betrayal by Judas is not likely. Neither was he crucified by the Roman authorities. The resurrection never took place. He did work some cures by psychic power. He did relieve some nervous sufferers who were thought to be possessed by demons, which belief he shared. But many men can do these things now. But he never raised the dead or walked upon the water or fed the 5,000. Jairus's daughter was in a deep comatose sleep. Jesus was calm and collected in a storm, and this probably became distorted into a belief that he walked upon the water. In some of his cures he was not permanently successful. (Does he himself not tell the story about the demon coming back with seven others?) In other cases he failed altogether; for instance, in his own country, where he could do no mighty works.

And so we have left us the figure of a man—a prophet who protested against the prevailing Pharisaic ideals of religion and morals, and who died a martyr to his convictions.

So much for the portrait of Jesus. His teaching is subjected to the same rigorous criticism. The sermon on the mount is probably his, but it must be much reduced in size and diluted in strength to comply with the critical requirements. Many of Jesus's isolated sayings are taken from him. His apocalyptic discourses are almost wholly the creations of later days. We have left his parables, and these yield a body of ethical teaching about two great themes—the Kingdom of Heaven and the Father in Heaven.

We have left so much therefore of the person and teaching of Jesus. The suspicion did not escape Professor Schmidt

that perhaps even this much was not salvable, but he was able to allay it. He is sure that there was a person named Jesus.

But the methods by which he eliminates so large a portion of the Gospel narratives must interest every one. We cannot be satisfied to hear that he has methods. We must ourselves test them.

And first, there is the principle already referred to, tho it is not expressly stated by our author, that the presence of the supernatural is a cause for suspicion. Second, there is the presupposition that the disciples, tho they were constantly with Jesus, did not understand him before or after his death. Consequently, if we can gather from their writings what they understood Jesus to be or to say, the truth is just the opposite. This is, of course, Schmiedel's famous principle.

But when these two canons have been applied for example to the words of Jesus there is left a considerable number of passages which have hitherto been understood in a Messianic sense. Among these are the "Son of Man" passages. Not all of them, however, for most of them, according to Schmidt, were added to the original Gospel material by the disciples of a later age. They come from a time when Christians believed that the term was Messianic. Finding an old Jewish apocalypse referring in certain passages to the Son of Man (derived from Daniel vii), and thinking erroneously that the allusion was to Jesus, they added the apocalypse to the Gospel record. But we may ask how they came to think that "Son of Man" referred to Jesus, and how did the disciples begin to think that Jesus was the Messiah if he never thought so and combated the idea so strongly during his life. If the traditional notions of Messianic prophecy were accepted we might account for these supposed facts, but Professor Schmidt has swept all these into the discard. The very term "Messianic prophecies" should be banished, he says. If there had been a belief current in Jesus's day that a personal Messiah was to come it might have come to pass that popular belief attributed Messiahship to Jesus even against his will and belief. But we are allowed no such way out. The misinterpretation of Jesus's words, the misinterpretation of so-called prophecy, the growth of misinterpretation into Church opinion and the promulgation of such belief in the Gospels must all have taken place in the interval between Jesus's death and the First Gospel's date of composition. This date was, according to most critics, about the year 70 A. D. Forty years for such a reversal of facts! Professor Schmidt agrees that this is too short a time and so is forced to push the composition of his First Gospel (Matthew, not Mark, as most think) down to about 100 A. D. This Gospel contained a genuine kernel due to its Aramaic source, but, in addition, misinformation, misinterpretation and misrepresentation of the facts about Jesus which had developed in sixty or seventy years in a Church devoted to his memory and believing all the while that it was possessed of his Spirit. Even if we could accept the heroic measure of dating all the Gospels after 100, to render this possible, the supposition would be utterly incredible.

But in that original Aramaic source which Professor Schmidt values there are certain references to the Son of Man which we have always thought Messianic. What shall we do with these? There are not many left, to be sure. Only four out of sixty-nine are genuine, we are told. But even four are four too many if they are against us. Professor Schmidt does not find them troublesome, however. He finds nothing Messianic in them. Jesus used the term, when he did use it, neither as a designation of himself nor as a Messianic title. The phrase meant nothing more than "the individual of the human species." Genuine words of Jesus must be translatable into Aramaic, and the only Aramaic term possible here was *bar nasha*, and that meant "man." So we have "Man is lord of the Sabbath," "Foxes have holes, but man has not where to lay his head," "Whosoever shall speak a word against man it shall be forgiven him," etc., "Man has power to forgive sins." The first and the third of these interpretations might be possible if the theory was otherwise workable. But the second and fourth texts mean nothing at all. A man comes to Jesus desiring to follow him, and Jesus must answer with a word that fits the situation. No general comparison between

foxes and men will do. The best that our author can do here is to interpret: "The beast is not deprived of his home and hearth by his convictions; . . . whereas man's life is full of danger and uncertainty."

Likewise, in the case of the fourth of the instances cited it is difficult to conceive of a man winning favor as a prophet among the Jews who could declare that man and not God alone has power to forgive sins. So that, allowing the principle, it is impossible to apply it. But must we allow it? Did Jesus never speak Greek? Of course, Aramaic was his mother tongue, but must he not have known Greek, and might he not have used it on occasion in speaking to his disciples? Admit the possibility and the whole *bar nasha* argument is crippled, if not disabled. Then again, it is extremely doubtful what the Aramaic equivalent of the Greek words translated "son of man" would have been. Scholars are divided on the question whether this term *bar nasha* was in use at all in Galilee in the time of Christ. Professor Schmidt builds his theory on the unproved supposition that it was impossible to make any distinction between "man" and "son of man" in the language spoken by Jesus. Dalman calls this a grievous error and says a careful observation of the biblical Aramaic alone would have rendered it impossible. And Dalman asks very pertinently why it is, if Jesus said "man" and not "son of man," we never have the Greek phrase "son of man" in any passage where the sense is manifestly "man." It might be expected, for example, in just that passage in Mark from which one of Schmidt's illustrations is drawn. "The Sabbath was made for *man.*" Considering the presence of the phrase "son of man" in the following clause, we ought to expect it here, and read, "The Sabbath was made for the son of man, therefore the son of man is lord even of the Sabbath."

Still further, even if the phrase was used which in common speech meant simply the man or man, it is not unlikely that Jesus, who frequently put new meanings into old phrases, and whose ministry might be described as the revelation of the unsuspected content of the old, may have used such a phrase with an emphasis all his own. At any rate the four passages containing "son of man" which Schmidt allows to remain in the Gospels are the only ones in which "man" is at all possible as a translation, while in all the others rejected by him it is impossible. His theory rests on the very difficult contention that *all* of these are spurious. If one should be adjudged genuine on other grounds the whole theory falls. Or would Professor Schmidt say it could not be genuine just because it contained the expression "son of man" in a distinctly Messianic sense? We hope not, and we believe not.

In this way, by means of a wholesale discrediting of all Messianic prophecy, by means of his Aramaic *bar nasha,* by additions and interpolations, he succeeds in eliminating the direct references of Jesus to his Messiahship. It is true that with so corrupt a source as he conceives our Gospels to be almost anything may be done. But nevertheless, even after such a radical treatment, there remains a subtle, intangible, pervasive something about the Gospels that is of the very essence, and that something is unquestionably Messianic. To take this away is impossible without destroying the Gospels. Professor Schmidt has left a prophet Jesus, whom he describes in glowing terms and whose ethical teaching he deems sufficient to redeem the world. But after he has reduced his material by so large a proportion of its bulk, how are we to insure the salvage that he offers us against the opinions of the next ingenious scholar? The criteria which Professor Schmidt employs are subjective. It may appear to another that even the prophet is a mythical figure. A text ought to be known by the company it keeps. Even the genuine passages which are left to us by one scholar as innocuous to his theory are decided to be of the accidents and not of the essence by one with another critical axe to grind. It surely is not too much to say that historical suspicion of the New Testament such as this will wait long before acceptance by serious biblical critics.

In conclusion, it may be said that tho the spirit and temper of the writer of book and article have been very justly praised by all schools of theological thought, nevertheless, none of his dis-

tinctive positions has won acceptance by any considerable number of scholars. Some of his reviewers may have done him injustice—this one may unconsciously do so—but these two quotations from scholars of widely different points of view may be sufficient to show the characteristic attitude of theological learning toward his attempt.

Wernle, in the *Theologische Literatur Zeitung*, says:

"The entire narrative of the Gospels as we have them is immersed in the Messianic . . . he who will adopt Schmidt's hypothesis must conceive that Jesus was totally misunderstood by the disciples in spite of his efforts to the contrary, and that the oldest picture of Jesus in the Gospels has everywhere been transformed into the opposite. And this . . . is in the highest degree improbable (seltsam)."

Vos, in the *Princeton Theological Review*, says:

"The problem is not to explain away certain Messianic elements in the sources, but to wipe out the pervasive Messianic character of these sources, and that in such a way as to retain of the de-Messianized material something substantial enough out of which to construct a lifelike, plausible plan of the life and teachings of Jesus. We do not believe that with all his critical acumen, historical grasp and literary skill the author has succeeded in doing it."

EASTON, PA.

A Little More About Saloons

[The article, entitled "What I Know About Saloons," in our issue of September 10th, has provoked so much discussion that we are glad to reopen our columns to the author so that he can clear up some misunderstandings and relate some further experiences.—EDITOR.]

IN your issue of September 10th you were good enough to publish some amateur observations of mine on saloons. By "amateur" I mean amateur as regards writing, not as regards saloons. I know a good deal about saloons, and I know a little more about writing now than I did before you published my article. I was sincerely surprised to see the attention which these random jottings of mine called forth, and to find that I was supposed to be advocating Sunday baseball as a substitute for Sunday closing and a solution of the saloon problem generally. Every notice of the article, without exception, I think, gave this interpretation to my remarks. One Brooklyn clergyman, who seemed irritated, wrote for my name and address, adding: "I would like to look him up and see whether he is competent to be an unprejudiced instructor in morals to Christian people." I an instructor in morals to Christian people! The Lord forbid! I wouldn't presume to instruct a cat in morals, let alone a Christian. I only presumed to write on saloons because, from long acquaintance, I thought myself competent to do so. In the course of so doing I happened to devote about one hundred words out of over five thousand to the effect of Sunday baseball on Sunday saloons. I feel that I must have exprest myself very badly to give the impression I did. My original statement was:

"In combating the saloon I want to register my sincere conviction that there is nothing that will take a saloon bunch away from the saloon except baseball. The masses are crazy over baseball. They like it better than the theater, better than any show, better than the saloon. On Sundays all thru summer when baseball games are running, the saloons are emptied. And the men are not only not drinking, they are also saving money and sitting out in the open air. I believe Sunday baseball is the strongest enemy the saloon has got among saloon habitués. The churches fight Sunday amusements, and are particularly earnest against Sunday baseball, and I confess that baseball makes a lot of noise. Nevertheless, baseball is a perfectly clean, decent, innocent amusement, and I solemnly register my belief that among drinking workingmen it is the saloon's only competitor."

By reason of this, numerous newspapers and magazines quoted me as favoring Sunday baseball in place of Sunday closing, and the clergyman wrote that I was probably connected with the saloon business or the Sunday baseball business any way.

Now, I never for one moment advocated Sunday baseball as a substitute for Sunday closing or a solution of the saloon problem. I offered no solution of that problem. I left that to my betters. I believe absolutely in Sunday closing. I did not suppose there was any person of sense or decency who did not. I not only believe in Sunday closing, but I would be glad to know that every drop of alcoholic drink had been eliminated from the face of the earth. The appetite for it has been a handicap which I have had to carry all my life. It has injured my health and my prospects; hurt me socially, financially and physically; saddened the lives of the women of my family. I suppose that alcohol is useful in medicine. But I think the good it may do there is so greatly overbalanced by the harm it does elsewhere that it would be a benefit to the world to have it swept out of existence.

Now that I have stated my personal position, we may discuss things as they are. The manufacture of alcoholic drinks will not be prohibited yet awhile, so the only thing to do is to deal with the question locally, while the breweries and distilleries pour out their products in other localities.

Sunday closing will not stop Sunday drinking. Men will drink at home, in clubs, in secret drinking places. It will, however, very greatly reduce it, as I know personally that it has done in Essex County, N. J., under the administration of the "bishop's" law by Sheriff Frank H. Sommer. In my article I emphasized midnight closing more than Sunday closing, because many people who are convinced of the evils of the latter do not at all understand the dangers of the all-night saloon, particularly the Saturday all-night saloon. Now, as to Sunday baseball. The clergyman already mentioned says that:

"In Brooklyn the saloons near the baseball fields, whenever the professional games are played, reap a rich harvest. I know of one saloon open on Sunday which was the headquarters of a baseball team for Sunday games. That did not look as if Sunday baseball were an enemy of its business."

This is true superficially, but shows how a person not thoroly familiar with his subject may misunderstand surface conditions. A saloon near a ball field reaps a harvest whenever there is a game. But that is from the crowd coming and going. The men do not sit there all day drinking. They only stop in for a drink and then go on to the grounds. There are so many of them that it makes a harvest for the saloonkeeper, but it is not nearly so injurious to the men themselves as their ordinary Sunday sessions. Saloons at a distance from the grounds which during winter are crowded all day with men who sit there from morning till night, are emptied on baseball Sundays. About half way between Orange Valley and Mountain Station, N. J., on what is called the Swamp Line trolley, there is a ball field where semi-professional games are played every Sunday in summer. In the days before Sunday closing saloons all thru the "Valley"—a factory section—were emptied on these days, and it is a fact, known to me personally, that some Valley saloonkeepers voluntarily closed their saloons such afternoons because they had no business. This ball ground is so far from the center of population that nobody would establish a saloon there for the sake of the ball-day patronage alone. In other cases, where city ball grounds are surrounded by saloons, I don't see why ordinances could not be past prohibiting a saloon within a certain distance of a ball ground, just as is done with churches. It would be more reasonable, for the churchgoers are not likely to be tempted by the saloons, while the baseball patrons are.

Take, for instance, a great professional game, like that between New York and Chicago, at the New York Polo Grounds, attended by 35,000 people. Half an hour before the game begins the seats are a solid mass of humanity, and still the people pour out of the elevated road chute in countless multitudes. These people do not descend to the street at all; they come straight from the elevated into the grounds. They cannot go into saloons. Immediately after the game, it is true, saloons in the neighborhood will be found crowded. But half an hour later they are not crowded. And those who stop in for a drink are only a drop in the bucket. Fifty would "crowd" one of those saloons. These games are of course

on weekdays, but it would be the same on Sunday, only that more workingmen would be present.

Amateur and semi-professional baseball are more effective than professional in emptying the workingmen's little neighborhood saloons, because the men know the players, and many who would not care enough for the game itself to leave the saloon will go thru friendship or local pride.

In endeavoring to elevate any section of the population, it seems to me that you have got to find their highest level, the highest thing in which they are interested, and work from that. I believe every elevating thing, libraries, museums, lecture halls, should be open on Sunday. It is the workingman's only day of leisure, the only day on which they can become acquainted with these accumulated treasures of civilization. Such places will doubtless attract a certain percentage of boys and young men and keep them from drifting into the saloon on Sunday. But the "saloon bunch," the element which has already formed the habit of sitting around a saloon all day Sunday, will not go to the library or museum any more than they will to church. They are not interested in such things. They are, however, wildly interested in baseball, which is harmless and to a certain extent elevating and beneficial. Therefore it seems to me it is the part of good sense to foster and cultivate this interest, not suppress it. In places like the Oranges all that is necessary is to let them play; not forbid it by law. In the large cities every open space set aside and used on Sunday is an enemy to the saloon. The only objection is the noise of their yelling. I have observed that when I myself am at a game the yelling does not annoy me at all; but when I want a quiet Sunday afternoon on the porch, it annoys me somewhat. By a Sherlock Holmes mental process I conclude that it may be the same with other people. People who want a quiet Sunday have their rights as well as saloon bums and baseball fiends. In this, as in other things, the greatest good to the greatest number is the only right rule. The elevated roads in New York are a great annoyance to the people who live beside them. But their interests had to be subordinated to those of the whole city.

The human race can be elevated thru its amusements as well as its work and education, and amusements are perhaps the nicest gage of the grade of civilization. Roman civilization, with all its greatness, is definitely stamped by the fact that its people found their greatest amusement in watching human beings killed. It seems to me that any country in which even the habitual frequenters of saloons find an absorbing interest in so clean, healthy and manly a sport as baseball is to be congratulated, and that that interest should be fostered, even by the government.

It is interesting to note in this connection that since the appearance of my former article—not that there is any relation between the two—Gen. George W. Wingate, chairman of the athletics committee of the New York Board of Education, has started a movement to open the playgrounds of the New York schools for Sunday athletics. To my mind society has got to come to the point where it will take official cognizance of the amusement and entertainment of the people, as well as their education. It now provides libraries. They are useful. In the Stickney Memorial Library, in Orange, N. J., I have seen Italian boys, sons of the steerage, sitting in the children's room absorbed in a book. But there are large numbers to whom these things do not appeal, and it would be no more unreasonable to provide amusement for them than for the bookishly inclined. The New York street kids love the nickelodeon, for instance. Why shouldn't the school board give free houseroom to these shows in the schoolhouses evenings and Sundays, only providing that no moving picture be used which is not first submitted to some educational authority? Here society would catch the street kid on a thing that he is crazy over, but with everything objectionable eliminated. The present evening lectures of the school board do not exactly fill this field. Some of them in certain neighborhoods, as in the American Museum of Natural History, are largely attended. Others, in what might be called saloon territory, I have seen very slimly attended, indeed. Why

shouldn't there be free dancing classes evenings and Sundays in the New York schoolhouses? The dancing halls in the slum quarters are packed, and many of them are run in connection with saloons, in some cases the use of the room being given in consideration of a certain amount of drinks being ordered. Dancing can be made very good physical training if it is taught in an educational way. But that should be only incidental. The point should be to let the kids amuse themselves with all danger removed.

I am inclined to agree with the Prohibitionists that local option is not much good unless the dry territory extends for a considerable distance. Greeley, Col., the town founded in response to Horace Greeley's injunction, "Go West, young man," is the only perfectly dry town I ever happened to strike. I could not find anything to drink there, and they told me there really wasn't anything. But two and a half miles away there is a little village (Evans) which seemingly exists merely to serve the vices of Greeley. Nearly every building in the place is a saloon, and the place is full of disreputable women. Colorado City, as is well known in Colorado, used to serve the same function for Colorado Springs, tho it is now much toned down, its distinctively high rolling character being submerged under more recent industrial and residence features. In Colorado Springs itself, long a nominally dry town, one can get a bottle of whiskey as easily as a bottle of medicine in any drug store—or could when I was there. The drug stores sold so openly and lavishly that the saloon people in Colorado City raised a great public outcry against them for cutting into the saloon business without paying a saloon license. In Fort Collins, a dry town, I was taken to a "club" upstairs in a hotel. I was introduced and made a member of this club on the spot. The "club" was purely and simply a barroom, and men were lying about drunk in it. In a Fort Collins restaurant, also, I walked thru a door pointed out by a waiter and found myself in a little box of a place where bottled stuff was on sale. In Des Moines, a dry town, in the '90s, a good and respectable citizen took me back into the prescription room of a drug store, and we bought drinks the same as in a saloon. Drug stores often sell drinks in their prescription rooms in license States. I have bought drinks in the back rooms of drug stores in New York State towns which had saloons, the saloons paying license money into the city treasury, while the drug stores did not.

Passing to Kansas, a Prohibition State, in Kingsley, Larned and other small towns I found the blind pig in the livery stable. It was always in a box stall, where one found a plank across some packing cases, and bottled beer and whiskey for sale. Nothing is sold by the glass here. The stuff in these blind pigs is always more poisonous and higher priced than anywhere else. They buy the cheapest and poorest stuff, doctor it, and then sell it at an outrageous price. The blind pig also encourages whiskey drinking, as does every species of secret and illicit drinking that I ever encountered. As they cannot handle keg stuff and ice, which would be too noticeable, the bottled beer they sell is warm and undrinkable.

At Topeka I found saloons wide open, running without a pretense of concealment, just the same as anywhere. It was saloons of this kind that Carrie Nation smashed, and it was because every one of them was illegal that the old lady could go on smashing with so much impunity. Carrie is a joke, of course, but one can understand her wrath at seeing these things wide open, absolutely illegal, and no one paying the slightest attention. Also it cannot be denied that Carrie had sand. It's a wonder she hasn't been killed.

All such facts as these will be seized by friends of the saloon to show that prohibition is a failure. To my mind, however, the proof is just the contrary. My common sense tells me that drinking is less in the blind pig than in the wide open town. All that social side of saloon life which I depicted in my other article, all those features which make the saloon the "poor man's club," all the sitting about for hours at cards, and the almost continuous treating which makes these long sessions so productive of drunkenness, all those late hours in the saloon, with fights, killings and thefts, are eliminated in the box stall of a livery stable or the prescription room of a drug store.

There is no attraction in any such place except the drink itself. The social side of the drink problem is practically eliminated, and only the physical one remains. Knowing as I do that the treating described in my other article is responsible for a very great part of all drunkenness, my reason tells me that wherever drinking is forced into the blind pig that intoxication must be reduced.

It is not law, but law enforcement, that counts. Essex County, N. J., has not been a dry county for the last two years, but it has been a thoroly well regulated county. So far as the law went it was enforced absolutely. Saloons were closed Sundays and at midnight. There was no fake about it. It was done. There was no selling to minors unless the minor was so near twenty-one that the barkeep couldn't tell the difference. When a whole county goes dry on Sunday it means something. Men can be found in every county to enforce the laws as Sheriff Sommer has done if the voters want them bad enough. Demand invariably creates supply. Whenever the mass of respectable people want the laws regulating or closing saloons enforced they will be enforced. Up to the present, with the exception of a few men in the Prohibition party and a considerably larger body of women, the American people have never been in earnest against the saloon. Late advices from the South and West seem to indicate that people down that way are getting earnest. If the public can keep saloons out of the neighborhood of schools and churches, as it does; if it can prevent its sale to Indians, as it does, it can do anything else it likes with the business. An Indian filled up with firewater is not at all a nice person to meet. He commonly starts out to recover the land of his fathers, and some white man is apt to get hurt. Therefore, in certain border towns frequented by Indians, the saloonkeeper knows that if an intoxicated Indian starts on the warpath, the man who started him will be hunted down and punished, if possible. Consequently, the law forbidding sale to Indians is obeyed in towns where no other saloon regulation receives any attention.

There will be drinking just as long as the stuff is made; but that is no more reason for stopping efforts against it than the possibility that tuberculosis can never be entirely eliminated is a reason for stopping the present world campaign against the white plague. And just as a radical consideration of tuberculosis will lead one into industrial conditions, into housing conditions, congestion of population, underfeeding, so a thoro consideration of the drink question leads one back and back to the very roots of civilization itself.

I read an interview in a New York paper the other day with a cooking teacher, in which the good woman said that drinking was due to bad cooking, and that she didn't blame a man for getting drunk when his wife couldn't cook. The naïve, childlike way in which some women will shoulder the responsibility for masculine sins off on their own sex is amusing; tho, to be sure, in this case the lady's opinions advertised the wares she had to sell, so there may have been method in her madness. Doubtless much drinking comes from under nourishment, whether from poor cooking or poor quality of food. But in that case why do not the women of the working class drink as much as the men? They certainly do not, and I suppose they live on the same cooking. And why do not lower class American women drink as much as women of the same class in England, which they certainly do not? I suppose English cooking is not worse than American. And why do not Italian men drink as hard as corresponding classes of Americans and Irish, which they certainly do not? The drink problem is only partly a physical question; it is also a social, industrial, economic, mental, moral and racial question. That's what makes it so complicated.

Why is it that in Sicily, commonly reckoned the most ignorant and poverty-stricken portion of the Italian kingdom, drunkenness—as I know from personal observation—is very rare; while the abuse of liquor increases as one travels toward the more prosperous and intelligent North? Why is it that the Latin and Oriental races generally are less subject to drunkenness than those of North Europe and their descendants in America, while on the other hand the negroes and Indians are worse than the latter? I

think the only theory that explains this is that the older the civilization the less its members are subject to drunkenness. We know that when wild tribes are first brought in contact with the white man's drink its ravages among them are frightful. The ancestors of the Latins and Orientals were living in cities when ours were running wild in the forest. The North of Italy has, all thru the centuries, received heavy infusions of Teuton blood, while the race in the South has remained much more purely Greek and Latin. The older the civilization the longer it has been evolving members who can carry their liquor, and the longer the inexorable pressure of economic conditions has operated to crush the drunkard type out of existence. Drunkenness is the most peculiarly economic of all vices. A man can gamble and still make money. He can live an immoral life and do the same. But if he is habitually intoxicated he loses the power of self-support, and, of course, the power of providing for his family. That is the reason why society interferes, and has the right to interfere, with the custom of drinking. The drink evil is a handicap for any race to carry, just as tuberculosis is a handicap, or yellow fever. It impairs vitality, reduces efficiency, energy, initiative, working power.

There is no reason to think that the Anglo-Saxon race, at least, has got to wait till its civilization is as old as that of the Latins to eliminate the drinking type as largely. The Anglo-Saxon race moves very quickly, compared with the old races. Less than a century ago it was the custom in polite society in England for every dinner party to finish with the men dead drunk under the table. "Drunk as a lord" is a simile which has come from that time, like the habit of women leaving the dinner table before the men. It wasn't fit for them to stay till the end, more than it is fit for them now to go into saloons. The shifting of civilization to a commercial basis, largely in England and almost entirely in America, is the reason for the great and rapid change in these habits. A drunken man cannot do business. He joins the down and out club.

Perhaps some tactless person, seeing me talk so wisely, may think to ask why I continue to drink. A wise lady said, a long time ago:

"I would rather tell twenty what were good to be done than be one of the twenty to follow mine own teaching."

An intellectual perception of a fact is a very different thing from ordering one's life in accordance with that fact. The world is full of people who eat more than they ought to, and things that they know will disagree with them; who ride when they know it would be better for them to walk; sit up nights when they know they ought to be in bed; practice a thousand obscure self-indulgences which impair their vitality, efficiency, business success and domestic happiness. The act of the man who drinks too much is exactly the same *per se;* the only difference is in the consequences. Should the fat old pod who habitually overeats respond virtuously that he wouldn't do it if the consequences were those of overdrinking, let him recollect that he hasn't, not by a thousand degrees, the same temptation; that he does not know and cannot tell what he would do were the drink habit once fixt upon him.

On Becoming an American Citizen

BY JOHN SPARGO

Author of "The Bitter Cry of the Children," Etc.

MY occult and clairvoyant friend volunteered the information that I should soon receive a paper of importance—"a document of very great value," was the way she put it. What could it be? To say that I wondered would be a useless misstatement, for I have never invested any of my faith in occult stocks. But when, about a week later, I received my certificate of naturalization as an American citizen, I remembered the prophecy. My "document of very great value" had come.

Value and price must be sharply distinguished, so the economists have told us, and I desire to be accurate. Naturally, I hope the document will prove to be valuable, otherwise I would not have troubled to obtain it. At present, however, I can best testify to its cost price, to use a term which haunts the memory from the reading of some dry-as-dust economics. This inartistic and unimposing square of engraved paper ought to be good as a security for a considerable loan, judging by its price. It is, however, not negotiable.

Still, I am proud to own it, quite apart from its value as a warrant entitling me to the privileges of American citizenship. I value it as one values a trophy won in a golf tournament or a long-distance race. It is a diploma, a token of successful endurance in a contest with bureaucracy, officialism and red tape. I look upon it and am thrilled with pride. I congratulate myself as the winner in a sort of moral Marathon, a long-distance-patience-endurance test.

Eight years ago I came to America from England, my native country. For centuries ancestors of mine had shared in its political and ecclesiastical government, leaving their names respectably enshrined in its history. In turn, I prepared to follow the family trail to respectable glory—either the trail leading to some quiet bishopric or archdeaconry, or that leading to the solemn shades of the House of Commons. But Fate led me away from these to seek literary fame and fortune, first in company with the shades of Fleet street—Dr. Johnson's and the rest—and then in New York City.

At first New York was cold, neglectful and heartless. No cheer came during the first year or two. Then suddenly her great heart seemed to warm with a kindly glow, and I was no longer a stranger, friendless and homesick in a strange land. New York had become a foster-mother to me. So I would have the adoption made formal and decided to take out my "first papers."

I went, early in 1904, to the Supreme Court in New York City, and made my application. I stood at the end of a long line of human beings such as one sees nowhere else, a cosmopolitan line in which every nation on earth seemed to be represented. I heard men renounce allegiance to all the governments, princes and potentates of the world, I think. They made their renunciations upon oath, glibly enough, tho I had a suspicion that there were many who answered in the affirmative without knowing in the least what the cud-chewing Irishman with the finely developed Galloway brogue was asking. But they knew in a general way that they must say "Ya" if they would become foster-sons of New York.

To get "first papers" was easy enough. There was a long wait, to be sure, but it was mildly interesting, and, since smoking was not forbidden, I could endure it with philosophic calm. I guessed rather than understood what the Irishman with the Galloway brogue asked, and answered each question promptly. At first he was brusque and rude, evidently regarding me as one of "thim dagoes," his name for all the timid applicants for citizenship. But I won his homage and respect by volunteering to fill out the official blank for him; not even the centuries' old hatred of Ireland for my England could survive that shock of admiration. Most of his "dagoes" could barely write their names, much less fill out a blank. We shook hands, and there was an Irish-

English alliance immediately effected. I paid a dollar for the first paper, officially styled "a declaration of intention to become a citizen of the United States," and went out. I was now on probation for at least three years. After that time I might hope for my "second papers."

I let the year 1907 pass without finishing the process of becoming a citizen. Not living in New York City any longer, it was necessary to appear at the Supreme Court of the county in which I reside, and that involved a good deal of trouble. Then, too, there was no election of very great importance that year, and naturally, I wished my first vote to be historic. So when 1908 came there began to stir political ambitions. I wanted to become one of the sovereign electors, to cast a vote in the great quadrennial Presidential contest. To find out what step I should take next, I consulted a legal friend and discovered that I would have to attend a hearing at the County Clerk's office, taking with me two witnesses who could testify to having known me for at least five years.

Accordingly, one morning in March of this year, I attended such a hearing with my two witnesses. These were men whose time was valuable, one being an employer of labor, with a considerable business. I, too, am an unusually busy man, and my time is rather more valuable than that of most men who appear in the naturalization court. We hoped, therefore, to get thru in good time and to avoid a long wait by being at the court office a little while before the opening hour, which was, I had learned, nine o'clock. Others had reasoned in a similar manner, evidently, for even at that time there were ten applicants standing in line before me, their witnesses being seated around the room. I took my position as the eleventh in line, consoling myself with the thought that in an hour at most my turn would come.

Being an Englishman by birth and training, I have always been accustomed to regard government offices of all kinds as examples of punctuality. If an English court or government office is scheduled to begin business at nine o'clock, it begins at nine o'clock, and not five minutes past nine. But in America this is not the case, as I have found to my sorrow upon more than one occasion. It was five minutes past ten when a young. insolent clerk came, and ten minutes later when he got to work, having first to rid himself of a thrilling story of a riotous spree the night before by recounting its incidents to a fellow clerk. Evidently a naturalized Italian, this young man of a class closely related to the yahoo and the hoodlum was most offensive in his attitude toward the applicants for citizenship before him, regarding us all as his inferiors, to be mocked by him at will. I felt angry—all the more because I knew that an indictment for participation in election frauds loomed before him. And I could not help thinking that in the land whose citizenship I was relinquishing there would have been no possibility of such disgraceful conduct toward applicants for anything.

Each applicant had to fill out an immense blank, making the petition a pretty comprehensive summary of his personal history. Most of them were actually filled in by the clerk for the simple reason that few of the applicants could read and write English. He had to translate the questions into Italian very often and then write down the answers. In the case of other nationalities than the Italian, it seemed to me that there was danger of much inaccurate work defeating the purpose of the record. I wondered why it would not have done just as well to have had the blank forms printed in various languages, letting each applicant fill out his own. I took the trouble to time the clerk as he filled out the blanks. Once it took forty-seven minutes, another time forty-four minutes, and another time thirty-nine minutes. I am certain that I could have filled out the form in duplicate in his books in less than ten minutes. To fill out my own form took me less than three minutes.

In addition to the questions which referred to one's opinion of anarchism and polygamy, there were others which one had to answer more or less at random. Had one known what the form was like beforehand he could have refreshed his memory a bit. But what man ever remembers the exact dates of his wedding, his wife's birthday, and the birthdays of all his children? It seems to me that all

that waiting in line while these blanks are filled out is quite needless. The procedure needs to be simplified. Why could not each applicant fill out his form at his own convenience, signing it together with his witnesses, and then go to the proper official and take the necessary oath?

It was twelve minutes to four in the afternoon when my turn came. I had waited for seven hours and my witnesses had done the same! To say that each of us valued that time and the extra time spent in travel at $20, making a total of $60, would be a very conservative statement. Of course, we were all three enraged, but nevertheless we were fortunate as compared with half a score who stood behind me, some of whom had waited just as long. For when I got thru, at eleven minutes past four, the clerk announced, "No more to-day!" closed his books with a bang, and hurried out. Here were half a score of men, all of the laboring class. Each man had brought two witnesses and each of these had lost a day's wages in all probability, which the applicants in most cases would pay. Figuring their wages at $2 per day, each of the half score of disappointed ones had been taxed $6 that day for nothing at all, and would have to come again and make the same sacrifice. And all merely to *make application* for citizenship!

When I had handed over $4 to the clerk, that being the fee prescribed by law, my petition was filed and I was free to go. I had no receipt for my money, and even my precious "first paper" had been taken away. Yet I was proudly conscious that I was advanced a long way toward citizenship. But my pride was dulled a bit by the things I had seen; by my consciousness of great shortcomings in our manner of conducting public business. Why should it be possible for a young ignoramus to insult and browbeat honest workingmen when they come knocking at the door seeking citizenship? Why should it be possible for a whisper in the ear from a politician to get the last man in line attended to before the first man? Why should I have been treated so deferentially when my turn came and the clerk, who had been so insolent a moment before, glanced at my application? I had answered the question concerning my occupation by writing "Author and journalist." That was all. Ordinarily I write something much less boastful, but the insufferable conduct of the clerk led me to so describe myself. I wanted to see whether he would dare treat me as an ignorant and helpless creature to be made sport of and the result disquieted me.

After ninety days, I was told, my two witnesses and myself would be required to attend the Supreme Court and appear before the judge for examination. Then, if nothing prevented, I should get my certificate of naturalization, enabling me to vote in the coming election. Meantime, my name would be posted at various places thruout the county, so that any person interested in the matter would be able to protest against my admission to citizenship. There can be no objection to such posting of the names of applicants, of course, but it seemed to me that unless some person entered objection to my application I ought not to be compelled to bring two witnesses to the court again when they had already sworn to all that the law requires. It seems to me now that after filling out that formidable petition and having it duly witnessed, then having my petition on file for ninety days, during which any person could enter any objection he might have to my admission, I should have been admitted at once, as a matter of course, upon satisfying the court or some responsible body that I understood enough of the political government of the country to be an intelligent voter. Only in the event of a protest, it seems to me, ought it to be necessary for one to appear in court with witnesses whose testimony is already recorded.

Before the ninety days expired I received a notice that I must appear with my two witnesses for a "preliminary examination" at the city hall in my own town on a given day. Grumbling, we went and spent another couple of hours each. I was asked all the questions I had answered in my petition and many supplementary questions, which were for the most part ridiculous. For example, I was prest to fix the date and manner of my first meeting with each of my witnesses: What was the exact date when you first met Mr. B——? Where did

you meet him? Who introduced you to him? What was the nature of the public gathering at which you first met Mr. C——? In what year and on what date in the year did you move from the house you formerly lived in on Myrtle street into your present house on Ivy Terrace? Such were the questions with which one was plied by a very harmless little assistant from the office of the Attorney-General at Washington, a fussy little fellow, overwhelmed with consciousness of his dignity, but courteous to everybody.
